No. 347

SOCONY-VACUUM OIL COMPANY, INC., ET AL., PETITIONERS

vs.

THE UNITED STATES OF AMERICA

ON WRITS OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SEVENTH CIRCUIT

PETITIONS FOR CERTIORARI FILED AUGUST 31, 1939
CERTIORARI GRANTED OCTOBER 16, 1939

IN THE

United States Circuit Court of Appeals
For the Seventh Circuit

No. 6721

THE UNITED STATES OF AMERICA,
Plaintiff-Appellee,

vs.

SOCONY-VACUUM OIL COMPANY, INC., ET AL.,
Defendants-Appellants.

Counsel for all
Defendants-Appellants:

MR. WILLIAM J. DONOVAN,
MR. HERBERT H. THOMAS,
MR. RALSTONE R. IRVINE,
MR. CARBERY O'SHEA.

Counsel for Certain
Defendants-Appellants:

MR. LOUIS MEAD TREADWELL,
Socony-Vacuum Oil Company, Inc.,
Wadhams Oil Company,
Charles E. Arnott, and
H. T. Ashton.

MR. GOLDTHWAITE H. DORR,
Charles E. Arnott.

MR. JOSEPH H. MARSHUTZ,
Wadhams Oil Company.

MR. CHARLES A. FRUEAUFF,
MR. CHARLES R. GATELY,
MR. THEODORE W. BRAZEAU,
MR. EMMERT L. WINGERT,
Empire Oil & Refining Company
(now Cities Service Oil Company).

MR. DAN MOODY,
MR. W. H. ZWICK,
MR. JAMES J. COSGROVE,
Continental Oil Company.

Counsel for Certain
Defendants-Appellants:

MR. CHARLES I. FRANCIS,
The Pure Oil Company and
R. H. McElroy, Jr.

MR. SAMUEL A. MITCHELL,
MR. TRUMAN POST YOUNG,
Shell Petroleum Corporation and
P. E. Lakin.

MR. G. T. STANFORD,
MR. ROY T. OSBORN,
MR. FREDERICK H. WOOD,
MR. THOMAS T. COOKE,
Sinclair Refining Company.

MR. J. C. DENTON,
Mid-Continent Petroleum Corporation and Robert W. McDowell.

MR. DON EMERY,
MR. R. H. HUDSON,
MR. RAYBURN L. FOSTER,
MR. WALTER L. BARNES,
Phillips Petroleum Company.

MR. W. P. Z. GERMAN,
MR. A. F. MOLONY,
MR. CLIFF V. PEERY,
Skelly Oil Company.

MR. RALPH HORWEEN,
MR. SAMUEL TOPLIFF,
The Globe Oil & Refining Company
(Illinois) (Oklahoma).

Counsel for Plaintiff-Appellee:

MR. THURMAN ARNOLD,
MR. JOHN HENRY LEWIN,
MR. W. P. CRAWFORD,
MR. GRANT KELLEHER,
MR. W. B. WATSON SNYDER,
MR. JOHN J. BOYLE.

Appeal from the District Court of the United States for the Western District of Wisconsin.

INDEX.

Placita 1

Indictment, filed Dec. 22, 1936.................... 2

Summons for Mid-Continent Petroleum Corporation 18

IN THE DISTRICT COURT OF THE UNITED STATES OF AMERICA

Placita.

For the Western District of Wisconsin.

PLACITA.

Pleas in the District Court of the United States for the Western District of Wisconsin, begun and held before the Honorable Patrick T. Stone, Judge of said Court, in the United States Court Room at the City of Madison in the said District, at the regular term of the said Court beginning on the first Tuesday of December, 1936, and on December 22, 1936, being one of the days of said term, the following proceedings were had, to wit:

IN THE DISTRICT COURT OF THE UNITED STATES

For the Western District of Wisconsin.

United States of America,
vs.
Standard Oil Company (Indiana), *et al.*,
Defendants.
} No. 11365.

Be It Remembered, that the above-entitled action was commenced by the Grand Jury returning into Court and by the filing of the following Indictment in the above-entitled cause, on December 22, 1936, with the Clerk of the District Court of the United States for the Western District of Wisconsin:

Filed Dec. 22, 1936.

IN THE DISTRICT COURT OF THE UNITED STATES.

For the Western District of Wisconsin.

United States of America,
Western District of Wisconsin.
} ss.

INDICTMENT.

The Grand Jurors of the United States of America, at a regular term of the District Court of the United 2 States of America for the Western District of Wisconsin, to-wit: the Madison, December, 1936, term thereof, held at Madison, in the County of Dane in said Western District of Wisconsin, after being duly impanelled, sworn, and charged at the term of court aforesaid, inquiring for the said district, upon their oaths find and present, as follows:

A. The defendants:

1. The following named corporations, engaged principally in the petroleum business, that is to say, in the manufacture, purchase, transportation, and sale of petroleum products, are hereby made defendants herein. Each of said corporations is duly authorized to do business under and by virtue of the laws of the state of incorporation as indicated, and has its principal place of business as indi-

cated. Each may be described as an integrated company, i. e., a company which is engaged in the combined functions of production, transportation, and refining of crude petroleum, and the transportation and wholesale and retail marketing of the products thereof, principally gasoline. Each is also sometimes known as either a "major" or "semi-major" company, as distinguished from "independent," or smaller company. Each will sometimes be referred to herein, for convenience, by the abbreviated name as indicated. Said corporations, and those of their subsidiaries hereinafter named as defendants, will sometimes be referred to as "defendant major oil companies":

Name of Corporation	Abbreviated name	State of incorporation	Principal place of business
Standard Oil Company (Indiana)	Standard of Indiana	Indiana	Chicago, Ill.
Socony-Vacuum Oil Company Inc.	Socony-Vacuum	New York	New York, N. Y.
Cities Service Company	Cities Service	Delaware	New York, N. Y.

3

Name of Corporation	Abbreviated name	State of incorporation	Principal place of business
Continental Oil Company	Continental	Delaware	Ponca City, Okla.
Gulf Oil Corporation	Gulf	Pennsylvania	Pittsburgh, Pa.
The Pure Oil Company	Pure	Ohio	Chicago, Ill.
Shell Petroleum Corporation	Shell	Virginia	St. Louis, Mo.
Sinclair Refining Company	Sinclair	Maine	New York, N. Y.
The Texas Company	Texas	Delaware	New York, N. Y.
Tide Water Associated Oil Company	Tide Water	Delaware	New York, N. Y.
Mid-Continent Petroleum Corporation	Mid-Continent	Delaware	Tulsa, Okla.
Phillips Petroleum Company	Phillips	Delaware	Bartlesville, Okla.
Skelly Oil Company	Skelly	Delaware	Tulsa, Okla.
Barnsdall Refining Corporation	Barnsdall	Delaware	Tulsa, Okla.
The Globe Oil & Refining Company	Globe	Oklahoma	Blackwell, Okla.
The Globe Oil & Refining Company	Globe	Illinois	Lemont, Ill.
The Globe Oil & Refining Company	Globe	Kansas	McPherson, Kans.
Deep Rock Oil Corporation	Deep Rock	Delaware	Tulsa, Okla.

2. The following named corporations, subsidiaries of the respective defendant parent companies as indicated, similarly engaged in the petroleum business, are hereby made defendants herein, their respective abbreviated names, states of incorporation and principal places of business being as indicated:

Name of subsidiary	Abbreviated name	Parent Company	State of incorporation	Principal place of business
Cities Service Export Oil Company	Cities Service Export	Cities Service Company	Delaware	New York, N. Y.
Empire Oil and Refining Company	Empire	Cities Service Company	Delaware	Bartlesville, Okla.
Louisiana Oil Refining Corporation	Louisiana Oil	Cities Service Company	Virginia	Shreveport, La.
Gulf Refining Company	Gulf	Gulf Oil Corporation	Delaware	Pittsburgh, Pa.
Wadhams Oil Company	Wadhams	Socony-Vacuum Oil Company, Inc.	Wisconsin	Milwaukee, Wis.
Tide Water Oil Company	Tide Water Oil	Tide Water Associated Oil Co.	New Jersey	New York, N. Y.

3. The following corporations engaged in the publication and distribution of market information and price quotations are hereby made defendants herein:

(a) The Journal of Commerce Publishing Company (referred to hereinafter as Chicago Journal of Commerce), a corporation duly organized and authorized to do business under and by virtue of the laws of the State of Delaware, and having its principal place of business in Chicago, Illinois. Said company causes to be published in Chicago, Illinois, and widely circulated throughout the various states of the United States daily, except Sundays and holidays, the Chicago Journal of Commerce, said journal being devoted to the dissemination of market information concerning the various trades and industries in the United States. There is regularly contained in each issue of said journal a section devoted to "Petroleum Markets, 5 Statistics, News, and Analyses." Said section regularly contains a compilation of "Petroleum Quotations" wherein there are published, among other things, what purport to be gasoline prices prevailing on the preceding day in spot sales to jobbers or to the consuming trade in tank car lots.

(b) W. C. Platt Company (referred to hereinafter as Platt's Oilgram,) a corporation duly organized and authorized to do business under and by virtue of the laws of the State of Ohio, and having its principal place of business in Cleveland, Ohio. Said company causes to be published simultaneously from four offices located in Tulsa, Chicago, Cleveland, and New York, and widely circulated throughout the various states of the United States, daily, except Saturdays, Sundays, and holidays, editions of Platt's Oilgram, a journal devoted to the dissemination of market information relative to the petroleum industry. There is regularly contained in each issue of each edition of said Platt's Oilgram a compilation of petroleum quotations wherein there are published, among other things, what purport to be gasoline prices prevailing on the publication date in spot sales to jobbers in tank car lots.

(c) The National Petroleum Publishing Company (referred to hereinafter as National Petroleum News), a corporation duly organized and authorized to do business under and by virtue of the laws of the State of Ohio, and having its principal place of business in Cleveland, Ohio. Said company is closely affiliated, through common-stock ownership, with Platt's Oilgram. Said company causes to be published in Cleveland, Ohio, and widely circulated throughout the various states of the United States, National Petroleum News, a weekly publication devoted to the dissemination of information concerning the petroleum industry, including news, markets, and technical develop-
6 ment. There are regularly contained in each issue of
said National Petroleum News compilations of what purport to be gasoline prices prevailing daily in the preceding week in spot sales to jobbers in tank car lots, being the same prices published daily during the preceding week in the several editions of Platt's Oilgram.

4. The following individuals are hereby made defendants herein, each having the address and being (or having been) associated with the company and having (or having had) the official title or position therewith, as indicated. Said individual defendants have, during the period covered by this indictment, been actively engaged in the management, direction, and control of the affairs and policies of the respective defendant major oil companies, particularly those affairs and policies of said companies covered by this indictment.

Name of individual	Address	Official title or position	Company with which associated
Edward G. Seubert	Chicago, Ill.	President	Standard of Indiana
Allan Jackson	Chicago, Ill.	Vice-President in Charge of Sales	Standard of Indiana
Edward J. Bullock	Chicago, Ill.	Vice-President in Charge of Purchasing	Standard of Indiana
Ira A. Smith	Tulsa, Okla.	Buyer	Standard of Indiana

Name of Individual	Address	Official title or position	Company with which associated
John A. Brown	New York, N. Y.	Chairman of Executive Committee, and President	Socony-Vacuum
Charles L. Jones	New York, N. Y.	Vice President in Charge of Domestic Trade Department	Socony-Vacuum
Charles E. Arnott	New York, N. Y.	Vice President	Socony-Vacuum
7			
H. T. Ashton	St. Louis, Mo.	Manager of Lubrite Division	Socony-Vacuum
A. G. Maguire	Milwaukee, Wis.	Chairman of Board of Directors	Wadhams
R. R. Irwin	Kansas City, Mo.	Manager, White Eagle Division	Socony-Vacuum
Bryan S. Reid	Chicago, Ill.	General Manager Chicago Division	Socony-Vacuum
Frank R. Coates	New York, N. Y.	Director Vice President	Cities Service Cities Service Export
Harry D. Frueauff	Tulsa, Okla.	Vice President Vice President	Empire Cities Service Export
H. E. Brandli	New York, N. Y.	Vice President Vice President Vice President and General Manager	Empire Louisiana Oil Cities Service Export
O. J. Tuttle	Tulsa, Okla.	Tank Car Sales Manager	Empire
D. W. Harris	Shreveport, La.	General Manager	Louisiana Oil
John A. Welch	Shreveport, La.	Sales Manager	Louisiana Oil
Dan Moran	Ponca City, Okla.	President	Continental
Harry J. Kennedy	Ponca City, Okla.	Vice President in Charge of Marketing	Continental
L. T. Cramer	Ponca City, Okla.	Tank Car Buyer	Continental
Edward Karstedt	Denver, Colo.	Formerly Vice President	Continental
J. F. Drake	Pittsburgh, Pa.	President President	Gulf Oil Corporation Gulf Refining Company
8			
William V. Hartman	Pittsburgh, Pa.	Vice President Vice President	Gulf Oil Corporation Gulf Refining Company
H. C. Meyer	Pittsburgh, Pa.	(Unknown)	Gulf
O. H. Carlisle	Houston, Tex.	(Unknown)	Gulf
Henry M. Dawes	Chicago, Ill.	President	Pure
C. B. Watson	Chicago, Ill.	Vice President	Pure
R. H. McElroy, Jr.	Chicago, Ill.	Tank Car Sales Manager	Pure

Name of Individual	Address	Official title or position	Company with which associated
Dewey K. Chamberlain	Tulsa, Okla.	Manager, Tulsa Division	Pure
Alexander Fraser	St. Louis, Mo.	President	Shell
P. E. Lakin	St. Louis, Mo.	General Manager of Sales	Shell
J. W. Carnes	New York, N. Y.	Vice President	Sinclair
W. S. S. Rodgers	New York, N. Y.	President	Texas
R. D. Cottingham	New York, N. Y.	Assistant to President	Texas
H. W. Dodge	New York, N. Y.	Vice President in Charge of Sales	Texas
P. C. Scullin	Houston, Tex.	Vice President and General Manager	Indian Refining Co., Subsidiary of Texas
Edward L. Shea	New York, N. Y.	Vice President	Tide Water
Noel Robinson	New York, N. Y.	(Unknown)	Tide Water
J. W. Warner	Tulsa, Okla.	(Unknown)	Tide Water
R. O. Audrain	Tulsa, Okla.	Buyer	Tide Water
9			
Jacob France	Baltimore, Md.	President and General Manager	Mid-Continent
Robert W. McDowell	Tulsa, Okla.	Vice President in Charge of Sales	Mid-Continent
Thomas Fitzgerald	Tulsa, Okla.	Assistant to Vice President in Charge of Sales	Mid-Continent
Frank Phillips	Bartlesville, Okla.	President	Phillips
Fred. L. Koopman	Bartlesville, Okla.	(Unknown)	Phillips
A. M. Hughes	Bartlesville, Okla.	Sales Manager	Phillips
H. A. Gardner	Bartlesville, Okla.	Tank Car Sales Manager	Phillips
W. G. Skelly	Tulsa, Okla.	President	Skelly
James Nagle	Tulsa, Okla.	In Charge of Wholesale Sales	Skelly
E. B. Reeser	Tulsa, Okla.	President	Barnsdall
I. A. O'Shaughnessy	Minneapolis, Minn.	President	Globe
Bernard L. Majewski	Chicago, Ill.	Vice President in Charge of Sales	Deep Rock
Keith Fanshier	Chicago, Ill.	Petroleum Editor	Chicago Journal of Commerce
Warren C. Platt	Cleveland, Ohio	President President	Platt's Oilgram National Petroleum News
Clyde M. Boggs	Arkansas City, Kan.	President	Western Petroleum Refiners Association
Arthur V. Bourque	Tulsa, Okla.	Secretary and Treasurer	Western Petroleum Refiners Association

10 B. General nature of the business and the interstate commerce involved:

5. The States of Michigan, Wisconsin (including the Western District thereof), Minnesota, North Dakota, South Dakota, Iowa, Illinois, Indiana, Missouri, and Kansas compose one of the great marketing areas for gasoline in the United States. Said area comprises the gasoline marketing territory of defendant Standard of Indiana, and is sometimes known as the "Standard of Indiana territory" by reason of said defendant's dominant position in the distribution of gasoline in each of said states. Said area is sometimes also known as the Mid-Western area and will be so referred to herein. Each of defendant major oil companies, either directly or through subsidiary or affiliated companies, markets gasoline in some or all of the states comprising said Mid-Western area.

6. Gasoline distributed in said Mid-Western area is manufactured largely from crude petroleum produced in the States of Texas, Oklahoma, Kansas, Arkansas, and Louisiana. Said producing states are sometimes divided and grouped into (1) the East Texas field and (2) the Mid-Continent fields, extending over the State of Oklahoma, the northern and western portions of the State of Texas, the southern and eastern portions of the State of Kansas, the southern portion of the State of Arkansas, and the northern portion of the State of Louisiana. Large quantities of the crude petroleum produced in these fields are transported in interstate commerce, principally by pipe lines, from the states of production to refineries located in the aforesaid Mid-Western area, principally in the States of Illinois, Indiana, and Missouri. Gasoline refined from such crude is further transported in substantial quantities in interstate commerce from the states in which refined 11 to other states in said Mid-Western area. Refineries are also located in the aforementioned crude producing states and substantial quantities of gasoline so manufactured in those states are transported in interstate commerce, principally by tank car, into each of the states in the aforesaid Mid-Western area. Defendant major oil companies marketing in the Mid-Western area, together control, and manufacture, ship, and sell more than 85% (approximately 4,500,000,000 gallons) of all gasoline distributed yearly in said Mid-Western area.

7. Each of said defendant major oil companies marketing gasoline in said Mid-Western area distributes and markets said gasoline in the manner following, that is to say:

Each owns or leases, and operates or controls the operation of, large numbers of retail service stations through which gasoline is sold directly to consumers. Each usually delivers gasoline to such retail service stations by tank truck or tank wagon from its bulk storage plants conveniently located to supply the retail stations in the various local marketing areas, said bulk storage plants being supplied with gasoline by tank cars principally from the refineries of the respective defendant major oil companies. Each also sells and distributes large quantities of gasoline from the same or similar bulk storage plants to numerous independent retailers or dealers owning or operating retail service stations, said gasoline being usually sold to such independent dealers under long term supply contracts. In addition to selling through company owned or controlled retail service stations, and to independent dealers, each of said defendant major oil companies marketing gasoline in said Mid-Western area, with the exception of defendant Standard of Indiana, sells gasoline in large quantities in tank car lots to jobbers.

12 8. Jobbers usually own and operate bulk storage plants conveniently located so as to serve, by their tank trucks or tank wagons, retail service stations either owned or operated by them, or independently owned or operated, in the various retail marketing areas served by them. Approximately 50% of all gasoline distributed to retail service stations in said Mid-Western area is distributed by or through jobbers. There are in excess of four thousand jobbers of gasoline doing business in the states comprising the aforesaid Mid-Western area. Great numbers of said jobbers have been engaged in the distribution of gasoline for many years and their investments in capital assets have been and are substantial.

9. Jobbers marketing gasoline in the Mid-Western area are, and have been for several years last past, supplied with gasoline for the most part by the defendant major oil companies marketing in said area, except Standard of Indiana. By means of intensive advertising campaigns defendant major oil companies have created a public acceptance of, and demand for, their gasoline which is sold under their respective brand designations. Most jobbers have been persuaded, or induced, to enter into contracts for the purchase of their supplies from said defendant major oil companies, and at the present time in excess of 80% of all gasoline purchased by the jobbers is purchased from said defendant major oil companies. Gasoline sold

by each of said defendant major oil companies to said
jobbers is sold and transported largely in interstate com-
merce, delivery being made from the states in which the
refineries are located to the states in which the various
jobbers are located, principally in tank cars as aforesaid.
A small number of jobbers in the Mid-Western area pur-
chase gasoline from independent refiners, being com-
13 paratively small refiners located principally in the
East Texas and Mid-Continent fields, either directly
or through so-called brokers or tank car marketers.

10. The terms and conditions of sale under which gasoline is so sold by said defendant major oil companies to jobbers in the aforesaid Mid-Western area are, and have been for several years last past, usually embodied in written contracts between seller and buyer. Each of said defendant major oil companies employs throughout the Mid-Western area a separate standard form of jobber contracts which its jobber customers are required to execute. Each of said defendant major oil companies requires jobbers handling its branded products to do business with it exclusively. Recently said jobber contracts have usually been made for terms of one year.

11. For more than a year last past, and continuing to
the date of the presentation of this indictment, said de-
fendant major oil companies have uniformly adopted and
have embodied in their respective standard forms of job-
ber contracts employed throughout the Mid-Western area
virtually identical provisions governing terms and condi-
tions of sale, in part substantially as follows: The price
of gasoline to the jobber shall be the average spot market
price, determined by averaging the high and low spot mar-
ket prices for gasoline of comparable octane rating pub-
lished by defendant Platt's Oilgram, for the Tulsa, Okla-
homa, market, and by defendant Chicago Journal of Com-
merce on date of shipment. If the average spot market
price plus freight to destination shall allow the buyer a
margin of less than 5½¢ per gallon below the service sta-
tion price posted by defendant Standard of Indiana, then
the buyer and the seller shall share equally in the deficit
below a 5½¢ margin. In certain States in which the
Standard of Indiana has recently discontinued the
14 posting of retail prices, such jobber margins have
been calculated on the basis of a margin of 2¢ below
the dealer tank wagon prices posted by the Standard of
Indiana (such tank wagon prices having usually been
3½¢ below the posted retail prices).

12. Sales by independent refiners to jobbers are also sometimes made under long term supply contracts. Independent refiners in the East Texas field have usually sold the greater part of their gasoline, and independent refiners in the Mid-Continent fields have sold a portion of their gasoline, on a spot basis. Prices of gasoline sold by said independent refiners in spot transactions for delivery within the aforementioned Mid-Western area have generally been quoted f. o. b. "group three" (being a district which includes Tulsa, Oklahoma, and nearby points from which freight rates on gasoline to the same destinations in the Mid-Western area are identical).

13. Defendant major oil companies do not sell any substantial part of their gasoline to jobbers or brokers in tank car quantities in spot transactions. Virtually all gasoline sold in tank car quantities in spot transactions in the aforesaid Mid-Western area is sold by independent refiners. Gasoline so sold in tank car quantities on a spot basis amounts to less than 5% of all gasoline marketed in said Mid-Western area.

14. By far the greater part of all gasoline sold in spot transactions consists of so-called third grade gasoline, that is to say, gasoline having an octane (or anti-knock) rating of less than 65. By far the greater part (not less than 90%) of all gasoline sold under contract by defendant major oil companies to jobbers in the Mid-Western area, as aforesaid, is so-called "regular" or "house brand" gasoline, having an octane rating of 68 to 70. The 15 quantity of gasoline having an octane rating of 68 to 70 sold in spot transactions is not more than 2% of all gasoline sold in said Mid-Western area and not more than 3% of all gasoline having an octane rating of 68 to 70 sold in said Mid-Western area.

15. By reason of the aforesaid uniform provisions of their said standard forms of jobber contracts, and by reason of the further facts set forth in paragraph 13 hereof, said defendant major oil companies marketing gasoline in the Mid-Western area have contracted, and do contract, in effect, to sell regularly to jobbers great quantities of gasoline (amounting to nearly 50% of all gasoline sold in said Mid-Western area) at the average of the prices obtained in sales of less than 5% of all gasoline sold in said Mid-Western area, which sales, as aforesaid, are spot sales by independent refiners. Furthermore, by reason of the additional facts alleged in paragraph 14 hereof, said defendant major oil companies have contracted, and

do contract, in effect, to sell regularly to jobbers by far the greater part of the gasoline sold by them to jobbers, which, as aforesaid, consists of gasoline having an octane rating of 68 to 70, at the average of prices determined in sales of less than 3% of all gasoline of such octane rating sold in said Mid-Western area, which sales, as aforesaid, are spot sales by independent refiners.

16. Tank car prices for gasoline obtained in each of the spot markets in the East Texas and Mid-Continent fields, and in Chicago, Illinois, tend to, and do, directly and substantially influence the spot market tank car prices for gasoline in each of the other of such markets, and such prices in each of such markets tend to, and do, closely parallel the prices in each of the other of such markets.

16 Tank car prices obtained for third grade gasoline in each of the spot markets tend to, and do, directly and substantially influence the spot market prices of regular gasoline; that is to say, when the prevailing price of third grade gasoline is reduced, the spot market price of regular gasoline is likely to, and usually does, decrease; and when the prevailing price of third grade gasoline is increased, the spot market price of regular gasoline is likely to be, and usually is, affected accordingly.

17. Spot market tank car prices of gasoline tend to, and do, directly and substantially influence the retail prices of gasoline, i. e., the prices which consumers are required to pay, in that an increase in the spot market tank car prices of gasoline will, and usually does, result directly in an increase in the retail prices of gasoline.

C. The conspiracy.

18. Beginning in the month of February 1935 and continuing to the date of the presentation of this indictment, defendants and certain persons hereinafter referred to, and other persons to the grand jurors unknown, well knowing all the foregoing facts, have combined and conspired together for the purpose of artificially raising and fixing the tank car prices of gasoline in the aforementioned spot markets, and, as intended by them, defendants have artificially raised and fixed said spot market tank car prices of gasoline and have maintained said prices at artificially high and non-competitive levels, and at levels agreed upon among them and have thereby intentionally increased and fixed the tank car prices of gasoline contracted to be sold and sold in interstate commerce as aforesaid in the Mid-Western area (including the

Western District of Wisconsin), and have
17 arbitrarily, by reason of the provisions of the prevailing form of jobber contracts above described in paragraph 11, exacted large sums of money from thousands of jobbers with whom they have had such contracts in said Mid-Western area (including the Western District of Wisconsin), and in turn have intentionally raised the general level of retail prices prevailing in said Mid-Western area (including the Western District of Wisconsin). In so doing, defendants have then and there engaged in an unlawful combination and conspiracy in restraint of trade and commerce in gasoline among the several states of the United States in violation of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Antitrust Act.

19. Said unlawful combination and conspiracy has been effectuated in the following manner and by the following means, that is to say: Beginning in the month of February 1935 and continuously to the date of the presentation of this indictment, as aforesaid, defendant major oil companies, acting through or under the direction of their respective officers and agents and those of their subsidiaries (or former subsidiaries) hereinabove made defendants herein, and through others of their officers and agents, some of them hereinafter referred to, and through defendants Bourque and Boggs, and other persons to the grand jurors unknown, have knowingly and unlawfully engaged and participated in two concerted gasoline buying programs hereinafter referred to as (a) the East Texas buying program and (b) the Mid-Continent buying program, for the purchase by each of them from independent refiners in spot transactions of large quantities of gasoline in the East Texas and Mid-Continent fields at uniform, high, and at times progressively increased prices, some of said defendant major oil companies purchasing gasoline in the East Texas field and others of them in the Mid-Continent fields, and some of said defendant
18 major oil companies making such purchases in both buying programs as hereinafter more fully set forth, but each and all of them acting pursuant to the common purposes set forth in paragraph 18 of this indictment. Said buying programs are more fully described as follows:

(a) The East Texas buying program.

20. Throughout the period aforesaid, defendants, Sinclair, Gulf, Texas, Pure, Continental, Tide Water, Tide Water Oil, Cities Service, Cities Service Export, and

Louisiana Oil, have made large and increased purchases of gasoline in spot transactions from most of the independent refiners located in the East Texas field. Said independent refiners have been members of an association known as the East Texas Refiners Marketing Association which was formed in February 1935, with the knowledge and approval of some of the defendants, for the purpose of selling and facilitating the sale of gasoline to defendant major oil companies. Among members of said association have been McMurray Refining Company, East Texas Refining Company, Dominant Refining Company, Cascade Refining Company, Grogan Oil Company, Trinity Refining Company, Tower Refining Company, La Pren Refining Company, Southport Petroleum Company, Century Refining Company, Tyreco Refining Company, Wabash Refining Company, Inc., Texover Refining Company, Ocean Refining Company, Solvex Refineries, Inc., Arrow Producing & Refining Company, Chief Refining Company, Gilliland Refining Company, Texas Oil Products Company, Matthews Refining Company, Utah Refining Company, Premier Oil Refining Company, and others to the grand jurors unknown.

21. Purchase of gasoline through said association, from the respective members thereof, have been made at the instigation and under the supervision and direction 19 of defendants Arnott and Carnes, with one Neil Buckley, employee of Cities Service Export, acting in a liaison capacity between said association and the defendant major oil companies and also instigating and directing said purchases. Said Buckley acted in said capacity under the instructions of defendant Cities Service and defendants Brandli, Coates, and Frueauff. With the approval of said Buckley, one Robert N. Cline has been secretary and manager of said association and has acted in said capacity, allotting orders for gasoline received from defendant major oil companies among the members of said association. Each of the defendant major oil companies named in the preceding paragraph has taken a part of the large quantities of gasoline purchased through said association, as from time to time arranged among them. Said quantities of gasoline purchased from said independent refiners through said East Texas Refiners Marketing Association have amounted to more than 50% of all the gasoline produced by said independent refiners. Said purchases have been in excess of the amounts which the aforementioned defendant major oil companies would have purchased apart from their participation in said

buying program, and they have been made at uniform, high, arbitrary, and non-competitive prices, and from time to time at progressively increased prices, as agreed upon by said defendant major oil companies, all with the unlawful purposes and effects aforementioned. In furtherance of said unlawful purposes said independent refiners have, at the instance of defendant Arnott, and the aforesaid Buckley, curtailed their production of gasoline. All of the companies and individuals mentioned in this and in the preceding paragraph, whether or not made defendants herein, have known of said unlawful purposes and have actively engaged and cooperated in the unlawful combination and conspiracy set forth in this indictment.

20 (b) The Mid-Continent buying program.

22. Throughout the period aforesaid, defendants Standard of Indiana, Socony-Vacuum, Wadhams, Sinclair, Shell, Empire, Pure, Phillips, Mid-Continent, Continental, Skelly, Barnsdall, Globe, and Deep Rock have made large and increased purchases of gasoline from many of the independent refiners located in the Mid-Continent fields. Said independent refiners have been, for the most part, members of an association known as the Western Petroleum Refiners Association. Among the independent refiners in said Mid-Continent fields that have sold gasoline to the aforementioned major oil companies in the Mid-Continent buying program have been Champlin Refining Company, Eason Oil Company, Bell Oil & Gas Company, Panhandle Refining Company, Olney Oil & Refining Company, Omar Refining Company, Cushing Refining & Gasoline Company, Waggoner Refining Company, Inc., Taxman Refining Company, Rock Island Refining Company, The Dickey Oil & Refining Company, Inc., Danciger Oil & Refining Company, Shamrock Oil & Gas Company, Wilcox Oil & Gas Company, and others to the grand jurors unknown.

23. Purchases of gasoline from said independent refiners have been made at the instigation and under the supervision and direction of defendants Arnott, Ashton, McDowell, Tuttle, and Bourque, and one Walter Paul Jacobi, an employee of defendant Wadhams. Each of the defendant major oil companies named in the preceding paragraph has taken a part of the large quantities of gasoline purchased, as aforesaid, as from time to time allotted to it by defendants McDowell and Tuttle and Bourque, and the aforesaid Jacobi. At monthly meetings

of representatives of said defendant major oil 21 companies the independent refiners named in paragraph 22 have from time to time been assigned to the defendant major oil companies participating in said buying program, one or more of said independent refiners being assigned to each of said defendant major oil companies as so-called "dancing partners", and each of said defendant major oil companies has purchased from its said dancing partners quantities of gasoline as recommended by said defendants McDowell, Tuttle, and Bourque, and said Jacobi. Said quantities of gasoline purchased from said independent refiners in said buying program have amounted to nearly 50% of all the gasoline sold by said independent refiners. Said purchases have been in excess of the amounts which the aforementioned defendant major oil companies would have purchased apart from their participation in said buying program, and they have been made at uniform, high, arbitrary, and non-competitive prices, and from time to time at progressively increased prices, as agreed upon by said defendant major oil companies, all with the unlawful purposes and effects aforementioned. In furtherance of said unlawful purposes said independent refiners have, at the instance of defendants Arnott, McDowell, Tuttle, Boggs, and Bourque, curtailed their production of gasoline. All of the companies and individuals mentioned in this and in the preceding paragraph, whether or not made defendants herein, have known of said unlawful purposes and have actively engaged and cooperated in the unlawful combination and conspiracy set forth in this indictment.

Participation of market journals.

24. Defendants Chicago Journal of Commerce and Keith Fanshier, its petroleum editor, and defendant Platt's Oilgram, National Petroleum News, and War-22 ren C. Platt, their president, well knowing all the foregoing facts, beginning on or about March 1, 1935, and continuously to the date of the presentation of this indictment, have intentionally and wrongfully engaged and participated in the combination and conspiracy set forth in this indictment, and have directly and materially aided the other defendants in effectuating the same, and the unlawful purposes and effects thereof set forth in this indictment. Said defendants have been the chief agencies and instrumentalities through which the wrongfully and artificially raised and fixed prices for gasoline paid by

the major oil companies as aforesaid have affected the prices paid by jobbers, retail dealers, and consumers for gasoline in the Mid-Western area, including the Western Division of Wisconsin. While representing the price quotations published by them, as aforesaid, to be gasoline prices prevailing in spot sales to jobbers in tank car lots, and while knowing and intending them to be relied on as such by jobbers and to be made the basis of prices to jobbers for gasoline in the prevailing forms of jobber contracts in the Mid-Western area described in paragraph 11 of this indictment, they have throughout said period in the Mid-Western area, including the Western District of Wisconsin, knowingly published and circulated as such price quotations the wrongfully and artificially raised and fixed prices for gasoline paid by the defendant major oil companies as aforesaid in the said East Texas buying program and Mid-Continent buying program.

D. Jurisdiction and venue.

25. The combination and conspiracy herein set forth has operated and has been carried out in part within the Western District of Wisconsin. In pursuance of said com-
bination and conspiracy, defendant major oil com-
23 panies (with the exception of Standard of Indiana
and Gulf) have contracted to sell and have sold and have delivered large quantities of gasoline in tank-car lots to jobbers within said district at the artificially raised and fixed and non-competitive prices aforesaid and have arbitrarily exacted from jobbers within said district large sums of money. Defendant major oil companies (with the exception of Gulf) have solicited and taken contracts and orders for said gasoline within said district, sometimes by sales representatives located there, which district has been an important market for their product and they have required retail dealers and consumers in said district to pay artificially increased prices for gasoline, as aforesaid, all by virtue of said combination and conspiracy and pursuant to the purposes and ultimate objectives thereof.

And so the grand jurors aforesaid, upon their oaths aforesaid, do find and present that said defendants, throughout the period aforesaid, at the places and in the manner and form aforesaid, unlawfully have engaged in a combination and conspiracy in restraint of the aforesaid trade and commerce among the several states; contrary to the form of the statute in such case made and provided and against the peace and dignity of the United States.

SUMMONS FOR MID-CONTINENT PETROLEUM CORPORATION.

Filed December 31, 1936, H. C. Hale, Clerk.

The President of the United States of America: To the Marshal of the Northern District of Oklahoma—Greeting:

You Are Hereby Commanded, That you summon Mid-Continent Petroleum Corporation, a corporation, Tulsa, Oklahoma, late of your District, if it may be found therein, so that it be and appear within 20 days after service of this summons before the United States District Court for the Western District of Wisconsin, at Madison, Wisconsin, to answer to an indictment returned December 22, 1936, by the Grand Jury in and for the regular December, 1936 term of court for the aforesaid district.

And have you then and there this writ.

Witness, the Honorable Patrick T. Stone, United States District Judge at Madison, Wisconsin this 23rd day of December, A. D. 1936.

H. C. Hale,
Clerk.

(Seal)

26 MARSHAL'S RETURN.

(Corporation)

I certify that I received this writ on December 29, 1936, at Tulsa, Oklahoma, and served the same on the within-named defendant Mid-Continent Petroleum Corporation, a corporation at Tulsa, Oklahoma, on December 29, 1936, by delivering a true copy hereof to J. C. Denton, (Office) Vice-President of said corporation, the President, Treasurer, Secretary, General Manager, Managing Agent, or other higher officers not being found in my district and the said J. C. Denton upon whom service was made was the person having charge thereof at the usual place of business of said corporation.

Jno. P. Logan,
United States Marshal.

WARRANT FOR ROBERT W. McDOWELL.

Filed December 29, 1936, H. C. Hale, Clerk.

United States of America, }
Western District of Wisconsin. } ss.

The President of the United States of America, to the Marshal of the Western District of Wisconsin, Greeting:

We Command You to Take Robert W. McDowell, Mid-Continent Petroleum Corporation, Cosden Building, Tulsa, Oklahoma, if he may be found in your bailiwick and him safely keep, so that you have his body before the Judge of the District Court of the United States, within and for the Western District of Wisconsin, at the City of Madison, in said District, forthwith, to answer unto the United States of America, on an indictment for Violation of U. S. C., Title 15, Section 1 (26 Stat. 209) returned on the 22nd day of December, A. D. 1936, by the

Grand Jury of the United States within and for said Western District of Wisconsin.

28 Hereof fail not under the penalty of the law, and have then and there this writ.

Witness, the Honorable Patrick T. Stone, Judge of the District Court of the United States, for the Western District of Wisconsin, this 23d day of December A. D. 1936, and in the 161st year of the Independence of the United States of America.

Attest,
H. C. Hale,
(Seal) *Clerk.*

I hereby certify and return that on the day of , A. D. 19 by virtue of the within writ, I did arrest the within named and now have in custody.

Marshal.

By

Deputy.

United States of America,
Western District of Wisconsin. } ss.

I hereby certify and return that after due and diligent search and inquiry, I am unable to find the within named defendant within my district this 23rd day of December, 1936.

John M. Comeford,
United States Marshal.
By Will Touton,
Will Touton,
Chief Deputy.

SPECIAL APPEARANCE AND PLEA OF DEFENDANT, MID-CONTINENT PETROLEUM CORPORATION, TO THE COURT'S JURISDICTION AND VENUE.

Filed January 15, 1937, H. C. Hale, Clerk.

Comes now the Mid-Continent Petroleum Corporation, a Delaware corporation, one of the defendants in the above entitled cause, and, appearing specially and only for the purpose of this plea, and for no other purpose whatsoever, and without submitting or intending to submit itself to the jurisdiction and venue of this Court, alleges and states.

That this Court is without jurisdiction or venue to hear and determine the above entitled cause for the reason that the indictment herein fails to show that the alleged crime charged or attempted to be charged therein was committed in the Western District of Wisconsin, or in the State of Wisconsin; but, on the contrary, said indictment affirmatively shows that, if said alleged offense were committed, the same was committed not in, but outside, the Western District of Wisconsin and the State of Wisconsin. That by reason thereof said defendant, Mid-Continent Petroleum Corporation, is and was not indictable and cannot legally or constitutionally be tried in the Western District of Wisconsin, or in the State of Wisconsin, for the alleged crime charged or attempted to be charged in said in-
30 dictment. And that said indictment, the summons issued for this defendant on December 23, 1936, and the service of said summons made upon this defendant in the State of Oklahoma on December 29, 1936, pursuant to said indictment are and were null and void, and should be quashed, vacated, set aside and held for naught, for the reason that this Court does not have, by virtue of said indictment, and of said summons and service thereof, any jurisdiction or venue over either the person of said defendant or of the alleged crime charged or attempted to be charged in said indictment.

Wherefore, the defendant, Mid-Continent Petroleum

Corporation, respectfully moves and prays this Honorable Court that the indictment herein, and the said summons and service thereof, be quashed, vacated, set aside and held for naught, for the reason that this Court is without jurisdiction or venue to hear and determine this cause.

Dated this 12th day of January, 1937.

J. D. Denton,
R. H. Wills,
Attorneys for Defendant, Mid-Continent Petroleum Corporation.

JOINT AND SEVERAL SPECIAL APPEARANCE AND PLEA OF DEFENDANTS, JACOB FRANCE, ROBERT W. McDOWELL AND THOMAS FITZGERALD, TO THE COURT'S JURISDICTION AND VENUE.

Filed March 1, 1937, H. C. Hale, Clerk.

Come now Jacob France, Robert W. McDowell and Thomas Fitzgerald, defendants in the above entitled cause, and, appearing specially and only for the purpose of this plea, and for no other purpose whatsoever, and without submitting or intending to submit to the jurisdiction and venue of this Court, allege and state:

That this Court is without jurisdiction or venue to hear and determine the above entitled cause for the reason that the indictment herein fails to show that the alleged crime charged or attempted to be charged therein was committed in the Western District of Wisconsin, or in the State of Wisconsin; but, on the contrary, said indictment affirmatively shows that, if said alleged offenses were committed, the same was committed not in, but outside, the Western District of Wisconsin and the State of Wisconsin. That by reason thereof said defendants, Jacob France, Robert W. McDowell and Thomas Fitzgerald, are and were not indictable and cannot legally or constitutionally be tried in the Western District of Wisconsin, or in the State of Wisconsin, for the alleged crime charged or attempted

32 to be charged in said indictment. And that said indictment, the warrants issued thereunder for these defendants, and each of them, and the service of said warrants upon these defendants, and each of them, pursuant to said indictment, are and were null and void, and should be quashed, vacated, set aside and held for naught, for the reason that this Court does not have, by virtue of said indictment, and of said warrants and the service thereof, any venue or jurisdiction over the persons of said defendants, or either of them, or of the alleged crime charged or attempted to be charged in said indictment.

Wherefore the defendants, Jacob France, Robert W. McDowell and Thomas Fitzgerald, respectfully move and pray this Honorable Court that the indictment herein, and the said warrants and service thereof, be quashed, vacated, set aside and held for naught, for the reason that this Court is without jurisdiction or venue to hear and determine this cause.

Dated this 10th day of February, 1937.

MEMORANDUM OF ORDER OVERRULING PLEA.

On February 1, 1937, one of the days of the regular term of the above Court, at a hearing of the above-entitled cause before the Honorable Patrick T. Stone, Judge of said Court, in the United States court room in the City of Madison in said District, the special appearance and plea of defendant Mid-Continent Petroleum Corporation to the Court's jurisdiction and venue, which had been filed with the Clerk of said Court on January 15, 1937, came on for hearing, and, after consideration thereof, the Court, on February 1, 1937, made an order overruling said special appearance and plea, to which order the Court allowed an exception to the defendant Mid-Continent Petroleum Corporation.

MEMORANDUM OF MOTION AND ORDER THAT ARRAIGNMENTS BE SUBJECT TO DETERMINATION OF DEMURRERS AND MOTIONS.

On March 3, 1937, being one of the days of the regular term of the above Court, at a hearing of the above entitled cause before the Honorable Patrick T. Stone, Judge of the said Court, in the United States Court Room in the City of Madison in said District, counsel for the defendants made a motion that the arraignments of the individual defendants to the indictment in the above entitled cause and the entry of a plea of not guilty by each defendant on March 3, 1937, be subject to the determination by the Court of the demurrers to said indictment, motions for bills of particulars, and other motions presented to the Court on March 3, 1937.

DEMURRER.

Filed January 27, 1937, H. C. Hale, Clerk.

Come Now the hereunder named defendants, by their respective attorneys, and demur to the indictment heretofore returned and filed herein, and as grounds for their demurrer say that the said indictment is fatally insufficient and defective in substance and in form and especially in that:

1. The said indictment fails to allege that the defendants entered into the alleged combination and conspiracy within the Western District of Wisconsin, or that the defendants, or any of them, performed or did any act pursuant to the alleged combination and conspiracy within the Western District of Wisconsin.

2. The said indictment discloses on its face that a trial of the defendants thereunder in the Western District of Wisconsin would violate the right of the defendants under the Sixth Amendment of the Constitution of the United States to a trial by an impartial jury of the State and District wherein the crime, if any, alleged in the indictment was committed.

3. The said indictment fails to describe and to particu-
larize the alleged combination and conspiracy with
37 sufficient definiteness and certainty and so specifically
as to enable the defendants to prepare and to make
their defense thereto and to plead an acquittal or a conviction thereunder in bar to any other proceeding against them based on the same matters or things, or on any of them, on which said indictment is based.

4. The said indictment fails to describe and to particularize the alleged combination and conspiracy and the means agreed upon to accomplish the purposes thereof with sufficient definiteness and certainty and so specifically as to charge any offense against the United States and as to enable this Court, from an inspection of the said indictment, to ascertain whether, if carried into effect, the alleged means would cause a restraint of interstate trade and commerce within the prohibitions of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. Sec. 1).

5. The said indictment shows on its face that the conspiracy therein alleged did not and could not restrain interstate trade and commerce in gasoline within the meaning of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. § 1).

6. The said indictment fails to allege facts showing any violation by these defendants of any law of the United States.

7. The said indictment is insufficient and defective for other reasons apparent upon its face.

Wherefore, the hereunder named defendants ask that this demurrer be sustained and that the said indictment be dismissed.

DEMURRER.

Filed January 30, 1937, H. C. Hale, Clerk.

Comes Now the Standard Oil Company (Indiana) one of the defendants, by its attorneys, and demurs to the indictment heretofore returned and filed herein, and as grounds for its demurrer says that the said indictment is fatally insufficient and defective in substance and in form, and especially in that:

1. The said indictment fails to allege that the defendant entered into the alleged combination and conspiracy within the Western District of Wisconsin, or that the defendant performed or did any act pursuant to the alleged combination and conspiracy within the Western District of Wisconsin.

2. The said indictment discloses on its face that a trial of the defendant thereunder in the Western District of Wisconsin would violate the rights of the defendant under the Sixth Amendment of the Constitution of the United States to a trial by an impartial jury of the State and District wherein the crime, if any, alleged in the indictment was committed.

3. The said indictment fails to allege facts showing the commission by this defendant of any offense over which this Court has jurisdiction.

41 4. The said indictment fails to describe and to particularize the alleged combination and conspiracy with sufficient definiteness and certainty and so specifically as to enable the defendant to prepare and to make its defense thereto and to plead an acquittal or a conviction thereunder in bar to any other proceeding against it based on the same matters or things, or on any of them, on which said indictment is based.

5. The said indictment fails to describe and to particularize the alleged combination and conspiracy and the means agreed upon to accomplish the purposes thereof with sufficient definiteness and certainty and so specifically as to charge any offense against the United States and as to enable this Court, from an inspection of the said indictment, to ascertain whether, if carried into effect, the alleged means would cause a restraint of interstate trade and commerce within the prohibitions of Section 1 of the Act of

Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. Sec. 1).

6. The said indictment fails to allege facts showing any violation by this defendant of any law of the United States.

7. The indictment shows upon its face that this defendant did not and could not have had any connection with the alleged conspiracy therein attempted to be charged.

8. That the said indictment is fatally duplicitous.

9. That the said indictment is fatally duplicitous in that more than one contract, combination or conspiracy is attempted to be alleged within a single count.

42 10. The said indictment shows on its face that the conspiracy therein alleged did not and could not restrain interstate trade and commerce in gasoline within the meaning of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. Sec. 1).

11. The said indictment is insufficient and defective for other reasons apparent upon its face.

Wherefore, the defendant, Standard Oil Company (Indiana) asks that this demurrer be sustained and that the said indictment be dismissed.

SEPARATE DEMURRER OF DEFENDANT, MID-CONTINENT PETROLEUM CORPORATION.

Filed February 11, 1937, H. C. Hale, Clerk.

Comes now the defendant, Mid-Continent Petroleum Corporation, a Delaware corporation, by its attorneys, and demurs to the indictment filed herein on the following grounds, to-wit:

1. Said indictment does not charge said defendant with any crime or any offense under any law of the United States.

2. Said indictment fails to allege that the defendants named therein, or any two or more of them, formed or entered into the alleged combination and conspiracy within the Western District of Wisconsin or within the State of Wisconsin; or that said defendants, or any of them, and particularly this defendant, Mid-Continent Petroleum Corporation, performed or did any act pursuant to, tending to effect the object of or consummating the alleged combination and conspiracy, within the Western District of Wisconsin or within the State of Wisconsin.

3. Said indictment alleges facts which affirmatively

show that the trial of this defendant on the charge contained in said indictment, within the Western District of Wisconsin or within the State of Wisconsin, would vio-
45 late the rights of said defendant under the Sixth Amendment to the Constitution of the United States, which guarantees to said defendant the right to speedy and public trial, by an impartial jury of the State and District wherein the crime shall have been committed.

4. Said indictment alleges facts which affirmatively show that this Honorable Court does not thereunder have any venue or jurisdiction over this defendant, or any venue or jurisdiction to try said defendant for the alleged crime attempted to be charged in said indictment, by reason of Section 3, Article III of the Constitution of the United States, which provides that the trial of all crimes shall be held in the State where the said crime shall have been committed.

5. Said indictment does not inform this defendant of the nature and cause of the accusation against it, as required by the Sixth Amendment to the Constitution of the United States, in that said indictment fails to allege and describe the alleged combination and conspiracy attempted to be set out therein or the acts alleged to have been performed in pursuance of or to effect the object of said combination and conspiracy with sufficient definiteness and certainty as to enable this defendant to prepare and to make its defense thereto, or to plead an acquittal or a conviction thereunder in bar to a subsequent prosecution for the same alleged offense attempted to be charged in said indictment.

6. Said indictment does not inform this defendant of the nature and cause of the accusation against it with sufficient definiteness and certainty as to enable it to prepare and to make its defense thereto, or to plead an acquittal or a conviction thereunder in bar of a subsequent prosecution for the same offense attempted to be charged in said indictment, as required by the Sixth Amendment to the Constitution of the United States, for the following reasons, to-wit:

46 (a) Said indictment does not allege or state what were the artificially raised and fixed spot market tank car prices of gasoline which the indictment alleges that the defendants named therein "combined and conspired together for the purpose of artificially raising and fixing * * * in the aforementioned spot markets," and "have maintained said prices at artificially high and non-competitive levels and at levels agreed upon among them," and "have thereby intentionally increased and fixed the tank

car prices of gasoline contracted to be sold and sold in interstate commerce as aforesaid in the Mid-Western area (including the Western District of Wisconsin)"; and does not allege or state what were the artificially raised and fixed spot market tank car prices of gasoline which the indictment alleges were maintained by said defendants at artificially high and non-competitive levels, or what were the said artificially high and non-competitive levels at which said prices of gasoline were maintained; and does not allege or state which of the defendants have arbitrarily, by reason of the provisions of the prevailing form of jobber contracts described in paragraph 11 of the indictment, exacted large sums of money from thousands of jobbers in the said Mid-Western area (including the Western District of Wisconsin), and in turn have intentionally raised the general level of retail prices prevailing in said Mid-Western area (including the Western District of Wisconsin); and does not give the names of the jobbers, or any of them, from whom it is alleged large sums of money were exacted, or state the time and place and other facts and circumstances necessary or sufficient to identify said jobber transactions; and does not state what was the level of
47 retail prices of gasoline before the formation of said conspiracy as charged, nor the general level to which said retail prices were raised by the consummation of said conspiracy.

(b) Said indictment does not allege or state the names of the corporate or individual defendants who performed each and all of the acts which are alleged to have been the manner and means of effectuating said combination and conspiracy; and does not identify or connect said corporate and individual defendants, and each of them, with each and all of said alleged acts which were performed by each of them respectively; and does not allege or state the time when nor the place where each of said acts were performed by the respective defendants, corporate or individual, or other necessary and material facts and circumstances relating to, connected with and identifying each of said acts relied upon to effectuate or consummate said combination and conspiracy.

(c) Said indictment does not allege and state the material facts relating to and describing the allegedly "large and increased purchases of gasoline in spot transactions" made by the defendants, Sinclair, Gulf, Texas, Pure, Continental, Tide Water, Tide Water Oil, Cities Service, Cities Service Export and Louisiana Oil from the independent

refiners located in the East Texas field; and does not allege the names of the independent refiners of gasoline located in the East Texas field from which each of said large and increased purchases of gasoline in spot transactions were made, nor the time when nor the place where each of said large and increased purchases were made, or the particular corporate defendant which made each of
48 such purchases, or the amount of each of such purchases or the price thereof; and does not allege other material facts relating to, connected with and describing each of said purchases.

(d) Said indictment does not allege the names of the defendants herein, either corporate or individual, and each of them, who it is alleged had knowledge of and approved the formation of the East Texas Refiners Marketing Association in February, 1935, for the purpose of selling and facilitating the sale of gasoline to the defendant major oil companies; and does not allege which of such purchases of gasoline by and through said East Texas Refiners Marketing Association were made, as alleged, at the instigation and under the supervision and direction of defendants Arnott and Carnes with one Neil Buckley, employee of Cities Service Export, acting in a liaison capacity between said Association and defendant major oil companies; and does not allege the name or the names of each of said purchasers, the time when nor the place where each of said purchases were made, the amount of such purchases or the price thereof, or other material facts relating to and describing each of said purchases; and does not allege or state the prices at which such purchases of gasoline were made, and which prices the indictment expressly alleges were "uniform, high, arbitrary and non-competitive prices, and from time to time progressively increased prices"; and said indictment does not allege or state facts sufficient to identify or describe the various orders for gasoline received from defendant major oil companies, which the indictment charges one Robert N. Cline, as Sec-
49 retary and Manager of said East Texas Refiners Association, with the approval of the said Buckley, allotted among the members of said Association; and does not allege or state what was the amount of gasoline produced by the members of said East Texas Refiners Association, or what was the percentage or ratio of gasoline purchased from said independent refiners in relation to the total production of gasoline in the United States or in the East Texas and the Mid-Continent fields; and does not al-

lege and state facts and circumstances necessary to identify and describe each and every instance or transaction when said independent refiners, and each of them, as the indictment charges, at the instance of Arnott and the aforesaid Buckley, curtailed their production of gasoline.

(e) Said indictment does not allege facts sufficient to describe or to identify each and all of the large and increased purchases of gasoline made by the defendants, Standard of Indiana, Socony-Vacuum, Wadhams, Shell, Empire, Pure, Phillips, Mid-Continent, Continental, Skelly, Barnsdall, Globe and Deep Rock, which the indictment charges were made from many of the independent refiners located in the Mid-Continent field, nor the names of said independent refiners in said Mid-Continent field from which each of such purchases were made, nor the time when or the place where each of such purchases took place, the amount of gasoline purchased, the prices paid, and other material facts; and does not allege which of said purchases of gasoline from the independent refiners in the Mid-Continent field and from members of the Western Petroleum Refiners Association were made at the instigation and under the supervision and direction of Arnott, Ashton,
50 McDowell, Tuttle, Bourque and one Paul Jacobi, an
employee of Wadhams; and does not allege which of said purchases of gasoline by said defendants, and each of them, was made from time to time on the allotment or allocation to said defendants by the defendants, McDowell, Tuttle and Bourque and the aforesaid Jacobi; and does not allege when and where the monthly meetings of representatives of said defendant major oil companies were held, at which meetings, the indictment charges, said independent refiners were from time to time assigned to the defendant major oil companies participating in said Mid-Continent buying program; and does not allege and state the names of each of the independent refiners named in paragraph 22 of the indictment who were from time to time assigned to the defendant major oil companies participating in said buying program as "dancing partners," and the name of the major oil company to which each of said independent refiners was assigned, as alleged; and does not allege and state the purchase prices at which each of such purchases or sales were made, which the indictment charges to have been made at "uniform, high, arbitrary and non-competitive prices, and from time to time at progressively increased prices as agreed upon by said defendant major oil companies"; and does not allege what the

percentage or ratio of the quantity of gasoline purchased by said defendant major oil companies from said independent refiners was or bore to the total quantity of gasoline produced by said independent refiners or in said Mid-Continent area or in the United States; and does not allege which of said independent refiners have, at the instance of defendants Arnott, McDowell, Tuttle and Bourque, curtailed their production of gasoline; and when and where such curtailment took place, and the amount of and other material facts pertaining to such curtailment.

51 (f) Said indictment does not allege or state any facts or circumstances to support the conclusion of the pleader contained therein that "said defendants have been the chief agencies and instrumentalities through which the wrongfully and artificially raised and fixed prices for gasoline paid by the major oil companies as aforesaid have affected the prices paid by jobbers, retail dealers, and consumers for gasoline in the Mid-Western area, including the Western Division of Wisconsin."

(g) Said indictment does not allege and state the names of the defendant major oil companies which, as alleged, have contracted to sell and have sold and have delivered large quantities of gasoline in tank car lots to jobbers within said Western District of Wisconsin "at artificially raised and fixed and non-competitive prices"; and does not allege and state the time when, the place where, the persons to whom, or the prices at which, such sales were made, and other material facts necessary to describe and identify said sales; and does not allege and state the names of the major oil companies which, as alleged in said indictment, have solicited and taken contracts and orders for sales of gasoline in tank car lots to jobbers within said Western District of Wisconsin; and does not allege and state the time when or the place where such contracts and orders were solicited and taken, or the persons from whom such orders were taken, or the amount or the prices of such sales, and other material facts necessary to describe and identify said sales; and does not allege and state the name of the defendant major oil companies which, the indictment charges, have arbitrarily exacted from jobbers in the Western District of Wisconsin large sums of money, or the
52 names of such jobbers from whom large sums of money have been exacted, or the time when or the place where such exactions took place; and does not allege and state which of the defendants have required consumers in the said Western District of Wisconsin to pay artificially in-

creased prices for gasoline, or the names of the consumers in said District who have been required to pay said artificially increased prices for gasoline, or the time when or the place where such alleged transactions took place, and other material facts necessary to describe and identify the same,—all of which acts, the indictment alleges, are relied upon to give the United States District Court for the Western District of Wisconsin jurisdiction and venue to try said defendants, and each of them, on the alleged crime contained in said indictment.

7. Said indictment fails to allege facts showing any violation by this defendant of any law of the United States, and particularly of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act, in that the facts alleged in said indictment and relied upon to effect the object of said combination and conspiracy show on their face that said acts did not and could not actually or legally have the effect, as charged in said indictment, of consummating said conspiracy or of artificially 9 raising and fixing the spot market tank car prices of gasoline or of maintaining said prices at artificially high and non-competitive levels.

8. Said indictment alleges no facts or acts which constitute any violation of the laws of the United States, and particularly of said Section 1 of the Act of Congress of July 2, 1890, in that the two alleged buying programs, the East Texas buying program and the Mid-Continent buying program, which the indictment charges were the manner and means of effectuating the object of the con-53 spiracy charged therein, were wholly incapable of effectuating or consummating the object of the conspiracy as charged in the indictment.

9. Said indictment alleges no facts or acts which constitute a violation of the laws of the United States, and particularly of Section 1 of the Act of Congress of July 2, 1890, in that said indictment fails to allege and state what were the alleged artificially fixed and raised spot market tank car prices of gasoline created or brought about by the alleged conspiracy and acts of said defendants, and each of them; and, therefore, the allegations or recitals contained in said indictment charging that the said spot market tank car prices of gasoline were "artificially raised and fixed," were maintained at "artificially high and non-competitive levels" and at levels agreed upon among the defendants, and at "uniform, high and at times progressively increased prices," were and are mere conclusions of the

pleader, and are insufficient in law and in fact to show or charge a violation of Section 1 of said Act of Congress of July 2, 1890, or that the alleged conspiracy as charged in the indictment is one in restraint of trade or commerce among the States.

Wherefore, defendant, Mid-Continent Petroleum Corporation, prays that its demurrer to the indictment be sustained and that the indictment herein be quashed, vacated and set aside.

J. C. Denton,
R. H. Wills,
Attorneys for Defendant, Mid-Continent Petroleum Corporation.

ORDER OVERRULING DEMURRERS TO INDICTMENT AND OTHER PLEADINGS IN THE NATURE OF DEMURRERS.

Filed March 31, 1937, H. C. Hale, Clerk.

The defendants hereinafter named have demurred to the indictment in the above entitled cause for the reasons set forth in said demurrers filed herein, and the Court, having heard the arguments of counsel and considered the briefs submitted, is of the opinion that the indictment meets the legal test required under numerous decisions of the United States Supreme Court, in that it sets forth the facts which constitute the alleged offense so distinctly and so clearly as to advise the defendants of the charge they are to meet; so fully as to give them a fair opportunity to prepare their defense; so particularly as to enable them and each of them to avail himself of a conviction or acquittal in defense of another prosecution for the same crime; and so clearly that the Court, on examination of the indictment, may be able to determine whether or not, under the law, the facts therein stated are sufficient to support a conviction. The indictment charges the defendants with commission of acts which by a law of the United States are made criminal and punishable. This offense is charged in the indictment with precision and certainty, and every ingredient of which it is composed is clearly set forth.

55 It Is Therefore Ordered, Adjudged and Decreed, that the demurrers of the defendants, Standard Oil Company (Indiana); Socony-Vacuum Oil Company, Inc.; Wadhams Oil Company; Cities Service Company; Cities Service Export Oil Company; Empire Oil and Refining Company; Louisiana Oil Refining Corporation; Continental Oil Company; The Pure Oil Company; Shell Petroleum Corporation; Sinclair Refining Company; The Texas Company; Phillips Petroleum Company; Skelly Oil Company; Barnsdall Refining Corporation; The Globe Oil and Refining Company (Oklahoma); The Globe Oil and Refining Company (Illinois); The Globe Oil and Refining Company (Kansas); Deep Rock Oil Corporation; Tide Water Associated Oil Company; Mid-Continent Petroleum Corporation; The Journal of Commerce Publishing Company; W. C. Platt Company; National Petroleum News; Platt's Oilgram; Edward G. Seubert; Allan Jackson; Edward J. Bullock; Ira A. Smith; John A. Brown; Charles L. Jones; Charles E. Arnott; H. T. Ashton; A. G. Maguire; R. R. Irwin; Bryan S. Reid; Frank R. Coates; Harry D. Frueauff; H. E. Brandli; O. J. Tuttle; D. W. Harris; John A. Welch; Dan Moran; Harry J. Kennedy; L. T. Cramer; Edward Karstedt; Henry M. Dawes; C. B. Watson; R. H. McElroy, Jr.; Dewey K. Chamberlain; Alexander Fraser; P. E. Lakin; J. W. Carnes; W. S. S. Rodgers; R. D. Cottingham; H. W. Dodge; Edward L. Shea; Noel Robinson; J. W. Warner; R. O. Audrain; Jacob France; Robert W. McDowell; Thomas Fitzgerald; Frank Phillips; Fred L. Koopman; A. M. Hughes; H. A. Gardner; W. G. Skelly; James Nagle; E. B. Reeser; I. A. O'Shaughnessy; Keith Fanshier; Warren C. Platt; Clyde M. Boggs; Arthur V. Bourque; and P. C. Scullin, be and the same are hereby overruled.

For the same reasons as hereinbefore set forth, It Is
Ordered, Adjudged and Decreed, that the motions to
56 quash the indictment herein filed by the Gulf Oil Corporation,
the Gulf Refining Company, and other defendants
above named, be and the same are hereby denied.

It Is Further Ordered, Adjudged and Decreed, that the defendants who have not heretofore entered a plea of not guilty to this indictment may have until April 16th next to enter a plea herein.

To all of which the defendants may have an exception.

Dated at Madison, Wisconsin, this 31st day of March, A. D. 1937.

MEMORANDUM OF ARRAIGNMENTS OF CORPORATE DEFENDANTS.

On February 1, 1937, being one of the days of the regular term of the above Court, at a hearing of the above entitled cause before the Honorable Patrick T. Stone, Judge of the said Court, in the United States Court Room in the City of Madison in said District, the defendants Gulf Oil Company and Gulf Refining Company each was arraigned on the indictment in the above entitled cause, and through their attorney each waived the reading of the said indictment and each entered a plea of not guilty to said indictment.

On March 4, 1937, being one of the days of the regular term of the above Court, at a hearing of the above entitled cause before the Honorable Patrick T. Stone, Judge of said Court, in the United States Court Room in the City of Madison in said District, the defendants W. C. Platt Company and The National Petroleum Publishing Company each was arraigned on the indictment in the above entitled cause, and, through their attorney, each waived the reading of the said indictment and each entered a plea of not guilty to said indictment.

The defendants Standard Oil Company (Indiana),
Socony-Vacuum Oil Company, Inc., Cities Service Com-
pany, Continental Oil Company, The Pure Oil Com-
58 pany, Shell Petroleum Corporation, Sinclair Refining
Company, The Texas Company, Tide Water Associ-
ated Oil Company, Mid-Continent Petroleum Corporation,
Phillips Petroleum Company, Skelly Oil Company, Barns-
dall Refining Corporation, The Globe Oil & Refining Com-
pany (Oklahoma), The Globe Oil & Refining Company
(Illinois), The Globe Oil & Refining Company (Kansas),
Deep Rock Oil Corporation, Cities Service Export Oil
Company, Empire Oil and Refining Company, Louisiana

Oil Refining Corporation, Wadhams Oil Company, Tide Water Oil Company, and The Journal of Commerce Publishing Company were not arraigned in the above entitled cause and did not enter any plea to the indictment therein. Said defendants waived arraignment in the above entitled cause and did not enter any plea to the indictment therein, but said defendants, except the Tide Water Oil Company, went to trial on said indictment.

MEMORANDUM OF ARRAIGNMENTS OF INDIVIDUAL DEFENDANTS.

At hearings of the above entitled cause before the Honorable Patrick T. Stone, Judge of the above named Court, in the United States Court Room in the City of Madison in the above named District, on the dates stated below, each being a day of the regular term of said Court, the following proceedings occurred, constituting all of the arraignments of individual defendants in the said cause:

On March 3, 1937, the defendants Frank R. Coates, Harry D. Frueauff, H. E. Brandli, O. J. Tuttle, John A. Welch, Harry J. Kennedy, L. T. Cramer, Edward Karstadt, Alexander Fraser, P. E. Lakin, Robert W. McDowell, Thomas Fitzgerald, Frank Phillips, A. M. Hughes, H. A. Gardner, W. G. Skelly, James Nagle, E. B. Reeser, Warren C. Platt, Clyde M. Boggs, Arthur V. Bourque, Fred L. Koopman, P. C. Scullin, R. O. Audrain, Noel Robinson, Edward L. Shea, J. W. Warner, Edward J. Bullock, Ira A. Smith, Charles L. Jones, Charles E. Arnott, H. T. Ashton, A. G. Maguire, R. R. Irwin, Bryan S. Reid, Dan Moran, Henry M. Dawes, C. B. Watson, R. H. McElroy, Jr., Dewey K. Chamberlain, W. S. S. Rodgers, [illegible] D. Cottingham, H. W. Dodge, Keith Fanshier, and J. W. Carnes, being present in Court, each was arraigned on the indictment in the above entitled cause, each
60 waived the reading of said indictment, and each entered thereto a plea of not guilty.

On March 4, 1937, the defendant D. W. Harris was arraigned on the indictment in the above entitled cause, and, not being present in Court but being represented by his attorney, waived the reading of said indictment, through his attorney, and entered a plea of not guilty to said indictment.

On April 15, 1937, the defendants Edward G. Seubert, Allan Jackson and Jacob France, being present in Court, were each arraigned on the indictment in the above entitled cause, each waived the reading of said indictment, and each entered thereto a plea of not guilty.

On April 20, 1937, the defendant I. A. O'Shaughnessy, being present in Court, was arraigned on the indictment in the above entitled cause, waived the reading of said indictment, and entered thereto a plea of not guilty.

On April 21, 1937, the defendant John A. Brown, being present in Court, was arraigned on the indictment in the above entitled cause, waived the reading of said indictment, and entered thereto a plea of not guilty.

The defendants J. F. Drake, William V. Hartman, H. E. Meyer, O. H. Carlisle, and Bernard L. Majewski, were not arraigned at any time on the indictment of the above entitled cause, and did not enter a plea of guilty or not guilty to said indictment, and were not tried on said indictment.

ORDER GRANTING MOTION OF TIDE WATER OIL COMPANY.

Filed June 3, 1937, H. C. Hale, Clerk.

The motion of Tide Water Oil Company, a defendant named in the indictment in the above entitled action, that the summons herein dated December 23, 1936 and addressed to the Tide Water Oil Company be quashed and that the return on said summons be vacated, and that the indictment be dismissed as to said Tide Water Oil Company, on the ground that prior to the date of the indictment herein, on September 4, 1936, the said Tide Water Oil Company was dissolved pursuant to and in accordance with the laws of the State of New Jersey, having come on to be heard at the present term of the above named Court, and after hearing the arguments of counsel and having considered the briefs submitted, and being fully advised in the premises,

It Is Ordered, Adjudged and Decreed that the said motion of the Tide Water Oil Company be and the same is hereby granted, and that the summons be quashed and the indictment be dismissed as to the Tide Water Oil Company, without costs to the United States of America.

Dated this 3rd day of June, A. D. 1937.

MEMORANDUM OF DEFENDANTS NOT BROUGHT TO TRIAL.

On October 4, 1937, being one of the days of the regular term of the above Court, at a hearing of the above-entitled cause before the Honorable Patrick T. Stone, Judge of said Court, in the United States Court Room in the City of Madison in said District, counsel for the Government submitted to the Court for its approval, a list of defendants in the above-entitled cause who were not called for the trial of said cause, and after considering said list, the Court, on October 4, 1937, made an order that the record show that the defendants John A. Brown, Frank R. Coates, D. W. Harris, J. F. Drake, William V. Hartmann, H. C. Meyer, O. H. Carlisle, Bernard L. Majewski, Keith Fanshier, and Edward Karstedt were not present and were not being tried at the trial of the above-entitled cause beginning on October 4, 1937.

* * (Caption—11365) * *

MOTION TO QUASH.

Filed October 4, 1937, H. C. Hale, Clerk.

Come Now the hereunder named defendants, by their respective attorneys, and move to quash the indictment heretofore returned and filed herein, and as grounds for their motion say that the said indictment is fatally insufficient and defective in substance and in form and especially in that:

1. The said indictment fails to allege that the defendants

in the Western District of Wisconsin, or that the defendants, or any of them, performed or did any act pursuant to the alleged combination and conspiracy within the Western District of Wisconsin.

2. The said indictment discloses on its face that a trial of the defendants thereunder in the Western District of Wisconsin would violate the right of the defendants under the Sixth Amendment of the Constitution of the United States to a trial by an impartial jury of the State and District wherein the crime, if any, alleged in the indictment was committed.

3. The said indictment fails to describe and to particularize the alleged combination and conspiracy with 64 sufficient definiteness and certainty and so specifically as to enable the defendants to prepare and to make their defense thereto and to plead an acquittal or a conviction thereunder in bar to any other proceeding against them based on the same matters or things, or on any of them, on which said indictment is based.

4. The said indictment fails to describe and to particularize the alleged combination and conspiracy and the means agreed upon to accomplish the purposes thereof with sufficient definiteness and certainty and so specifically as to charge any offense against the United States and as to enable this Court, from an inspection of the said indictment, to ascertain whether, if carried into effect, the alleged means would cause a restraint of interstate trade and commerce within the prohibitions of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. Sec. 1).

5. The said indictment shows on its face that the conspiracy therein alleged did not and could not restrain interstate trade and commerce in gasoline within the meaning of Section 1 of the Act of Congress of July 2, 1890, known as the Sherman Anti-Trust Act. (15 U. S. C. A. Sec. 1).

6. The said indictment fails to allege facts showing any violation by these defendants of any law of the United States.

7. The said indictment is insufficient and defective for other reasons apparent upon its face.

Wherefore, the hereunder named defendants ask that this motion be granted and that the said indictment be quashed.

MEMORANDUM OF ORDER OVERRULING MOTION TO QUASH.

On October 4, 1937, being one of the days of the regular term of the above Court, at a hearing of the above-entitled cause before the Honorable Patrick T. Stone, Judge of said Court, in the United States Court Room in the City of Madison in said District, the motion of the defendants to quash the indictment which had been filed with the Clerk of said Court on October 4, 1937, came on for hearing, and after consideration thereof, the Court, on October 4, 1937, made an order overruling said motion to quash the indictment, to which order the Court allowed an exception to the defendants making said motion.

Walter Barnes,
R. L. Foster,
Attorneys for Phillips Petroleum Company, Frank Phillips, Fred L. Koopman, A. M. Hughes, and H. A. Gardner.

W. P. Z. German,
A. F. Molony,
Cliff V. Peery,
Attorneys for Skelly Oil Company, W. G. Skelly, and James Nagle.

William Dewey Loucks,
Glen W. Stephens,
Attorneys for Barnsdall Refining Corporation and E. B. Reeser.

Bethuel M. Webster,
Attorney for Tide Water Oil Company, Tide Water Associated Oil Company, Edward L. Shea, Noel Robinson, J. W. Warner, and R. O. Andrain.

W. L. Cunningham,
Attorney for Clyde M. Boggs.

H. P. Reynolds,
Attorney for Deep Rock Oil Corporation and Bernard L. Majewski.

168 **Indictment:**

The above-entitled action was commenced by the Grand Jury returning into Court and by filing with the Clerk of the above-entitled Court, on December 22, 1936, the Indictment in the above-entitled cause.

(Said Indictment is printed ante, pages 2-18 of the Record.)

Pleas to the Jurisdiction and Venue:

On January 15, 1937, the defendant Mid-Continent Petroleum Corporation, by its attorneys, appeared specially and filed with the Clerk of the said Court its Plea to the Court's Jurisdiction and Venue in this cause, and moved to quash the Summons served upon it.

(Said Plea to Court's Jurisdiction and Venue is printed ante, pages 21-22 of the Record; and said Summons is printed ante, pages 18-19 of the Record.)

On February 1, 1937, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order Overruling the Plea of the defendant Mid-Continent Petroleum Corporation to the Court's Jurisdiction and Venue in this cause, and allowed an exception.

(Memorandum of said Order is printed ante, page 23 of the Record.)

169 On March 1, 1937, the defendants Jacob France, Robert W. McDowell, and Thomas Fitzgerald jointly and severally, by their attorneys, appeared specially and filed with the Clerk of the above Court their Plea to the Court's Jurisdiction and Venue in this cause and moved to quash the Warrants served upon them.

(Said Plea to Court's Jurisdiction and Venue is printed ante, pages 22-23 of the Record, and said Warrant issued for the defendant Robert W. McDowell is printed ante, pages 19-20 of the Record.)

On March 3, 1937, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order overruling the Plea of the defendants Jacob France, Robert W. McDowell, and Thomas Fitzgerald to the Court's Jurisdiction and Venue in this cause, and allowed an exception.

(Memorandum of said Order is printed ante, page 24 of the Record.)

Arraignments:

On February 1, 1937, the defendants Gulf Oil Corporation and Gulf Refining Company, and on March 4, 1937, the defendants The National Petroleum Publishing Company and W. C. Platt Company each was arraigned on the Indictment in this cause, and each entered a plea
170 of not guilty to the said Indictment. The other corporate defendants were not arraigned and did not enter any plea to the Indictment herein, but waived arraignment.

(Memorandum of said Arraignments of Corporate Defendants is printed ante, pages 39-40 of the Record.)

On March 3, 1937, at a hearing of the above cause, counsel for the defendants made a Motion that the arraignments of the individual defendants to the Indictment in this cause and the entry of a plea of not guilty by each defendant be subject to the determination by the said Court of the Demurrers to said Indictment, Motions for Bills of Particulars and other Motions presented to the Court on March 3, 1937.

(Memorandum of said Motion is printed ante, page 24 of the Record.)

On the same date, March 3, 1937, at a hearing of the above cause, Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order granting the said Motion.

On March 3, March 4, April 15, April 20, and April 21, 1937, each of the individual defendants named in the Indictment in this cause was arraigned on said Indictment and pleaded not guilty, except that the defendants J. F. Drake, William V. Hartman, H. E. Meyer, O. H. Car-
171 lisle, and Bernard L. Majewski were not arraigned at any time, and were not tried on said Indictment.

(Memorandum of said Arraignments of individual defendants is printed ante, pages 40-41 of the Record.)

Demurrers:

On January 27, 1937, the corporate defendants Socony-Vacuum Oil Company, Inc., Cities Service Company, Continental Oil Company, The Pure Oil Company, Shell Petroleum Corporation, Sinclair Refining Company, The Texas Company, Tide Water Associated Oil Company, Phillips Petroleum Company, Skelly Oil Company, Barnsdall Refining Corporation, The Globe Oil & Refining Company (Oklahoma), The Globe Oil & Refining Company (Kansas), The Globe Oil & Refining Company (Illinois), Deep Rock Oil Corporation, Cities Service Export Oil Company, Empire Oil and Refining Company, Louisiana Oil Refining Corporation, and Wadhams Oil Company, by their attorneys, filed their Demurrer to the Indictment in this cause with the Clerk of the above Court.

(Said Demurrer is printed ante, pages 25-27 of the Record.)

On January 30, 1937, the corporate defendant Standard Oil Company (Indiana), by its attorney, filed its Demurrer to the Indictment in this cause with the Clerk of the above Court.

172 (Said Demurrer is printed ante, pages 28-29 of the Record.)

On February 1, 1937, Warren C. Platt, W. C. Platt Company, The National Petroleum Publishing Company, and The Journal of Commerce Publishing Company, by their attorneys, filed their Demurrers to the Indictment in this cause with the Clerk of the above Court.

On February 11, 1937, the defendant Mid-Continent Petroleum Corporation, by its attorney, filed its Demurrer to the Indictment in this cause with the Clerk of the above Court.

(Said Demurrer is printed ante, pages 30-37 of the Record.)

On March 3, 1937, at a hearing of this cause, before the Honorable Patrick T. Stone, Judge of the above Court, the defendants, Charles E. Arnott, H. T. Ashton, P. E. Lakin, Robert W. McDowell, Edward G. Seubert, Allan Jackson, Edward J. Bullock, Ira A. Smith, John A. Brown, Charles L. Jones, A. G. Maguire, R. R. Irwin, Bryan S. Reid, Frank R. Coates, Harry D. Frueauff, H. E. Brandli, O. J. Tuttle, D. W. Harris, John A. Welch, Dan Moran, Harry J. Kennedy, L. T. Cramer, Edward Karstedt, Henry M. Dawes, C. B. Watson, R. H. McElroy, Jr., Dewey K. Chamberlain, Alexander Fraser, J. W. Carnes, W. S. S. Rodgers, R. C. Cottingham, H. W. 173 Dodge, Edward L. Shea, Noel Robinson, J. W. Warner, R. O. Audrain, Jacob France, Thomas Fitzgerald, Frank Phillips, Fred L. Koopman, A. M. Hughes, H. A. Gardner, W. G. Skelly, James Nagle, E. B. Reeser, and I. A. O'Shaughnessy, by their attorneys, made a Motion that they be made parties to the Demurrer, filed on January 30, 1937, by the defendant Standard Oil Company (Indiana). Thereafter, on the same date, March 3, 1937 (and not on February 1, 1937, as stated in the "Memorandum of Order Allowing Individual Defendants to Join in Demurrer Filed by Standard Oil Company (Indiana)", appearing at page 29 of the Record), at a hearing of this cause, the Honorable Patrick T. Stone, Judge of said Court, granted said Motion, and made and entered an Order allowing the individual defendants to join in the said Demurrer to the Indictment in this cause filed by Standard Oil Company (Indiana).

(Memorandum of said Order is printed ante, pages 29-30 of the Record.)

On March 31, 1937, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order overruling the above-mentioned Demurrers and other pleadings in the nature of demurrers to the Indictment in this cause, and allowed an exception to the defendants.

(Said Order is printed ante, pages 37-39 of the Record.)

174 **Statements of Counsel During Arguments on Demurrers:**

On March 3, 1937, during the hearing of the arguments on the above-mentioned Demurrers in the above Court before the Honorable Patrick T. Stone, Judge of said Court, the following occurred:

(1) In the course of the argument by Samuel T. Lawton, attorney for the defendants, The Journal of Commerce Publishing Company and Keith Fanshier, in support of the Demurrers filed by such defendants, the following colloquy occurred:

> "General Lawton: Now, in the first place, so far as the participation of the journals in the conspiracy is concerned, the oil companies get the benefit of their own conspiracy without any further conspiring with the journals, the conspiracy that ultimately as the Government contends, raised the prices of the spot jobbers tank car purchases, and, knowing the journals will publish that the next morning, the good is automatically accomplished. They do not have to ask if the Journal will publish that price the next morning. They know the Journals will do that. All the journals will do that in the regular course of their business. So I think it is important to keep 175 in mind that the cooperation of these journals is absolutely unnecessary, that the oil companies will get the benefit of their conspiracy; it works automatically.
>
> • • • • • •
>
> "The Court: It is quite possible that the Journal might be an innocent victim of the conspiracy.
>
> "Mr. Lewin: Not under the way this indictment alleges."

(2) The colloquy set forth below occurred between Samuel T. Lawton, attorney for the defendants The Journal of Commerce Publishing Company and Keith Fanshier, and John Henry Lewin, Special Assistant to the Attorney General of the United States, attorney for plaintiff:

> "Gen. Lawton: Here is what you say: The Journal of Commerce purporting to publish tank-car prices to jobbers, and intending they should be relied upon by the jobbers, instead of doing that they substituted a false price for that which is the majors'

price to the independents, and I believe I will show before I am through that those two are the same.

176 "Mr. Lewin: Is it your thought that you cannot help along the conspiracy by doing a fraudulent act?

"Gen. Lawton: Oh, no, but you are charging us with doing something that is not related to the conspiracy of the oil companies.

"Mr. Lewin: You are the chief instrumentality.

"Gen. Lawton: No.

"Mr. Lewin: If it had not been for your fraud the whole thing would have broken down.

"Gen. Lawton: No.

"The Court: Let's stick to the argument.

"Gen. Lawton: Had we published the true jobber price you would have the benefit of the conspiracy right there.

• • • • • •

"Mr. Lewin: They not only published it; they published it knowing the possibilities.

"Gen. Lawton: Yes.

"Mr. Lewin: They published it as part of the participation.

"Gen. Lawton: That is a conclusion.

"Mr. Lewin: They published it as part of the agency. You say they were the only agency for effecting the thing.

177 "Gen. Lawton: No.

"Mr. Lewin: And they published it with an idea which they well knew might have destroyed the link in what they did in the East Texas field and what they accomplished in Wisconsin, and you helped them along.

"Gen. Lawton: Why don't you say so?

"Mr. Lewin: It does say so."

• • • • • •

(3) In his argument in opposition to said Demurrers, Hammond E. Chaffetz, Special Assistant to the Attorney-General of the United States, attorney for the plaintiff, stated:

"Our proposition to your Honor is going to be that the indictment can mean only one thing, and that is that it charges a combination and conspiracy to raise the spot prices; that the raising of the spot prices was only the immediate object of the conspiracy; it couldn't have been the real end and aim and ultimate objective; and that by so doing, the defendants intended to and did raise the price of gasoline in this area; that that, the raising of the price to the 178 jobbers and to the consumers in this area, was the real ultimate purpose of the whole conspiracy."

(4) Later in the course of Mr Chaffetz' argument in opposition to said Demurrers, the following colloquy occurred:

"Col. Donovan: For the Court, would you mind asking—would you mind my asking you this?

"Is it your contention that it is stated anywhere in this paragraph, or anywhere in the indictment, that the defendants agreed among themselves that they would sell to the jobbers only at the average spot market price that you have described?

"Mr. Chaffetz: That question touches upon the question that Colonel Donovan propounded in the course of his argument yesterday, and I had intended to deal with that specifically.

"I will state now that this paragraph does not intend to charge, and does not charge that the defendants agreed together to do business only on the basis of this contract. The contract, the substance of it, is set forth in Paragraph 11.

"Col. Donovan: Thank you very much. You won't mind if we take up also whether you think 179 that charge is made here, Mr. Chaffetz?

"Mr. Chaffetz: No, I will stand by that. I don't think that charge is made in this indictment.

"Col. Donovan: It is not made in this indictment?

"Mr. Chaffetz: Not in this indictment, that is right.

"Mr. Lewin: It is charged as an overt act later—not the fact that they made the uniform pattern, but that they sold on that basis.

"Mr. Chaffetz: I stand on my statement, which is that this indictment nowhere charges that the defendants agreed to do business only on this contract, the substance of which is set forth in Paragraph 11.

"Col. Donovan: But the answer to my question is that it is not your contention that they agreed among themselves to sell only at the spot market price which you have described in Paragraph 11?

"Mr. Chaffetz: I think I will stand by the response that I made.

"Col. Donovan: Yes. I just wanted to be sure. Thank you very much."

180 (5) In his argument in opposition to said Demurrers, Mr. Lewin made the following statements:

"Mr. Lewin: For a long time contracts that the defendant major oil companies make with jobbers have followed a certain uniform pattern.

• • • • • • •

"It required that they make contracts in their sales to jobbers, or continue to make contracts in their sales to jobbers, where the contract price to the jobber would be based on the spot market.

"Now, if the spot market is uninfluenced, small though it is, it might be a fair measure of the contract price. If it were free, open markets, arm's length transactions between a willing seller and a willing buyer, then it might be regarded, not a satisfactory measure of what the right contract price ought to be, but it might be regarded as one type of proper measure. But think how terrible it would be if instead of that measure being a free, open contract, transactions, measures, it is a spot price determined by fiat of interests controlling 85 per cent of all the 181 business. Then think what you have! Then you have contracts, innocent on their face, really meaning that the contract price shall be what the major companies, putting their heads together, say that it shall be.

"Now, that was too raw a way to do it, and this indictment shows how the ingenious way was selected and followed. If they could raise the spot market then they would be automatically given the opportunity by further overt acts to translate that raised spot market price, in which they should not be interested at all because they did not sell on the spot market, and they make gasoline for sale, or if they are interested in it they ought to be interested in it very casually, and they certainly ought to have kept their hands off of it if they kept their contract with their own jobbers—if they can get that price, if they can get the trade journals to cooperate with them, because that is a necessary element too—they might have raised that price ever so high; and if it had not been quoted in the Chicago Journal of Commerce and Platt's Oilgram as the arm's length price, then the contract price based on what is carried in Platt's 182 Oilgram and the Chicago Journal of Commerce would not rise.

"So a necessary element in this ingenious scheme was to get the trade journals to cooperate. What was the motive of the trade journals is beside the point. Let's leave that to the evidence. There was enough temptation there to warrant them in cooperating, under the words of this indictment, because they did consciously—knowing how these contracts were made, knowing what they provided, knowing that they intended them to be arm's length transactions between independent refiners and jobbers, knowing and participating in a scheme that would make them fiat prices determined by the major oil companies—they learned this: In the words of this indictment they participated in that very scheme, and formed the connecting link between the immediate objective, the raising of the spot market price, and the ultimate objective, unjust enrichment for the major oil companies.

* * * * * *

"If these trade journals had been in that position,
innocent victims, simply reporting news, then you
would say that they were a chain and means where-
183 by the whole conspiracy was carried out, but an in-
nocent means.

* * * * * *

"Now, here it is alleged that these trade journals knew everything that has been alleged in that indictment, and then intentionally participated in it. Now, if knowing of that they had put their feet down and said, 'No, we won't cooperate,' they could have prevented this particular scheme from working. Some other scheme might have been devised to get around that, some other agency might have been found with less conscience, that would have quoted these fiat, agreed upon prices on the spot market, so that the contracts with the jobbers could be made in terms of that quotation.

"But that was not necessary here, because these trade journals, knowing all of this, knowing how important they were, lent themselves to it, and they lent themselves to it and in order to lend themselves to it they had to commit a fraud as well.

* * * * * *

"Spot market, the place where the jobber ordi-
narily buys, where the independent refiner ordinarily
184 sells, where transactions are ordinarily supposed to

be an arm's length transaction, made by a fair external measure of a price in the contract—it now becomes not that, but a price fixed by the major oil companies themselves, and it is fixed in two ways.

"One is by the direct process that the major oil companies have by being put into the journals, because this indictment says that the journals carried these very prices under a caption, 'Prices to jobbers'. That is one way. That is direct. The major oil companies acting together were in there buying 50 per cent at the spot market. The need for it is negligible—buying it up not because they needed it, but because they wanted to raise the spot market price, and that price they paid is translated directly into the journals.

"As they participate in these spot markets, may it please the Court, as they run up that price, they run up the price that the real jobber has to pay as well.

"If a buying force suddenly comes into a small spot market and buys up 50 per cent of the gasoline that is offered on that spot market, what is going to happen to the price of the other 50 per cent? Why,
185 of course under competitive conditions it is going to respond accordingly.

"So when the trade journals published these things, whether they published jobbers' prices, or whether they published major oil company prices, they were really major oil company prices, determined by their own concerted action, and they published them as a price in an arm's length transaction with a really true, honest-to-goodness independent jobber, and the jobbers paid that price under those contracts."

• • • • • • •

"And again, where we talked about the trade journals, why would we say, or why would the draftsman say, if you like, that the trade journals

> "'have been the chief agencies and instrumentalities through which the wrongfully and artificially raised and fixed prices for gasoline made by the major oil companies as aforesaid have affected the prices paid by jobbers, retail dealers and consumers for gasoline in the Mid-Western area, including the Western District of Wisconsin,'—

unless the pleader intended to charge and did charge a conspiracy to accomplish that final result, the raising of prices paid by jobbers, retail dealers and consumers for gasoline in the Mid-Western area? 186

* * * * * * *

"As I have said before, this isn't a case, under the allegations of this indictment, of some innocent, ignorant person being victimized by a conspiracy. This is a case in which the cooperation of the trade journals, I say, either consciously or unconsciously is absolutely necessary if this particular conspiracy is going to work.

"The major oil companies could go out and spend their money and waste it on the spot market, and raise the actual prices that they paid there, day by day or week by week, as they did; but that would be a foolish expenditure unless they can get it translated into the terms of jobber contracts and into the terms of the retail prices that follow. So that the market journals became the outstanding means, the absolutely necessary means toward getting the conspiracy through. They are more important, probably, than any one of the major companies buying in the pools. They become outstanding defendants, in a sense. 187

"Now, they are alleged to have conspired with the other defendants to bring about these results. That is categorically, clearly alleged. Some men will call it a conclusion of law; other men, including myself, will call it a statement of ultimate fact. They conspired—that is, they put their heads together to accomplish a result. That is perfectly plainly stated there.

"Then it is further alleged that they participated in the partnership that got going,—knowing what? Knowing all of these things: Knowing that the pools were in operation; knowing that the prices were being bid up; knowing what the intent was on the part of the major oil companies; knowing what the real objectives were; knowing how absolutely necessary to the whole scheme the trade journals actually were.

"Now, when you give them all of that complete knowledge of the comprehensive crime that is charged here, and if you state further that they conspired in it, participated in it, and lent themselves as one of the chief agencies for the carrying out of that conspiracy; and when you follow that up further by 188 saying that they really stooped to a fraud in order to aid their confederates—and the specific fraud is set forth: Publishing as spot market prices to jobbers what were really spot market prices to major oil companies—then it would seem to me that you have just as many detailed facts of criminality charged against those trade journals as you have against any of the defendants.

189 "The major oil companies couldn't have published the prices; that wasn't their job. Both things had to be done, both the paying of the high spot market price and its rigging, and its translation into the market journals, and hence, from there, into the contracts with the jobbers. Each man did and labored according to his particular assignment and task.

"Now can there be any doubt under the law that, if a conspiracy gets under way, and one particular feature of it is necessary to it; and one man undertakes to do that, knowing about the conspiracy and intending to further it, and actually furthering it and making it succeed; can there be any doubt under the law that that person is just as guilty as the rest?"

Motion to Quash of Tide Water Oil Company:

On February 1, 1937, the defendant Tide Water Oil Company, by its attorney, filed its Motion to Quash the Summons filed upon it and to Dismiss the Indictment against it.

On June 3, 1937, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order granting the Motion of Tide Water Oil Company to Quash 190 the Summons filed upon it and to Dismiss the Indictment against it.

(Said Order is printed ante, pages 41-42 of the Record.)

Motions for a Bill of Particulars:

On February 1, 1937, the corporate defendants Barnsdall Refining Corporation, Cities Service Company, Cities Service Export Oil Company, Continental Oil Company, Empire Oil and Refining Company, The Globe Oil and Refining Company (Illinois), The Globe Oil and Refining Company (Kansas), The Globe Oil and Refining Company (Oklahoma), Louisiana Oil Refining Corporation, Phillips Petroleum Company, The Pure Oil Company, Shell Petroleum Corporation, Sinclair Refining Company, Socony-Vacuum Oil Company, Inc., Standard Oil Company (Indiana), The Texas Company, Wadhams Oil Company, Mid-Continent Petroleum Corporation, Skelly Oil Company, Deep Rock Oil Corporation, Tide Water Associated Oil Company, by their attorneys, filed in the above Court their Motion for a Bill of Particulars; and thereafter on February 17, 1937, said corporate defendants, by their attorneys, filed in the said Court, their Amended Motion for a Bill of Particulars.

On March 3, 1937, the individual defendants Edward G.
Seubert, Allan Jackson, Edward J. Bullock, Ira A.
191 Smith, John A. Brown, Charles L. Jones, Charles E.
Arnott, H. T. Ashton, A. G. Maguire, E. R. Irwin, Bryan S. Reid, Frank R. Coates, Harry D. Frueauff, H. E. Brandli, O. J. Tuttle, D. W. Harris, John A. Welch, Dan Moran, Harry J. Kennedy, L. T. Cramer, Edward Karstedt, Henry M. Dawes, C. B. Watson, R. H. McElroy, Jr., Dewey K. Chamberlain, Alexander Fraser, P. E. Lakin, J. W. Carnes, W. S. S. Rodgers, R. D. Cottingham, H. W. Dodge, P. C. Scullin, Edward L. Shea, Noel Robinson, J. W. Warner, R. O. Audrain, Jacob France, Robert W. McDowell, Thomas Fitzgerald, Frank Phillips, Fred L. Koopman, A. M. Hughes, H. A. Gardner, W. G. Skelly, James Nagle, E. B. Reeser, I. A. O'Shaughnessy, by their attorneys; and on the same day the defendants C. M. Boggs and A. V. Bourque, by their attorney; and on the same day the defendants Warren C. Platt, W. C. Platt Company and The National Petroleum Publishing Company, by their attorney, filed with the Clerk of the above Court their respective Motions for a Bill of Particulars.

On March 23, 1937, the defendants Gulf Refining Company and Gulf Oil Corporation, by their attorney, filed with the Clerk of the above Court their Motion for a Bill of Particulars.

192 On April 6, 1937, the defendants Shell Petroleum Corporation, Alexander Fraser, and P. E. Lakin, by their attorneys, filed with the Clerk of the above Court their Supplemental Motion for a Bill of Particulars.

On June 3, 1937, the Honorable Patrick T. Stone, Judge of the above Court, signed and caused to be filed with the Clerk of the above Court (1) an Order granting certain demands of the Supplemental Motion for a Bill of Particulars of the defendants Shell Petroleum Corporation, Alexander Fraser, and P. E. Lakin; (2) an Order denying the Motion for a Bill of Particulars of the defendants Warren C. Platt, W. C. Platt Company, and The National Petroleum Publishing Company; (3) an Order granting certain demands of the Motion for a Bill of Particulars of the defendants C. M. Boggs and A. V. Bourque; (4) an Order granting certain demands of the Motions for a Bill of Particulars of the corporate defendants, filed on February 1, 1937 and February 17, 1937; (5) an Order granting certain demands of the Motion for a Bill of Particulars, filed on March 3, 1937, by certain individual defendants; and (6) an Order granting certain demands of the Motion for a Bill of Particulars of the defendants Gulf Oil Corporation and Gulf Refining Company.

193 On June 15, 1937, the Honorable Patrick T. Stone, Judge of the above Court, signed and caused to be filed with the Clerk of the above Court an Amended Order granting certain demands of the Motion for a Bill of Particulars of the individual defendants, filed on March 3, 1937.

On July 12, 1937, the plaintiff, the United States of America, by its attorneys, in compliance with the above-mentioned Order of the Court, filed respectively with the Clerk of the above Court, five separate Bills of Particulars. Each of said Bills of Particulars sets forth the same, or substantially the same statements appearing in the other Bills of Particulars. In order to avoid repetition which would result in printing herein each of said Bills of Particulars, and to avoid printing the various Motions for Bills of Particulars, the said five Bills of Particulars have been consolidated, and the following is a complete, accurate and fair consolidation of the said five Bills of Particulars:

194 BILL OF PARTICULARS.

Now comes the United States of America, and in compliance with the Orders of the Court filed herein on the 3rd day of June, 1937, passed upon the Motions for a Bill of Particulars of the defendants Edward G. Seubert, Allan Jackson, Edward J. Bullock, Ira A. Smith, John A. Brown, Charles L. Jones, Charles E. Arnott, H. T. Ashton, A. G. Maguire, R. R. Irwin, Bryan S. Reid, Frank R. Coates, Harry D. Frueauff, H. E. Brandli, O. J. Tuttle, D. W. Harris, John A. Welch, Dan Moran, Harry J. Kennedy, L. T. Cramer, Edward Karstedt, Henry M. Dawes, C. B. Watson, R. H. McElroy, Jr., Dewey K. Chamberlain, Alexander Fraser, P. E. Lakin, J. W. Carnes, W. S. S. Rodgers, R. D. Cottingham, H. W. Dodge, P. C. Scullin, Edward L. Shea, Noel Robinson, J. W. Warner, R. O. Audrain, Jacob France, Robert W. McDowell, Thomas Fitzgerald, Frank Phillips, Fred L. Koopman, A. M. Hughes, H. A. Gardner, W. G. Skelly, James Nagle, E. B. Reeser and I. A. O'Shaughnessy; and of the defendants Barnsdall Refining

Corporation, Cities Service Company, Cities Service Export Oil Company, Continental Oil Company, Empire Oil & Refining Company, The Globe Oil & Refining Company (Illinois), The Globe Oil & Refining Company (Kansas), The Globe Oil & Refining Company (Oklahoma), Louisiana 195 Oil Refining Corporation, Phillips Petroleum Company, The Pure Oil Company, Shell Petroleum Corporation, Sinclair Refining Company, Socony-Vacuum Oil Company, Inc., Standard Oil Company (Indiana), The Texas Company, Wadhams Oil Company, Mid-Continent Petroleum Corporation, Skelly Oil Company, Deep Rock Oil Corporation, and Tidewater Associated Oil Company; of the defendants Gulf Oil Corporation and Gulf Refining Company; and of the defendants Shell Petroleum Corporation, Alexander Fraser, and P. E. Lakin; and of the defendants C. M. Boggs and A. V. Bourque, files the following Bill of Particulars:

As to Paragraph 18 of the Indictment:

(1) In response to the demand in said motions:

Whether it is claimed that defendant conspired that the defendants, or some of them, should agree upon levels at which spot market tank-car prices should be fixed?

The Government claims that all of the defendants named in the Indictment conspired and agreed in the Sherman Act sense to raise and fix prices "at levels agreed upon among them."

(2) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

196 Is it claimed that defendants Boggs and Bourque conspired to raise and fix the spot tank-car market prices artificially?

The Government claims that each defendant named in the Indictment, including defendants Boggs and Bourque, "combined and conspired together," within the meaning of the Sherman Act, for the purpose of artificially raising and fixing the spot market tank-car prices of gasoline.

(3) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that defendants Boggs and Bourque were parties to a conspiracy or agreement that the spot market tank-car price should be fixed at agreed upon levels?

The Government claims that every defendant named in the Indictment, including defendants Boggs and Bourque, were parties to a conspiracy within the meaning of the Sherman Act, whereby the spot market tank-car prices of gasoline should be fixed at agreed upon levels.

(4) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that defendants Boggs and Bourque agreed with any other persons as to the levels at which the spot market tank-car prices should be fixed? If so, specify
197 names and the times and the places of such agreement. If a written agreement, furnish a copy. If oral, give the substance of the agreement and the names of all persons present when such oral agreement was made:

The Government claims that defendants Boggs and Bourque agreed in the Sherman Act sense with the other defendants named in the Indictment upon the levels at which the spot market tank-car prices should be fixed.

(5) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that defendants Boggs and Bourque agreed with any other person to increase and fix the price of gasoline contracted to be sold and sold?

The Government claims that defendants Boggs and Bourque agreed in the Sherman Act sense with the other defendants named in the Indictment to increase and fix the tank-car price of gasoline contracted to be sold and sold in the Mid-Western area.

(6) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that defendants Boggs and Bourque or either of them made any sales of gasoline to jobbers or to any other persons or corporations in the Western District of Wisconsin?

198 The Government does not claim that defendants Boggs and Bourque sold gasoline to jobbers in the Western District of Wisconsin, but only that they were participants in a conspiracy to raise and fix the price of gasoline which jobbers and others in this District were compelled to pay.

(7) In response to the demand in said motions:

Whether it is claimed that defendant entered into an agreement to raise the general level of retail prices prevailing in the Mid-Western area, including the Western District of Wisconsin?

The Government states that the defendants are charged in Paragraph 18 of the Indictment with having entered into a combination and conspiracy to raise the general level of retail prices prevailing in the Mid-Western area, including the Western District of Wisconsin, and the Government claims that such combining and conspiring amounts to an agreement within the meaning of the Sherman Act.

(8) In response to the demand in said motions:

Whether it is claimed that the defendant entered into an agreement not to sell to jobbers except in accordance with "the prevailing form of jobber contract described in Paragraph 11"?

199 The Government does not claim that each defendant "entered into an agreement not to sell to jobbers except in accordance with" the contract described in Paragraph 11 of the Indictment. The Indictment, in Paragraphs 11 and 15, alleges that the defendant major oil companies have made contracts wherein the contract price is based upon the spot market quotations. It further alleges in Paragraph 18 that the defendants conspired to, and have, fixed the spot market prices and, "by reason of the provisions of the prevailing form of jobber contracts" the prices charged to jobbers and others.

As to Paragraph 19 of the Indictment:

(9) In response to the demand in said motion filed by Shell Petroleum Corporation, Alexander Fraser, and P. E. Lakin:

With respect to the allegations of Paragraphs 19, 20 and 21: whether the two buying programs set out in said paragraphs were a part of one conspiracy?

The Government claims that a general conspiracy is charged by the Indictment, in which two buying programs were used simultaneously and concurrently for carrying it out and "for common purposes," some of defendants taking an active part in both programs.

200 (10) In response to the demand in said motions:

Whether it is claimed that defendant agreed that defendant should engage and participate in the two buying programs referred to in Paragraph 19, and, if so, whether the defendant conspired and agreed that said buying programs were to operate the one in concert with the other?

The Government claims that each of the defendants engaged and participated with the other defendants in a general conspiracy in which "two concerted buying programs" were used simultaneously and concurrently for carrying it out and "for common purposes," some of the defendants taking an active part in the operation of both programs, which participation amounted to an agreement within the meaning of the Sherman Act.

(11) In response to the demand in said motions:

Whether it is claimed that defendant engaged and participated in the two buying programs referred to in Paragraph 19, and, if not, in which, if either, of said buying programs defendants are alleged to have engaged and participated?

The Government claims that the defendants Sinclair, Gulf, Texas, Pure, Continental, Tide Water, Cities Service, Cities Service Export and Louisiana Oil bought, and their
defendant officers and agents participated, in the East
201 Texas buying program, and that defendants Standard
of Indiana, Socony-Vacuum, Wadhams, Sinclair, Shell, Empire, Pure, Phillips, Mid-Continent, Continental, Skelly, Barnsdall, Globe, and Deep Rock bought, and their defendant officers and agents participated, in the Mid-Continent buying program.

(12) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that defendants Boggs and Bourque, or either of them, entered into a conspiracy or agreement that the alleged combination should be carried out in the manner and by the means described in Paragraph 19 and the paragraphs following?

The Government claims that defendants Boggs and Bourque entered into a conspiracy within the meaning of the Sherman Act that the alleged combination should be carried out in the manner and by the means described in Paragraph 19 and subsequent paragraphs of the Indictment.

(13) In response to the demand in the motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that Boggs and Bourque, or either of them, participated in or were parties to a conspiracy, combination or agreement that the major oil companies, referred
to in Paragraph 20, should make large and increased
202 purchases of gasoline from most of the independent
refiners located in the East Texas field? If so, specify the times when the places where Boggs and Bourque, or either of them, participated in such conspiracy, combination, or agreement, the names of other persons present, the manner in which they, or either of them, so participated and the acts performed by Boggs and Bourque, or either of them, in furtherance thereof:

The Government claims that defendants Boggs and Bourque were parties to a conspiracy, within the meaning of the Sherman Act, whereby the defendant major oil companies made large and increased purchases of gasoline from independent refiners located in the East Texas field.

As to Paragraph 20 of the Indictment:

(14) In response to the demand in said motions:

In comparison with purchases during what period or with what other standard the alleged purchases referred to in the first sentence of Paragraph 20 are described as "increased", and whether in number, volume or value?

The Government claims that a part at least of the purchases made by the defendant major oil companies in both buying programs would not have been made had there been no conspiracy to fix tank-car prices.

203 (15) In response to the demand in said motions:

Whether it is claimed that the purposes of the East Texas Refiners Marketing Association have at any time included the making or facilitating of the purchases by the defendants to be made pursuant to the alleged so-called buying programs, and if so, when, and in particular whether at the time of the formation of said Association?

The Government claims that the purposes of the East Texas Refiners Marketing Association included the making or facilitating of purchases by the defendant major oil companies to be made pursuant to the East Texas buying program, and that such was one of the purposes of the Association at the time of its formation.

204 As to Paragraph 21 of the Indictment:

(16) In response to the demand in said motions:

Whether it is claimed that Arnott and Carnes acted in a liaison capacity between the East Texas Refiners Marketing Association and the defendant major oil companies?

The Government claims that Arnott and Carnes instigated and directed purchases of gasoline in the East Texas buying program and that Neil Buckley acted in a liaison capacity between the East Texas Refiners Marketing Association and the defendant major oil companies.

(17) In response to the demand in said motions:

Whether it is claimed that Neil Buckley approved the incumbency of Robert N. Cline as secretary and manager of the East Texas Refiners Marketing Association or the allotments alleged to have been made by Cline in said capacity?

The Government claims that Buckley approved Cline's appointment as secretary and manager of the East
205 Texas Refiners Marketing Association and approved his acting in that capacity, and his general conduct of his office, but no claim is now made by the Government that Buckley expressly and specifically approved each of the actual allotments of purchases made by Cline.

(18) In response to the demand in said motion filed by Shell Petroleum Corporation, Alexander Fraser and P. E. Lakin:

Whether or not it was a part of the original conspiracy that the defendant Arnott and one Buckley should cause the independent refiners referred to in said Paragraph to curtail their production in the East Texas field, and whether or not these moving defendants are alleged to have joined in a conspiracy to cause such curtailment of production?

The Government claims that the curtailment of production, as alleged in Paragraph 21 of the Indictment, was done pursuant to the conspiracy and in furtherance of its unlawful purposes, each of the individuals and companies participating having knowledge "of said unlawful purposes," and that, therefore, the curtailment alleged was within the general scope of the conspiracy to which defendants were parties.

206 (19) In response to the demand in said motions:

The purposes to which reference is had in the last sentence of Paragraph 21, together with the place, if any, in the Indictment at which mention is made thereof?

The Government states that the unlawful purposes referred to in the last sentence of Paragraph 21 of the Indictment refer to those set forth in Paragraph 18 of the Indictment, namely, to raise and fix artificially the tank-car prices of gasoline in the spot markets, to maintain said prices at artificially high and non-competitive levels, and to increase, fix and maintain the tank-car prices of gasoline contracted to be sold and sold in interstate commerce in the Mid-Western area, to raise, fix and maintain the general level of retail prices prevailing in said area, and to exact large sums of money from handlers and consumers of gasoline.

As to Paragraph 22 of the Indictment:

(20) In response to the demand in said motions:

Whether it is claimed that any of the purchases referred to in the first sentence of Paragraph 22 were spot transactions, and if so, the parties to each such purchase and the dates thereof?

The Government claims that the purchases in the Mid-Continent buying program were made in spot transactions.

207 (21) In response to the demand in said motions:

In comparison with purchases, during what period or with what other standard the alleged purchases referred to in the first sentence of Paragraph 22 are described as "increased" and whether in number, volume or value?

The Government claims that a part at least of the purchases made by the defendants in the Mid-Continent buying program would not have been made had there been no conspiracy to fix tank-car prices.

As to Paragraph 23 in the Indictment:

(22) In response to the demand in said motions:

Whether it is claimed that the quantities of gasoline alleged in the second sentence of Paragraph 23 to have been taken by the defendant major oil companies were so taken pursuant to an agreement entered into by the defendant?

The Government claims that the purchases, alleged in the second sentence of Paragraph 23 of the Indictment to have been made by the defendant major oil companies, were
208 made pursuant to an agreement in the Sherman Act
sense and pursuant to the combination and conspiracy charged in the Indictment.

(23) In response to the demand in said motions:

Whether McDowell, Tuttle, Bourque, and Jacobi participated in making each or any of the allotments referred to in the second sentence of Paragraph 23?

The Government claims that McDowell, Tuttle, Bourque, and Jacobi allotted gasoline among the defendant major oil companies in the Mid-Continent buying program.

(24) In response to the demand in said motion filed by C. M. Boggs and A. V. Bourque:

Is it claimed that Boggs and Bourque, or either of them, were parties to the alleged agreement among the defendant major oil companies as to the alleged uniform, high, arbitrary, and non-competitive prices referred to in the fifth sentence of Paragraph 23?

The Government claims that defendants Boggs and Bourque participated in the conspiracy charged in the Indictment and, as such participants, were parties to an agreement, in the Sherman Act sense, as to the uniform, high, and non-competitive prices referred to in Paragraph 23 of the Indictment.

(25) In response to the demand in said motion filed
209 by C. M. Boggs and A. V. Bourque:

As to the following allegations in Paragraph 23:

> "In furtherance of said unlawful purposes, said independent refiners, at the instance of defendants Arnott, McDowell, Tuttle, Boggs, and Bourque, curtailed their production of gasoline."

Is it claimed that Boggs and Bourque, or either of them, were parties to a conspiracy or agreement that the independent refiners would curtail their production of gasoline? If so, specify the time and place when Boggs and Bourque entered into such a conspiracy or became parties to such an agreement, the names of the other parties thereto, the substance thereof and the names of all individuals present:

The Government claims that defendants Boggs and Bourque participated in a conspiracy within the scope of which the curtailment of gasoline productions by independent refiners took place.

(26) In response to the demand in all of said motions:

The purposes to which reference is had in the last sentence of Paragraph 23, together with the place, if any, in the Indictment at which mention is made thereof?

210 The Government states that the unlawful purposes referred to in the last sentence of Paragraph 23 of the Indictment refer to those set forth in Paragraph 18 of the Indictment, namely, to raise and fix artificially the tank-car prices of gasoline in the spot markets, to maintain said prices at artificially high and non-competitive levels, to increase fix and maintain the tank-car prices of gasoline contracted to be sold and sold in interstate commerce in the Mid-Western area, to raise, fix and maintain the general level of retail prices prevailing in said area, and to exact large sums of money from handlers and consumers of gasoline.

As to Paragraph 24 of the Indictment:

(27) In response to the demand in said motions:

Whether any of the acts or things alleged in Paragraph 24 were done by agreement with defendants, and, if so, the time and place of such agreement?

The Government states that Paragraph 24 of the Indictment sets forth the participation of the market journals in the general combination and conspiracy charged in the Indictment, and the Government claims that the allegation of this paragraph that the acts of the Journals were done intentionally "in the combination and con-
211 spiracy set forth in this Indictment" amounts to saying that they were done in combination with all the other defendants.

As to Paragraph 25 of the Indictment:

(28) In response to the demand in said motions:

Whether the defendant has contracted to sell gasoline to jobbers in the Western District of Wisconsin in the

manner alleged in Paragraph 25; whether the defendant has sold gasoline in said district in the manner alleged; whether the defendant has delivered gasoline in said district in the manner alleged?

The Government claims that all of the defendant major oil companies have sold and delivered gasoline in the Western District of Wisconsin in the manner alleged in Paragraph 25 of the Indictment and that all of them, with the exception of Standard of Indiana, have contracted to sell and have sold gasoline to jobbers in this district in the manner alleged.

(29) In response to the demand in said motions:

Whether the artificially raised and fixed, non-competitive prices referred to in the second sentence of Paragraph 25 were raised and fixed by agreement or agreements to which defendant was a party?

The Government claims that the artificially raised and
fixed and non-competitive prices referred to in the
212 second sentence of Paragraph 25 were raised and fixed
by agreements in the Sherman Act sense to which defendants were parties.

(30) In response to the demand in said motions:

Whether the artificially increased prices referred to in the last sentence of Paragraph 25 were increased pursuant to an agreement or agreements entered into by defendant?

The Government claims that the artificially increased prices referred to in the last sentence of Paragraph 25 of the Indictment were increased pursuant to agreements in the Sherman Act sense entered into by defendant.

(31) In response to the demand in the motion filed by the Shell Petroleum Corporation, Alexander Fraser, and P. E. Lakin:

As to Paragraph 25 of the Indictment whether the allegations that defendant major oil companies "have contracted to sell and have sold and have delivered large quantities of gasoline in tank-car lots to jobbers," and the allegation that defendant major oil companies "have solicited and taken contracts and orders for said gasoline within said district, sometimes by sales representatives lo-
cated there," refer solely to contracts executed on
213 the form of contract described in Section 11 of the
Indictment, or whether said allegations refer to and include sales made to jobbers in miscellaneous transactions, such as, cash sales at spot prices and other forms of sales, in addition to sales made upon the contract form described in Section 11?

The Government claims that all contracts to sell, sales and deliveries of gasoline in the Western District of Wisconsin, whether made on the basis of a uniform contract or not, at the artificially raised and fixed prices effectuated by the conspiracy constitute overt acts in furtherance of the conspiracy charged in the Indictment.

W. P. Crawford,
John Henry Lewin,
Hammond E. Chaffetz,
W. B. Watson Snyder,
Grant W. Kelleher,
Special Assistants to the Attorney-General.

214 **Motion to Quash:**

On October 4, 1937, certain of the defendants, by their respective attorneys, filed a Motion to Quash the Indictment in this cause with the Clerk of the above Court.

(Said Motion is printed ante, pages 42-43 of the Record.)

On August 19, 1938, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order that the said Motion to Quash the Indictment in this cause be amended by the addition nunc pro tunc of the names of certain individual and corporate defendants.

(Said Order is printed ante, pages 44-45 of the Record.)

On October 4, 1937, the Honorable Patrick T. Stone, Judge of the above Court, made and entered an Order overruling the said Motion to Quash the Indictment in this cause, and allowed an exception.

(Memorandum of said Order is printed ante, page 44 of the Record.)

TRIAL OF THE CAUSE.

On October 4, 1937, at the hour of 10 o'clock A. M., the trial of this cause began before the Honorable Patrick T. Stone, Judge of the District Court of the United States 215 for the Western District of Wisconsin, sitting at the United States Courthouse at Madison, Wisconsin. The Honorable Patrick T. Stone made and entered an Order that the record show that the defendants John A. Brown, Frank R. Coates, D. W. Harris, J. F. Drake, William V. Hartmann, H. C. Meyer, O. H. Carlisle, Bernard L. Majewski, Keith Fanshier, and Edward Karstedt were not present and were not being tried at the trial of this cause beginning on October 4, 1937. All of the other defendants named in the Indictment in this cause, except Tide Water Oil Company, were present and ready to be tried on said Indictment.

(Memorandum of said Order is printed ante, page 42 of the Record.)

Thereafter, on October 4, 1937, in the course of the proceedings in said cause, the Court made the following statement:

> "The Court: So, without any further discussion, I will say to you now that the jury will be kept in the custody of the Marshal from the beginning to the end of this trial; to the end that the jury will determine this case upon the evidence received in Court, and that only."

Thereafter, on October 4, 1937, the selection of the jury to try this cause occurred, and twelve jurors and two alternate jurors were selected as the jury in this cause.

216 Thereafter, Mr. Crawford, on behalf of the United States, made the first opening address to the jury. Counsel for the defendants-appellants inserted in this Bill of Exceptions those portions of said opening address set forth in the defendants-appellants' Assignment of Error No. 38 and requested counsel for the plaintiff-appellee to specify those other portions of such address which they believed modified or explained such statements in said Assignment. In response counsel for the plaintiff-appellee thereupon requested that the entire opening addresses to the jury by Mr. Crawford and by Mr. Chaffetz be inserted in this Bill of Exceptions. Such opening addresses are hereinafter set forth. The opening address of Mr. Crawford is as follows:

217 OPENING STATEMENTS ON BEHALF OF THE GOVERNMENT.

Mr. Crawford: May it please the Court and gentlemen of the jury; with very little preliminary or introduction I will attempt to give you an outline in a general way of the proof that will be produced here on the part of the Government with respect to the allegations contained in the indictment upon which these defendants, whose names you have heard, are brought to trial here. The litigation

—the indictment, and the charge, as you know now, involves the question of a violation by the defendants of the Sherman Anti-Trust Laws, in that it is claimed, and we will have evidence here to sustain the claim, that these defendants engaged in a conspiracy to fix and regulate prices of gasoline, both wholesale and retail, during the period from at least March of 1935, and continuing on down to the time when the indictment was returned here by a Grand Jury, sitting at Madison, in December of 1936.

In order that you might a little better understand the
evidence that will be presented before you, it is, of
218 course, advisable that you be given some idea of what
the field to be covered by the evidence consists of.

In the first place, gasoline coming in to the mid-western states, which is known as the Standard of Indiana territory, and will be commonly referred to as that, is produced and manufactured principally in East Texas and what is known as the mid-continent field. We will have before you, and it will be explained more fully by one of my colleagues who will follow, by maps and charts here, indicating the areas in which crude oil is produced and places where it is manufactured and shipped.

It is the claim upon the part of the Government that during the year 1935, the early part of that year, these defendant major oil companies—and by the way, perhaps you ought to know who we mean when we speak of major oil companies—that is best explained to you by referring to the indictment itself. A major oil company, in short, is an oil company which produces crude oil; manufacturers it into gasoline, owns and operates refineries and pipe lines and ships and markets the gasoline from its refineries into the different territories where it is distributed, largely by jobbers in this area,—sometimes by the major oil companies themselves.

The major oil companies are, as you have heard here,
and perhaps it ought to be told to you again, the
219 Standard Oil Company of Indiana, Socony-Vacuum,
Continental Oil, Pure Oil, Shell Petroleum, Sinclair Refining Company, Texas Company, Tide Water Associated, Mid-Continent Petroleum, Phillips, Skelly, Barnsdall, Globe, Deep Rock. I have just used the abbreviated names of those.

The mid-western area with which this lawsuit is principally concerned, and in which it is claimed that this conspiracy operated, are the ten mid-western states, including the state of Wisconsin; and so that you may become a little more familiar with that, I will speak of those as they are spoken of in the indictment: The states of Michigan, Wisconsin, Minnesota, North Dakota, South Dakota, Iowa, Illinois, Indiana, Missouri, and Kansas. They comprise one of the great marketing areas for gasoline in the United States.

We have also here for trial, in addition to the major oil companies, several of their subsidiaries, such as—and these are all of them—Cities Service Export Oil Company, Empire Oil and Refining Company, Louisiana Oil Refining Corporation, Gulf Refining Company, Wadhams Oil Company of Wisconsin.

In addition to those defendants, we have also here, on
trial, charged as being members of this conspiracy, two
220 or more trade journals—three—Chicago Journal of
Commerce, Platt's Oilgram, and the Petroleum News,
and the connection between those trade journals and these other oil companies and individuals will be made quite plain to you as we go along. I am trying now to get you a little bit familiar with the general set-up in the case, as the evidence is going to be presented to you.

A very important element in the case which you will consider and the evidence will fully explain to you is another group operating in the gasoline business, known as independent refineries. Now let me here explain to you and it will be more fully explained by one of my colleagues who shall follow me, the difference between an independent refiner and a major oil company. Briefly speaking, an independent refiner is one who does not own and have its own crude oil, does not have pipe lines, it gets its crude oil from oil fields which are small and which it may itself own or lease. It operates a small refinery and sells its gasoline on what we call a spot market.

Major oil companies, which are these big aggregations or corporations that I have referred to own their own crude oil and manufacture their own gasoline. They do not sell on the spot market any substantial amount. Neither ordinarily do they buy on what we call the spot market.

Now the "spot market" is a term that is used here
221 and will be used very generally throughout the trial of
the case. Many of you who buy and sell merchandise
know something about what we mean when we say you buy it on the spot. And so these independent refiners, who only control a small percentage of all the gasoline marketed in this mid-western area, sell their gasoline in tank car

quantities to independent jobbers largely, and that transaction is called a spot market transaction.

Now a jobber, as some of you perhaps know from experience, is a corporation or an individual who owns and operates a bulk storage plant. He may have retail service stations of his own or he may deliver the gasoline to independent service stations. He gets his gasoline usually from a broker. Very often he gets it direct; and he gets it from one of two sources,—either from a major oil company or from the independent refiners. When he buys from the independent refiners, as you might know, he buys just like you go out to buy any article of merchandise that you want. You go to the man who has the gasoline to sell and buy it at what price you can buy. Usually, as you will see a bit later, he goes to the independent refiners. The independent refiner quotes him a price. They may dicker on the price, and finally a trade is made, and the jobber buys one tank car or two or three or four, whatever he may need immediately for his bulk storage plant.

222 That comes in tank cars and is delivered to his bulk storage plant, he in turn selling it to the independent retail station or delivering it to his own for sale, and there is where you buy the gasoline for your automobile. That, in short, is the business of the jobber.

Now you will hear a lot about the jobber in this law suit, and it will be important for you to consider just what place he has in this picture. It is a very important place indeed; and as the evidence upon the part of the Government will show that he—now speaking of him as one—speaking and thinking of him as a group again, is the one or the group who probably has been most seriously injured by this conspiracy.

You will hear from the evidence in the case that in the mid-western area there are in the neighborhood of four thousand jobbers engaged in this business. And let me say too that these jobbers now and for some time past buy their gasoline mostly from the major oil companies, and testimony will be produced before you as to why that is done, as to why he does not go into the open market and dicker with the independent refinery and get a price that is satisfactory to him. You will find, from the evidence here, that these jobbers, throughout these ten states, are buying
gasoline chiefly—mostly—under contracts which have
223 been made between themselves and the major oil companies. And you will find too that the contracts which the jobbers have with the major oil companies are substan-

tially alike. And you will find, although it will take a number of witnesses and quite a volume of testimony to give it to you fully, why it is that the jobber operates under this contract and not otherwise.

In the first place, as you all know, when you go to buy gasoline for your car you think of Mobile gas; you think of Shell; you think of Texas, or think of Cities Service, or you think of a number of these major companies whose brands are well known to you. These major companies have over a number of years built up this advertisement—this demand upon the part of the public for this particular brand of gasoline. You listen on the radio, you remember something about that, how extensively it is that they advertise their own brand.

And so the jobber, when he comes to buy gasoline, when he comes to sell it, has to deal really with this branded class or character of gasoline which have been built up for acceptance by the public by the major oil companies.

So if he goes out into the field and buys gasoline and he
goes to the independent refiner, he is in some degree
224 handicapped if he undertakes to deliver that to the
man who drives an automobile, so usually he gets his gasoline from a major oil company who has a brand or character of gasoline, and gets its under a contract.

These contracts may run for a long time or they may run, as many of them do, from year to year. The matter of these contracts is a very important matter in the decision of the questions involved here. It will be found that these contracts are substantially alike and you will find from the evidence too, that a man, for instance, who has a contract with the Standard of Indiana, to buy gasoline over a period of a year at a certain price, I will speak of in a moment, usually don't walk out on that company if he is dissatisfied, like he would, if he were not tied, because if he goes from the Standard of Indiana, or Texas or Cities Service, intending to make a better contract or a better bargain, he would be using precisely the same thing that he had and nothing else. Therefore you have the jobbers bound by these contracts.

These contracts provide, being all substantially alike, that the price which the jobber shall pay to the major oil company for gasoline is this: The spot market tank car price in the field or at the refinery. And that spot market
tank car price is determined by what? It is determined
225 by the price which is quoted in these three trade jour-
nals I have referred to, taking the average of the quo-

tations of high and low from day to day. That presents the price that the jobber must pay for his gasoline. That will give you some explanation and a more full explanation by my colleague will show, and the evidence will show, the part that these trade journals have played in the picture which reflects the operation of this conspiracy.

It will appear too, that 85 per cent or more, of all of the gasoline that is distributed in these ten mid-western states is produced, refined, sold and distributed by these major oil companies. In other words, they have control of about 85 per cent of all the gasoline that is sold in this area, leaving about 15 per cent of the gasoline sold in this area unaccounted for. Presently we will inquire as to what becomes of the other 15 per cent—where it comes from and where it is handled, and we find that about 15 per cent of all gasoline marketed here is sold by these independent refiners, largely to independent jobbers who are not tied by contract to the major companies and sometimes where a man runs away from his contract and does not get caught at it.

As I have told you, the spot market which determines
the price under the contract which the jobber pays for
226 his gasoline is the price paid to the independent refiner
who only handles about 15 per cent of the gasoline, by
the independent jobber. Now the independent refiner also sometimes, perhaps frequently, gets contracts with independent jobbers, so there is taken out perhaps 15 per cent, a substantial part of it in that way, leaving them for the spot market which I have told you is the price which the independent jobber pays to the independent refiner for the gasoline, leaving them with only a small part of the 15 per cent, which makes the market—the market price, for the 85 per cent which is bought under the contract, by the jobber. And as you have seen, the trade journals quoting the prices which are paid in the spot market, the high and low averaged, determines the price that the jobber has to pay for his gasoline.

I told you a moment ago that it would appear here from the testimony and from the inferences from the facts that will be produced before you that these four thousand or more jobbers in this area are the group of people that have been irrevocably hurt by this conspiracy. That will be explained a little more fully but you have the idea from what I have said, as to the principal features of the conspiracy.

Perhaps I have told you enough about the general situ-

ation to go to some general statement as to what this
227 conspiracy is, and I am sure you are anxious to hear
about that now; and to do that I want to say now
here and impress on your mind this fact. The evidence
will show that the quantity of gasoline sold and marketed
in these ten mid-western states amounts annually to between four and a half billion and five billion gallons. Now those figures are too great for me to fully comprehend. I am just going to throw them at you, as the fact is. That will mean the sale of I think ten to twelve million gallons of gasoline per day, for 365 days out of the year. That is the volume of this production that was being dealt with by these men who entered into this conspiracy to raise and fix the prices of gasoline in violation of the law. And out of this four and a half or five billions of gasoline, as you have seen, at least more than 50 per cent of that is sold and handled through jobbers, so that when we speak about the jobber in this territory being affected by this conspiracy, you can understand just about what that means.

Now let's get down and see what it is that the Government claims that these defendants did in violation of the law and in an attempt to take over and control and fix prices. I am not going to give this to you connectedly.

There is only about five per cent, as I said a while
228 ago, of all gasoline that is marketed in this area,
which is sold on the tank car spot market price. 85
per cent of it is controlled by the majors. The trade journals quote the spot market price which is a price of 5 per cent of the gasoline that is sold by the independent refiners to the independent jobbers. So if the spot market price is too low to suit the major companies, and if they can raise the price of the 5 per cent, which is the spot market, they have raised the price of the 85 per cent of the five billions of gasoline that they can sell in a year.

Now, that is the situation which these companies and these individuals sought to manipulate and successfully did. In other words, if they can manipulate the price of 5 per cent of all gasoline sold in this territory, they can control the price of the 85, 90 or 95 per cent, which they sell. Now the indictment charges them with doing that.

Let me say now that you must not expect that we are going to come before you with any written contracts entered into by these big corporations and these 40 or 50 individuals in which it will appear that they contracted in writing with one another to go into this criminal scheme to fix prices in violation of the law. When people are going out to form a conspiracy to enter into an agreement to do something which is contrary to the law, 229 and for which the law may punish them, they don't do it in the presence of witnesses, and they don't do it by any written contract. They do it in the dark and they do it secretly, and they do it by a series of operations—series of contacts covering a long period of time, and that is precisely what they did here. So you must not expect us to have any contracts here to show that they engaged in writing to enter into any violation of law for which they are brought here for trial. But there will be unfolded before you gradually by the witnesses who know the facts and by many documents taken from the files of the corporations themselves a picture of how the master minds in this conspiracy sowed the seed into the minds of those who finally came in with them of the scheme and the plan under which they would raise the price of this 5 per cent of spot market gasoline and in that way would be able to fix the price of gasoline all over this territory and do what they pleased with their oil.

Now, I will refer to the indictment in that respect. Beginning in the month of February, 1935 and continuing to the date of the presentation of this indictment, defendants and certain persons hereinafter referred to, and other persons to the grand jurors unknown, well knowing all the foregoing facts,—which I have just sketched before you—have combined and conspired together for the 230 purpose of artificially raising and fixing the tank car prices of gasoline in the aforementioned spot markets, and, as intended by them, defendants have artificially raised and fixed said spot market tank car prices of gasoline and have maintained said prices at artificially high and non-competitive levels, and at levels agreed upon among them and have thereby intentionally increased and fixed the tank car prices of gasoline contracted to be sold and sold in interstate commerce as aforesaid in the Mid-Western area, including the Western District of Wisconsin, and have arbitrarily, by reason of the provisions of the prevailing form of jobber contracts above described, exacted large sums of money from thousands of jobbers with whom they have had such contracts in said Mid-Western area, including the Western District of Wisconsin, and in turn have intentionally raised the general level of retail prices prevailing in said Mid-Western area, including the Western District of Wisconsin. In so doing, defendants have then and there engaged in an unlawful combination and conspiracy in restraint of trade and commerce in gasoline among the several states of the United States in violation of Section one of the Act of Congress of July 2nd, 1890, known as the Sherman Anti-Trust Act.

Now, in order to make this conspiracy effective—in
231 fact, in order to carry it out, it became necessary for
these major oil companies to have the cooperation of
the independent refiners who controlled the 15 per cent of the gasoline in the mid-western area. We find that in 1935 the independent refiners in East Texas and in the Mid-Continent field were selling their gasoline at a very low price—comparatively low price—such a price that enabled the jobber to get a reasonably profitable margin between what he paid for it and what he could sell it at.

This, of course, low price for this gasoline was very unsatisfactory to these big companies, because they had to meet the price, and so they conceived the idea of getting in touch with the independent refiners and in some way raise the price of the small quantity of gasoline that was being sold and being so translated into trade journals which fix the price that the jobber has to pay. This was accomplished in one or both of those fields, I won't stop to go into the details in respect to that, by organizing the independent refiners. There are a large number of them. They are referred to in the East Texas field as about 23. Mid-Continent field, 18 or 20. Just a part of them. So they got these independent refiners who were selling on the spot market organized; had a man act for them as a representative between the independent refiners and the
major oil companies.

232 Now, here is the important thing in the whole
conspiracy. As you have seen, in order to get the
price of gasoline up below the low level at which the independent refiners were selling it, it was only necessary to get the price up of about 5 per cent, not exceeding 15 per cent, of the five billion gallons of gasoline that was sold. Having organized the independent refiners, finding the spot market price too low, wanting to raise it, wanting to control it, the major oil companies began buying gasoline from the independent refiners; not because they needed it. Indeed, they did not. They had more than they needed. But if they could establish a high price in the spot market for gasoline it would fix the price that the jobber would have to pay to them. So they set about to buy gasoline from the independent refiners on the spot market.

233 And when they had that organization perfected, or had it functioning in some sort of a way, later more perfectly functioning—where, for example, the independent refiner today is selling gasoline at 3 cents a gallon, the major oil companies step in and they begin buying from them, and they pay them 4 cents. They pay them 4 cents instead of 3 cents; not because they had to. The independent was willing to sell it at 3; but they don't want it at 3, they want to pay 4 for it.

This is an illustration, now. They don't jump from one cent to another like that; they deal in eighths, usually.

Having paid 4 cents instead of 3, it might occur to you, "now, that is just a loss, a money loss, and it is perfectly foolish to expect us to believe that they did that." But wait till you see how it works.

Now, I spoke about the vast volume of gasoline that is necessary to supply the needs of this Mid-Western area, these ten states. In fact, it now has become one of the necessities of life.

Suppose, for example, that the major oil companies bought today on the spot market from the independent refiners a million gallons of gasoline, and paid 4 cents for it instead of 3. They are taking a loss on that, are they not? Translate that into money, and you have a
234 substantial loss. But suppose that tomorrow they are able to sell 12,000,000 gallons at the increased price of one cent; they have benefited by the transaction. Suppose that during the year they have been able to sell four and a half or five billion gallons of gasoline at this raised price. They took a little loss on the small quantity they bought, where they paid a price they didn't need to pay, but they benefited in the very large volume which they supplied throughout the country.

Now, that is exactly what happened.

The trade journals, whose price determined the price to be paid by the major oil companies, looked at the price in the spot market today. What do they find? They find 4 cents instead of 3, and they quote that; 3⅞ low, and 4 high, and so on, running along like that. They take the average.

Now, that is the price of gasoline to the jobber tomorrow. But the major oil company is the one who made that price, isn't he? Because he went in there and bought gasoline from the independent, and paid him a higher price than he had to, in order to raise the price for the gasoline that he was to sell.

Well, here is the jobber in the picture, with a contract under which they agree to supply him with gasoline for a period of one year, at the price to be quoted by the Journal of Commerce and Platt's Oilgram. And that price is the rigged price, it is the rigged market made by the major oil companies.

235 And the jobber must, if the raise was one cent—the jobber does business on a very narrow margin; his volume largely keeps him alive, if he can get a reasonable margin of profit. The jobber then is squeezed just one cent a gallon, isn't he? And if he has a contract with the major oil companies under which he gets a margin, the difference between what he pays them and what he gets for it at the retail service station, if that is 3 cents and the rigged price takes one cent away from him, he is down to 2. If they raise it another cent he is down to one cent. If they raise it another cent, he is down to zero.

And that is what the major oil companies like. If they raise the spot market one cent more, the jobber goes out of the picture—4000 of them or more, in this one area—and the major companies sell direct to the consumer; and they can tell you and me what to pay, and we have nothing to say about it. They have absolute control of that market, and a monopoly on the whole market; because, where we found that they had 85 per cent in the beginning, they cooperated with the independents and took control of the 15, and they have got it all. It is not a monopoly as we speak of it or read of it—it is the perfect monopoly.

Now, that is precisely what happened here, as the evidence will show: That they took over, and they have
236 retained absolute control of that market. Down until the day that they were indicted by the Grand Jury here on the 22nd of December, 1936, they had the power—maybe they have it now—of making you and me, instead of paying 20 cents a gallon, pay 30 cents. The only reason they don't do it is the very reason they didn't do it in December, 1936: Because the Government of the United States stepped in and said, "You have gone too far now. Stop."

Now, that, in a very general way, is the conspiracy. Very much more, and a good deal of it in legal phraseology, is contained in this indictment, going into some details which I will not follow here, showing you just how this contact was made between the group of major oil companies and the independent refiners, and just how the jobber was hurt.

Now, mind you, the scheme under which the consumer had the price of gasoline raised on him, I have just barely dealt with, just barely touched upon. But you can see at a glance what would happen to the consumer in that situation.

Here is the jobber. He has got thousands of dollars, hundreds of thousands of dollars, many of them have, invested in their plant, bulk stations, retail service stations, trucks and equipment, throughout the country. Here is the jobber, driven to the wall by this rigged market under which he has to pay this high price. He is
237 bound by this contract with the major oil company, and he can't get another contract anywhere; and he can't get gasoline from an independent refiner, because the majors have gone in and taken it all.

Now, what does he try to do, in order to live? He tries the only thing that is possible—and that is hardly possible—that is, to pass on some of his loss to the consumer, and get a higher price at his retail service station in order to make up for his loss in buying under the contract at the rigged market. That is where the consumer has been injured. That is where the consumer has been placed within the grasp and the power of these tremendous aggregations of great wealth, operating together.

Now, one or two of them alone couldn't have done this, of course, if there were competition between them. And they well knew that. And the picture will be painted to you by evidence here, of how they got together; how they held secret meetings, in Chicago, Washington, Kansas City, St. Louis, Tulsa, some of the other places down in the oil fields, from time to time.

And, as I said at the beginning, these were not meetings at which the public were invited—indeed, no. They were meetings from which the public was excluded. And there the scheme was hatched, and there the men were selected for the purpose of going out and taking their part in putting it into effect.

And you will find mentioned frequently here in the trial of this case two very important figures.

238 One was a gentleman by the name of Buckley, Neil Buckley, an employee of the Cities Service Company, who went down into the East Texas field and acted as a contact man between the group of independent refiners and the major oil companies in carrying out the plan to raise the spot market tank car price of gasoline down there. And it will be a long, long story, if it is fully told. And it

won't be fully told, because you must remember, we are not going to have everything that happened here exposed to you. It couldn't be expected, and can't be had. But enough will be exposed before you by way of the testimony of witnesses to show that these people were bound and determined that they were going to carry out this plan of fixing these prices of gasoline.

And Buckley acted as the man between the two groups down in the East Texas field. And you will be shown how he moved about from place to place, from major company office to major company office and to the independent refiners, and to the agency that was set up as the agency between the two. And how, when the independent refiner had gasoline to sell today, he didn't sell it to the jobber, who was begging for gasoline at a reasonable, living price; but he sold it through the agency set up by Buckley. Buckley, on the other hand, contacting the major oil company and saying, "We have so much gasoline from the independent refiner today. Can you take it?" And going to another major and saying, 'I have so much gasoline from this fellow. Can you take it?" And they did. And, "What
239 is the price?" And the price began gradually going
up and up and up.

I didn't intend to refer to this chart, but it might be of some little help to you now, and might give you a little more general idea of what happened in the gasoline price. (Referring to large chart)

You see the top line, showing the rise in prices. You see these bottom lines, showing the rise in prices. That will be gone into very fully and explained to you in detail, that that is the way, essentially, the prices acted.

Then we go into the other field, which is a smaller field in production, the Mid-Continent field; and we find a similar set-up. We find a contact man there between the independents and the majors. He will be referred to by the name of Jacobi, who is an employee of one of the major oil companies, Wadhams Company, the subsidiary of Socony-Vacuum, is it?

Mr. Lewin: Yes.

Mr. Crawford: Socony-Vacuum. He is the man that made the contact, with the help of a lot of other fellows who were also interested in this scheme and were going to benefit by it. He made the contact between the independents and the majors, and helped fix the spot market in the Mid-Continent area.

And the two, of course, operated in harmony. There will be considerable testimony on that point.

240 Now, of course, again speaking generally, we find in this conspiracy, as you might expect, some of the biggest men—speaking now of big in the way of controlling vast volumes of financial influence—some of the biggest men in this country in the oil business, involved in this conspiracy.

And one of them who will be referred to many; many times in the trial of this case, probably was the mastermind in this whole conspiracy. He is the man who led. He is the man who practically told the other fellows what to do, and they followed him. That is one Charles E. Arnott, Vice-President of Socony-Vacuum. He is the man who called these meetings together, many of them. He is the man who at the meetings, very carefully keeping it away from the eyes of the public, laid down the plan under which this operation should be carried on.

I think I have already told you, as the evidence will show, that starting out with 85 per cent control of all the gasoline marketed in these ten states, these defendants had a working monopoly—

The Court: Mr. Crawford, I think we will suspend now until two o'clock.

241 Opening Statement Continued by Mr. Crawford.

May it please the Court, and gentlemen of the jury. I am always glad when we have a little recess between the time that I start to talk and the time I finish. It is nice for the lawyers, but it is kind of tough on the jury, because we go out and we think of a few more things in reference to it to which you have to listen.

I am not going to spend a whole lot of time in talking to you now. My endeavor is purely and simply to outline to you in a general way what the Government expects to prove so that perhaps as the testimony of the Government's witnesses comes in, you will be able to understand it a little better than if the outline had not been given to you.

I referred a while ago to the Mid-Continent oil field, and more particularly to the East Texas field, and that largely because of the East Texas field is a very large oil-producing area. The production there in such large quantity is in East Texas.

When you move from there—and this map will carry you along as you are referring to it—to the field which is known as the Mid-Continent field, and both of those fields will be referred to here so that it is proposed for you

242 to know now what area that Mid-Continent field comprises. So as to make no mistake about that, I again return to the indictment to tell you.

The Mid-Continent fields extend over the State of Oklahoma, the northern and western portions of the State of Texas, the southern and eastern portions of the State of Kansas, and the northern portion of the State of Louisiana.

I spoke to you in the beginning as to what the proof would show with respect to the carrying on of this buying program in the East Texas field. The term "buying program" is a term you are going to hear many times also.

I referred to the fact that it was managed largely by one Neil Buckley who acted, as he will say himself, as a liaison man between the two groups, the independent refiners and the major oil companies.

I think I called your attention, too, to the fact that they set up an organization there in the East Texas field of the independent refiners, and appointed a man by the name of Robert Cline to act between the two groups.

Now, these groups of major oil corporations that were going in there and buying this small quantity of gasoline produced by the independent refiners were really operating a pool, and you will hear a lot about pools as you listen to the evidence in the trial of the case; and I think I need
243 not go into any detailed explanation as to what is meant by a pool to you men, because you have known and heard and read a lot about it, and maybe been on the short end of a few of them, too.

This pool operated in the East Texas field generally in the way I have stated. Get over into the Mid-Continent field, and as I said generally there the pool operation, the buying program, taking up the gasoline of the independent refiners so that the price might be raised, was carried on by one Jacobi as a go-between between the independents and the majors, he having considerable help from another group that were assisting in that work there, and both—both pools, both operations, having drawn in finally the independent refiners so they were all acting together, being managed, as I say, by Mr. Arnott, vice president of Socony-Vacuum Corporation, having his office on Wall Street in New York. This, the evidence will show.

In the Mid-Continent field, for the purpose of making the operation comparatively simple, the independent refiners selling the gasoline to the major corporations had an arrangement whereby a certain independent refining company would be assigned to a certain major company.

That independent refiner would sell his gasoline to that company and no other. That independent refiner
244 who was buying gasoline from a certain major, was known in the Jacobi Mid-Continent pool as a "dancing partner". It operated so well and so much to the satisfaction of the major companies that instead of talking in terms that you and I would talk of that situation, they talked in terms of "dancing partners". So, each independent refiner was a dancing partner for each major, and that will be testified to by the men who had to do with managing these pools.

Now, gentlemen of the jury, I think from what I have already said, and certainly from what shall come afterwards from the witnesses, that you will appreciate the fact that much of this testimony giving you the facts with respect to this conspiracy is going to come from the mouths of men who are just as hostile to the Government in this prosecution as anybody can be, and you have a right to expect from what I have said thus far, and you will have better reason to expect, as we go along, that some of this set-up has got to come from the mouths of the very men who carried it on; and when Neil Buckley testifies to anything here relating to the facts in this case that may be detrimental to the major oil companies, you can believe that he is doing it under the greatest stress and because he finds no other way out.

The same will be true with respect to Jacobi.

245 You will also find that true, gentlemen of the jury, with respect to a great many other witnesses that the Government is going to call here.

In other words, the Government's case has to be made almost entirely, at least very largely, upon the testimony of men that were engaged in the violation of this very law, and for whose punishment some of them are standing before you now.

Now, besides these defendants that have been named here in these large numbers, and besides the men who were engaged in operating, carrying out their scheme, the independent refiners were also taking part, and they were profiting by it; and when and if an independent refiner testifies here, with possibly a very few rare exceptions, you will find them reluctant, unwilling and hostile, and I am going to ask you gentlemen of the jury to receive that testimony in the way in which the Government is obliged to present it to you.

And so they had this "dancing partner" arrangement in the Mid-Continent field, and it worked beautifully. I do

not know who furnished the music. I suppose John Q. Public furnished part of it. I understand that Mr. Arnott is a great musician, a second Paderewski in fact, and he was at the top of the whole show, directing Buckley and Jacobi what to do. Maybe he was the musician. But anyhow they threw this little element of humor into the whole picture so as to take away from it the seriousness per-
246 haps that the Government finally found that it should receive.

Gentlemen of the jury, this is a serious, sober, important and solemn undertaking upon the Department of Justice, being presented to you by the men assigned to the Department of Justice for that purpose, and whatever we do here before you in the way of argument or in the way of presentation of testimony, we do with that seriousness and earnestness which will tell you that there is a conviction in the heart of all of us that this is one of the most gigantic, far-reaching, and withering conspiracies to violate the Sherman Anti-Trust Law ever attempted in the United States, affecting as it does the lives of millions of people in these ten mid-western states, the lives and the happiness and the property and the security of the business of thousands of jobbers in this mid-western area, and if I impressed on your minds this morning that the jobbers are the ones who suffered from this conspiracy so much, I did not mean at all to make less important that the consumer, who always pays most of these bills, is the one who suffered almost equally, if not greater, than he did; because you will find from the testimony here that when the spot market rose, where the independent jobber buys from the independent refiner; the wholesale market went up, the retail market went up almost in the same proportion, there being a lag in point of time, but finally the retail
247 market responding to the rise.

There is one thing that stands out here perfectly plain and will remain in your minds, I think, from the beginning to the end of this trial, and that is, that the rigging of this spot market of gasoline by these indicted defendants, and the money that they took out of it, they took either from the consumer or the jobber. There were only two places for it to come from, and those two classes of people paid the bill, running into millions, hundreds of millions of dollars, as the evidence will show, covering the period of time covered by this indictment.

248 Not only, gentlemen of the jury, is this prosecution actuated by the Government because of the injury done to the public, but because of the fact that it is a ter-

rible thing that a group of influential, wealthy millionaires or billionaires should take over the power, take over the control, the power to make prices, and to want to make them. That is the terrible thing, and the thing which the law denounced and was intended to prevent. I would like to have you carry that with you throughout this trial, because it is, after all, the very thing that the Sherman Anti-Trust Act was intended to prevent.

Now, I would like for you to be not seriously disturbed as you sit here and listen to this evidence, because you don't at once understand and fully analyze it all. Don't let that bother you at all.

There are going to be a great many witnesses; there are going to be hundreds of documents, taken by the Government agents out of the files of these big corporations—and they didn't get them all.

Don't you be disturbed because you are not understanding this as it goes along. Not even all the lawyers in this case, and I think very few of them, are able to make a perfect analysis from the evidence at hand, as to what that set-up was.

But you will, I am sure, keep in mind the major
249 points in the whole case in so far as the Government
is interested in this prosecution; and that is the fact that these men went outside the law, placed themselves above and beyond it, and took over the power to do the thing that the law says they should not do. And it is for that that this prosecution by the Government is being carried on.

Now, the Government remained, as it will appear, silent and inactive for quite a period of time since the beginning of this conspiracy in 1935. And of course that was bound to be true, because it took long, weary, hard work by the Government agents to uncover the scheme and the criminal plot that was worked out by these defendants and put into operation—and put into operation. And it was only when there were murmurings and rumblings and grumblings by the people of these ten Mid-Western States, that it finally reached Washington, that it finally went into the Department of Justice, that this prosecution was decided upon.

Gentlemen of the jury, from the beginning, when it was found advisable and necessary in the interests of the common people and the protection of the public, that something be done about it, as the evidence will show, when
the Bureau of Investigation started out, they faced a
250 long, long, weary, crooked road, to get at some of the
facts. As I said to you before, most, if not all of

them, had to come from the men or the officers of the corporations, and the individuals, who were engaged in the commission of the misdemeanor or the crime for which they are being prosecuted here. But when finally they did get on the trail—if you have been reading something about the Federal Bureau of Investigation and the Department of Justice, they never let up—something like the Canadian Mountie, they always get their man.

And so we think that we have it here, ready to present to you from the mouths of witnesses—most of them unwilling—an abundance of testimony; testimony so convincing and so great in volume and weight that, at the end, you will have no trouble at all in following the instructions of the Court, in finding these defendants guilty beyond all reasonable doubt.

Now, I want to say just one thing more, and perhaps that will be all. And that is with respect to these trade journals.

You have heard me say the part that they played in this picture. These trade journals knew that the prices of gasoline to the jobber—and to the consumer were going
to be affected by it, too—that that was the price that
251 was being made in the spot market by the major oil
companies carrying on this conspiracy, and having rigged the market.

Now, you know what rigging the market means, I am sure. If you lived in 1929, 1928, and a few years afterward, you all heard something about that.

This was a rigged market. These trade journals knew it. They helped to rig it. They knew that you and I and the other millions of people in these ten states were going to buy gasoline on that market. And I shouldn't fail to say to you that we believe the evidence will show here, that nobody in this conspiracy is guilty of more reprehensible conduct than those people. It was not only a violation of the Sherman Anti-Trust law, but it was a perpetration of a gross fraud upon those who were dealing in gasoline.

A good many incidental questions occur to your mind, of course; and perhaps it is not necessary to explain them to you or to talk about them; but one that occurs to the mind of most anybody is: "Well, why is this prosecution brought in Wisconsin?" You are all interested in that.

Well, from what I have told you and from what you are going to hear from the evidence, here, this gasoline
from these refineries, this rigged market gasoline
252 found its way into all of these ten Mid-Western States.

And that rigged-price gasoline was bought and sold in the State of Wisconsin. And every one of these corporations, I think, except two, are engaged in doing business in Wisconsin; and those two ship and sell and market through various agencies gasoline in Wisconsin, too.

Another reason, perhaps, by looking at the map, you might guess, is the location of the State of Wisconsin with reference to these ten Mid-Western States. We all forget our geography pretty easily—I do easier than most of you. But when you look at the location of the State of Wisconsin in this Mid-Western area (referring to large map of the United States), you will find, I think, that it is the only state in that area that does not tie into or connect with any state outside of the area. Now, that is a little complicated, isn't it? But here is Wisconsin (indicating on map). That is part of the Mid-Western area. Here is Minnesota also; here is Michigan; here is Iowa; here is Illinois, and here is Indiana. So that Wisconsin is nearly in the center of these ten Mid-Western States. That may not be any real reason at all, but it is perfectly proper thing to think about, and to talk about. But, anyway, here we are.

253 I won't take the time in looking at those red spots there, which ought to be explained to you; but I won't take the time to explain that. One of my associates can do it so much better than I.

But here we are, in the Western District of Wisconsin, and under an indictment returned by a grand jury in session last December, for the trial of this case.

Now, I needn't say to you, I am sure, but just to mention to you that the Government of the United States doesn't want anybody found guilty who is not guilty. And you are going to get the law of this case from his Honor, the Judge, and from nobody else. And what law anybody might attempt to talk about before you, just forget it, because here (indicating the Court) is the place from which you get the law. And you will be told something about the Anti-Trust Sherman Act by the Court, and that is where you will take your law.

As I said awhile ago, there is so much to talk about here that one hardly knows, who hasn't been through the thick and turmoil of the evidence, and maybe from consultations with many of the witnesses in the case, you hardly know where to begin and where to stop.

We are going to try to make this just as simple for
254 you as we possibly can. And of course, the defendants here are going to be accorded every right and

every privilege and every protection that the law throws out and surrounds and protects anybody charged with a crime with.

But we are going to ask you, gentlemen of the jury, and I do it now, that when you come to a consideration of the evidence or the defense to be offered here by these people who are brought to trial, to remember that after all, and when you are all through, there will stand out prominently in your minds, I believe, in such a way that you cannot forget it—and neither sneering nor eloquence nor argument, without evidence to support it, by the lawyers on the other side, is going to remove it from your minds—and that is that there was a rigged market in gasoline from 1935 down to 1936. And one of my associates will point out to you how that market acted; that it acted during that period of time like no market on merchandise of this kind ever acted in history before.

And so you will keep in your minds the high spots of the charge here, and of the conspiracy: That these men did join together for the purpose of bringing about a fixing of the market, a control, a power over it that left you and I and everybody else who wanted to deal in
255 or use this class of commodity, helpless, prostrate. We want you to keep that in your mind.

And, gentlemen of the jury, if you are satisfied from the evidence here that is going to be produced by the Government, giving full consideration to everything produced by the defendants, that this market was rigged and fixed, then there is only one answer; that is the answer that the Government contends that you ought to make at the conclusion of this trial, and that is the guilt of these defendants.

I thank you.

256 Thereupon, at the close of the opening statement to the jury by Mr. Crawford, and in the presence of the jury, the following colloquies occurred:

Mr. Donovan: May it please the Court, I ask the Court to instruct the jury to disregard the inflammatory remarks of counsel for the Prosecution: Particularly in reference to the millionaires and billionaires here who were attempting to rig the market in this area; and further, to his statement that there was not only a conspiracy in restraint of trade, but there was the perpetration of a gross fraud.

Mr. Crawford: I think, if the Court please, that if that objection were going to be taken, it should have been taken at the time, and not now.

And I don't agree at all that this was anything outside of what it was proper for counsel to say to the jury, that the evidence would convince them of.

Mr. Donovan: If it please the Court, it may well be that, out of an excess of courtesy to counsel, I refrained from interrupting; but that does not preclude these defendants from having the jury instructed to disregard the remark.

257 Mr. Crawford: Counsel has referred to two classes of remarks, I think, especially two. I am willing that the Court should instruct the jury to disregard that, and that it was made in the heat of the argument.

The Court: Yes. I may say to the jury that any reference to the wealth of any of the defendants is entirely immaterial. A man of wealth has just as much standing in a court as a man that is poverty-stricken.

Mr. Donovan: And, if it please the Court, I would like to have it appear further that that assumes something not established.

The Court: Yes, I understand.

Mr. Donovan: I don't know that it would be established here that they were men of wealth.

The Court: Yes.

Mr. Lewin: Certainly, the corporations—

Mr. Crawford: Well, I think it would do nobody any good by discussing that now.

The Court: No.

• • • • • • •

Mr. McAffee: Your Honor, before the opening statement is continued, in the interests of the economy of time here, there are various exceptions

258 and objections to testimony and other happenings in the trial that will be made by the defendants or some one of them.

May we have a stipulation with Government counsel, in the interests of economy of time, that the objection or exception taken by any of the counsel for the defendants shall enure to the benefit of all of the defendants, unless otherwise stated at the time of taking such objection or exception?

Mr. Crawford: That is agreeable to us.

The Court: I think that is a very good suggestion. Let the record show that it is so stipulated.

Mr. Gray: Your Honor, before they resume the opening statement for the Government, I would like to supplement the objection made by Colonel Donovan to some of the remarks of the Prosecutor who opened this for the Government, and request the Court to instruct the jury to disregard all of those statements and remarks made by him with respect to the length of time it required the Government and its agents to uncover what he referred to as a scheme in this case—

Mr. Crawford: Now, I think—

259 Mr. Gray: (Continuing.) —and the G-men, and all the agents and everybody else that it required to do those things.

Mr. Crawford: I think that is not proper, if the Court please. The evidence will so show.

The Court: Your motion is denied, and you may have—

Mr. Gray: May we have our exception?

The Court: Yes, you may.

Thereafter, Mr. Chaffetz, on behalf of the plaintiff the United States, made his opening address to the jury. Such address is as follows:

260 Mr. Chaffetz: May it please the Court, gentlemen of the jury, the only excuse that I could possibly offer for taking your time to supplement the remarks of my associate is that the facts in this case are complicated, and it may be that hearing them through a different voice, perhaps, from a somewhat different approach, it may tend to make your task of trying to follow the proof offered by the Government as the witnesses are called before you easier. I think I may best begin by again calling your attention to this map of the United States.

You have been told that the price fixing conspiracy charged by the Government operated in the ten middle western states surrounding the state and including the state of Wisconsin: Michigan, Indiana, Illinois, Wisconsin, Minnesota, Iowa, North Dakota, South Dakota, Missouri, and Kansas.

Now, you will learn that those are the states in which the Standard Oil Company of Indiana is what is known as the market leader. It does more gasoline business in each of those states than any other company. And that is why the territory has been known as the Standard of Indiana Territory.

I would like to impress that on your minds, because you will hear continuous reference to the Standard of Indiana Territory throughout this case. I repeat the Gov-
261 ernment case will be that the combination and conspiracy to fix and raise prices charged in the indictment operated in the Standard of Indiana Territory, the ten states to which I have just pointed.

You will find that each of the defendant companies, the major oil companies named in the indictment, does business in some or all of those states. Some of the defendants do business throughout those states, such as the Standard of Indiana. Some of them do business only in part of these ten states. But they all do business in some or all of the ten states that I have enumerated, and the evidence will so show.

Now, the claim is that the conspiracy here charged was directed at raising the general level of the prices of gasoline, both wholesale and retail, prevailing in those states, and to understand that I think it is helpful to refer to this graph.

Can your Honor see it?

This graph will be at a later time offered in evidence by the Government, and I might say that the defendants will have the opportunity to show any inaccuracies. It is brought before you now to give you graphically in picture form what it is the Government contends the defendants have been guilty of, and it is intended to show what the trend of prices of gasoline, both wholesale and retail, was during the period of the conspiracy, and, as you might
262 suspect from the charges made, the trend of prices was upward, and so we contend the testimony will show.

I should say that in general there will be reference in this case to two kinds of gasoline, "Regular" or house brand gasoline, which is the gasoline that most of us buy. It is a gasoline that is sold under the leading brand name of the supplying company, and I suppose includes about 90 per cent or more of all the gasoline that is sold.

In addition to regular gasoline there is what is known as third grade gasoline. Now, there are various qualities of third grade gasoline. Generally the test of the difference between third grade gasoline and regular gasoline, as the evidence will show, will relate or will be based on the anti-knock quality of the gasoline. You buy a cheap gasoline, and you will find that it knocks in your motor more than a higher priced gasoline does. That cheaper quality of gasoline, which usually sells at a differential of a half a cent to two, three, four cents below the regular gasoline, is sometimes referred to as third grade gasoline.

And the conspiracy charged in this case relates to both the poorer quality, third grade gasoline, and the regular gasoline.

263 I will point out to you in a moment that the gasoline purchased in open markets, in order to rig the markets, consisted of more third grade gasoline than of regular gasoline. But, as I say, the conspiracy included both.

And so directing your attention again to this chart, you have as the lowest line across the graph a picture of the trend of the prices of third grade gasoline, beginning at the time that this conspiracy started, the early part of March or the latter part of February, 1935, and continuing down until the return of the indictment by the Grand Jury in December of 1936. And I call your attention to the fact that these prices rose rather rapidly during the earlier part of that time, leveled off, and remained uniform and stationary for a long period of months. Then it gradually went higher, reached a new peak far above the level at which the price trend started in March, 1935, and then dropped gradually thereafter.

In that connection I call the jury's attention to the fact that the Grand Jury, which was first called to investigate this case, the evidence will show, was called on the fourth of May, 1936, and there was a notice in the press for several weeks prior to that time of the proposal of the Government to call the Grand Jury to investigate these matters. We shall have occasion again throughout the

264 trial to refer to the fact that these drops in prices developed after the Government commenced its investigation here.

Now, referring again to this trend of prices, I say to you that this investigation into the facts that are about to come before you, will be for the purpose of determining, for the purpose of your determining whether there was any illegal factor, any illegal cause that entered into that rise in the price.

About the graph that I have just referred to is a line which is intended to indicate the trend of regular prices, wholesale prices of regular gasoline, and you find that the tendency of that graph was to follow very closely the trend of the price of third grade gasoline only at the higher level because it was a higher priced gasoline.

Then we look at the level of the retail prices throughout this period, and we see that the trend of the retail prices, while not exactly the same as the trend of the tank car prices, was following the same general tendency, the same general direction, upward, during the major part of the time the Government contends this conspiracy operated.

And we will contend and we will adduce testimony to prove to you that that trend upwards in the retail prices was brought about directly and intentionally by the
265 conspirators who are here charged with raising and rigging the prices of gasoline in these ten middle western states.

Now, of what does the Government's case consist? It divides itself logically into two parts. The oil industry is a complicated industry. For you to understand the nature of the conspiracy and how it operated, it is necessary for you to become informed as to how the industry operates.

I suppose these defendants could have sat around the table and agreed on the price, just said, "We will charge such and such a price for gasoline." That would have been a very simple conspiracy. It would have accomplished exactly the same results that we contend was accomplished in this case. But they chose to adopt a more round-about and more complicated method of reaching exactly the same results, ultimately fixing the prices of gasoline, which was what they set out to do.

And, as I say, in order for the jury to understand the nature of their scheme and how it functions, in order to bring about the illegal results that I have referred to, we must produce before you evidence to show you how the industry operates normally. That I will refer to as part one of the Government's case.

There will be no evidence of conspiracy in that part
266 of the case. That will be devoted entirely to showing you how the industry operates.

And then part two of the Government's case will commence with the origin of this conspiracy, and we will show you how it began and how it operated in the light of the facts that were presented to you in connection with the first part of the case.

I think at the risk of some repetition I can be of some assistance to you in lightening your task and making it easier for you to understand the witnesses as they testify and the documents as they are offered, if I again outline to you, still rather roughly, but in as much detail as possible, what the facts are, what the basic facts are in the industry against the background of which this conspiracy operated.

I have pointed to the fact that all of the defendant oil companies do business in the Standard of Indiana territory, that is, the middle western states. We will prove that they control more than 85 per cent of all the gasoline that is sold in these states.

Where does that gasoline come from? You will find from the testimony that the crude oil from which the gasoline is manufactured that is shipped into the middle western states, the Standard of Indiana territory, is found largely in two separate areas.

There is first the East Texas field. Unfortunately
267 this map, which is the only one that we could find for
this purpose, doesn't give an accurate picture, as you look at it, of the relative importance of the crude oil producing areas in the United States.

The green on this map indicates the existence of crude oil deposits. The red you may ignore, but to satisfy your curiosity I can tell you that that relates—that refers to the location of natural gas wells—natural gas, I should say, but natural gas has no part in this case.

The green indicates the location of crude oil. And possible crude oil, as the testimony will show, is located here in the East Texas field. And that small green spot that I am pointing to here indicates the location of the largest crude oil field in the world. From that crude oil field a very large part of all the gasoline used and consumed in the middle western area is produced.

268 Surrounding the East Texas field is a series of oil
fields which will be referred to in this case as the Mid-Continent oil field located in Oklahoma, Kansas, Arkansas, Louisiana, and the northern and western portions of Texas. The crude oil produced in these fields is in some part converted into gasoline right in the fields. There are refineries located there. But a large part of that crude, you will discover is put into pipe lines and transported in the form of crude oil out of these oil producing states, into the states of Missouri, Illinois, and Indiana principally, and some of the other states in the middle western area and is there converted into gasoline.

You will learn that some of the largest refineries of the Standard Oil of Indiana are located at Whiting, Indiana, just outside of the City of Chicago. The Shell Company has large refineries outside of St. Louis. From these refineries, whether located within these ten states or located by the producing wells, the gasoline is further transported,

either by pipe line and more often in tank cars, and I am sure you have all seen gasoline tank cars standing at railroad sidings—transported in tank cars to local distribution points. These local distribution points, scattered through-
out these ten middle western states, and indeed
269 throughout the entire United States, are referred to
as bulk stations—bulk storage plants.

Now, each of the defendants owns and operates large numbers of these bulk storage plants throughout the area that I have described.

From the bulk storage plant which ordinarily holds a minimum of one tank car—you dump one tank car into a bulk storage plant, sometimes you can dump a large number of tank cars into a bulk storage plant—from these bulk storage plants the gasoline is further distributed by tank trucks—oil trucks, commonly seen on the highways, to the retail stations. Each of the defendant oil companies referred to as a major oil company or a semi-major oil company when not as large as some of the larger defendant companies are, operates a business which covers all of the phases that I have described, the production of crude oil in the oil fields, the transportation of the crude oil in pipe lines, the conversion of the crude oil into gasoline at refineries, and the further transportation of that gasoline from the refineries to the bulk plants, and from the bulk plants to the retail stations.

Now, the evidence will show that a large part of the gasoline manufactured by the defendants is not sold by them at retail but is sold to jobbers.

A jobber, we will show, is a man who begins with a
270 bulk storage plant. He buys in tank car quantities, has
the tank cars delivered to his bulk storage plant, and he operates from then on, stores, delivers in tank trucks, either to his own retail stations, or to independently owned retail stations.

Now, the indictment alleges, and we will prove, that such jobbers who, I think the evidence will show, compose in numbers, some four thousand within the territory to which I have referred—the Standard of Indiana territory,—that is to say, there are at least four thousand jobbers operating bulk storage plants and tank trucks and retail stations in this territory.

The evidence will show that these jobbers get the greater part of their supply of gasoline from the defendant oil companies. The indictment alleges that they get 80 per cer cent of all the gasoline that they distribute from the defendants, the remainder being sold largely by so-called independent jobbers who handle no major brand of gasoline, is purchased from independent refiners, such independent refiners being located usually right in the oil fields.

How does a jobber buy his gasoline? He buys it under contract with the defendant companies. The evidence will show that each of the defendant companies does business with jobbers in pretty much the same way. They use 271 a contract which is pretty much the same. That contract provides that the price that the jobber shall pay the major oil company—the defendant companies in this case, shall be the average of the prices published in the Chicago Journal of Commerce, a defendant in this case, and Platt's Oilgram, another defendant in this case.

In other words, when the jobber orders his gasoline under his contract, if he wants to know what price he has to pay, he looks at those journals to see what prices they publish as the going spot market price on the day of shipment, and that is the price he has contracted to pay.

Now, as has been pointed out to you, the evidence will show that the jobber was not the one who framed that contract. The jobber has found over a period of years that the public demands a major brand of gasoline,—an advertised brand, that the consumer can depend upon or has been persuaded by advertising to believe is dependable. In order to get that type of gasoline, he must go to the company that sells it. He must go to one of the defendant major oil companies in this case; and if he goes to one and is given a contract by that company, and he does not like that contract, the evidence will show that it is purposeless for him to shift to another company because the same 272 contract is offered to him by any other company to whom he goes. So, we will seek to convince you that it is the major oil companies themselves who determine upon the policy of selling their gasoline to jobbers, consisting fully of one-half of all the gasoline they sell in these ten middle western states. It was their policy, we will show, to do business with jobbers on the basis of the open spot market price of gasoline, as published in the two market journals I have referred to.

Now, what are the open spot market prices? I have referred and my associate referred to the independent refiners.

(Thereupon a recess of 20 minutes was taken.)

Mr. Chaffetz: (Continuing) May it please the Court and gentlemen. At the recess I had just concluded calling your attention to the fact that the prices paid by jobbers who buy about one-half of all the gasoline sold by the defendant major oil companies in this area were under contracts adopted by the major companies themselves, made to depend on the open spot market prices of gasoline as published in the Chicago Journal of Commerce and Platt's Oilgram, so that the prices the jobbers pay is supposed, under those contracts, to be determined by the price made from day to day in this open market known as the spot market.

273 That graph shows, and the Government will prove, that the retail price, likewise the price that you and I pay for gasoline, is determined largely by the open spot market price; as the spot market wholesale tank car price goes up or down the retail price tends to follow up or down; not directly, there may be a lag, but surely as one goes up, the other goes up. The evidence will so show. So that it is a basic fact in this case that all prices—virtually all prices for gasoline sold, no matter which way in these ten middle western states depends upon the price determined in that open spot market.

So it becomes important for the jury to know what is that open spot market, sometimes called spot tank car market because the gasoline sold on these spot markets is sold in tank car quantities. You want to know what that spot market is supposed to be, and what it actually was during the operation of this conspiracy. Now, how is it composed? You will bear in mind that the defendant major oil companies don't sell any significant amount of gasoline on the open spot market. They sell either under contract to jobbers, under contract to dealers, or through their own stations.

274 Sales on the open spot markets in East Texas and Oklahoma are sales almost exclusively by small independent refiners. Some of those small independent refiners do business to some extent in the same way that the defendant major oil companies do; they sell in part under contract to jobbers. But a part of their gasoline they sell in the open market, they sell to any buyer who comes along, for the best price they can obtain at the time of the transaction. That is what makes a spot sale.

Now, you have been told and you will learn again from the evidence, that these independent refiners together control not more than fifteen per cent of all the gasoline that is sold in these ten Mid-Western States. Of that half or more they sell under contract, so not more than five per cent or seven and one-half per cent we will say as a maximum—I think that is what the evidence will show—is sold by these independent refiners on the open spot market.

We have this situation then that you must bear in mind as the evidence develops: That the great bulk of all the gasoline sold in these ten Middle-Western States by the defendant major oil companies who control eighty-five per
cent or more of the oil, and in part by the independent
275 refiners who sell under contract—prices of all that
gasoline are determined in a normal course by this small amount of gasoline sold by a few independent refiners in and around Oklahoma and in Texas on the open market.

The prices in the sales made by these independent refiners to jobbers in the open market are, in the ordinary course of business, the prices which determine the prices that you and I pay for gasoline in these ten Middle-Western States.

Now, these prices, those open spot market prices, are reported in the journals to which I have referred, the Chicago Journal of Commerce and the Platt's Oilgram. Those journals purport, they represent to the public that they are investigators continually on the alert investigating these spot market transactions day by day, to find out what the going market price is on these open spot markets, and they purport to publish in their daily journals what they say they found to be the going spot market tank car prices on that day. The price that they publish becomes the market because, as I have said, the contracts with all these jobbers are based on one or the other, and usually on both of those
journals. The prices published in those journals are
276 the prices that the jobber contracts say shall be paid,
and it is the price published in those journals, as the evidence will show, which directs the movement of the retail price.

So we must keep in mind two things: One, the spot market price, composed by these sales by independent refiners to independent jobbers, and the translation of that spot market price, or those spot market prices, into the journals by the representatives and employees of the journals.

Now, having that situation in mind, if we were about to conspire together to manipulate and raise and fix the price of gasoline in these ten Middle-Western States, we can see that the easiest way to get about it would be to manipulate those open spot market prices, because, as I have said, they determine the prices that the jobbers pay and the prices that the consumers pay in this area.

Not only would we manipulate that open spot market, but to make our conspiracy perfect we would get the journals into the conspiracy and get them to publish the rigged, artificial, arbitrary prices that we want to establish as the prices for gasoline in this area.

277 Now, that, gentlemen of the jury, is what the Government charges the defendant major oil companies and their co-conspirators in this case with you. They tampered with that supposedly free, open, tank-car spot in order, we will charge, to enrich themselves at the expense of the thousands of jobbers and the millions of consumers of gasoline in these ten Middle-Western States.

278 And this is how they did it, in general, as we will show:

As I have said, the normal course of business of an independent refiner is to sell gasoline to a jobber. From time to time, major oil companies have bought on the spot market. Sometimes occasion arises for their buying on the spot market, and there is nothing wrong in that. Any defendant major oil company is free at any time it pleases to buy as much gasoline as it wants on the spot market, so long as it acts alone. But when it combines and conspires with other defendant major oil companies to manipulate that spot market by purchases, then they violate the law. Now, that is what they did.

The buying that will be described to you, the buying on the spot markets which the Government will claim was the buying which rigged and manipulated that spot market price, was done in concert, was done by all of these companies who are charged with acting in co-operation and together, for the purpose of raising the price.

They purchased on these spot markets at gradually increasing prices. They changed the ordinary course of business under which these independent refiners sold their gasoline to independent jobbers. They purchased this 279 gasoline from the independent refiners at arbitrary, non-competitive prices—not the prices that they would pay if they were going into the market to buy gasoline that they needed for their daily operations, and the prices that they would each pay if they were acting alone. They paid increasing prices, higher prices than they would have had to pay if they were buying gasoline to meet their own ordinary needs. And they got the journals to publish as the going market prices the prices that they paid. Now, see how simple that was.

The prices, as I have said again and again, for all gasoline sold in this area, whether to jobbers or consumers, depend on the prices published in these journals. The journals ordinarily publish the going, open market prices. But during the time of this conspiracy, we will show that they published, not the going open market prices, but they published the prices that the major oil companies were trying to fix as the market prices for gasoline throughout this territory.

The major oil companies sell their gasoline in these states. They sell 85 per cent of all the gasoline that is sold in these states. By buying on the open market small dribbles of gasoline, in relation to the large quantity that they sold here, and paying an arbitrary price, and getting the journals to carry that price as the going market 280 price, that price automatically and directly became the price that they got for the great quantities of gasoline that they sold in this territory. Now, that is the nub of the Government's case.

How did it operate, in greater detail?

There were two so-called buying programs.

One, it is alleged, operated in and around the East Texas field; the other operated in the Mid-Continent fields, in Oklahoma, Arkansas, Kansas, Louisiana, and the northern part of Texas.

Let us start with the East Texas purchasing program. In East Texas there are a number of independent refiners, some 15 or 20 or more. As I have said, they normally sell their gasoline in the open market to independent jobbers; sometimes through brokers who buy from the independent refiner and sell to the jobbers.

These independent refiners, the evidence will show, early in the year 1935, organized themselves into an association for the purpose, not of finding a normal market for their gasoline; not for the purpose of advertising that they have a brand of gasoline that is a good gasoline and should be bought by consumers in competition with the brands 281 of the defendant major oil companies. They thought they had an easier device than that for the disposal of their products. They formed an association to dispose of their gasoline to the major oil companies. And they thought—justifiably, I think you will become convinced—that the major oil companies would be interested in paying them higher prices for their gasoline; because they knew that, the higher the price that the major company paid to them for their gasoline, the higher would be the price that the major company got for the gasoline that it sold to the public.

And so, as the evidence will show, this association was organized. It was known as the East Texas Refiners Marketing Association. It sounds like an association organized as a small agency to market gasoline. But it won't take the jury long to realize that a bona fide marketing organization would have been set up to establish permanent markets as outlets for the products of these independent refiners. This wasn't a marketing organization. This was a device, as we will show, for the transfer of gasoline from the independent refiners in East Texas to a group of the defendant major oil companies, at artificially high prices, for the purpose of raising the general level of prices
282 prevailing in this area.

As liaison man or intermediary between these independent refiners and the major oil companies who supported the East Texas market, was Neil Buckley, whom the evidence will show was loaned by the Cities Service Company to the independent refiners for the purpose of effectuating the plan that I have described. He contacted the major companies on the one hand, the independent refiners on the other hand, and caused the scheme to operate. With his approval, Robert Cline was designated as the Executive Secretary and Manager of the association of the independent refiners.

Cline distributed among the independent refiners the orders that Buckley was able to secure from the major oil companies, and advised Buckley from time to time as to how much gasoline there was available that had to be bought in order to keep the market rigged.

These independent refiners, if their gasoline wasn't purchased by the major oil companies, would sell it on the open market, and they might sell it at a low price, and that price might affect the going market price for gasoline. And so Mr. Cline's duty was to keep tabs on all the gasoline that was available, and make sure that the major
283 companies respectively took their fair shares of that gasoline in order to effectuate the scheme.

The other buying program, as I have said, was operated in the so-called Mid-Continent field. There, the scheme was a little different in its operations, but the principle was identical, as the evidence will show.

There was a so-called Tank Car Committee. I think one McDowell, a defendant here, Robert McDowell, an employee of the Mid-Continent Oil Corporation, likewise a defendant here, was known as the Chairman of that committee. The committee consisted also of Ashton, a defendant here, who was an employee of the Shell Corporation—

Mr. Lewin: Socony-Vacuum.

Mr. Chaffetz: —of the Socony-Vacuum Corporation, I should say; Tuttle, an Empire man, or a Cities Service man; Empire is a subsidiary of Cities Service; both companies are defendants here. You will hear reference to an assistant of Mr. Tuttle's, named Fitzgerald, who was likewise with the Empire Company—

Mr. Lewis: Fitzgerald was an assistant of McDowell.

Mr. Chaffetz: My associate tells me that Fitzgerald
284 is the assistant of McDowell. And also on this committee was one Walter Paul Jacobi.

Jacobi will be called here as a witness, and the principal facts as to the operation of the Mid-Continent buying program will be elicited under oath from him. Jacobi is an employee of the Wadhams Oil Company, which is a subsidiary of the Socony-Vacuum Oil Company; and both those companies are defendants here. And you will learn from Mr. Jacobi, as the facts are elicited from him, that there was an organization in the Mid-Continent field, somewhat comparable to the association in the East Texas field, except that this association had been in existence previously, known as the Western Petroleum Refiners Association.

The president of that association, Mr. Boggs, is one of the defendants here. The secretary of that association, Mr. Bourque, B-o-u-r-q-u-e, is likewise a defendant here—and Bourque, incidentally, was a member of this committee that I recently referred to.

Now, the function of this committee was to take the major oil companies who, as the witnesses will say, were supporting the Mid-Continent buying program, and divide among them the output of the independent refiners whose product was being purchased in that program in order
285 to raise the price in the Mid-Continent spot markets.

As Mr. Crawford has so clearly explained to you, the evidence will show that the group of independent refiners were divided among the group of major companies, so that each major company had one or more so-called "dancing partners". And it was the obligation of each of those major companies, under their agreement, to remove from each independent refiner all the gasoline that that refiner had available, to sell on the open market. They will sometimes refer to that gasoline as distress gasoline, or as surplus gasoline.

A big controversy in this case will center around the proper use of those terms. The effort of the defendants, I think, will be to show that this so-called distress gasoline or surplus gasoline was gasoline manufactured by the independent refiners for which they had no use; they couldn't find a market to dispose of it.

We will seek to show that what is distress gasoline or
what is surplus gasoline depends a good deal on price. It
may be that an independent refiner would have no market
for his gasoline at a price of 6 cents; and if the effort is
made to maintain the market at 6 cents, and the independ-
ent refiner can't find a customer for his gasoline at that
286 price, he may consider that he has surplus gasoline.
But the evidence, I am sure, will show that there is a
market for all this gasoline at a price. So that those terms
must not be loosely used, nor the jury led to believe that
all the major companies did was to buy some loose gasoline
that was lying around, that had no market.

I impress upon you, and ask you to watch and listen during the trial with this thought in mind: That that so-called distress or surplus gasoline—and so the defendants will designate all the gasoline that they bought—is the spot market gasoline. It is the gasoline which they, through their own policies, have adopted for the purpose of determining what prices they will charge to the jobbers.

Now, if they have any quarrel with the nature of that spot market, it isn't for them to say, "We will fix a price for that spot market which we think is fair, and charge that price to the jobbers and the consumers." A more honest, more direct method of accomplishing that result, if it was moral at all, would have been to go to the jobbers and say, "The price we want to charge you, and the only price that we think is fair, is this price."

That isn't what they did. We will show, as I have said,
that it was their practice to sell gasoline on the basis
287 of the open spot markets. Then they contend that the
open spot markets aren't good markets, they are not
fair markets, because there is surplus gasoline in those
markets, and they say, "We will buy up that surplus gaso-
line and make a market to suit ourselves."

Not only that, they didn't content themselves—and this
I am positive the evidence will show—they didn't content
themselves with merely buying surplus gasoline which an
independent refiner had which he couldn't dispose of—and
this goes to the very basis of their honest intentions in this
scheme. They bought as much of that gasoline as they
thought was necessary to bring about the price that they
wanted to establish, whether it was surplus gasoline or not
surplus gasoline.

288 Their scheme was to fix the price and not to buy sur-
plus gasoline. I think it would have been just as illegal

for them merely to have bought surplus gasoline under the circumstances, because where a gasoline is not a gasoline that fixes the price that all consumers have to pay, they have no right in concert to affect that market whatsoever under the law. But as I say, we will show they went beyond that. They didn't merely buy this gasoline. They used this gasoline through their purchases for the purpose of raising and fixing the price that they thought they were entitled to. You will find, too, and this is the most amazing of all the testimony that we will offer: The conspiracy had been under way but a few weeks when they became dissatisfied with the way the market was going up by mere purchasing of the gasoline on the market at the price that was effective, the price that was brought about by their own purchases. They thought the market should have moved up a little faster.

And so at these secret meetings, which will be testified to, they said to each other, "Let us each pay an eighth of a cent more today, and see if we can make that the price?" And they did, and they all paid an eighth of a cent more on
that day. And the testimony will show that that price
289 was published immediately in the journals as the
going market price for gasoline. And a week or two weeks later, they agreed and they paid a price one eighth of a cent still higher and so on, down until, I think it was, the seventh of June, 1935, when they indicated that for the moment that they had the price where they wanted it, and they maintained that price absolutely uniform for a period of five to six months by purchasing, by purchasing gasoline continuously at those prices.

I think by referring to the graph you can see pictorially the statement I have just made. The price in June was raised to this peak after continual hiking up until that point, and the evidence will show, as this graph illustrates, that from that point they kept the price absolutely uniform on regular gasoline down until January, and on third grade gasoline, down until November, and dropped for a week or two, and then back at the same level, and then down again until January.

Then what happened in January? The price of crude went up. The price of crude oil went up. I think the evidence will make it pretty clear that the price of crude oil went up, and that the price of gasoline went up. When they had the gasoline market firm at the levels they desired to in their conspiracy, there was a good chance to raise the price of crude, and the price of crude was raised.

Then what did they do? They said, "Now, the
290 price of crude has gone up, we have got to get more
for our gasoline."

Did they consult anybody? No. They consulted themselves. They decided the price of gasoline ought to go up another half cent, and they did, in January, 1936, they got in touch—the conspirators were all represented, and they agreed to raise the price a half a cent, and they did so. The journals again carried that half cent raise of gasoline and at a time, if the jury please, when market conditions were such that gasoline wasn't being sold, in one of the severest winters, the evidence will show, that we had in years. There was no market for gasoline, no normal excuse in the world for the price of gasoline going up in January of that year except the arbitrary action of these conspirators in raising that price.

I don't want you to misunderstand. These meetings I have referred to were meetings held by the representatives of the companies, who, as I have said here, supported the Mid-Continent field. They will tell you there was no price agreement. They will tell you that the price agreement was discussed, and they said they would share in that later, everyone did.

Now, a man with any experience in business at all, knows that when competitors sit in a room and if
one says what he is going to do when they leave that
291 room, everyone knows that his competitor has a moral
obligation to do as he said he was going to do. There is an agreement there, regardless of the fact that the agreement was not in writing and signed. There was a gentleman's understanding, and that is the way these conspiracies, as you will discover, are carried out. Those prices, as you see, were affected in the Mid-Continent area. If the price went up in the Mid-Continent area, the refiners in East Texas, both independent refiners who were selling for the majors, and the majors who were buying gasoline in the East Texas pool or program, following the prices that were being raised in the Mid-Continent fields, paid correspondingly higher prices in this way. The freight rate from the East Texas field into this general area is about one-eighth of a cent more per gallon than the freight rate on gasoline produced and sold from the Mid-Continent field. East Texas is a bit farther away from this area than the Mid-Continent field.

Normally, therefore, there is a differential of about one-eighth of a cent in the price because of the higher freight

rate, and so the normal East Texas price was regarded as a price one-eighth cent below the Mid-Continent price, and that was the price that the defendants supported, the East Texas buying program, gentlemen, well knowing that they were buying at a price based on a price that was
292 being rigged and raised in the Mid-Continent area. They were all in the same conspiracy or engaged to accomplish the same general purpose, to raise and fix the general level of prices prevailing in that area.

The refiners and major companies who were supporting the East Texas Association buying pool, accomplished one more object, and that was they took gasoline that normally flowed from East Texas and moved into the Standard of Indiana territory, and removed it down to the Gulf for the purpose, as we will contend, of reinforcing this buying conspiracy, this conspiracy to raise the price, because if that gasoline moved into the Indiana territory, it would be competitive with gasoline being sold there, and even in such a small way. They took that gasoline out of East Texas and took it down to the Gulf and distributed it to their tankers and to the east coast where they had their other market outlets.

Now, I think I have given you as much as you can absorb at this time upon how these buying pools, as we refer to them, operated. I haven't given you but a very small part of all of the facts. As the evidence is disclosed, you will find in general the purpose, the feeling, I should say, of those who were engaged in it knew what they were doing, were, at least, very close to the line.

I think one illustration will serve to show what I have in mind. You will find this, that the Texas Com-
293 pany, whom the Government charges was supporting the East Texas buying program, didn't buy its gasoline through the Association. I think the evidence may show specifically the reason why they didn't. But it certainly is a suspicious circumstance, all the other companies supporting that program bought through the Association. Texas didn't. They made their purchases. They bought at going prices, the prices paid by the other major companies, who were supporting this market, but they wouldn't buy through the Association. I will let the evidence show for itself what the significance of that fact is.

In closing, I ask only that the jury take my remarks as remarks of counsel, not as proof. I have said all that I have said to you, only for the purpose of enabling you to understand what it is we are trying to show through these witnesses who will be paraded before you one after another, and through the vast quantities of documentary material, which we will offer.

I think you will find, if you keep the picture in mind that I have tried to paint, that the evidence that we will adduce before you will corroborate, will establish the picture that I have painted, beyond any doubt. Thank you.

294 Thereafter, at the close of the opening statement to the jury by Mr. Chaffetz, and in the presence of the jury, the following colloquy occurred:

Mr. Donovan: May it please the Court, the counsel, in his opening, stated this, as I understood it—and if I am wrong, I wish you would correct me: That if this agreement which he alleged took place affected the price one iota that it was a violation of the law.

I ask the Court to instruct the jury to disregard that statement as being an incorrect statement of the law.

Mr. Chaffetz: If the Court please, I think that that is an exact statement of the law, and it was not an oversight. I made that statement deliberately I am willing, in order to leave no erroneous impression with the jury, that the Court instruct the jury, that that is only my statement of the law, and not the Court's statement of the law.

Mr. Donovan: Then I ask the Court, so that there will be no misunderstanding or no misapprehension in the minds of the jury, the correct statement of the law be made to them at this time.

Mr. Crawford: I think that is entirely uncalled for, entirely out of order. It is not the 295 ordinary way to instruct the jury.

The Court: The Court will instruct the jury as to the law.

Mr. Donovan: Exception.

The Court: I want to say this to the jury. The defendants are charged with conspiracy, in fixing and raising the price of gasoline in the mid-western states. Don't let that get away from your minds. That is what they are charged with. And I think that is all I will say on that.

But at this time I want to clear up in the minds of the jury this fact, that no evidence will be received as to the financial condition of any individual defendants. All persons, rich or poor, have the same standing in a court of justice. And you will disregard any remarks that have been made with reference to the financial condition of any of the defendants, individual defendants. I think it is proper that I should make that remark at this time.

And as to the law in the matter, any statements that counsel will make as to what the law is, you may disregard that. At the close of the testimony, the Court will advise you what the law is.

296 Thereafter, William J. Donovan, on behalf of the defendants he represented, made the first opening address to the jury for the defense. Counsel for the plaintiff-appellee have requested that such opening address in its entirety be inserted in this Bill of Exceptions. Such address is as follows:

297 OPENING STATEMENT BY MR. DONOVAN.

Mr. Donovan: May it please the Court and gentlemen of the jury. We have had some hours since the prosecution has outlined this case to you. Now it has come the time for me to address you on behalf of certain of these accused. I want you to look upon me as I am, an advocate for these men, and view all of what I say from that view point. What I shall say, I shall say simply and
298 deliberately and with full consideration. And so I shall not get off the track, so that I shall not take too much of your time, I have notes before me to which I shall have no hesitation in referring, because I want to speak with the fullest accuracy. When you listen to what I have to say, you will find it entirely different from what the prosecution has said—so different that you will believe that we are not talking about the same kind of a case.

Before stating the position of the defense, I must refer briefly to certain statements made yesterday by those of the prosecution who addressed you. One of the first things said,—I may not give it in fullness, but I am sure I give it in substance—was by Mr. Crawford when he said all the facts will not come out. Gentlemen, it will be my purpose, in so far as I can do so, to see that all the facts do come out, and I shall undertake to state to you now what those facts were; what we did; under what circumstances; and at whose instigation and why.

Mr. Crawford said this: When people go out and violate the law, they don't do it before witnesses or before the public. Gentlemen, they don't tell the Government, either. It is fair to say that if they do tell witnesses, they
do tell the public, and they do tell the Government,
299 they were not violating the law. We did do this. We
did tell the Government; and I shall tell you how and under what circumstances we did it.

He said also in substance this: It became necessary to have the cooperation of the independents. The low prices were unsatisfactory to the majors, so it became necessary to get in touch with the independents. This was accomplished by organizing. We shall show that the contrary is the fact, and that these independents were in such dire distress that they came to these defendants for aid and for assistance; that they went to the Government for aid and for assistance, and they thanked these men for having saved them from destruction.

Again, the statement was made the majors were to buy at prices and levels fixed by them. Gentlemen, our proof will show that this is not so. I shall tell you just what we did; just why we did it; under what circumstances what we did was performed.

Then the statement was made the majors had more gasoline than they needed. Our proof will establish that this was not the fact. They had less than they needed, and I shall tell you why they had less,—because of certain Governmental regulations. And that will cause me to tell you, as I will have to tell you, so that you will understand of
how the industry was then being operated under the
300 codes and the machinery which was set up under the
Code in order to control the operation of these refineries.

Then, the Government said that these defendants hatched this conspiracy. There was no conspiracy, gentlemen, we hatched nothing. And I shall show you at whose instance and at whose suggestion, and under what circumstances we did what we did at the time this conspiracy is alleged to have been in existence.

One inference,—inescapable inference from Mr. Crawford's opening was that our objectives were unlawful, and our purposes sinister. I shall show you they were not. I shall show you they were not only the objectives laid down and defined by the Government, but it was the very purpose that the Government was seeking to bring about.

Now, it has been said here that the master-mind was Mr. Arnott, and that he ran this whole show from No. 2 Wall Street. I don't know why that was involved. But at any rate, we shall show that what he did was done from the offices of the Planning and Coordination Committee of the Code in the City of Washington, in a Government building. And what he did went out into the further reaches of the country, dealing with these people that he was requested and authorized by the Secretary of the Interior to deal with.

301 Now, gentlemen, Mr. Thomas and I represent here 21 defendant companies and 43 individual defendants. These defendants are not here because they wish to be; they are here in order to answer this indictment. And I am sure that the Court will approve what I say now, and it is this. That of these defendants not one lives in this Federal District. Only one is a resident of the State of Wisconsin and the remainder live in 12 different states. I think, in point of fact, that the Court indicated that to you himself.

But I want to say something further that the Court, I am sure, will think is only fair to these defendants. These defendants had the right, under the law to refuse to come here until the Government had established in their local communities, before a court of competent jurisdiction, that there was probable cause that an offense had been committed.

302 They had a right to have those local courts determine whether they should be brought to Madison for trial, and they could have stood upon that right. But they have not waited, gentlemen. They have come here to face their accusers, and to present their defense, and to submit to your judgment. They are not here to deny or to minimize the facts or to apologize for what they did. They are prepared to submit their acts to any group of fair-minded men, who, as you have said you are, and will be, are on the level with them.

You have heard undoubtedly of the great number of lawyers who are here, and you see them before you. They have come here by reason of this case, and you may be inclined to wonder why that is. Of course, gentlemen, each of these defendants is concerned with his good name, because, although they are unknown to you, they bear reputations as decent, honorable citizens in their own communities. To them that good name is just as important as their liberty, and they are here to defend that. And under our rules of procedure, they do it through lawyers. Each has the right to be represented here by counsel of his own choosing. That is a fundamental right, so that his case may properly be presented.

303 Now, gentlemen, in the interests of economy of time, the time of the Court as well as your time, because you will be forced at the best, as the Court has indicated, to be here many weeks, away from your homes and your business, and in order to save as much time as we can properly do so, these 21 defendant companies and these 43 individual defendants and their counsel had agreed upon Mr. Thomas and myself to speak on their behalf and present their defense.

You can appreciate what it would mean if at this opening each lawyer were to speak for his client and during the course of the trial, each lawyer should examine and cross-examine each witness. It would be impossible for the Court and it would be an impossible situation for you. It is for that reason that Mr. Thomas and I are here. But I want you to keep in your minds, that during the course of the trial, there may be matters as to which it will be useful for certain counsel to address the Court or to examine a witness on behalf of their particular client. That is a right each one of those clients should have. The Court has already indicated that he will permit it.

Now, I tell you that, gentlemen, at the beginning, because we are going to be together for a long time, and
304 at the very start, I want you to understand and appreciate why Mr. Thomas and I are here.

Now, let me try to state to you as well as I can, as carefully as I can, and as fully as can be encompassed at this time, the facts, the circumstances, and the events which we shall establish during the trial in defense of these men.

Before doing so, let me refer for a moment, as the prosecution has done, to the law against which these men are said to have offended. Now, what I say the law means is not controlling to you. The Court has already indicated to you that you must take the law only from him. What I state the law may be, the Court may feel is erroneous. If he does feel so, he will give you instructions. I am stating the law only because I must do so in order to indicate to you the nature of our defense, so you may see the reason that I have in mind for each piece of evidence that may be offered in the Court.

Counsel for the Government has told you about the Sherman Law and how it forbids monopolies, conspiracies, and combinations, and agreements in restraint of trade. I want only to say this to you, that the law forbids, as it is my understanding of the law—and the Court will correct me if I am wrong—only those combinations or agreements in restraint of trade which are unreasonable.
305 Voluntary acts by industry to rescue and preserve competition is the basic philosophy of our country, to relieve a distressed industry, and to increase employment, and thus to restore and revive commerce by placing it on a healthier basis, are not condemned by law. The fact that the correction of abuses may tend to stabilize the business or produce fairer price levels, does not mean that the abuses should go on uncorrected, or that cooperative effort to correct them can be considered as unreasonable restraint of trade. Putting an end, gentlemen, to injurious practices with the result that there is an improvement in the competitive position of a group of producers may be such action as would be consistent with public interest instead of against it.

Whereas, we shall contend here that that group still needs effective competition in a fair market.

And now, this means, gentlemen, under our view of this case, that the prosecution here must show more than an agreement, and that that agreement restrains competition. They must prove more than this, because the Courts have said that each agreement concerning trade restrains and limitations—what the prosecution must establish, gentlemen, in our view, is, What was done by these defendants in this case unreasonably restraining com-
306 petition and was it prejudicial to the public interest?

You will keep in mind, gentlemen, that the prosecution must prove this, not we who must disprove it.

The prosecution has outlined its charge against the defendants. They say we violated this law. They say we entered into a conspiracy to fix prices.

We believe that our proof will show that nothing could be more contrary to the facts of this case than the picture the prosecution has presented to you. The statements they make, as appears from what they read from the indictment, are only enlargement of what they assert in the indictment, because, as you must know, and if I am mistaken about it, the Court has already indicated—no, he has not indicated that—I must make that statement on my own—that while the indictment has been returned by the Grand Jury, it was written by the men who sit at this prosecution table (indicating).

Now the prosecution would have you believe that these defendants, at a time of great national crisis, took advantage of the situation, were false to their trust, betrayed their country's need, exploited the public and enriched themselves.

Gentlemen: I stand here for the accused, and I tell 307 you that this case will clearly show to you that this sordid picture drawn by the prosecution is a false picture. Our evidence will clearly show that what these men did, they had a right under the law to do, that they attempted honestly and earnestly to correct abuses caused by destructive competitive methods, and they sought to remove those obstacles that stood in the way of healthy competition, and what they did was justified by the economic needs of industry, was promoted by the public interest, and had the sanction of the law, regardless of any National Recovery Act, and regardless of any Oil Code. They stand on that right.

Our evidence will show further, that in doing what they tried to do, they acted to carry out the purposes and objectives sought by the Government and initiated by the Government. They acted, in addition, to accomplish these purposes which were deemed useful and appropriate by the Government. These men tried to help accomplish results which the qualified agents of the Government desired and induced and instigated the defendants to do.

They cooperated with these Government officials to carry out the policies which the Government at the time thought were and which were, in fact, in the interests of the public and the industry alike.

308 Now, gentlemen, what were these objectives? They were objectives defined by the President of the United States. They were purposes, the accomplishment of which the Secretary of the Interior had been charged, under his oath, to seek to obtain. They were purposes which had been sharpened and clearly defined by the emergency which confronted our people at a moment, the dark realities of which, in the words of President Roosevelt, were apparent to everyone, and which, as he said, only a foolish optimist could deny, because—and now I use his words—because, he said, the withered leaves of industrial enterprise lay on every side, and a host of unemployed citizens

faced the grim problem of existence, and an equally great number toiled with little return.

Those were his words, and those were his words used at this time.

Now, let me try to state these purposes for you. The first purpose was to meet the emergency. The second purpose was to increase employment, establish fair wages, and improve the standard of labor. The third purpose was to conserve the national petroleum resources and to prevent those wastes which were detrimental to the public.

309 Now, Mr. Crawford, during the course of his remarks, gentlemen, gave some long reasons why this case happened to be tried in Wisconsin. We are not concerned with those reasons, because gentlemen, these defendants have no hesitation in presenting to a jury representing the thought and the feeling of the people of Wisconsin that they aided, that these defendants aided and cooperated in the attainment of those objectives and the accomplishment of those purposes. They had no fear to proclaim their work, because they know the social sense of the people of this state, your interest in the conservation of living and of security, and more than that they know that you were early taught out of your own bitter experience the need of conservation of great natural resources, that you can understand from your experience with your timber industry what the President meant, as these defendants understood what he meant, when he said, talking directly to this petroleum industry, "A nation is dependent upon its petroleum resources in times of peace and war, in its comfort and in its necessity. The nation must therefore, always be concerned with the production and utilization—" and that is in his words, not mine, gentlemen—"so God gave us this source of wealth, and it is necessary for that nation in its individual and domestic life."

310 He said, "We know it is conservation. Government with the industry—" he is now talking of the industry—"Government with the industry is now engaged in a program of conservation through a balancing of the supply and demand and the control in an orderly manner of newly discovered and developed sources of supply."

And then he goes on to say, "Conservation is vital, but it is not all. The petroleum industry is a large part of the whole of industry that must be stabilized so that those who are devoting their lives and fortunes to this large field of endeavor may share in the well-being of the nation and in the spirit to insure well-being by fair means of competition, just wages, and working conditions."

That was the position of the President.

So, here, then, is what is meant by stabilization. The President defines it. You will hear much of it throughout this trial, and it will be well for you to keep it in mind, because what he said will explain much of what was directed to be done by his Secretary of the Interior.

Now, gentlemen, the Court, when you were sworn in, talked to you about the presumption of innocence, and, again, you must not take what that doctrine means from me, but I can tell you what I understand by that pre-
311 sumption. I understand it to mean this, that this presumption persists throughout the trial by which every piece of evidence must be measured and must remain as your guide in your secret deliberations and it stands unshakeable until the evidence and only the evidence convinces you of guilt beyond a reasonable doubt.

Now, you have been accepted by the Court as a juror in this case, and I only want to say to you that these defendants have confidence in you as representatives of this community to judge them fairly without any preconceived prejudices, and that you will give them a square deal. That is all they ask.

That means, however, gentlemen, that the task before you is a very heavy one, a very important one, and a very responsible one. You have a stake, as representing the public, in this industry. You have a stake in this lawsuit. It means that in order to judge it fairly and impartially you have got to learn something about the oil industry in the few weeks you are here. You have got to learn its characteristics, its peculiarities, the vital necessity in the nation of the conservation of oil, which is one of the greatest of our natural resources, and the history of governmental efforts to accomplish that purpose.

312 Most of all, gentlemen, it means you must put aside, put aside the hindsight by which so many of us are apt to judge men and events, and recall to your minds—yes, more than that, you must re-create and re-live in the time dealt with in this indictment, which was the period of the Depression, a period during which many men feared for the economic security of this country, a period when industry trembled on the brink of disaster, and those in charge of our Government declared the existence of an emergency, just as an emergency can be declared in time of war, and called upon all citizens of the United States

to come to the aid of their country and to cooperate with their Government in meeting this crisis.

Gentlemen, I am not going to burden you with many dates, but one date I do ask you to fix in your minds, and that is the date in the indictment of February 1, 1935. That is the date when the indictment says the conspiracy was entered into. But when you do that, I want you to remember that on this date and for a year and a half preceding and for four months thereafter, the National Industrial Recovery Act was in full force and effect.

What I ask you to keep constantly in mind is the fact that the defendants are charged with having entered
313 into this conspiracy at a time when the industry was operating under a Code, which had been in full force and effect of law, which under penalties, they were bound to obey and whose objects, they were pledged to accomplish.

Now, these purposes hadn't been defined by the industry. These purposes had been defined by Congress. To carry out these purposes President Roosevelt had sent out an appeal for a partnership of Government and industry. This appeal, gentlemen, was accepted by these defendants. That is why they are here.

Now, we don't feel that there is any dispute here between us and the interests of the people of the United States of America or between us and the interests of the Government of the United States.

On the contrary, we feel that in this case—and I say this seriously—we feel that in this case we are defending the interests of the United States and your interests as much as our own.

The question that you will naturally ask there is, "Well, if that's so, what the defendants did was to help in getting the results which the Government wanted and believed to be in the public interest. Why should the Government indict them for it?"

Gentlemen, that is the question that the defendants
314 have been asking themselves for a long time. To them it just doesn't make sense. But the evidence may help to clear that up in your minds.

You know, after all, we ask ourselves this question: What is the Government of the United States? Is it the department of law that is represented here by this group of gentlemen who are acting as prosecutors for the Government, sitting at this table (indicating), or is it the Department of the Interior, charged with the responsibility of conserving our natural resources, and which under the National Industrial Recovery Act, was charged by the President of the United States, with the constructive task of trying to rehabilitate this industry, give leadership to these men as leadership had been given to men in other industries, and to induce and to encourage them to cooperate, and to receive that cooperation in full measure?

The evidence will make clear to you that what we call "the government", for practical purposes, consists of several branches, all operated by different sets of men, with different sets of ideas, with different experiences and knowledge, and consequently with different points of view and with different policies.

We believe that what these prosecutors would do would
be to break down what the evidence will show to be
315 the great work of constructive value that the Presi-
dent himself as well as the Congress of the United
States, and the Department of the Interior, had built up.

Let me, then, try to summarize our position to which we will direct our proof and to which we think the Government should direct its proof, and by which we think the evidence submitted must be measured:

First, that these defendants acted within the law, the very law invoked here, the Sherman Law, and that what they did had the sanction of the decisions of our courts interpreting the law.

Second, that what they did was to relieve the industry of abnormal conditions which threatened to bring disaster upon the industry and everyone employed in it.

Third, that what was done was done for the purpose of removing the evils of destructive competition and to foster competitive practice.

Four, what was done by these defendants was done for the purpose of accomplishing the objectives and purposes of the National Industrial Recovery Act, and was undertaken at the request and pursuant to the authorization of the Secretary of the Interior, Mr. Ickes, the Administrator of the Petroleum Code.

Now, gentlemen, I don't stand here to tell you that
316 these men, in attempting to cure these evils, were
acting solely from motives of altruism. I am not going to claim that they were more than they were. They were practical business men who were trying to improve conditions in the industry in which they made their livelihood. Their intelligent, self-interest told them it was good business to do that.

Gentlemen, the law does not undertake to impose a penalty on the use of intelligence in business and the proof will show, and we want you to believe, that there was more to that than that, because men aren't governed merely by self interest. We have had many emergencies in this country, and you know that is a fact, and these men were engaged in a business closely touching the public and its needs. They had a sense of duty and of obligation, and that sense of duty and of obligation was an important factor in impelling them to accept the appeal of the Government in this emergency.

Now, the evidence that we shall offer, and which I believe we will be permitted to introduce, will show this, that these are men, human beings, gentlemen, nothing mechanical about them, men, who came in and worked their way up through the industry and take pride in their work, pride in their industry, and pride in its accomplishments.

317 The proof will show, and this you ought to know, the proof will show that the oil industry of America has contributed greatly to the country's wealth, that it has served the American public's constantly growing demand for petroleum products at a constantly declining average price, and that the service of its distribution is more humanized than that of any other industry, because, as you know, it is difficult to find in this country, any hamlet, no matter how small it happens to be, without a gasoline pump.

318 It will show that its contributions to foreign trade and to the rapid development of this country can hardly be overestimated.

It employs more than a million men, at wages second to no other industry; that it was a pioneer in the shorter working week, and is now in the forefront of progressive employers in wages and hours. It has probably, as we will show, better conditions of employment and employee benefit plans than any other industry. To achieve the low price of its product, there has been no exploitation of labor.

Now, if, as will be said, and I think has been said, that there has been fluctuation of the price of gasoline, this must be said: That the trend has been consistently downward, and the quality consistently better. No other country in the world enjoys as cheap a price on gasoline and as widespread efficiency of service as does the American motorist. And no regulated industry, no utility in this country can show any such combination of service and price to the public, and such continued improvement of quality as has been provided by the competition prevail-

ing in the American petroleum industry. During the
319 last 16 years, gentlemen—and we will offer proof of
this fact—during the last 16 years, the price of gasoline has been cut in half, and the public has been given the maximum in the way of service; despite higher wages, shorter hours of work, deeper oil drilling, increased taxes and greater demand.

Now, gentlemen, unless you understand the motives and purposes of these defendants, you cannot understand the facts in this case and their significance. These facts will demonstrate that the case of the Prosecution is builded upon a misconstruction of the motives, purposes and intentions of these defendants; that the Prosecution has drawn and has asked you to draw, and will ask you to draw, mistaken and unreasonable inferences from acts done in the utmost good faith, under the eye and guidance of Government officials.

Now, this case can't be judged unless you have the complete story. The story told by the Prosecution is incomplete. They have chosen to eliminate facts which we shall offer as the most important and controlling facts of the whole story. Now, I am not criticising them for doing that, because it is their privilege to pick and choose facts which they think useful to them. But it is our right to present the entire story. And that story is not a short one, but it must be told; and it will require your patient attention, not only here, but during the course of this
320 trial.

I have already said, your Honor, and gentlemen, that these defendants stand upon the contention that what they did was within the law, had its sanction, and was justified by the conditions of the industry.

In order for you to determine whether or not this was the fact, whether or not what these gentlemen did was reasonable, whether or not what they did was to promote healthy competition, you must be informed of those facts, which the Supreme Court has said must be considered in arriving at a verdict.

They are as follows, and I believe that the Court will so instruct you: You must take into account—and if the Prosecution fails to do so, we will offer proof concerning facts peculiar to the oil industry, its condition before and after the acts complained of were done; the nature of these acts, and their actual or probable effect; the history of these acts; the evils believed to exist; the reason for adopting the particular remedy, and the purpose sought to be attained.

The indictment says that we had an illegal and an improper purpose. We assert that we had a legal, a proper, a justifiable purpose.

We think this: That the evidence we shall produce in regard to these matters will convince you that these defendants had, as a matter of economic self defense;
321 legal justification of all that they did.

Let me tell you what I mean by economic self defense. If you or I are attacked, we have a right to defend ourselves for our preservation, so long as we act within the law. So an industry, if attacked, has a right as a principle of economic self defense to protect itself, so long as it acts within the law.

But further, gentlemen, we say that these same facts and these same circumstances which justified these defendants, were the impelling reasons for the Government to take the action it took in dealing with the oil industry. It will explain these facts. It will explain why the Oil Administration felt compelled to inspire and induce and encourage and instigate certain activities on the part of these defendants. It will make understandable the motives of the defendants in complying with the requests and demands—and demands, of Secretary Ickes. In other words, through the facts and circumstances surrounding this industry, we will establish the legal justification for what these defendants did to save a great industry; and the same facts and the same circumstances will make clear why the Government instigated us to do what we did do.

Now, what are the conditions surrounding this industry? That is a question that I will try to answer I am not going to be able to do it very well; it can be better
322 presented to you from these gentlemen, who are familiar with the industry, and who will testify under oath from the stand.

Yesterday, in talking to you, Mr. Chaffetz said that this was a complicated industry, and he felt that you should know something about its operation in normal times. He began with the marketing end of it, and described something of those conditions. But I think you have got to begin at the beginning, to understand anything; you just can't take one part, you gentlemen who are sitting here, and undertake to judge the whole.

So our proof, if the Government does not proceed to do so, will begin with the organization and functions of the industry. And it will then deal with the demoralization existing in the industry at the time charged in this

indictment to be the beginning of this conspiracy, and show the causes of that demoralization. It will be directed to showing the oil program of the Government to deal with those problems during the period of this conspiracy. We will spread before you what was done by these defendants to cooperate with that program. And it will establish the facts as well as the circumstances, by which the Government inspired and requested what was done by these defendants. When this is done, gentlemen, we are confident that it will be shown that
323 this prosecution is wrong in its law and mistaken in
its facts. We will establish, we think, that what was done during that period clearly shows that we, not they, are in fact upholding the law and the public interest in this case.

Now, gentlemen, in any chain of events there is one that stands out as the central, determining fact. It is so here. So far as that is concerned—so far as this case is concerned, the central fact is action taken by the Government through Secretary Ickes on July 20, 1934. That is one other date that I would like you to keep in your minds.

On July 20, 1934, Mr. Ickes, Secretary of the Interior, exercising the delegated powers conferred upon him by the President—because the President delegated to Mr. Ickes all of the power which he had in dealing with the oil industry, conferred upon him by Congress; because, I may as well say this to you now, they regarded the industry as in so extraordinary and peculiar a condition that, while they had one Administrator for all the other industries in the country, they picked out a special one for the oil industry, and that was the Secretary of the Interior, which was the Department dealing with conservation.

Now, this letter was sent to Mr. Arnott—and Mr.
Arnott was described by Mr. Crawford as "this
324 musician", somewhat scornfully. It will be interest-
ing to have it appear through this testimony later that many of these people out in the field, when they heard that Mr. Arnott was coming, would say in their language, which I will not quote, "Well, what is this fiddler going to do out here?" It didn't take long for them, gentlemen, as it will appear, to see that he was a man of character and of understanding and of fairness and of judgment. And that is what you will see before this case is through.

Now, gentlemen, I cannot read that letter, but I can give to you in substance my best recollection of it.

In that letter, Mr. Ickes undertook to explain that the market for gasoline had been disturbed by numerous price wars in many different localities; and that this had resulted in causing petroleum products to be sold below cost in order to meet unrestrained competition; and as a result, had depressed the whole market; and with that result, there had been built up a surplus; all to the economic waste of the industry.

And he pointed out again, that all of those conditions had resulted, in many instances, from the payment of wages, the payment of wages below the minimum established by the code. And you gentlemen will remember
that one of the great concerns of the Code Adminis-
325 tration was to have wages at a right level. And it
also had the effect, as Mr. Ickes pointed out in that
letter, of having employees working beyond the maximum hours provided for by the code.

He pointed out also that price wars necessarily injured independent marketers, who were unable to dispose of their products profitably when prices would sink to ruinous levels.

Then he said this, in effect: "That brings us to this position. We are confronted with the fact that unless something is done, the purposes and objectives of what we have been delegated to do will be prostrated, with the result that there would be increasing unemployment, reducing standards of labor and preventing the rehabilitation of industry"—all of which the Act was intended to achieve.

Then he said: "I am requesting you, as Chairman of the Marketing Committee of the Planning and Coordination Committee"—as I will explain to you later, the Planning and Coordination Committee was the committee set up in the code administration, made up of the representatives of all points of view, appointed by the industry itself. And, as appears here, Mr. Arnott was chairman of the Marketing Committee of that Committee.

And he said: "I am therefore requesting you to
326 take action, to take action which we deem necessary
to restore markets to their normal conditions in areas
where wasteful competition has caused them to become depressed."

He pointed out that it would be impossible, because of their number, for the Petroleum Administrative Board

—and I will describe that later—which was really the eyes, and arms and motivating power of the Administrator, to deal with each specific instance.

And he said this: "I am therefore requesting and authorizing you, as Chairman of the Marketing Committee, to designate committees for each locality, when and as price wars develop, with authority to confer and to negotiate, to hold due public hearings, with a view to ascertaining the elements of conflict that are present, and in a cooperative manner to stabilize a price level—to stabilize the price level"—this is from the Secretary of the Interior to Mr. Arnott, whom he designated as his agent—"normally prevailing in contiguous areas where marketing conditions are similar."

Now, gentlemen, I shall have occasion to refer to that letter again, but I want only now to make clear to you, to help you to understand that letter, how it came to be written, and the effects which flowed from it, right up to this trial. We shall have to go backward and forward from its date, that July day in 1934, on which the
327 Secretary of the Interior signed it.

How did it come to be written at all? Why did Mr. Ickes select Mr. Arnott as Stabilizer, as he came to be known? What did Mr. Arnott do under this appointment? And how did that work inevitably grow into the events upon which the Prosecution has based this indictment?

Those are questions which you will naturally ask, and that you are going to ask through the course of this trial. The answers are really clear, but they lie in a multitude of facts, the more important of which I shall try to marshal for you.

Now, gentlemen, I said that I thought we ought to deal with the industry that we are going to try to judge. And I want to talk to you for a few minutes about the organization and functions of this industry.

The Prosecution has already indicated to you that there are five principal states of oil production; but there are nineteen states which produce crude oil in commercial quantities.

The five states that they talked about, Texas, Oklahoma, Kansas, Arkansas and Louisiana, produce over 90 per cent of the crude oil used on this side of the Rocky Mountains. These states contain two great fields, two great oil producing districts.

One is the Gulf Coast District, which runs from

328 the southernmost tip of Texas, as you have seen upon the map, along the Gulf of Mexico to New Orleans. And the so-called Mid-Continent district, which embraces most of the rest of the five states. Now, this latter district includes the great East Texas oil field that Mr. Chaffetz referred to, and which, as he said, you will hear a lot about. It is the largest single oil field ever discovered any place. When discovered, in 1930, it made a dynamic and explosive impact upon the oil industry of the world; for this single pool, gentlemen, increased—and this is important for all of us to keep in mind, because it will explain a great many things that happened—it increased the known oil reserves of the United States by almost 30 per cent.

Now, I don't know how much you gentlemen know about oil—I am sure you know more than I do—but it will be part of our proof upon the witness stand to show the product, its nature, what is done relative to refining and marketing. Let me try in a more imperfect way to remind you of what you probably learned a long time ago, and what you will hear from the witness stand.

Crude oil is found in the earth at varying distances. It may be only 60 feet below the surface, as in the first discovery of oil, down here in western Pennsylvania; or it may be miles under the ocean as, along the Coast of Louisiana.

329 Now, they speak of pools of oil, and when they speak of pools of oil, you might think that oil collects in underground lakes and caverns. But that isn't what happens. It is found between the tiny particles of porous rocks, such as sandstone or limestone; just like water is held in a sponge. And this underground structure in which the oil is found may, for practical purposes, be likened to a dome—in fact, that is what they call it.

Now, within this structure, there is gas on top, oil comes next, and then water. Now, the oil is held within that dome under pressure of the gas, and of millions of gallons of salt water. This pressure, as the experts on the stand will tell you, is tremendous—sometimes over a thousand pounds to the square inch. And in such pools, when the dome is drilled into, this pressure forces the oil out of the well and over the derrick, just like you see it in pictures. Then that pressure goes down, until the pressure in the field is not sufficient to raise the oil to the surface; so then you have got to put on the pump.

Now, everyone trying to get oil in that field is anxious

to get the first production; that is called the flush production; because that production comes before the nature pressure is exhausted. So, as soon as one man finds oil,
there is a mad scramble to sink as many wells as
330 they can in that neighborhood, as soon as possible.

Of course, before you produce oil, you have got to find it; and it is no easy matter to do this. For a long time, it was a hit or miss policy.

Formerly, if you drilled close to a place where some other fellow had already drilled, you had a fair bet; but if you were a wild catter, if you drilled where no one else had yet found oil, your chance was slim.

Now, today, prospecting for oil is much more scientific. They employ expert geologists; they examine the surface of the ground and the rock formations, to find likely places to drill. The oil men take photographs from the air. They create miniature earthquakes with dynamite, to send vibrations through the earth; and they use dozens of similar devices to determine the character of the underground structure. They even examine with a miscroscope the mud that comes out of the drilling well. The workers in the field, for this reason, call these men of science "mud smellers".

Now, even with all these modern improvements, prospecting for oil is still a gamble. In wild cat territory, only one well in every hundred drilled, one well in every hundred drilled is a producing well.

When the oil man has located a pool, his next job is to get his oil to the surface. How does he do this?
It will be explained to you graphically upon the
331 stand, but let me briefly indicate it.

A hole is drilled until it bores through the solid rock capping the oil. When the drill has pierced the cap rock and bored into the porous rock beneath, as I have said, the pressure of the natural gas and of the salt water underneath the oil forces the oil to the surface, in much the same way that seltzer water is forced out of the siphon. But in this wild scramble to produce that I have described, the pressure is quickly exhausted; and the remainder is brought to the surface only by a pump, which strips the remaining oil from the well, just as one strips a cow at milking time, and that is where they get the name "stripper well".

It costs a good deal more to produce oil by pumping than by natural pressure. The cost of producing oil in a flush field may be as low as 10 cents a barrel; but the average cost of running stripper wells on the pump is approximately a dollar a barrel. If the price of crude oil goes below a dollar a barrel, these wells must shut down.

Now, that is one fact that I would like to have you keep in mind, there: If the price of crude oil goes below a dollar a barrel, these wells must shut down. And the fact that these stripper wells can operate only when the price of crude oil is a dollar or more is a matter
332 of national importance. Now, why is that?

Well, of the 325,000 or more stripper oil wells in the United States, something like 250,000 or about five-eighths, are stripper wells. If they are not kept on the pump, the oil in the structure may be lost forever. That means they must be pumped; and pumping costs money, day in and day out. These stripper wells, gentlemen, it will appear from the proof, are the backbone of American production; the future supply of the nation is dependent upon their maintenance. That is why the Government, in the interests of conservation and the consumer, has always insisted that the price of crude oil should be high enough to permit the stripper wells to operate.

Now, you get your oil out, and you are wondering what to do with it. Well, you have to move it, and move it quickly; and why is that? Because, to store it, you have got to build steel tanks, and that is expensive.

It is physically impossible in flush fields to build enough to take care of the oil that is produced. Besides, the bulk of the oil is produced by small, independent producers; and they can build just enough tanks, about, to take care of a few days' production. As a matter of fact, the industry as a whole has only enough crude storage to
333 hold six or eight months production, and little of this
is located in the oil fields. Even today, seven years after it opened, there is barely enough storage in the whole East Texas field to hold a week's production.

Now, if this is true, you may ask, why does an oil man produce his oil unless he has use for it? Why doesn't he let the earth be his storage tank; why not leave the oil in the ground?

The answer to that is a simple one. He could leave it in the ground if all the other producers in the field likewise shut down. But, whenever a single producer runs his well, he is drawing oil from the common storage tank, which is under the land of others as well as his own. Now, why is this?

It is because, as the geologists tell us, oil is migratory;

that is, it moves, if it is given a chance. So, as soon as the well of one operator is opened, the tendency of all the oil is to run to that well.

Ever since 1859, when oil was first discovered, the law has permitted one operator to drain oil from another man's land, without let or hindrance. That is called the law of capture. It is the same law that is applied to wild beasts: He who can get can keep.

Now, we have this situation, then, gentlemen, and it has a very important bearing upon what shall develop in
334 this case:

When Mr. Smith opens his well, Mr. Jones, having wells on adjoining land, must produce his well or lose his oil. Now, if Mr. Jones produces his well, he cannot store more than a very limited quantity of the oil he produces. He must sell it as he produces it.

If the Mr. Joneses and Mr. Smiths are multiplied by hundreds or by thousands, as they were in the East Texas field, the amount of oil forced on the market becomes so great, that, by the simple law of supply and demand, the price must drop, and it does drop. Now, as the price per barrel gets less, the only way in which individual producers can cover the cost of their investment is to produce still more oil. And you can see what effect that has upon conservation.

335 Mr. Donovan: Gentlemen, I am sorry to punish you so much for this but it is something that must be told because I think if we could only get it in our minds it will help us at a later point in the case.

I had finished discussing, very inadequately, how crude oil is obtained. Crude oil in its natural state is practically useless. To be of any commercial value things you use, like gasoline, kerosene, heating and lubricating oil, must be extracted from the crude. This process of extraction is called refining. That is done by heat and pressure. How it is done we will have explained to you from the stand. However, I ought to say this, that the simplest method consists merely of boiling the oil and condensing the vapors into gasoline and other products. This process is called skimming, and refineries operating in this way are called skimming plants. But skimming, as it will appear from the evidence is not only a very wasteful process, it could not begin to produce enough gasoline to run the automobiles of this country. But the inventive genius of our people has devised a method by which the amount of gasoline recovered from a barrel of crude oil has been more

than double. This process is known as the cracking
336 process, and you get it through the use of heat and
pressure.

Now, through that use of heat and pressure, dark, heavy crude oil molecules are torn apart and made into light transparent gasoline. By that process not only is that done but the quality has been improved so that the cracked gasoline is better than that produced by skimming.

These new processes are complicated. They require enormous stills, high pressure towers, special pumps, huge boilers, intricate machinery, alloy steels, all costing hundreds of thousands of dollars, even millions of dollars. All this has merely increased the expense of refining.

I said to you something about the storage of crude oil. As a matter of fact, the storage of gasoline is more of a problem, because it evaporates more quickly. The tanks must be tighter, better built. You have seen the aluminum paint on the gasoline tanks in your neighborhood, and that is to protect the contents from the sun. Now, all of this makes gasoline storage tanks more expensive than the crude oil tanks, and as a result the smaller refiner is even less able than the crude producer to build enough storage tanks.

Here is where we come to one of our problems in this
case: Since he cannot store he must ship, even though
337 he has no customer, he has got to send it to market
and run the chance of getting one. Since he cannot leave it on the siding in the tank car, because it is a fire hazard contrary to the law to store gasoline in this way, it must be sold. So he sells it. And he sells it at whatever price he can get.. Mr. Chaffetz talked to you something about that—rather pooh-pooed the idea of distress gas. But he sells it at whatever price he can get even though that price be below what it costs him to make it. That is what they call distress gasoline.

This selling below cost is known as dumping. Dumping drags down the whole market below cost for every one, big and little alike, but it hurts the little fellow most.

Now, it is natural for you to ask the question why a refiner would produce gasoline as long as he has no customer and which he has got to sell below cost. Why doesn't he shut down? That is a natural question. To answer it we have got to tell you something about the peculiar nature of the oil industry. We cannot shut down. Why can't we shut down. If he refines the oil that he produces himself, he must continue to produce his well or the other crude producers will get his oil, for the reasons I have talked to

you about. If he purchases his crude, the crude producer
selling him that oil requires him to take it from the
338 wells every day, so that the producer will not be drained
by his competitor. So he is in a pretty tough spot.
He must keep taking crude or else lose his source of supply and disappear as a refiner. We shall show you that happened many, many times.

Then this gasoline goes from the refiner to the market. What is that market? It is almost entirely for the use of automobiles. There is an intricate marketing system to render that service. It hasn't any order or scientific basis. It has just grown with a growing industry.

What happens after the gasoline leaves the refiner and goes to market? If you ride on the trains or if you drive along the highway you have frequently seen on the outskirts of every town and city what are called bulk plants. Mr. Chaffetz talked something about those yesterday. Some of them are owned by oil companies but many of them are the storage tanks of the middlemen of the industry. These middlemen are called jobbers. They are the wholesalers. They buy from the refiner. They sell to the service stations and the service stations are sometimes owned by others, and sometimes owned by them—the jobbers.

Now how do they buy from refiners? Mr. Chaffetz referred to it briefly yesterday, and I would like to supple-
ment what he has said. A jobber may buy in one of
339 two ways: One group prefers to do business with an
established refinery on a long time basis, to get the
advantage of a nationally advertised product, well-established from Coast to Coast, of a uniform and dependable high quality of product. He would rather do business with a company financially strong enough to support him in the event that the jobber encountered many difficulties in his marketing problems.

The terms under which a jobber purchases from a refiner are contained in a paper that is called a jobber contract. That contract sets forth the mutual rights and obligations of the refinery, the seller, and the purchasing jobber. I haven't any doubt there will be a great deal of testimony relating to some of those contracts.

There is another type of jobber. He is called the spot market purchasing jobber, and in just a moment I will try to tell you what a spot market is and what it is not. This type of jobber prefers to shop around and pick up his material at the lowest available price. Of course in doing this he runs the danger of getting a poor quality of gasoline. The purchases made by this latter class of jobber are called spot tank car market for which prices are quoted in such trade papers as the Chicago Journal of Commerce and Platt's Oilgram. You have all heard the names of these defendants in this case, who are represented here by counsel now.

340 I said I was going to say to you a word about spot markets and well might do it now, because we ought to understand each other when we talk about that.

In the oil business there are no organized exchanges, such as the Chicago Board of Trade for the various stock, cotton and commodity exchanges of some of the larger cities, where buyers and sellers of gasoline and other oil products could meet and do business together. There aren't even any meeting places of the trade, such as the old curb exchanges, where dealers in securities and commodities used to meet. There is no organized market or exchange at Tulsa, Oklahoma, or East Texas, or in any other place mentioned in the indictment. So, when an oil man speaks about an Oklahoma spot market, he is not thinking of a building, or of a curb or traders banded together in an exchange. All he means is this.

That there are refineries in the state of Oklahoma which sell gasoline from day to day for prompt shipment, and when he speaks of spot prices in the market, he is merely stating what gasoline can be bought for from day to day from refineries located in Oklahoma.

So it is when he speaks of the Chicago spot market. He
means merely that sales of gasoline for prompt ship-
341 ment take place in Chicago. In none of these places
is there a spot market for gasoline except in this sense;
that there is a spot market for butter and eggs in Madison, because if you are living on Main Street you can call up here three or four different grocers and buy butter and eggs from any one of them for immediate delivery.

Now, since in none of these so-called spot markets is there any exchange or curb or board of trade on which sales are made and recorded as they are in the various wheat, cotton, corn or other commodity exchanges in this country, there is no record whatever—no record whatever of the volume of gasoline spot sales, without examining the record of every refiner, jobber, broker, farm cooperative and grain elevator in the oil business. The Government states there are thousands in the jobber category alone.

Nobody can do more than guess at how many of these spot transactions take place every day and how much gasoline is involved. If I try to give you a figure it would only be a guess. Any figure claimed by an oil man, no matter how experienced, would be a better guess than mine, but it would still be a guess.

Let me repeat this. You are going to be dealing with spot tank car market. Let me repeat it, so that you will have the matter clear in your mind.

342 The evidence in this case will show, without dispute, that there is no official source; no petroleum or gasoline exchange which records prices paid by buyers and received by sellers or the amounts dealt in at its trading point. There is no organized trading in or exchange for gasoline. There is no Tulsa, Oklahoma, market as alleged in the indictment, and Platt's Oilgram does not purport to publish any price for any such market. There are no spot markets in the East Texas field and the Mid-Continent field, as alleged in the indictment, except in so far as there are refineries in these districts which sell for prompt shipment to anyone who may happen to inquire for gasoline. Anyone can go into that market and buy or sell. There is no spot market in Chicago, as alleged in the indictment, except in so far as there are some refineries and brokers in that city from whom you can order gasoline, just as in your own home town you can call up your grocer and order flour or coffee or whatever you want.

Now, that brings us to this whole question of the jobber. I have said that the jobber is a middleman. As such he has no investment in the production end of the industry; he has no financial identification with the refinery end of the business. But he does own his own plant, his trucks, and sometimes his service station. He is a very important factor in the marketing end of the industry. With-
343 out him, gentlemen, most of these defendants can not properly market the gasoline which they refine. He is an outlet. He is the pool for their gasoline. Now, this is a small but it is a very important fact. Yet the Government, in its opening, would have you believe that the defendants wanted to drive the jobbers out of the business. That is not the issue in this case and it just isn't true.

There are disagreements in the industry as in every industry between individuals. In this industry, however, there were certain jobbers trafficking in hot oil gasoline. By hot oil gasoline, as I will tell you more fully, is meant gasoline produced from oil run in violation of state conservation laws. They profited in the demoralization of the industry, like the bootlegger or the smuggler, they avoided the payment of state and federal taxes.

344 This kind of jobber by this sort of practice was able to buy this illicit product at a price much less than the law-abiding jobber could do it, of course. This kind of jobber fought the efforts of state and federal governments to stop the traffic in hot oil. They wanted to keep their bootleg business. Many of this kind of jobber are members of an association which has openly and brazenly lobbied against this present national administration's successful effort to conserve the oil resources of the nation by stopping this illegal traffic.

Not one word has been said of the stoppage of this illegal traffic in oil by the so-called Connolly Act, which I will discuss for you—not one word by the prosecution in its presentation to you.

You will find, gentlemen, in the course of this trial what that small minority has been able to do.

Now, Mr. Crawford made this statement when he was talking to you about how long it took to trail these men down, trail these defendants down, and it was only when there were murmurings and rumblings and grumblings by the people of these ten midwestern states that it finally reached Washington, and it finally went into the Department of Justice, that this prosecution was decided upon.

Gentlemen, we will show that the murmurings and grumblings came from these jobbers, among others; 345 that only a small minority who have been able to use the law department, who have been able to punish these defendants by the Department of the Interior.

You will be interested in learning what elements go into the price you pay for your gasoline at the service stations. We are going to show you. We will show you on whatever date may be fixed, selected at the time,—and I may take now October 1st, when the Madison motorist drove into his local service station he paid twenty cents for a gallon of regular grade gasoline. Now, where did that twenty cents go? Of that price, five cents, or twenty-five per cent, represented state and federal taxes; and a little over four cents, or twenty-three per cent, represented the amount your detail dealer adds to his purchase price for gasoline delivered to his underground tanks by jobbers or suppliers. Two cents, or ten per cent of the price, has been added as a distribution margin for the storage and handling of the gasoline, and to cover all the overhead expense of selling. Transportation—that is, freight, amounted to 2.17, or thirteen per cent.

Now, this left 5.66, which was twenty-eight per cent of the price you paid to the refiner and crude oil producer, the

independents among others, and out of which five cents and over had to come the cost of finding and producing the crude oil, and of refining the gasoline, with the amortization of cost and equipment, refiners' and producers' taxes, as well as the expense of the uncertain and expensive
346 search for crude oil.

Now, in those figures I would like you to note this: That the jobber who operates his own retail station gets 6.6 cents for selling the gasoline, while the refiner and crude producer gets only five for finding and producing the crude oil and refining it into gasoline.

Now, gentlemen, that brings us to a point that is a very important point. What was the condition of this industry at the time as alleged in the indictment that this conspiracy was entered into? I cannot tell you what that condition was, excepting that I relate to you the causes leading up to it, because it was that demoralization that caused the Government of the United States to intervene.

Now, those causes I want to refer to briefly but I think you need to know them to understand that condition.

Now, this will appear: That prior to 1924 the industry had been hard pressed to satisfy the demand for gasoline. There was no overproduction of crude gasoline. The gasoline consumption had increased year by year, like the automobile had increased by leaps and bounds.

Then, beginning in 1926, came a series of new oil fields because of intense and destructive competititon; they were so wastefully exploited as to flood the market with
347 more crude oil than anyone knew what to do with.

There was the Seminole field in Oklahoma, the Santa Fe field in California, and then in 1929 the Oklahoma City field in Oklahoma where the wells are sunk in the capitol grounds; and the Capital Hill field in California.

Gentlemen, we were producing more oil in this country than could possibly be used. The result was that each new oil field started a fight between those who wanted to exploit the field at once and those who wanted to protect themselves against reckless exploitation. Then the motive, the reason that I have already stated to you in explaining the migratory character of oil and the law of capture—oil producers had to produce as fast as they could or lose their oil to competing wells.

What was the natural result of that? The natural result of that was waste in the fields and a glut in the market. The oil was produced without any thought as to whether there was any need for it or any market.. So this forced the price of oil down to ridiculously low figures, and those low prices were a stimulus to overproduction.

Now, you see what I have told you about what happened to the refiner and the producer, because what he wanted to do, what he had to do was to meet his costs of producing oil, and those costs are constant overhead costs. 348 They represent the investment in prospecting, in drilling, in drilling equipment. To meet those costs, fixed monthly interest rates had to be met.

Now, those charges do not vary with the amount of oil produced. They are there whether the well operates or not. So that with each drop in the price of crude those charges could only be met by producing more and more oil. And the production of more barrels inevitably led to the still further drop in the price per barrel, and so the spiral ascended and descended.

The refiner was on a worse spot. He had to continue to buy crude because he had a contract to buy it, and, as I have already told you, if he refused to take oil under his contract he lost his source of supply. The only thing he could do was to take the crude oil as it came to him under these contracts, refine it and sell the gasoline as rapidly as he could, at any price he could get regardless of cost.

Of course, gentlemen, neither you nor I have to be much of an economist—which I am not—to see that this amount of gasoline on the market destroyed the entire market price structure of the industry.

The industry had tried to deal with this problem itself. In 1929, before the N.R.A. was ever thought of, they had obtained from the Federal Trade Commission a code of fair trade practices in refining crude oil and marketing 349 its products. But there were no means of enforcing the code. It needed Governmental leadership. How could the situation be remedied? That was the problem that faced the government of every oil-producing state.

Now, what did they try to do? The first practical solution offered was that of proration. And what does proration mean? There is no mystery about that. It was simply an effort at conservation of the oil. It was an attempt to limit production to demand, and to ration proportionately the amount of crude to be produced by each producer in the field. It was an attempt to prevent one man desiring to produce at a wasteful rate, and from forcing all others to produce at a like rate. Under that system of proration the amount of crude petroleum that a producer could take from a well was defined and limited.

In 1926 it was first attempted on a voluntary basis, but this did not work because there was no way of enforcing proration legally or otherwise. And so when the Seminole field came in, the state of Oklahoma attempted proration by the use of an old statute that had been on the books since 1915. So they took this statute, and they tried to perfect it by amendments, and it was wisely copied in various other states.

350 Now those statutes made it a crime to produce oil in excess of a prescribed allocation. It was pretty hard to investigate, and it was infinitely harder to enforce. In every state there was violation. The violator was known as "hot oiler", and the product was known as "hot oil." So that state proration failed as private proration had failed. Some states refused to have any proration law, and each state was insistent upon what is considered a fair share for its citizens.

So confronted with the seriousness of the situation in 1926, the then President of the United States set up a Federal Oil Conservation Board, and instituted the policy of the Federal Government to induce the oil industry to cooperate and carry on its work so that the ultimate capacity of every oil field should be exhausted before that field was abandoned. And so important, gentlemen, had that subject become, that the President of the United States in 1929 called a conference of representatives of the oil industry at which he urged regional interstate compacts, that is, agreements, among those particular oil producing states for curtailment of physical and uneconomical waste in the oil industry as the only sound basis for conservation and stability.

Now, what else happened?

351 As a part of this effort toward conservation, and as an aid to the refinery business, the United States Bureau of Mines, a Federal agency, began issuing monthly reports as to the stocks of gasoline on hand throughout the country, and the estimated National demand for gasoline during the ensuing month. The purposes of that information were fully stated in the report of the Federal Oil Conservation Board to the President of the United States on February 25, 1929, where it was said that a definite knowledge—

> "A definite knowledge of demand and of production control will, in themselves, tend to retard"—

tend to slow up—

> "—the over-expansion of refining and marketing facilities, and over-production of oil. Studies which tend to increase the fund of knowledge on these

phases of the problem, whether initiated by individual companies and associations or sponsored by the Federal Government, should be fostered."

Now, gentlemen, the consequences of a wasteful and uncontrolled industry had been felt. There was physical waste. Billions of cubic feet of natural gas were being
352 needlessly blown into the air, enough to supply the needs, the industrial needs of the nation for years. Millions of barrels of crude oil were being dumped into earthen pits, much of it lost forever. This in itself to the industry spelled chaos and disaster; to the people of the country, it was infinitely worse.

Faced with the insurmountable task of meeting this situation on the part of industrial and governmental people alike, the discovery of East Texas exploded like a bomb. It was the largest oil field the world has ever yet seen. The demoralization which came from its discovery—the discovery of fields like Oklahoma City and Seminole had been bad enough; but you could tuck both of those into a corner of East Texas. This field in a day, as I have already said, and it is worth repeating, had increased the known oil reserves of this country by thirty per cent.

Every operator in the field entered a race to produce oil as rapidly as he could. The number of new wells increased daily. During one week in 1931, nearly 200 were started. Acreage in the field was split up among thousands of small operators. Many drilled to get the oil of their neighbors, and the balance drilled and produced in an effort to protect themselves. More than this, the oil was relatively
353 close to the surface. It was of good quality. It didn't take much effort or much time to get it up. It could be quickly refined into gasoline, because it was of good quality. Within ten months of its discovery, this field was producing a million barrels of crude oil a day—enough to supply almost half of the total requirements of the United States.

What did the Texas authorities do? They made one last despairing effort to check the flow of oil. Their efforts were flouted. They threw up their hands. Martial law was declared, so desperate was the situation; but even the troops were not able successfully to close in the field.

But this wasn't enough. There was still more to hit us. On top of it all came the depression. The posted price of crude oil fell from well over a dollar a barrel to ten cents, and the price of gasoline fell below 2 cents a gallon at refineries in ~~the Mid-Continent~~ field. Refiner after refiner was forced out of business. Throughout the industry, cut-throat competition existed, from the well to the service station. Wage levels were demoralized, and thousands of men were thrown out of employment. The entire industry faced disaster.

Now, this was the situation when there came a change
in the national administration. And, gentlemen, it was
March, 1933. At this moment, the Roosevelt Admin-
354 istration came into office.

What did the President do? He at once announced that two of his principal objectives were to bring about national recovery, and to conserve our national resources. The oil industry, he saw, required immediate attention. Now, what did he do?

He had his Secretary of the Interior, Mr. Ickes, who had long been interested in conservation, call a conference of the governors of the oil-producing states; and when he called that conference, Mr. Ickes said this: "That the purpose of the conference was to grapple with this situation, in an attempt finally to keep production down to what can profitably be marketed."

At this conference, the representatives of these governors asked that the Federal Government help them to cut down production of crude oil to the level of market demand. Why? In order to prevent waste of crude oil, and the extinction of the small, independent producer through the effect of depressed crude prices.

Now, on May 7, President Roosevelt announced his plan for a National Industrial Recovery Act, and stated that the purposes of that Act were to bring about recovery, relieve unemployment, eliminate unfair trade practices, and conserve the nation's natural resources.

Now, that was the period, gentlemen, of codes under
the N.R.A. All of America's industry was suffering,
355 and the Government was dealing with each industry
on the same principles as it dealt with agriculture,
with mining, and with this industry. The plight of the oil industry, however, was so serious, as I have already told you, that it was dealt with separately under the law.

Now, by a certain section, which the lawyers in the oil industry and the members of the industry best knew as Section 9-C of the N.R.A., Congress authorized President Roosevelt to forbid the shipment in interstate commerce of gasoline manufactured from crude oil produced in violation of the pro-ration laws—which is what I will call hot oil. That provision of the law authorized the President to forbid it.

Soon after the President was given this authority, he was asked, both by State Conservation Commissions and by independent producers, to exercise this authority. And he did. He issued an order forbidding the shipment in interstate commerce of hot oil.

Now, the Oil Code, then, was turned over to a separate department of the Government, the Department of the Interior. It, as you know, is charged with the duty of conserving our resources. And in the Secretary of the Interior was vested by the President all of the power which had been delegated to him, the President, by the Congress. In other words, he said:

356 "Now, Mr. Ickes, all of the authority that this legislative body has given to me, I give to you, and you act as my agent."

Now, what was the purpose of the National Industrial Recovery Act? In his talk to the nation on March 7, President Roosevelt said this:

> "Government ought to have the right, after surveying and planning for an industry, to prevent, with the assistance of the overwhelming majority of that industry, unfair practices; and to enforce this agreement—to enforce this agreement by the authority of Government."

Now, if you have been able to follow what I have said, if I have made it at all intelligent, you will see for the first time there came in the action of Government to carry out what all conservationists had felt for many years was necessary.

Now, what were the purposes of the Oil Code? At the foreground, it was to meet the emergency in this industry; to increase employment; to establish fair and adequate wages; to restrain abuses; to prevent unfair competition. And then, in the words of the preamble itself, which I wish to quote to you:

357 "To protect the nation from the unnecessary, wasteful depletion of this national resource, essential for the national defense and safety; to assure the continued function of the nation's transportation facilities, that are dependent for operation upon an adequate and economical supply of petroleum and its products."

Now, under the N.R.A., gentlemen, members of the industry—this N.R.A., which was in force during the period of time dealt with by this indictment—members of the industry were not only permitted, but were required, but were required to take concerted action to accomplish the objectives of the Act. If they did not adopt a code, the President could impose one. And the Oil Code was laid down within the letter and the spirit of the words used by President Roosevelt on March 7, when he said:

> "The so-called anti-trust laws were intended to prevent the creation of monopolies, and to forbid unreasonable profits to those monopolies. That purpose of the anti-trust laws must be continued. But these laws were never intended to encourage the kind of unfair competition that results in long hours, starvation wages, and overproduction."

Gentlemen, that is what he said. And that code, designed within that letter and that spirit, was the law of the
358 land for the oil industry.

The administration of this code, as a part of the partnership laid down by the President, was divided between the industry and Government. The Secretary of the Interior was designated as the Administrator of the Petroleum Industry. And he was Administrator, in fact, as well as in law.

Now, he had a board of advisors; that was the Petroleum Administrative Board. I give you this now, because the terms are going to be used, and I would like to get them fixed in your mind. And that Board, the Petroleum Administrative Board, was generally called the P.A.B. You will hear a great deal about it, because it had a very important function to perform. It was really the eyes, ears and right hand of the Administrator. It was the ruler of the industry, under Mr. Ickes, during this period.

Now, the industry itself was represented by what was called the Planning and Coordination Committee. This was sometimes called the P. and C. Committee— the Planning and Coordination Committee, the P. and C. Committee. That committee and its membership was representative of every element in the industry, both large and small. The committee was selected at the outset of the Oil Code by the President himself. Its members were his per-
359 sonal employees—his personal appointees. Yet, in this indictment are named as conspirators seven of the twenty-four members of this committee that he appointed.

Now, that organization, the P. and C. Committee was set up to make effective the provisions of the Oil Code in the regulation of the industry.

From the beginning, the President recognized, the Secretary of the Interior, the Oil Administrator recognized that neither re-employment nor improvement of working conditions nor the conservation of oil could be accomplished unless prices were restored to normal. That is what they said; that is what we will prove.

As the first step towards this objective, the President, the Secretary of the Interior, and later the Petroleum Administrative Board urged a minimum of a dollar a barrel as the objective for crude oil, as the objective towards which the industry should work.

You will remember what I said. The Government, the nation, as represented by the Government, has always felt that unless they should get, unless these producers of stripper wells should get a dollar a barrel for their crude oil, they wouldn't be able to stay in business. And this comes back as a fundamental motivating principle of the action of the Government here, as we will show.

It was at the inducement, the direct request and 360 insistence of the highest officers of the Government—yes, the very highest officer of the Government, that the important producers of crude oil raised their crude oil prices to this level.

There, at once, you had something fixed; and this step was the keystone of a structure designed by the Government to preserve an irreplaceable natural resource. After that, of course, the whole Code program was designed to assure refiners and marketers a fair price, in order to protect the crude price. And the conservation program was dependent upon that.

Now, this compulsion and direction came not from the industry, gentlemen, that must be made clear; but it came from the officials of the Government, specifically.

The problem of the Secretary of the Interior was to do this: He had established the price of crude oil; it had been done at his direction. Then he had to deal with other elements of the industry;—with the problem of restoring the price of gasoline, so that a refiner could pay a dollar for his crude and still recover his cost from the sale of gasoline. If he had to pay a dollar for his crude, he had to make enough after he refined his crude and made his gasoline and went out into his market, he had to make enough to pay for that dollar barrel.

361 Now, the history of the Code, gentlemen, is the history of the difficulty of dealing with this problem.

In spite of all that the Administration could do, the tank car price did not reach a point at which the refiner could pay a dollar for his crude and remain in business. Now, you want to know, why not?

He couldn't do that, because the supply of illegal crude, this hot oil, this bootleg product, was not shut off completely. Even though this Section 9-C, which gave the President the power to declare that illegal was being enforced, its enforcement was not sufficient to cut it off.

This crude oil, this bootleg oil was available at a quarter a barrel, as against a dollar a barrel for the legal crude. Producers were willing to sell this hot crude for anything they could get, since it was stolen from other producers who were abiding by the law. And the refiners of this hot crude were equally willing to sell their gasoline for a song. This left the law-abiding refiners squeezed between the dollar crude and the low gasoline price set by their competitors, who were dealing in hot gasoline.

Now, you have got to remember, gentlemen, that in order to conceal their illicit traffic, the hot oilers paid neither
taxes to the Government nor royalty to the farmer
362 from whose land they produced the oil. Naturally, the
small, law-abiding refiner was threatened with extinction.

Now, the Administration recognized this, and saw that it had to deal with it. Having fixed the price of crude, it thought that the only way out was to fix the minimum price of all products.

And on October 16, 1933, the Administrator actually signed an order, actually signed an order fixing the wholesale price of gasoline at 6½ cents—which was higher than it reached during any period of this indictment, and even today. That was fixed by the Secretary of the Interior. And that was done at the insistence of the President of the United States, as we will show. This price of gasoline was more than a cent above the then existing market.

Because it was felt, finally, that the enforcing of price-fixing would be impractical—although the orders were drawn and signed—in such a highly competitive industry, that plan was abandoned. But, in abandoning that plan, the Administrator did not escape the problem of depressed gasoline prices. That problem still had to be met. Now how did they try to meet that?

They tried to meet it by a series of buying programs, to take from the market what the industry called distress
gasoline. And let me say again what that is, because
363 I find that I often have to remind myself of what it is
—and what the proof will show: It is gasoline which the refiner, out of the necessities of his business, is forced

to produce, and for which he has no outlet, except at prices below the cost of production.

Now, the first attempt to deal with this problem occurred in December, 1935—1934, I should say—yes, December, 1933.

This program was a proposed purchasing agreement, which was approved by the Administration, and never disapproved by the Department of Justice. This agreement specifically recited that its purpose was this:

> "To purchase, hold, and in an orderly way dispose of surplus gasoline which threatened the stability of the oil price structure, in an effort to bring the price of gasoline into a proper relationship with the present price of crude oil; and to maintain and support such relationship."

Now, what did this agreement specifically declare? That the proper relationship between Mid-Continent crude oil and gasoline of regular grade in the Mid-Continent was 18½ to 1, as set forth in the Code. This meant that the price of gasoline should be raised to 5½ cents, since the price of crude oil, which this agreement was designed to support, was already fixed at a dollar per barrel.

364 Now, how was this agreement to work? The refiners, including practically most of these defendants, were to contribute $10,000,000 to the pool, which was to be used to purchase distress gasoline and hold it off the market—this was the plan of the Administrator—hold it off the market until it could be marketed at a fair price, which would not drive the tank car market down below cost.

During the winter of 1934 the price of gasoline at the refinery continued downward, to levels still further below cost.

In March, an amendment to the Refining Article of the Code was proposed. The independent refiners demanded that the Code be amended to provide for the effective regulation of refinery output. In making this demand, the independent refiners expressly stated that the purpose of this amendment was to reduce the gasoline production of the major company refiners, so as to force them, to force the major companies to purchase distress gasoline from the independents. This amendment was supported, and formally approved by the Administration. It was adopted by the industry, as an attempt to bring gasoline prices into line with crude prices.

Now, in the spring of 1934, Secretary Ickes and the in-

dustry set up machinery together, at the insistence of the Administration, set up machinery together which was
365 intended, by cutting down the refinery allocation of the major companies, to compel those major companies to buy from the small refiners.

I want you to note that the petroleum administrator was approving a plan to force these defendants to do the very thing they now stand before you accused of having done.

And we will show that pursuant to this amendment the law limited—the Code was the law—the law limited the amount of gasoline which these defendants could produce, so they were forced to buy a part of their gasoline from small refiners.

Now, when the President first attempted by his order to stop the shipment of hot oil and forbade any producers to ship crude oil into interstate commerce, he required the producers to state in that affidavit that the oil was legal crude.

But as soon as the producers of hot oil understood that they could get away with hidden companies and hidden pipe lines, and the thousands of ways of getting away with the law and evading the tax, hot crude oil became available to refiners who were not squeamish about price. The going price for legal crude was still at a dollar, but illegal crude could be had in unlimited amounts at a quarter to fifty cents.

Gasoline made from this hot crude was sold at bargain prices and was shipped all over the country. It was not confined to East Texas. And wherever it went, the
366 legitimate refiner, operating on legal crude, either lost his market or was forced to sell his gasoline manufactured from the dollar crude at a price as low as that for gasoline manufactured from twenty five cent or fifty cent hot oil.

In June, 1934, the Oil Administrator sponsored a plan whereby these defendants and other companies were to buy gasoline from the East Texas refiners who were causing the trouble. Even though they had been violating the law, he felt something had to be done. And in return for them being dealt with, they were to agree not to run hot oil. And this plan became known as the Bennette Plan. By it the Secretary of the Interior hoped to protect the independent refiner, and he expected to remove from the market the depressing effect of the excessive stock of gasoline manufactured from illicit oil.

Now, what did he say? He stated that he approved this plan to decrease the disparity between the price of crude and the wholesale price of gasoline, and to prevent the over-production of crude.

Now, as a result of that, contracts were approved, under which refiners agreed not to use hot oil and the Administrator was made a party to that contract. The contracts also legalized hot gasoline in storage, so it could be pur-
367 chased and eliminated from the market.

But this plan failed. It didn't work. It didn't stop the flow of hot oil. But the legal refiner of distressed gasoline was still buying at the market. The independent refiner was still selling gasoline at less than cost, and was calling upon his Government for aid.

Now, then, gentlemen, there followed, in an effort to meet this situation, a program approved in the same manner to accomplish the same purpose by the same means.

All of them failed to bring the wholesale price of gasoline in line with the price of crude. Under each program of 1934, all these Government programs, the purchasing companies were assigned to independent refiners. I want you to get that in your mind, because I want to show you the contrast to what I am going to talk about later.

Under some of these programs, the contract price was specified by a committee approved by the Government. These formal buying programs continued through the year 1934, and more and more it became evident that buying alone could not restore and maintain a normal wholesale and retail market in the face of a continuous flood of hot oil.

368 All through the winter and spring of 1934, hot gasoline and distressed gasoline had eaten into the wholesale and retail markets. It resulted in price wars and all the evil practices of secret concessions and rebates. The Code Marketing Committee made no further effort to administer the marketing provisions of the Code, which prohibited sales below cost, and other destructive practices, although that law was there to be obeyed and men were required to obey it, but the marketing committee, in hopelessness, had to discontinue any attempt to enforce it.

The compliance program of the Department of the Interior had failed, and enforcement depended upon the Department of Justice, and although that Department often promised enforcement, it was not even attempted.

Local price wars were breaking out all over the country. Gasoline was being sold at ruinous and absurd prices. The wholesale gasoline was sold for as little as one and seven-eighths cents a gallon in some localities. Gasoline actually sold for less than the taxes on it. Representatives of the Oil Administration went from state to state trying to check marketing practices destructive to field and station operators. There were thousands of leaks in this dam.

369 Now, in this disastrous situation, there was again a cry from the small refiner for more law. They asked the Government for an order forbidding the sale of gasoline at less than a set minimum price. They wanted to go back to what the Government had first undertaken itself. Some of the states responded with such measures. Your own state government by rules of the state marketing commission here, sought to prevent cut-throat competition by attempting to prevent the sale of gasoline below a fixed minimum price during the very time covered by this indictment.

The Federal Government, however, was reluctant to add more law where it had already failed to enforce the law that it did have. Compulsion having failed, they felt that voluntary cooperation was the last resort.

370 Mr. Donovan: May it please the court, and gentlemen of the jury: At our close yesterday I had said that the refiners and those affected by the conditions in the industry had called upon the Government to enact more laws, and that the Government, feeling that it was useless to enact more laws when they were unable to enforce those that were already enacted, resolved to turn from compulsion, and turn to the industry in an effort to secure, by persuasion and negotiation, the results they desired.

And now it appears, gentlemen,—and it will appear from the testimony presented to you, why the letter of July 20, 1934, was sent. It was sent because something had to be done, and done quickly.

Now, why was Mr. Arnott called upon? And I think it may be well for me now, since the Government has described him as the "master mind," and the sinister 371 influence here—it might be well for you to see what kind of a human being he is. If Mr. Arnott is here—and I assume that he is—I would like to ask him to stand up.

(At this point Mr. Arnott rose to his feet, in the court room.)

Mr. Donovan: Thank you, Mr. Arnott.

Now, why was Mr. Arnott called upon? Why did the Secretary of the Interior ask him to undertake this work, at the time this letter was sent? Because, at that time there was wide diversity of views, among many of the larger companies, and there were many misunderstandings.

Through all of this Mr. Arnott was chairman of the Marketing Committee of the P. and C. Committee, which I tried to explain to you was the Planning and Coordinating Committee, representing the industry, and upon which all shades of opinion of the industry were represented, through appointees of the President himself, and on which I do not believe I did say to you there were three representatives of the administration appointed by the President himself.

372 Now, through all of these difficulties, in this work as chairman of the Marketing Committee, Mr. Arnott, as it will appear, emerged as a man in whom people could and did have confidence. He reconciled opposing views and interests, and he was successful in this—and this is important to know—he was successful in this because his method was to secure a fair and free examination of all points of view of a given problem, and all diverse interests, and then a conclusion could come as a result of that full and free discussion.

Now, that kind of a man was needed in that kind of work, and that is why the letter was sent to him. Let me call your attention now to what was said in that letter. In that letter Mr. Ickes said to Mr. Arnott, therefore, because of these facts,—that he had recited, of the condition of the industry,—therefore, I am requesting and authorizing you, as chairman of the Marketing Committee, to designate committees for each locality when and as price wars develop, with authority to confer, and, more, to negotiate, and to hold due public hearings, with a view of ascertaining the elements of conflict that are present, and in a cooperative manner to stabilize the price level—to stabilize the price level to conform to that normally prevailing in contiguous areas, where marketing conditions

373 are similar.

Now, there was a lawyer for that committee, the Planning and Coordinating Committee, and that lawyer, having the letter, acted for the Planning and Coordinating Committee, because he was its general counsel, and he sent a memorandum about this letter, which we will offer in evidence, and of which I will only at this moment call your attention to a simple provision.

This memorandum was received by Mr. Arnott, and in this Mr. Titus, the general counsel for the Planning and Coordinating Committee, said—

Mr. Crawford: Now, if the court please, I do not want to be objecting, but I think this is so entirely incompetent and immaterial, to tell the jury the contents of that letter, that it ought to be objected to, and counsel should be instructed to refrain from even quoting the substance of it. It is a letter passing from a lawyer in a certain department,—a lawyer for the chairman of the committee, who is one of the indicted defendants here.

Mr. Donovan: Now, if Mr. Crawford has not listened to me—and I hoped that he would listen to me carefully, because I said that Mr. Titus was general counsel for the
Planning and Coordinating Committee, and that upon
374 receipt of this letter from Mr. Ickes he prepared a
letter, which he sent to Mr. Arnott, and in which he described Arnott's authority under that letter, which is one of the very vital elements in this case.

Mr. Lewin: May it please the court, supporting further Mr. Crawford's objection, I would like to say this,—that this letter that has been alluded to as being in the possession of Mr. Arnott, from Secretary Ickes, is a plain and unambiguous letter. It does not refer in one iota to anything that is charged in this indictment. That is, the construction of that letter—

Mr. Donovan: May it please the court,—

The Court: Now, let us take this—

Mr. Donovan: I object to that statement, now, as being argument before this jury, in the midst of my opening.

Mr. Lewin: I should like to object to it on this ground, may it please the court: The construction of that letter is for the court. It is not for any one else, and particularly it is not for Mr. Arnott's own lawyer to construe it.

Mr. Thomas: Now, if the court please, I have not taken much part in this proceeding so far, but I object to the
remarks of counsel in the presence of the jury; and I
375 ask now that the court instruct the jury to disregard
the remarks made by counsel representing the Government.

Mr. Crawford: Which counsel?

Mr. Thomas: Mr. Lewin.

Mr. Lewin: Are you referring to me?

Mr. Thomas: Yes.

Mr. Lewin: Well, my objection is still before the court on that letter, and I ask the court to limit this opening statement, to prevent him from reading to the jury what Mr. Arnott's lawyer told him was the meaning of a letter, the construction of which is for this court alone.

Mr. Donovan: I object to the statement of counsel characterizing Mr. Titus as Mr. Arnott's lawyer.

The Court: Let us speed along. For the time being, just refrain from reading that letter.

Mr. Donovan: May I refer to it?

The Court: Refer to the fact that he was sent that letter.

Mr. Donovan: And may I tell what was said?

The Court: Not the contents of the letter.

Mr. Donovan: I will not go into detail, but I did want to say—

The Court: Did the letter contain certain authority,
376 or describe the authority of Mr. Arnott?

Mr. Donovan: It stated that this letter, for all practical purposes, was complete protection to Mr. Arnott and to his committee, to negotiate in all reasonable activities to restore prices to normal levels.

The Court: All right. That is sufficient.

Mr. Donovan: Now, upon the receipt of that communication from Mr. Ickes, Mr. Arnott set immediately to organizing stabilization work.

Now, what did he do? He took these old code committees, men who were versed in dealing with these problems, and who had been active in carrying out the provisions of the code, and he, with them, undertook to go into the territory that was affected, and deal with the problems that were presented.

Those committees had upon them men of different shades of opinion, and different interests, from all branches of the industry, from large companies, and from small companies; and whatever was done, as will appear from the evidence, was the result of a full discussion of all points of view.

Now, what did he try to do first? He tried first to rescue the industry from local price cutting wars, which were then raging, and as the evidence will show, were ruinous to everyone, but in which the little fellow, who began
377 to "holler" more and more, was hurt worse.

Now, this was attempted, gentlemen, through local committees, by men who were on the ground, and familiar with local situations.

Mr. Arnott was successful to some degree in creating a new spirit of cooperation, and in quieting conditions. Temporarily he did obtain a measure of success in slowing up, at any rate, if not stopping, local price wars. Mr. Arnott, as well as the oil industry, recognized, as will appear from the evidence, in the discussions at that time, that you could not prevent for long local price wars without dealing with the basic cause of such wars, which was distress gasoline.

Now, gentlemen, it will appear, as this evidence is unfolded to you, the dilemma in which the Government found itself, as well as the problem that Mr. Arnott, had to face,—that it was impossible, as was pointed out at that time, for crude to remain at a dollar, if the refiner could not get the price for his gasoline reasonably based on dollar crude.

As things stood, the refiner was not getting such a price yet, as was made very clear by those in authority, on the Petroleum Administrative Board, even all the work done by the Government, and the industry, to stabilize crude at that level, as I explained to you yesterday, if that
378 were undone, the industry would be again started on its downward destructive course.

Standards and hours of employment would be torn down. And that is what they were trying to prevent. And further, gentlemen, the continued sale of this distress gasoline at the refinery price would make it impossible to prevent the outbreak of new wars.

Now, it was a critical situation. The efforts of a year and a half by the Government and the industry were at stake. Labor recognized this danger, and we will see that its representatives were insisting that steps be taken to stabilize refinery prices of gasoline at a figure which would permit them to pay a fair wage.

Now, like jobbers and retailers, the refineries had been suffering heavily from the price wars which spread in the wake of "hot gasoline," which I have explained to you, in order to remain—and this had happened—in order to remain in business, and to enable their jobbers to remain in business, also, the larger companies made a practice of giving their jobbers protection against depressed prices, even though these larger companies had to sell at a loss.

379 The result was that the jobbers turned to the major companies who could hold an umbrella over them. This took from the independents numbers of their outlets and left them worse off than they were before.

Now, in the Fall of 1934 the small refiners were getting desperate, and they had made these complaints to the Department of the Interior and the Secretary of the Interior, himself, to the P. A. B., to every official in Washington they could get to. The disparity between crude and gasoline prices was worse than ever. They lost outlets, as I have said before, due to their inability to guarantee margins to these jobbers, which made them lose even more money.

All of this came to a head at a meeting of a group of these refiners at Wichita, Kansas, on December 20, 1934. At that meeting these men discussed their problems and their grievances and their difficulties, and finally they sent a telegram to Mr. Arnott, demanding that something be done to help them. They sent that telegram to Mr. Arnott. After the receipt of this telegram Mr. Arnott called a stabilization meeting in Chicago on January 4th and 5th, 1935. At this meeting the situation of the small refiners was reviewed, and the whole problem of the disparity between the price of crude and the price of gasoline refined from it was again emphasized. 380

Now, then, Mr. Arnott appointed a committee to consider it, because it had been made clear that these local price wars had expanded in the Mid-Continent territory so far that they now embraced the whole Mid-Continent area, and something had to be done to check it. This committee was called the Tank Car Stabilization Committee.

Gentlemen, all the members of this committee are defendants in this case. What was this committee asked to do? What was it asked to do by Mr. Arnott, who appointed it? This committee was asked to survey the situation and to make recommendations to him.

Now, here is something that happened even before they were able to have their first meeting, that tended to destroy all the stabilization efforts of the Government and the industry. Now, what was it? I have said to you that the efforts of the Government to stabilize the industry was based on what I described as a provision of the Recovery Act called 9C, and that was the authority to the President to prohibit and prevent the shipment of hot oil in interstate commerce. It was the only barrier to the flood of hot oil that was coming from the East Texas territory into the markets, the bootlegged oil that I have described to you.

381 After this stabilization committee meeting in Chicago, at which the Tank Car Stabilization Committee was appointed, the Supreme Court threw out those provisions of the N. R. A., and at once this decision created uncertainty. The industry was faced with the threat of a greater flood of hot gasoline from East Texas.

But the Administration, recognizing that, at once had Senator Connally of Texas introduce a law, which is known as the Connally Act, which was designed to stop the movement of hot oil in gasoline outside of Texas. Then, when that was introduced and before it was passed, but with the knowledge that it would probably soon be enacted into law, the Tank Car Stabilization Committee met in Chicago on February 5, 1935.

Now, I think that the evidence will show that that meeting was attended by all the members of that committee. They had a survey of the conditions in the Mid-Continent field, and this survey showed the amount of distress gasoline each refiner, operating in compliance with the code, would have, each refiner, operating in compliance with the code, would have of distress gasoline.

At that meeting there were a number of suggestions. Opposition was expressed by certain members of the committee to the adoption of any kind of buying plan
382 such as that which had been used by the Government
in the preceding months, and which I have described.

Now, these critics thought that no such plan would work, that it would fail again, as it had failed before. Then there was offered a suggestion that was different from the buying programs previously operated by the Government. What did this suggestion amount to? This suggestion was simply this: It was a suggestion that these major companies present should purchase only distressed gasoline, the distress gasoline I have described to you a number of times, from small refiners, and that these purchases were to be made only if the major companies needed gasoline, and they should be made from those refiners who had upon their hands this distress gasoline.

Now, they thought that was a very sensible, a very simple, and a very honest thing to do. There wasn't to be any pool buying, and there was no pool buying. There was no proposal that there be a contractual commitment such as had been done under the national agreement that I have described to you, about binding anyone to take the particular amount of gasoline, or any stated percentage of the total. Nothing in the buying which actually took place under this, as the months went on—there was the widest variation in the amounts purchased by a par-
383 ticular company at different times. There was to be
no central buying. There was to be no group buying. Price was a matter to be settled between each purchaser and each seller. It was suggested, however, that instead of these companies taking advantage of that situation in which these small refiners found themselves, that buying should be done at the going market instead of at distress prices.

Now, the Government, in this indictment, repeatedly used the words "dancing partners," and Mr. Crawford, in his opening talk to you about that, said that at this dance he wondered who furnished the music. I think I have said enough to you so that you have in your minds now clearly the answer to Mr. Crawford's question, that the Government not only furnished the music but taught these men how to dance and made them dance. But let us see if a sinister inference can be drawn from the expression, "dancing partners" and how that was used at the meeting of February 5th.

I am perfectly willing to have you know the origin of that term. It was something like this: Someone said there, "We have an economic dance going on here," they said, "that is not giving satisfaction to some of those in attendance, because they are wallflowers, and no one is bringing them out into this economic stabilization
384 dance. Now, some of us are sturdy dancers, and we
are not partners." Now, in your terms and in my terms they said—what they meant by that—they will say what they meant by that is this: That those major companies who normally purchased gasoline in this market, in this Mid-Continent market, should make their purchases from independent refiners having distress or homeless gasoline, that is, that gasoline for which they had no market, at prices which would enable them to realize the cost of their crude and the cost of the refining of that crude.

Now, on February 11th the committee met again, and on that occasion representatives of other buying companies were invited to the meeting. There was explained at this meeting the substance of the suggestion which the committee had considered on February 5th. There was a general discussion, and there were a good many speeches made.

At the meeting in Chicago on February 11th a so-called Mechanical Sub-Committee was set up, from which the prosecution, in their opening, would have you draw some inference that would indicate that it was a committee designed to carry out a price-fixing arrangement.

Now, what was the function of that committee? It was to keep the major companies at all times informed as
385 to any independent refiners who had surplus gasoline
which they needed to move. Now, they stated very frankly the reason for this. And what was that reason? The reason was a planned one that would facilitate the bringing together the purchasers who needed to buy gasoline and the sellers who had distress gasoline to dispose of.

This sub-committee was instructed further to make surveys to locate distress gasoline and report what they found to the prospective purchaser.

Now, I talked to you for a minute about the Connally Act being introduced, and I want to call your attention again to the fact that the prosecution, in its presentation, has made no reference to that Act. But it became effective on March 1st, and with that becoming effective, with the power of the Federal Government behind that law to stop the passage in interstate commerce of this bootlegged, so-called hot oil, Mr. Arnott became convinced that this Act would be effective in stopping the shipment of this illegal oil into these legal markets. And he felt assured that the members of the East Texas Refiners Association would not run illegal oil.

And I am going to talk to you, when I finish with this Mid-Continent, about this East Texas situation. So, under these circumstances purchasing in the Mid-Con-
386 tinent was commenced. Under these circumstances there was buying in that area."

Now, there is one point on which I don't want you to misunderstand me. During the period of the buying activity, during that period, the fact is that the price of gasoline in the refinery did rise higher than it had been before. Prices rose to about the parity level at which the Government had been seeking by one expedient after another to restore them for a year and a half. They could never have reached that level, as the evidence will show, but for the enactment of the Connally Act.

The reviving demand for gasoline at this period, we will show, contributed to that result. The buying activities of the defendants, by giving the small refiners some natural, established outlet, which would otherwise have been denied them for their distressed gasoline, may have contributed to this restoration of gasoline price at the refinery.

Now, how much, if anything, contributed to that no one can really answer, but that it offered some outside aid in this was believed at the time by most of those who were concerned with the matter in the Department of the Interior and by most of those in the industry.

Now, gentlemen, so far as that may have contrib-
387 uted to this result the defendants had no apology to offer. Their objectives were the same as the objectives of the Secretary of the Interior and of the officials of the P. A. B. The Government did not apologize. Neither do these defendants.

Now, gentlemen, in point of fact the rise in price began before the buying began. Immediately after the Connally Act went into effect on March 1st, we will show you, that almost coincident with the signing of that Bill prices began to go up. The market had gone up twice before the buying began in the Mid-Continent field.

In his opening Mr. Chaffetz referred to a graph of prices on an exhibit that he had before you, and his talk to you was directed to having you draw the inference that the rise began coincident with the date of the indictment of February 1, 1935. We will show that it really began in November of 1934, and that its second rise, as I have said, began immediately upon the enactment of the Connally Act.

Now, not only the machinery for the enforcement of the Connally Act against hot oil, but the prospect that the distress of the smaller refineries—the prospect that the distress gasoline of the smaller refiners would find regular outlets, restored confidence, and of course helped that rise to the point where a refiner would be able to stay in business.

388 Now, that is exactly what the Government had been trying to do for a year and a half. What these defendants did do, gentlemen, as the evidence will unqualifiedly show, was to pay at or about the low of the market price, as reflected in the publications, and what they have had to say about the publications, in their opening, I will discuss with you in a few minutes.

These major companies did not take advantage of their stronger position to try to secure the lowest, distress price possible from the smaller refineries from whom they were buying. They paid, in the main, as we will show you, they paid in the main about the same price or less than the same price received by the small refiners in spot sales to jobbers.

Now, in the meantime, gentlemen, the problem of distress and illegal gasoline in the East Texas field was being given a lot of attention by the small refiners in that field.

The Government, in its opening, would have you believe that what was done about the organization of the small refiners in East Texas was done by the defendants here. We will show you what really happened. We will establish by the evidence that conditions in East Texas were much as I have already described as existing in the Mid-Continent. From that evidence will appear this, that

the small refiners there had lost their legitimate mar-
389 ket. This meant that the gasoline that they had to
sell increased by just so much the distress gasoline pressing upon the market. It was a problem that demanded attention there, but, as the proof will show, it was got at in a different way than in the Mid-Continent field.

In East Texas the small refiners, themselves, undertook to deal with that. Now, they were, like the Mid-Continent themselves, they had to pay a dollar for legally produced crude, and they got a price so low that they did not make enough to pay for the cost of production. This condition had existed there for a long time, and being only human, many of them tried to protect themselves by using hot oil in their refinery operations.

Now, the Texas hot oil was crude produced in violation of the Railroad Commission's orders, and that commission was a state conservation agency charged with the control of oil production. This hot oil they could buy for a small fraction of the going price of legal crude. Many of those who carried on that practice evaded the payment of the production tax, the gasoline tax, but were able to buy this cheap, illegal gasoline, and by evading the taxes they could produce and sell gasoline at prevailing market prices at a profit, while those who were acting legally were sustaining heavy losses.

390 Now, this hot gasoline was sold not only in East
Texas, but it was transported across the state lines to distant points throughout the nation, and sold at prices far below the cost of gasoline from legally produced oil. This resulted in the depression of the market price of gasoline, and caused those who were obeying the law to sustain enormous losses through the necessity of selling gasoline at a price below the cost of production.

Now, by the latter part of January, 1935, this traffic in hot oil was getting shot, because the Connally Act was then in process of being legislated into law. Now, let me try to fix in your mind that under this Act transportation across the state line of crude oil produced in violation of Railroad Commission orders, or of products manufactured from such oil, was prohibited under severe penalties. Now, here was the position of these refiners who had been using that hot oil: They were faced with ruin, because they felt that they wouldn't be able to get it any more; or with the necessity of devising some means of selling their gasoline at prices that would enable them to make use of legally produced oil at the prevailing price.

Now, among these East Texas refiners were a group who really wanted to obey the law, and to cooperate with the state and federal authorities in their effort to 391 save this great East Texas field. This group comprised the great majority of those who had a substantial investment in their business. They felt that the only way this could be done, particularly in view of the fact that the Connally Act was certain to pass, was to operate on a legitimate basis, and to persuade others to do so, because they felt that if they didn't do that, they were going to be forced out of business. Accordingly twelve to fifteen of this group got together, and they organized an association which became the East Texas Marketing Association. They did it themselves.

This association was made up of these small refiners, and no one else. Each one pledged himself to use only legally produced oil. From a practical standpoint, their chief object in forming the association, as they will say themselves, was to locate market outlets for their gasoline and other products, at prices that would enable them to have a fair chance to continue in business while still obeying the law. They were faced with the danger of accumulation of surplus stocks. They had to find a market with marketing companies, which had facilities to transport and sell gasoline at distant points.

Now, they set up their association to accomplish this purpose. They obtained the services of a paid secretary, who was named Cline. Now, what was his job? His 392 job was to keep informed and to keep the association informed of the stocks of gasoline which the members of the association might have to sell from time to time, and also to keep in touch with those who might buy that gasoline.

Now, this gasoline, he wanted to, it was his duty to try and dispose of it, and in this way: He was not confined to any particular group of buyers, because these refiners had their own local contacts individually, and they were already in touch with local outlets. The association, through Cline, tried to reach those companies who needed gasoline shipped to different points.

Now, they were in this position, however: Their former practice of using hot oil in their operations had put them in bad repute with the major oil companies, because they were producing, they were using this illegally produced crude, and all of those major companies had consistently refused to deal in hot oil or its products. They were obeying the law, and a number of these major companies had

withdrawn entirely from purchasing in that field. So, these refiners realized that before they would be able to interest legitimate marketing companies which might be purchasers of gasoline, to do business with them, it would be necessary to convince them of their good faith in
393 their declared purpose to obey the law.

Now, what did they decide to do? They decided that they had to get somebody in whom the legitimate marketing companies might have confidence, and whom they themselves could trust, to call on these companies and present their case, and to demonstrate their good faith.

Now, they selected the man that the prosecution has referred to, and that man was Neil Buckley, because they had confidence in him, and they believed that he enjoyed the confidence of the legitimate marketing companies. They asked him, as their special representative, to intercede with those companies on their behalf. They hoped in this way to find a market for the legal gasoline from their East Texas refineries.

Now, who was Neil Buckley? He was an employee of the Cities Service Export Oil Company, representing that company in the Mid-Continent oil fields for many years. He had bought gasoline from these East Texas refiners over a long period of time. He was a man of wide acquaintance in the oil business. He was a likeable man. He was a man in whom these refiners and the marketing companies both had confidence. He was a trustworthy man. This was why these East Texas refiners asked him to investigate their claim of sincerity; and, if satisfied as to their sincerity, to represent them.

Now, this was kind of an unusual request for
394 an employee such as Mr. Buckley to receive; so he went to his superiors in his company and they in turn took the matter up with the officials in Washington.

Now, these men at Washington said that they had heard of the efforts of these East Texas refiners; that, from what they had heard, they believed that they should be aided; and that, if the East Texas refiners felt that Mr. Buckley could help, that the officers of the Cities Service Export Oil Company should permit him to do so. Accordingly, Mr. Buckley received permission to go to East Texas and help the refiners who had solicited his assistance.

Now, he went to East Texas. He talked with the refiners, he learned of their plight and of their hopes, and then proceeded to call upon representatives of various oil companies in an endeavor to bring them back into the field as buyers. He received a pretty cold reception. Few were willing to trust the East Texas refiners, and he was told by a good many that he was only wasting his time.

Now, what did Buckley do then? He went to Mr. Arnott as a last resort. He looked to him for help. He pointed out to him that some aid should be given to these refiners, so that they would not be forced to return to the production and purchase of hot oil in order to stay in business.

He told Mr. Arnott that his purpose in seeing him
395 was to convince him of the good faith of these East
Texas refiners who had organized this marketing
association; and to enlist the good offices of Mr. Arnott as Stabilizer, appointed by Mr. Ickes, in convincing the large oil companies which might be interested in purchasing East Texas gasoline, of the good faith of these East Texas refiners.

Mr. Arnott talked with him. He went into the situation, and after what Buckley told him, became convinced that these refiners wanted to go straight, and that they ought to be helped, and that this help should be through the purchase from them of their distress gasoline by those major companies who might be in the market.

Now, then, he asked, Mr. Arnott asked Mr. Buckley to appear and state his case,—or, I should have said, the case of the East Texas refiners, to various meetings which Mr. Arnott called as Stabilizer under the authority of his letter. Mr. Arnott himself stated at these meetings that he was convinced of the good faith of these refiners, and that he believed they were entitled to the patronage of prospective purchasers who could use gasoline from East Texas. And, at those same meetings, Mr. Buckley made substantially the same statement as I have already described to you.

Now, there is no use denying, because Mr. Arnott
396 is proud of the fact, that he was pleased that this
work was started. He encouraged it. He told the Mid-Continent people about it. He told the Government officials what was going on.

No agreement was ever made, undertaking to bind any of the defendants or any other company to purchase gasoline in East Texas. No understanding was entered into of any kind, or of any nature. Companies which were the natural outlets for this gasoline were encouraged to accept the declaration of the East Texas refiners as being made in good faith.

Now, Mr. Arnott considered it very important to the stabilization work, to aid in establishing outlets for what otherwise would have been distress products. Some of the companies may have purchased gasoline in East Texas that they would have purchased elsewhere; but each individual purchaser was free to buy, and did buy, in any quantity it might desire, from any refiner that it might choose, at such times as it might meet its convenience, and at such price as it might be able to negotiate with the seller, and that, either as an individual with this refiner, or through the instrumentality of the East Texas Marketing Association.

So, gentlemen, it will appear clearly from the evidence that the program organized in East Texas was a
397 selling program, organized and run by the East
Texas independent refiners who had gasoline to sell; that its activities were all directed to an effort to find those who were willing to buy gasoline, whether major purchasing companies, independent purchasing companies, brokers, or jobbers.

Now, some of these defendants bought the gasoline in East Texas and elsewhere, as they had always done, without regard to the buying and selling program I have mentioned.

The prosecution has already indicated, gentlemen, that they will make much of the fact that there was a large amount of buying by these defendants, beginning in March of 1935. And they will ask you to believe that these defendants were buying gasoline to hold it off the market. But that was not the case.

In March and during the remainder of 1935, the gasoline stocks of some of these defendants, when measured in days' supply, were lower than they had been for four years.

Under the refinery allocation which I described to you yesterday—and without a retention of that in your mind, you can not follow the evidence as it will go in, and the reason for the act—the amount under the refinery allocation, the amount of gasoline which these defendants could manufacture was limited by law. And one of
398 the purposes of adopting the refinery control program
was to compel these major companies to buy a part of their gasoline from independent refineries.

The month of March was not only the beginning of the demand season, but there was an unexpectedly large increased demand for gasoline. As a matter of fact, as the situation developed, there was a compelling reason for the purchase of the gasoline which these defendants bought.

The facts which I have tried to outline to you, we will prove from the mouths of witnesses, some of them still employed in the Government. We will also establish these facts from documents and correspondence written at the time these alleged buying and selling programs were being carried on; and many of these documents and much of this correspondence comes directly from the files of the Department of the Interior, and will bear the certification of the Secretary of the Interior.

Now, we feel, gentlemen, that such evidence will conclusively and overwhelmingly establish the innocence of these defendants; and that it will also establish that they were conducting a program which resulted from the instigation and inducement of the Government itself. But we will submit additional evidence that these programs are not what the Government here would have 399 you believe; and this evidence, we say, they can not deny or controvert.

Further, the prosecution has laid great weight upon the charge that the purchases by these defendants in the course of the so-called Mid-Continent program—and I think I say substantially, if not accurately, the words of the indictment—amounted to nearly 50 per cent of all the gasoline sold by the Mid-Continent independent refiners listed in the indictment. And it has made much of the claim that purchases from the listed independent refiners through the East Texas association have amounted to more than 50 per cent of all the gasoline produced by these independent refiners.

Now, we must assume that these allegations were not made deliberately and maliciously for the purpose of misleading you gentlemen—and I do assume that. But they are so far wrong that the Government must have recklessly failed to inquire into the facts before accusing these defendants.

The same records, gentlemen, that have been available to us, have been available to them. An examination of these records will show these charges to be untrue. The Mid-Continent purchases amount to 15 per cent—not nearly 50 per cent—of the 1935 sales of the refiners listed; and to less than 19 per cent of their 1935 sales.

In East Texas, the mistake is equally glaring—I should have said, to less than 19 per cent of their 1936 sales.

I want you to correct me. In East Texas the mistake 400 is equally bad. In 1935 these defendants bought less than 25 per cent, not 50 per cent, of the total production of the refiners listed; and in 1936 only 24 per cent.

You will ask, and I think quite properly, what difference does it make whether these defendants purchased 50 per cent or 17 per cent? The answer is simply this, and you have already gathered it from the opening of the prosecution:

The prosecution is going to try to prove, and they have said so, that these defendants were cornering the market; that, by reason of their purchases, others were unable to buy gasoline. Our proof will show that the proportion of the total available gasoline which these companies bought has been grossly exaggerated and overstated by the Government; and that in fact, only a very small proportion of the total gasoline available in the open market was bought by these defendants.

Now, second, the indictment charges that the trade journals, pursuant to an agreement with these defendants, knowingly published the high and artificial prices for gasoline—this is the allegation of the indictment—the high and artificial prices for gasoline paid by these defendants, as prices paid by the jobbers in the spot market.

Now, as I read this indictment, it simply means 401 this: That the defendants were paying more than the jobbers; and that these journals were falsely representing these as the jobbers' prices, which the prosecution claimed were lower.

Now, as the proof in this case develops, you will find that the prosecution has made its charge without knowing whether or not the prices being paid by these defendants were in line with the prices being paid at the same time by jobbers and other buyers of gasoline in tank car lots.

On the other hand, we will show you that the prices paid by these defendant companies, compared with the most accurate source available, namely, the records of the independent refiners who were making the sales, were not only not higher than the prices being paid by jobbers and the general trade; but were, in a very large proportion of cases, lower.

The prosecution, I assume, will offer you specific instances where prices paid by jobbers were lower than those generally paid on the market. It may even offer you, or try to offer you general statements, based on impressions, rather than on figures.

But we intend to present to you this: We intend to present to you the results of an actual study of the records. We shall show you transactions in the spot market, not by the dozen or by the score, but by the hundred,

402 which prove our point.

Now, when you have heard that evidence, gentlemen, I am confident that, as fair-minded men, you can not help being convinced that the Chicago Journal of Commerce and Platt's Oilgram accurately reported prices paid by jobbers; that the prices paid by these defendants, instead of being arbitrary as alleged in the indictment, were reasonable, competitive, and in line with the prices being paid by buyers generally throughout the Middle West for the same quality of gasoline.

More than that, I believe that even the prosecution, when for the first time it sees the full facts in regard to the defendants' purchases as we shall present them to you, gentlemen, will be forced to agree that, had the trade papers really reflected the prices paid by the companies whom I represent here, rather than the prices paid by the jobbers, which they did reflect, their quotations would, day after day, have been substantially lower than the quotations they actually carried.

The prosecution would have you believe that the prices for gasoline at the refinery, to dealers, and at the service station, were made high, arbitrary, artificial and noncompetitive by virtue of a conspiracy of these defendants.

We will show you that on the basis of the Govern-

403 ment's own economic statistics, the price of gasoline has not improved either as rapidly or as completely as have the prices for practically all other commodities sold in the United States.

Specifically, we shall show you that the rise in the refinery price of gasoline has been substantially less than the rise in the wholesale prices of all commodities and all other fuels and lighting materials. We shall show you that the tank wagon price of gasoline has advanced far more slowly than the advance in the price of all commodities; and far slower than the rise in the cost of living; and that it has been far slower than the rise in the price of food, than the rise in the price of textile goods, housefurnishing goods, building materials and dairy products.

We shall show you that the rise in the retail price of gasoline has been far slower than the rise in the prices of eggs, butter, milk, bread, sugar, and flour, if we take representative commodities for purposes of illustration.

We shall show you also that the rises in prices and the drop in prices of all commodities sold in the United States have occurred at practically the same time; that these rises and falls have been due to economic causes, and not to any conspiracy among these defendants or among
the dealers in these other commodities. And, although
404 all these rises in prices of all commodities have
occurred at the same time, the improvement in the price of gasoline—

The Court: Well, if you have something to say, make your objection. What is it, Mr. Donovan?

Mr. Donovan: No, I just wanted to wait for a minute—the improvement in the price of gasoline in every instance has been far less than the improvement in the prices of other commodities.

Then we shall show you, gentlemen, that the prices of gasoline in the ten states involved in this litigation have been less than in the 38 states not involved; and less, also, than the average prices for the 50 representative cities of the United States.

Now, gentlemen, another fact of outstanding importance is the fact that prices of gasoline from 1918 to 1936 have been downward in their trend. So that, today, gasoline is the cheapest commodity that can be bought in these United States.

This decrease from year to year in the price of gasoline has been accomplished in the face of improved wages of the workers in the petroleum industry. The Government would now endeavor to cast a blot on this record, by charging that an industry which has done everything
in its power to contribute to this general improvement
405 is composed of conspirators, operating contrary to
the public welfare.

Gentlemen, I meant to say, during the course of my discussion with you of the percentage of purchases, this further fact: That the purchases made by these defendants constituted only one and a half to two per cent of the total gasoline produced in this territory.

And I should have directed your attention also to certain provisions of the Code, that were in operation during the period in which it is alleged by the Government that this conspiracy was in existence.

One was Rule 6 of Article V. This rule provided, in effect, that the business of the major companies should be so conducted that every branch thereof; that is, the producing of petroleum, and the refining, and marketing of refined products, would be carried on upon a profitable basis.

And also, Rule 4 of Article V flatly provided, flatly prohibited the sale of gasoline below cost.

Now, what did these rules mean?

You will remember, because I have reminded you of it so often, that the price of crude had been fixed at one dollar. You will remember also that, on the date the prosecution says the conspiracy began, the price of gasoline was so low that the small refiners could not pay 406 a dollar for their crude, and refine the crude into gasoline and sell the gasoline refined except at a substantial loss. Yet, these rules in existence during the period of this alleged conspiracy, provided by their very terms that these defendants should conduct their business so that their refinery operations would be profitable. That was the law.

The law was directed against major companies. It was intended to compel the major companies to do what they could to restore the price of gasoline to a level that would comply with it. The refinery amendment of the Petroleum Code was adopted at the emphatic demand of the independent refiners, and for the announced purpose of so limiting the amount of gasoline which the major companies could refine, that they would be compelled to purchase their gasoline from the independent refiners.

Now, gentlemen, the prosecution has talked to you about the dark furtiveness and secrecy. What was done in relation to these buying and selling programs that reflected any such improper or furtive or secret or devious methods?

The proof will show that there was no secrecy about them. They were published in the papers. They were discussed whenever members of the industry and the Government got together—and that happened very often.

407 The members of the P. A. B., the real executive arm of Mr. Ickes in this work, anxious to help, were active in the field. At their Washington office, they interviewed refiners, jobbers, brokers and dealers. These men of the P. A. B. knew what was going on. It was

their job to know what was going on. But the information came to them more directly. It came to them from defendants in this case, by telegram, by letter, by personal interview. The proof will show that certain of the defendants informed the Board as early as January, 1935, that something was going to be done about the tank car market in Mid-Continent. The chairman of the P. A. B. as we will show, not only expressed no surprise, but said he saw nothing to prevent this being done. There was no secrecy there. There was no darkness there.

They received information, the P. A. B. received information from Mr. Arnott, not only from the transcript of the minutes of Allocators' meetings at which he had explained these programs, but by reports from him, given during March and April, 1935, directly to the Board.

The P. A. B. knew from Mr. Blazer, who had been appointed by Secretary Ickes, and who became an employee of the Department, paid by the Department, to inquire into this very question. The P. A. B. learned from frequent discussions with him, during the course of his inquiry and the preparation of his reports, just what was being discussed and what was being done in
408 relation to these programs.

We will show that, far from being displeased at this information, the members of the Board welcomed it. For fifteen months they had been trying by various methods to achieve this very thing; and, far from putting obstacles in its path, by May, 1935, they were begging Mr. Arnott to go to Pennsylvania and do for the Pennsylvania refiners what he was doing for the Mid-Continent refiners.

Now, gentlemen, when the P. A. B. requested Mr. Arnott to do this, they placed the authority, or they requested Mr. Arnott to exercise the authority which they requested him to exercise, squarely upon the letter of July 20, 1934. And they did all this, as the proof will show, because they did not want to pass up even one chance that would aid them in their fifteen months' fight to save the stripper well owners, and to maintain the price of crude oil.

Now, gentlemen, I would not be frank with you if I did not refer to those events following the period of the code, and which are embraced within the allegations of this indictment.

On May 27, 1935, the Supreme Court held unconstitutional the Act of Congress which was known as the National Industrial Recovery Act. So, by that decision, there was struck down that partnership of Govern-

409 ment and industry which had been built up at the
request of the Government during the last two years, to meet the perils of the emergency which the Government had declared existed.

Now, as I have already said, that decision took place on May 27th. It was the decision embodied in what was generally known as the Schechter case, of which you all have heard. And that declared the Industrial Act to be violative of the Constitution.

Why, then, you have a right to ask, why, then, did the buying program and the selling program continue for approximately eight months after that decision?

There are two answers that we shall offer:

The first I have already given you. That was, that what they did was a proper and legitimate thing to do; that it was justified by the condition of the industry, and needed the sanction of no code and of no recovery Act.

For the second, it was undertaken to obtain the objects and purposes of the National Industrial Recovery Act. The object and purposes, gentlemen, were as truly desirable after the Schechter decision as before; and this fact can not be controverted, because the President of the United States, the Secretary of the Interior, the National Recovery Administration, Mr. Richberg, and other officials of the N. I. R. A. repeatedly pointed out to
industry its moral responsibility to maintain the
410 gains established under the code.

As late as November, 1935, the Secretary of the Interior issued the warning that, unless the oil industry prevented economic and physical waste of oil and its products, the public would demand that it be made a public utility.

In November, 1935, the Independent Petroleum Association of America met at Dallas, Texas. At this meeting a statement, approved by the President, was read before the convention—

Mr. Crawford: Now, if the court please, I think counsel is going far beyond any limit, the widest margin of any limit that was set down before, where he pretends to quote matters from the Secretary of the Interior. And now he is going into quoting or referring to some matters and statements made at a certain meeting, about which this case has absolutely nothing to do. We object to it.

The Court: Objection will be sustained to any reference to what the President said, that was said at that convention.

Mr. Donovan: And will your Honor give me an exception to that ruling?

The Court: You may have an exception.

Mr. Donovan: These buying programs, gentlemen, were undertaken by these defendants during the
411 Petroleum Code, and were in direct furtherance of
its provisions. They were encouraged, as I have already said, and as we will prove; they were encouraged and supported, done in the open, supported by the Oil Administration. The requests that efforts be undertaken under the code to stabilize marketing practices were received by these defendants in good faith. After the Schechter decision, these objectives were still the same objectives; and they did so, and they followed that—and I want to be within your Honor's ruling now—they followed that at the instance of officials of the Oil Administration.

Now, I say at the close, gentlemen, as I said at the beginning, that the prosecution has told only part of the story; that here was an industry which, through the evils of destructive competition, had been brought to the edge of disaster. Its demoralization was a threat to every principle of conservation laid down by the Government. The abuses of unintelligent competition menaced not only the marketing structure of the business, but the wage and hour scale of those employed.

What was done by these defendants was not a conspiracy to fix prices; but was to attempt to correct the abuses, and to improve conditions, so that all elements in the industry would be able to profit from their labors.
Proof will show that what they did was decent in
412 purpose, honest in intent, and useful in effect.

Gentlemen, however the motives of these defendants may be questioned, certainly the motives of our Government will not be questioned. Yet, the proof will show that during the very period alleged in this indictment, that during that very period, for the same reasons and because of the same conditions, our Government laid down, in the interests of the public, as the proper course of conduct for this industry to follow the very course followed by these defendants. And the proof will show more.

Not only did the Government commission an agent, Mr. Arnott, to secure industry's cooperation in this stabilization movement, not only were these defendants encouraged to cooperate; but, throughout the whole of this buying program, there was no hint of wrongdoing from any officer of the Government, no warning that any governmental agency deemed these defendants' conduct illegal.

On the contrary, the final report of the Petroleum Administrative Board, the active and responsible representative of the Secretary of the Interior under the oil code, was published by the Department of the Interior in June of 1936, a short time before this indictment was returned; a document which this prosecution must have in its possession.

412 (a) Mr. Crawford pointed out to you, the long, long, crooked trail that had to be followed, and the darkness, and the furtiveness, and the secrecy.

I desire to show here that there was no long, dark, crooked trail; that there was no secrecy; that there was no furtiveness; and that this was made known, in full to the papers, not only to the members of the industry, but to the officers of the Government themselves.

413 Thereafter, Samuel T. Lawton, on behalf of the defendants he represented, and Morris F. Hanning, on behalf of the defendants he represented, respectively made their opening addresses to the jury.

Thereafter, the following statement was made by the Court:

> "The Court: Let the record show that all adverse rulings may carry an exception."

Whereupon, the plaintiff, the United States of America, to maintain the issues on its part, called the following witnesses to testify and introduced the following evidence:

Mr. Crawford offered in evidence EXHIBIT 1, being a stipulation with respect to the status of the various defendants.

(Document referred to received in evidence as EXHIBIT 1.)

HERBERT C. HALE, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I am clerk of the United States District Court for the Western District of Wisconsin. In the spring of 1936 I issued subpoenas duces tecum to various oil companies and individuals at the request of the United States, and pursuant to such subpoenas large quantities of documents were produced by those companies and individuals. These 414 documents have been impounded by order of this Court, and have been in my custody continuously since that time. Government counsel here have asked me to produce certain of these documents. I have them here.

(Documents so produced were respectively marked Exhibits 11 to 614, inclusive.)

No cross-examination.

415 CARL O. BEROTH, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I live at Chicago, Illinois, and am president of the Acme Petroleum Company in that city. I am 56. I was educated in public schools, high school and Chicago Law School. I have been engaged actively in the gasoline business for the past 20 years.

Acme Petroleum Company, incorporated in June 1917, has been active in the oil and gasoline business ever since. Its capital originally was a little over $200,000, and now is close to $110,000. We have offices in Chicago and Kansas City.

This Company buys tank car lots of gasoline, burning oils and industrial fuel oils from so-called independent refiners in Texas, Oklahoma, Louisiana, Arkansas, Michigan, Pennsylvania, Missouri, and Kansas. These tank cars contain from 8,000 to 10,000 gallons. We resell to jobbers in the 10 states known in this district as the Mid-Western or Mid-Continent area. We usually sell this gasoline to independent jobbers located in North Dakota, South Dakota, Iowa, Missouri, Minnesota, Wisconsin, Illinois, Indiana and Kansas. These are the states in which Acme Petroleum Company does business.

416 We buy outright from independent refiners, pay for the gasoline and take title for ourselves and resell it. We do not sell their gasoline for them on a commission. We are frequently referred to as a broker, but we are not a broker. That term "broker" of gasoline means a company that buys gasoline or handles gasoline for refineries, and resells it to the jobbing or the consuming trade.

A large number of independent refiners in the southwest, in the states I named, have no sales organization in large cities like Chicago, Kansas City, Minneapolis, Cleveland and St. Louis. To get rid of their products they need sales outlets in those particular cities and other smaller cities. Frequently these refiners have no brands on their gasoline; they are sold entirely on strict specifications. Then the marketer, at times called broker, handles this gasoline or fuel oil, or whatever the products are, for those small refiners, and resells it to the jobbers and to the consuming trade in the territory I have mentioned.

A broker or a jobber performs an important function to this extent: We frequently may have calls from jobbers for a price on a carload of Michigan kerosene, a car of Texas natural gasoline, a car of Oklahoma or South Texas naphtha, and perhaps some Pennsylvania lubricating oils. There is no large company in Chicago to my knowledge
that the jobber can go to and get a price on all those
417 products at the same time, but he can get it from several so-called brokers or marketers. They get the prices every day and know what they are. They give the jobber that information by telephone, wire, or letter. That saves him a number of calls to states where these products are manufactured or are on hand. For the independent refiners we are a sort of sales department, whereas for the independent jobbers we act as their sort of buying department. That is the way the broker acts, and our company also.

There are many such persons in the industry performing the functions I have mentioned as brokers in those particular states, the Standard of Indiana territory. The number of such brokers now is very much smaller than the number of such brokers in the past.

The Standard of Indiana territory comprises the states of North Dakota, South Dakota, Minnesota, Iowa, Missouri, Kansas, Illinois, Wisconsin, Michigan and Indiana. That is the territory which surrounds Chicago and Wisconsin. It is called the Standard of Indiana territory in the trade because Standard Oil Company of Indiana, one of the defendants in this case, is the leader in the marketing of gasoline in that territory. Our understanding is that it does the most marketing business in each of these states. It is the market leader, so called, for two reasons;
first, because for many years the Standard of Indiana
418 posted what was known as the service station price
whenever changes were made; and second, because the volume of gasoline according to state tax reports is the largest with Standard of Indiana in those states. It has generally been the custom for it, by reason of that position, to post the normal retail service station price at which

gasoline is sold to the consuming trade. The other companies in the trade usually follow that retail price. That has been the custom until just recently, when the so-called Iowa plan went into effect in about August or September, 1936, but they do not now post the retail price.

I explain this Iowa plan of marketing as follows: The State of Iowa passed what is known as the chain store tax law. They graduated the fees to be collected on the number of stations owned. Those fees were heavy on a company that had a great many stations. The large oil companies then leased out their stations to individuals, and retired from active marketing themselves in Iowa. Then that same procedure followed in a number of other states. Although there are some exceptions, the large companies, including Standard of Indiana, have now withdrawn generally from the retail business, have leased out the stations to the dealers, and the dealers are now independently in the retail business. It is generally true now that the
419 refining companies sell the gasoline outright to those dealers, and do not attempt to post the retail price at which those dealers resell.

Standard of Indiana, and the other large companies that follow it, post what is known as the tank wagon price. It is the price at which gasoline is sold in tank wagon lots to retailers or consumers.

The prices at which Standard of Indiana sold gasoline at their stations was carried in the trade publications as the service station price at the particular point where the gasoline was sold. Since the Iowa plan went into effect that has been discontinued. The companies now post the tank wagon price, although they are still selling at their own stations, or controlled stations, at a service station price above the tank wagon price. These companies, who used to follow Standard of Indiana with regard to the retail prices, now follow it with regard to the tank wagon prices throughout the Standard of Indiana territory. It is sometimes referred to as the Mid Western area.

Acme Petroleum Company handled as brokers during the last few years from 150 to 225 or 250 tank cars of gasoline per month. Each tank car contains 8,000 gallons. Gasoline ordinarily is not sold, or talked of in barrels but in gallons.

Over the last 3 or 4 years our volume had been declining. The volume we handled in 1935 and 1936 was
420 considerably smaller than that which we handled in the years previous to that.

Acme Petroleum Company has at the present time 10 employees. 4 are engaged in the buying and selling of gasoline; 1 is connected with and works out of the Kansas City office, and 3, the Chicago office. That number of employees represents about one-fourth of what we had a few years ago. Several years ago we had offices at Dallas, Shreveport, Tulsa, and St. Louis.

A broker, such as I have described, for performing this service in the industry, first as the selling department of the independent refiners, and second as the sort of buying department of the independent jobbers, gets usually ⅛¢ to ¼¢ per gallon, which amounts to $10 or $20 per tank car. That is the difference between what we buy the gasoline for and what we sell it for to the jobbers. It is our gross margin. The broker usually is able to buy at that fraction of a cent under the price at which the jobber himself could buy it if he went directly to the refiner. The normal broker's margin in this territory during 1935 and 1936 was from ⅛¢ to ¼¢. Out of that gross intake the broker must pay his office rent, help, salesmen, telephone bills, telegraph bills and bookkeeping items, and all other office or road expenses that are connected with the sale of his products. So, speaking generally, whether the broker can prosper de-
421 pends upon the volume that he is able to handle at that margin.

The principal grades of gasoline that Acme Petroleum Company purchases and sells are what is known as U. S. Motor gasoline, another grade known in the trade as "regular", high-test gasoline, and also blended gasolines. We have three principal grades.

U. S. Motor grade gasoline is commonly known in the trade as "third grade gasoline." The Bureau of Mines at Washington have set specifications for U. S. Motor gasoline, and the Government buys on those specifications. Those specifications are followed by the refiners in making their product, so that they will not only conform to the United States standard, but also to the various State standards, which have adopted the U. S. Government standard for that grade of gasoline.

The principal specification that determines this grading of gasoline into these three main classes is what is known as octane, or anti-knock, rating. This is a term used in the trade to determine just what the anti-knock properties of a gasoline are. For instance, if 70 octane gasoline is put into a motor practically no knock occurs during the operation of the motor. A gasoline having a 60 octane rating will knock a little in the motor. A Michigan gasoline

having maybe only a 20 or 30 octane rating, will cause considerable knocking in the motor. Knock in the motor is
422 that disagreeable sort of ringing noise we hear when
we put our foot down on the accelerator. The higher octane rating gasoline you have in your motor, the less of that ringing noise you get.

Third grade gasoline, or this U. S. Motor, coming from the Mid-Continent field usually has an octane rating somewhere between 58 and 62. So-called regular gasoline has been between 68 and 70. I am referring to the present day. In 1935 and 1936, a great deal of regular gasoline had an octane rating of only 65, 66 and 67; and U. S. Motor frequently had an octane rating of only 57 or 58. Our higher test or premium gasoline will run all the way from 72 to 78 and even 80 octane, depending upon how it is made. A benzol blend high premium gasoline can be made to run even 80 or 85 octane; whereas an ethyl gasoline will run lower than that.

It is customary for most of the companies that sell a branded product to handle these three general grades of gasoline that I have mentioned. Standard of Indiana's highest test gasoline is known as Red Crown Ethyl. The regular grade is known as Red Crown. Its third grade is known as Stanolind. Sinclair has two grades of the high test. It has a third grade, which it calls U. S. Motor. Texas Company calls its third grade Indian Red gas.

Which is the most popular grade with the motorists depends upon the section you are in, and how the mo-
423 torist feels about the prices he wants to pay. Gen-
erally the regular grade is the favored grade in the Standard of Indiana territory. A larger volume of regular is handled than of these other grades I mentioned.

You can improve octane rating, generally speaking, either through what is known as the cracking process, that is, making gasoline under real high temperatures and real high pressures; or by adding what is known as tetraethyl lead to the gasoline, or adding benzol to the gasoline.

Acme Petroleum Company does not handle any of these higher octane gasolines in the premium grade made by the addition of tetraethyl lead. We can't get them. When we get a gasoline that falls into the premium grade it is made by a cracking process and not by the addition of tetraethyl lead. We handle some premium gasoline that is made premium by the addition of benzol.

Gasoline is manufactured from what is known as crude oil, which is found in the ground by drilling a hole or a well in order to bring it to the surface.

Crude oil is refined in a plant or refinery that has a number of large steel boilers, tanks, towers and pipes. This crude oil is cooked or boiled in these stills; and then, as the vapors come off during this boiling or cooking process they are re-distilled, and are later processed into gasoline and other products. There are two processes of making
424 gasoline:

The small, independent refiner with little capital has only what is called a skimming plant. It is skimmed by applying heat, and then collecting the vapors that come off this crude oil. He usually makes a gasoline with a low octane, and gets only a yield of from 20 to 40% out of his crude oil.

The other, larger refiner has what is known as a combination skimming and cracking plant. He can get a yield out of his crude oil as high as 60 or 65% of good gasoline of a much higher octane rating.

Cracking is where a part of the first refined oil is put into high pressure tanks or boilers and there, under extreme pressures and heat, the particles are broken up into a fluid that has a much higher octane rating than if not put through that process. That gives us a higher octane gasoline.

About 60% of the gasoline that our company bought and sold during 1935 and 1936 fell into this third grade or U. S. Motor grade with the low octane. About 30% for 1935 and 1936 fell into the regular gasoline grade. The balance was divided between our premium grade and other blended high test grades.

In carrying on our business of buying and selling we contact the independent refiners principally by telephone or telegram, very rarely by letter. Also we call on these
425 refiners at their various sales offices, or at their refinery plants if they have no sales offices; and the refinery representatives, when they come to Chicago or Kansas City, call on us at our offices.

The jobbers we generally contact by telephone. They will call us up and ask us what the prices are on various products; or we will call them up and try to sell them various products.

We also send out circular letters or bulletins from time to time telling the jobber what prices are prevailing at that particular time for various grades of gasoline. Jobbers frequently will come to our offices and buy from us, or get market information. I personally engage in both buying and selling gasoline. I personally supervise the activities of our assistants in buying and selling gasoline. Every day I am in active contact with everything that goes on.

I am personally acquainted with the location, character and extent of the principal crude oil fields east of the Rocky Mountains. I have been in those fields many times. I have done business in them.

There is a rough grouping of the principal crude oil fields from which the gasoline used in Standard of Indiana territory usually comes, namely: the Mid-Continent field, which comprises Oklahoma, southeastern Kansas,
426 northern Louisiana, southern Arkansas, and northern and western Texas, and the East Texas field, which is around Kilgore, Long View, and Gladewater, Texas.

There are also the Texas and Louisiana coastal fields. A big part of the crude oil produced in these coastal fields or the gasoline manufactured from it goes to Gulf or Atlantic coast ports or for export. That gasoline is usually shipped by tanker several million gallons at a time. A large part of this crude oil also goes to Houston, Texas for refining. It is a very large refining center.

New pools are being found. There are other fields east of the Rocky Mountains not as extensive as those I have pointed out. Small production has just been discovered near Olney, Illinois. There are between 40 and 50 thousand barrels daily produced in Michigan at the present time. There are a number of crude oil fields in Pennsylvania but not large producers.

The Mid-Continent field is older than the East Texas field which was coming into production in 1930 and 1931.

Gasoline is refined by a number of refineries down in those two fields.

In the Mid-Continent field you have a number of refiners. For instance, at Enid, Oklahoma, Champlin Refining Company has a very large refinery; and also Eason Oil Company. At Cushing, Oklahoma, Cushing Refining Company has a large one. At Cleveland, Oklahoma, Johnson Oil Refining. At West Tulsa, Mid-Continent Petro-
427 leum Company, a defendant in this case, have a large refinery.

At Borger, Texas, Phillips Petroleum Company has a big plant. Phillips is referred to as a major company, and is a defendant in this case. It also has a refinery at Kansas City, Missouri. In Kansas, there is Globe Oil & Refining Company, at McPherson, a large plant; Kanotex Refining Company, at Arkansas City; Vickers Petroleum Company, at Potwin. At Blackwell, Oklahoma, is Omar Refining Company.

In the East Texas field there are a great many but not nearly as many plants as there were some time ago. There are Southport Petroleum Company; McMurray Refining Company; Louisiana Oil Refining at Shreveport; Grogan Oil Company at Shreveport; Grogan Oil at Overton, Louisiana; Premier, at Longview; Solvex, at Gladewater, Ocean, at Kilgore. I have named some of the major oil companies, and some of the so-called independent refiners.

Roughly speaking, most of the independent refiners from whom we buy gasoline are located in the East Texas and Mid-Continent fields. Some are in the Michigan field.

A great deal of crude oil produced in those two big producing fields is transported by pipe lines from Texas and Oklahoma into other territories where the large companies have their refineries.

Surrounding Tulsa, Oklahoma is the large center where
a large number of pipe lines come through from there
428 into Indiana principally. Also, there are pipe lines
coming through Missouri, and from the East Texas
field.

Sinclair has a large pipe line from Casper, Wyoming, that was formerly known as the Prairie Pipe Line.

Standard has a pipe line; Shell has one; and Texas Empire have one to transport crude oil from Oklahoma, Kansas and Texas into East Chicago and Whiting, Indiana, for refining purposes, and also into Sugar Creek, Missouri, and over to Neodesha, Kansas.

Pipe lines usually vary in inside diameter from 6 to 10 inches. These pipes are usually welded together so as to form one continuous, tight line. There are pumping stations about every 35 or 50 miles that push this oil through the pipe line to the next station, and so on, until it reaches its destination, which may be 800, 1,000 or 1,200 miles distant. There are also pipe lines that go all the way to the Atlantic Coast.

The so-called major companies own or make use of these
crude oil pipe lines. The little fellows do not have access
to them. They do not have any pipe lines. The majority
of the independent refiners are located where the crude oil
is produced, or very close to there. They may have a small
2 or 4 inch pipe line from a field to their refinery, maybe
10, 15 or 20 miles. Then they will refine the crude oil there,
and ship the gasoline, kerosene or fuel oil in tank car
429 lots to the various places where they sell their prod-
ucts. We just built a pipe line of a little less than 2
miles, and it cost us $22,000, so we think it is pretty expen-
sive.

There is the Great Lakes pipe line that brings gasoline from the Mid-Continent territory to one of the suburbs in the western part of Chicago. That line also goes north and connects up at Des Moines, and goes on to Minneapolis its northern terminus. It is my understanding that Skelly Oil, Pure Oil, Continental, Mid-Continent Petroleum Company, and one or two others own, operate and use the Great Lakes Pipe Line. These are major oil companies and are defendants in this case.

We have never had one case where the independent refiners, located down there in the Mid-Continent field of the type with which we do business, have been able to make use of that Great Lakes pipe line. There are regulations imposed that they would have to comply with in order to make use of that Great Lakes pipe line. I know what the regulations are, but I don't know if they are in writing. I understand the Interstate Commerce Commission publishes a regular tariff on the transportation of oil and gasoline in pipe lines. I consider a tariff to be a regulation.

Phillips has a gasoline pipe line from Texas to St. Louis. There is no use made of that pipe line by these independent refiners of the class with whom we do business that I know of.

430 The independent refiners located in the Mid-Continent field transport their gasoline into the Standard of Indiana territory in what is known as railroad tank cars. The majors usually do not ship gasoline refined down there in the producing fields into this territory by tank cars. They bring crude oil up here, refine it, and then ship the gasoline from the refineries here.

Shell and Standard of Indiana each have a large refinery at Wood River, Illinois, close to St. Louis. Socony-Vacuum has a refinery at Augusta, Kansas. Sinclair has one at Argentine, Kansas. Standard Oil has a large one at Sugar Creek, Missouri and another at Neodesha, Kansas. The largest one of Standard Oil of Indiana is at Whiting, Indiana. Cities Service, known as the Empire Refineries, and Shell, each have large plants, and Socony-Vacuum has what is called the Bartels and Maguire, at East Chicago, Indiana. At Lockport, Illinois, Texas Company has a very large refinery that is connected with a pipe line.

Gasoline refined in those states, at those points I have mentioned, is distributed throughout the Standard of Indiana territory in tank cars.

The refineries I named that are actually refining in the East Texas field belong to the class of independents. They usually ship their gasoline out of East Texas in tank
431 cars. At various times a substantial amount of gasoline manufactured by them down in East Texas comes

into this Standard of Indiana territory for sale in tank cars.

Most of the gasoline refined in the Gulf Coast crude oil fields moved around by tankers. Very little gasoline manufactured down there on the Gulf Coast moves into this Standard of Indiana territory by rail on account of the high freight rates. I do know a little bit about freight rates, because we have paid thousands of freight bills.

Gasoline shipped from the Mid-Continent field is usually shipped on what is known as the Group 3 freight rates. That means there are a number of refining points in Oklahoma, northern Texas, and Kansas that the railroads have grouped together. All gasoline that comes from those particular points, and is shipped to Chicago or Milwaukee has exactly the same freight rates no matter from which point you ship it. Then if you go a little farther back, for instance, in Texas, they will charge ⅛¢ up to sometimes 20 points, 14 points, 16 points higher for shipping in tank car from there to Chicago or Milwaukee. If you come to some Kansas point, or closer to Chicago or Milwaukee, then the railroads have a Group 2 rating from the refining point where the freight rate is less. For instance, the freight rate from Group 3 to Chicago is .0238¢, a little over 2⅓¢ a gallon.

432 If you ship gasoline from East Texas, a little bit farther off, the freight rate to Chicago would be approximately 14 points higher which would make it .0252¢, or a little over 2½¢ per gallon.

If you ship from Kansas and get out of Group 3 into the northern part of the Mid-Continent field, you get a lower freight rate because the distance from Kansas to Chicago is shorter. It usually runs around ⅛¢ a gallon difference. This is very important, because it frequently is the difference between our ability or lack of ability to sell to a jobber in competition with others.

The various elements of cost that go into making up the price of a gallon of gasoline that is brought up here into the Standard of Indiana territory are first, the cost of the gasoline per gallon at the refinery. The first cost would be the 5¢ a gallon at the refinery. That is not the market today, but I am using that as an easy figure to illustrate. Then your freight from the refining point to where the tank car is shipped. I don't know what the freight rate is to Madison, but to Milwaukee it is 2.61¢. After that you take your state tax of 4¢ and add that to the 7.61¢. That would be 11.61¢. Then add 1¢ more for federal tax. That would be 12.61¢. And if there was any occupational 433 tax of any kind in the state, like there is in Illinois, 3%, that would be added to it. Then you have to add to that figure the price which the jobber has to receive for feeding the gasoline in a tank wagon to a retail service station, and add to that price again what the service station man has to have for his expense in maintaining a service station and delivering the gasoline to the consumer. Adding all those elements together means generally what you have got to pay for gasoline. I assign 1½¢ to 2¢ for the jobber and 3½¢ ordinarily to the retailer, per gallon.

434 In the trade a major oil company means one that owns its oil wells, or leases places where crude oil is produced; that transports that oil by pipe lines usually to its refinery; then refines the oil into various kinds of products, and transports those products by tank cars or tank trucks to jobbers who can handle it in tank wagons. Also they will transport it themselves to these jobbers by tank wagon or tank car, and also to the retailers who sell it to the consuming public. A company that is engaged in all of those activities is known in the trade as a major integrated company.

The independent refiner is one who only refines crude oil. He has usually no long pipe lines nor wells. He simply refines the crude oil that he either buys or has transported to him, and then sells his products by contract or on the open market in tank car lots to those who buy from him.

An independent producer is one who is engaged only in the production of crude oil, and is not associated with a major company.

An independent jobber is one who owns tanks which are capable of holding at least one tank car of gasoline of at least 8,000 or 10,000 gallons capacity. Usually those tanks are 12,000 or 14,000 gallons capacity, so that he will never be out of gasoline before a car reaches him. 435 He must have a switching track into his bulk plant in order to unload this tank car. Then, he has tank wagons by which he resells this tank car of gasoline in smaller quantities, from 50 to 100 gallons and up, to dealers and consumers. A jobber may buy his gasoline either from a major company or from an independent refiner direct; or he may buy it from a broker like myself. The jobber is sort of a middle man. A broker, such as myself, is sort of a middleman.

By a dealer we mean one that either owns or leases a site upon which he has what is commonly known as a gas station, where he has a number of pumps through which he sells the motorists gasoline or perhaps a small station where he handles accessories, tires, grease, and things of that kind. The dealer may buy his supply of gasoline direct from a major company or from an independent refiner, or he may buy his supply from one of these middlemen, a broker or a jobber.

A major or integrated company is one that combines functions of production, refining, transportation and the functions of the jobber and the dealer. I know the names of the principal major oil companies that do business in the Standard of Indiana territory very well. Standard Oil Company, Socony-Vacuum Oil Company, Inc., Cities Service Company, Continental Oil Company, Gulf Oil
436 Corporation, The Pure Oil Company, Shell Petroleum
Corporation, Sinclair Refining Company, The Texas Company, Tide Water Associated Oil Company are majors. Mid-Continent Petroleum Corporation is also sometimes known as semi-major. "Semi-major" means in the trade a company that is not as big as the other companies just read.

A major company usually has more than one refinery and operates in a number of different territories. Mid-Continent Petroleum Corporation falls within that class as far as refining, marketing and jobbing are concerned, but not as far as being an owner of pipe lines, or a driller of wells is concerned. That is my understanding.

Phillips Petroleum Company, Skelly Oil Company and Barnsdall Refining Corporations are majors. The Globe Oil & Refining Company is a semi-major, because of only one refinery and a very limited pipe line facility. There is also a Globe Oil & Refining Company in Blackwell, Oklahoma, and one in Lemont, Illinois. The classification of these two is semi-major.

Deep Rock Oil Corporation is a semi-major because of one refinery only and no extensive pipe line. Louisiana Oil Refining Corporation is a major because they are a subsidiary of Cities Service, which is very large. The same holds true with Empire Oil & Refining Company. Cities Service Export Oil Company and Wadhams Oil Company are majors.

437 McMurray Refining Company, East Texas Refining
Company, Dominant Refining Company, Cascade Refining Company, Grogan Oil Company, Trinity Refining Company, Tower Refining Company, La Pren Refining Company, Southport Petroleum Company, Century Refin-

ing Company, Tyreco Refining Company, Wabash Refining Company, Texover Refining Company, Ocean Refining Company, Solvex Refineries, Inc., Arrow Producing & Refining Company, Chief Refining Company, Gilliland Refining Company, Texas Oil Products Company, Matthews Refining Company, Utah Refining Company, and Premier Oil Refining Company are all independent refiners located in the East Texas field. They belong in that class of independent refiners with which we, as an independent broker, do business.

Champlin Refining Company and Eason Oil Company, located at Enid, Oklahoma, Bell Oil & Gas Company, Omar Refining Company, and Danciger Oil & Refining Company, with their office at Tulsa, Oklahoma, Panhandle Refining Company and Taxman Refining Company, Wichita Falls, Texas, Olney Oil & Refining Company, Olney Texas, Cushing Refining & Gasoline Company, Cushing, Oklahoma, Waggoner Refining Company, Inc., Electra, Texas, Rock Island Refining Company, Duncan, Oklahoma, Dickey Oil & Refining Company, Inc., Wichita, Kansas, Shamrock Oil & Gas Company, Amarillo, Texas, and Wilcox Oil & Gas Company, Oklahoma, are all independent companies
438 located in the so-called Mid-Continent field. They belong
to that general class of independent refiners with which we, as an independent broker, generally do business. I would say that those two lists of independent refiners that I have just testified to are representative independent refiners in those two fields. By "representative," I mean they sell most of their products in the mid-western area. Those named are the principal independent refiners in those two fields and the group of independent refiners in those fields that do the largest amount of independent business up here in the Standard of Indiana territory. Over the past 20 years I have been in their plants and offices many times, and have bought from them, and sometimes have sold to them.

I know where the principal refineries of the major companies and semi-major companies I have named are located. In addition to those previously named Socony-Vacuum Company, Inc. has the Lubrite plant in the St. Louis district, and a plant at Trenton, Michigan, just south of Detroit.

It has been my understanding that Cities Service has a plant in the Shreveport, Louisiana District.

Continental Oil Company has a plant at Ponca City, Oklahoma.

I am not familiar with the Gulf Companies because of the fact that they do very little marketing in the Indiana territory. They do some, in Illinois, Michigan and Indiana.

The Pure Oil Company has a plant known as Smith's
439 Bluffs, I think it is, Texas, and there is one at Muskogee,
Oklahoma. I do not recall that it has any refineries in the Standard of Indiana territory, excepting a small plant at Midland, Michigan.

Shell has a plant at Arkansas City, Kansas. It also has a plant on the Gulf Coast at Houston; but gasoline manufactured there does not usually and normally come into this territory.

Sinclair's big plant is at East Chicago, Indiana, and it also has one at Parco, Wyoming.

I am not familiar with the Tide Water Companies' refineries. To my best knowledge they have none in the Indiana territory. They market and their products are marketed in this territory.

Mid-Continent Corporation has a refinery at West Tulsa, Oklahoma; Phillips Company, at Borger, Texas, and Kansas City, Missouri; Skelly, at El Dorado, Kansas. Barnsdall has one plant at Wichita, and another one in Oklahoma, and it is building one now, I am informed at Corpus Christi, Texas. The three Globe Companies have plants at McPherson, Kansas; Blackwell, Oklahoma, and Lemont, Illinois; Deep Rock Oil Corporation at Cushing, Oklahoma.

According to state tax reports from which we get our information, between 5 and 6 billion gallons of gasoline are marketed yearly in the Standard of Indiana territory. My understanding is that that would be true roughly for
1935 and 1936. Approximately 85% of that is handled
440 by the majors and semi-majors. The so-called inde-
pendent refiners manufacture or refine the balance, or about 15%. I would say that those percentages were generally true of the years 1935 and 1936.

Better than 4000 jobbers are doing business in the Standard of Indiana territory according to the tax reports that we have checked. They are scattered pretty generally throughout the territory. Some of those jobbers get their supplies from the major companies; and some from the independents, and some get them from the brokers like myself. Jobbers get at least 50% of the gasoline they handle from these major company and semi-major company defendants. Those figures I have given would be generally true for 1935 and 1936.

That number of jobbers, 4000, was smaller than the number in years previous to 1935. We checked with our office cards and found the number less. We make out a card for every jobber in the states in which we operate, and then at the end of a six month period or a year period we take out the cards of the jobbers that have gone out of business, or are inactive, and then the remaining jobbers are the current list. That means whether we do business with them or not. We get our cards from the State Gasoline Departments, and make up cards for every jobber that is listed there, whether he is a customer or not.

The major companies sell their gasoline by contract to the jobbers, and by spot sales to the jobbers in tank
441 car lots. We have never found a substantial portion sold by the major companies on the spot market to the jobbers. Most of the sales by majors to jobbers are under written and printed contracts. Of the 15% of all the gasoline that is handled and sold in the Standard of Indiana territory, which I say is refined by the independent refiners, about 7½%, possibly or maybe 10% I would say is sold by the independent refiners under written or printed contracts with the jobbers. That would leave either 7½% or 5% which is sold in some other way by these independent refiners. Normally, that 5 or 7½% is sold in what is known as day to day sales or separate transactions to the jobbers or concerns like ourselves who inquire for prices.

A spot sale is a sale where a refiner sells on, say, today's market, 1, 2, 3 or more cars of gasoline for prompt shipment, which means within 48 hours at the going price that day. For instance, if I wanted to buy 5 cars of gasoline today, and I called Cushing Oil & Refining Company at Cushing, Oklahoma, I would ask them, "What price can you give me on 5 cars of 68-70 gasoline for immediate shipment, or prompt shipment." Immediate meaning within 24 hours, and prompt within 48 hours. If they said 5¾¢ or 6¢, and I thought the price was right, I would buy that number of cars, and that would be termed a spot sale or a spot transaction. That is the type of transaction that represents the sale of this 5 or 7½%.

442 There is no general location where anybody goes with his wares, a sort of fair grounds, or anything like that.

The spot market is this price, as we understand it. For instance, if 50 cars are sold today, say, some at 5¢, some 5¼¢—say the highest 5¼¢, and the lowest 5¢—then if that is being bought by the jobbers, then we understand that that is the spot price. Maybe 10, 15 or 20 refiners might bid on any part of those 50 cars. The spot market, then, is a term which describes the grouping of these spot transactions.

There are agencies or publications that purport to report the spot market prices from day to day. The leading publications that purport to do that are the Chicago Journal of Commerce published at Chicago, Illinois; and Platt's Oilgram published at Cleveland, Ohio, with a Tulsa edition.

We keep records in our own business which embrace the sales we make each day, the number of cars, to whom we sell, on what basis we sell, the price at which we sell, the date of shipment, the number of cars we buy, from whom we buy, the kind of material we buy, the price at which we buy, the date of shipment, and the offerings which we receive that day which we might not buy, as well as quotations which we make to jobbers on which we did not make sales. We subscribe to only the Journal of Commerce, one of the publications I mentioned. But we also sub-
443 scribe to the National Petroleum News, which gives the Platt's Oilgram spot quotations in weekly form, rather than daily form.

The National Petroleum News weekly quotations purport to represent the low and high spot prices for that week for the respective grades of products listed. The Chicago Journal of Commerce quotations purport to represent the spot market from day to day on various products according to the grades published in the paper. The principal grades quoted in those two papers are third grade (U. S. Motor), regular, and premium. By the low and the high I mean the lowest price at which that product was offered, and the highest price at which the same product was offered, on that particular day. For instance, if the price is 5¢ low and 5¼¢ high, it is my understanding that some material or products were bought that day at 5¢, some may have been bought at 5⅛, but the highest price was 5¼¢.

For years, it has been the practice for these publications to publish a high quotation and a low quotation for each of these grades.

We check the Chicago Journal of Commerce every day for the news regarding the markets, and compare their prices before we start quoting or buying for that particular day so that we will know the prices which jobbers, who take that same paper, see in the Journal. I do that personally. I personally keep in contact with the
444 records of our actual transactions on the spot market.

The Journal of Commerce comes to my desk the first thing every morning that I am in town; and if I am out of town, the market section of the Journal is held there for my return. I have read every one of those sections for several years.

We constantly make a comparison between the prices that we pay on the spot market for the gasoline that we handle and the gasoline prices in the journals. We also compare the prices on fuel oil because we also sell fuel oils. We pay no attention to any of the other markets.

Normally in this business the broker, such as ourselves, is able to buy for from ⅛¢ to ¼¢ under the price at which the jobber is able to buy direct.

My understanding is that those quotations are supposed to represent the spot market. When I pick up that market sheet and read it it discloses to me the price which a jobber would ask, what the going price was on spot shipments for that day. We do not do business on the basis of those quotations because we always have to buy under those quotations; otherwise we would be out of business.

The price that we pay the independent refiner is determined by our calling the refiner and asking him for a price on a product for that particular day for immediate shipment; and then, if we believe that we can sell it at ⅛¢ or ¼¢ above that we will buy on that basis, irrespective of what the Journal or any other publication may say.

445 Since the broker normally must buy at from ⅛¢ to ¼¢ under the price to jobbers, I would normally expect that our price as a broker would be from ⅛¢ to ¼¢ under that of the Journal.

During the period beginning March 1, 1935, and through the rest of 1935 and 1936, we bought all the way from ⅛¢ under the low of the Journal for the respective grades to as much as ⅝¢ under the low of the Journal for U. S. Motor and regular gasoline. The ¼¢ margin was general and the ⅜¢ margin was almost general.

Beginning March 1, 1935, the market on both U. S. Motor and regular gasoline started upwards. In the case of U. S. Motor gasoline from a low of 3⅛¢ it went up, according to purchases we made, to 4¼¢ per gallon, f.o.b. Group 3, Oklahoma. The same relationship was true with reference to regular gasoline. I am speaking now of the trend of the prices that we paid. The Journal advanced during that same period, and the prices of the low of the U. S. motor and the regular grades, their low prices, were from ¼¢, ⅜¢ up to ⅝¢ higher than our purchasing prices.

From June until October, 1935, the markets remained fairly stationary. By that, I mean there were no fluctuations of any great consequence.

In November and December, 1935, and January, 1936,

there was a period when there were greater fluctua-
446 tions, so far as we were concerned. We were able to
buy at the lower margins that I mentioned, ⅝¢ below,
rather than ¼¢ under. I am now telling the trend of the
prices that we paid.

The general trend of the Chicago Journal of Commerce during that period beginning in the early part of the summer of 1935, running through the year 1935, and on into 1936, continued just on a very slight variation, and was stationary for quite a little period.

We paid from ¼¢ to ⅝¢ under what the Journal prices were for gasoline we bought in tank car lots depending upon the time of the year. When we came into the winter of 1935 and 1936, the spread between our price and the price quoted in the Journal widened.

Q. Will you tell us how this period of time, June 1st, or around the first of June, 1935, on through the rest of '35 and into '36 compared with previous years or previous periods of time, as to the trend of the Journal prices.

The Court: With what, with the prices he paid?

Mr. Lewin: No, with the prices of the Journal, which he was studying from day to day.

The Court: How did that compare with what?

Mr. Lewin: How did that compare with the trend of the Journal prices in previous years?

447 Mr. Donovan: I object. He is taking a period of years, and not any one year.

This witness is not qualified as an expert economist. That is what the question calls for.

There is no showing here that business conditions were the same. There is no showing of what conditions were. I object to the question on the ground—

Mr. Lewin: I didn't ask for that. I asked for a simple comparison between the trend of the Journal prices in this period and the trend of the Journal prices in prior periods. This gentleman is the very best source of information on that subject.

Mr. Lawton: If the Court please, I desire to make the same objection as to the 1935 testimony. The best evidence is the Journal of Commerce, which is available for that year; and his actual sales records. And we shouldn't be bound by his general statement of a comparison, when we have no means of cross examining him; no means have been offered to us for cross examining him upon the truth of his statements.

The Court: Q. The information—you are stating certain facts now, and you obtained that, I suppose from your files?

448 A. Yes sir.

Mr. Donovan: If it please the Court, if he is undertaking to testify from files and records, those files and records ought to be in Court so we would have an opportunity of examining them and cross examining this witness upon them; and I object further on that ground.

Mr. Lawton: The Court understands that that is the exact nature of my objection also; that is, it is included in my objection that he is making a comparison of his written records with the printed record of the Chicago Journal of Commerce, which is the best evidence, so far as the Journal is concerned.

449 Mr. Lewin: I say, take 1934 or 1933 or 1932 or 1931, any period of time. I want to know whether there was any other period of time, that was comparable to that, that you know of?

Mr. Lawton: In what respect?

Mr. Lewin: In respect to stability and uniformity of this price that he has described as being at a constant level.

The Court: Oh, I see what you are getting at.

Mr. Donovan: May I have an objection, your Honor?

The Court: Yes.

Mr. Donovan: And the exception?

The Court: Yes. You may answer that.

A. There had been no other period from 1930, in fact previous to that time, where prices were so uniform as during the period you state.

Mr. Donovan: I move to strike out the answer on the ground that it does not appear either from the question or the answer of the witness that the conditions of the country—the financial situation of the national—

The Court: We are not interested in that. We are interested now in the price of gasoline.

Mr. Donovan: Yes, your Honor, but he is drawing—

450 The Court: You may go into that later on. Motion denied. Exception allowed.

Mr. Donovan: If I may state my objection, your Honor? I make the objection on the ground that he has established no standard of comparison.

The Court: We are talking about the price of gasoline now, aren't we? (Addressing the witness)

A. Yes.

The Court: That is all we are interested in.

Mr. Lewin: The quotations in this Journal.

The Court: It appears the price of gasoline varied in 1936? (Addressing the witness)

A. 1935—to start with, in 1935 it went up, and then there was a period they were almost level for many months, practically no change at all. And that had not occurred in previous years.

The Court: Previous years?

A. Back to 1930.

The Court: Well, in 1930, 1931, 1932, 1933, and 1934, what would you say about the trend of prices during those years?

A. There was a much greater fluctuation, so the line would go more like this (indicating) than like this (indicating).

Q. Now, for the record—I don't know whether that appeared in the record—in the previous years the line went up and down?

451 A. Yes, frequently.

Q. And that is to be contrasted now with this period in the summer of 1935 and on into the winter of 1936, where the line was horizontal and rigid.

Mr. Donovan: Now, I object—

Mr. Lewin: I must get it into the record. I think the record ought to show that.

Mr. Donovan: I still have a right to make an objection, and I still object to the testimony of counsel.

The Court: Let me ask the question. Maybe we can clarify it and speed it up. Were you familiar with the price of gasoline during the years 1930, 1931, 1932, 1933, 1934 and 1935?

A. I was, yes, sir.

The Court: And during the years 1931, 1932, 1933 and 1934, was there any period during those four years where from month to month there was no variation in the price of gasoline, in the prices we have referred to?

Mr. Donovan: Very respectfully, if the Court please, I must object to your Honor's question, for the same reasons I have already stated.

The Court: Objection overruled. I want to know whether this witness has that knowledge. Exception

452 allowed.

A. I have.

Mr. Donovan: I only want to submit that that is not the way to obtain it.

Q. Now, Mr. Beroth—

The Court: Just a minute. I want to get from this witness facts from his own knowledge independent of the Journal of Commerce or other journals. What you have testified to now is variations in the price of gasoline during those years. Is that a recollection of your business experience?

A. That is our business experience, and also, the reading of the Journal during that period.

The Court: And your own file?

A. Yes, and my own file.

The Court: I think we ought to have—yes. All right, go ahead.

December, 1935 and January and February, 1936, were during the bad winter period, and not much gasoline was being used. We had more severe weather during that period than we had had for several years previously. Bad weather has very much effect on the amount of gasoline that is consumed. If the farmer cannot get out to the main road, he doesn't use gasoline to come to
453 town in his car, and only where the highways are plowed is there an appreciable amount of gasoline used in trucks. A great many pleasure cars do not make the trips in the winter time, in the short days and long nights, that they do in the summer periods or in other periods where the weather is milder. A bad consuming season has a very large effect upon the demand for gasoline on the market, because there are less inquiries to purchase gasoline, and the result is that the refiner has to either curtail his runs, which means making less gasoline during that period, or store it in tanks until the market condition improves.

That bad consuming season, because of bad winter months, lowered the price at which we were able to buy tank car gasoline quite a bit. The trend of the Chicago Journal of Commerce quotations during that same period, December, 1935 and the first part of January, 1936, was practically stationary. My best recollection is that the Journal of Commerce figures remained stationary at the same level that they had been at during the summer.

There was an upward trend in the spot market prices as quoted by the Journal in January, 1936. That took place about January 17, 1936. It went up to 6¢ per gallon. That was a rise of ½¢ in the Journal quotations from the level that they had been on before. The 454 trend of the gasoline quotations as reported by the Journal after that rise in January and down until the early part of the summer of 1936 stayed practically stationary at the higher level. I was talking about regular gasoline. Third-grade gasoline increased in price also at that time. The trend of the quotations for third-grade gasoline after that rise in January stayed practically stationary for some months.

There were some small breaks in 1936 in the price as quoted by the Journal for those two grades. They first occurred about May or June, 1936.

I testified before a Grand Jury in this jurisdiction in May, 1936 which was investigating the oil case. I do not remember any appreciable break in those quotation trends until around May or June, 1936.

There was an advance of 15¢ a barrel in the general posted price of crude oil in January, 1936. That change was just about the same time as the change that I just described in the price of gasoline as quoted in the Journals. Crude, prior to January, 1936, was $1.00 a barrel, and had been for some time. That was what is known as Mid-Continent crude. Then there are variations in the prices of crude oil for the different gravities.

The bad weather affecting the demand for gasoline, which I testified to this morning, occurred in January, 1936.

455 *By the Court*

I believe it was within a day or two of January 17th that the price of crude oil rose from $1.00 per barrel at the well in the Mid-Continent field to $1.15. There have been no variations in the price since January, 1936 that I know of.

By Mr. Lewin

I do not recall any changes in the price of crude after that rise of 1936 in the Mid-Continent. There have been changes in various grades of crude that I have not kept up on. The one that stands out in my mind is this one in January, 1936, and I do not remember any decline in that price later.

We purchased gasoline, both regular and U. S. Motor, at from ¼¢ to ⅞¢ a gallon under the low at various times. Not regularly straight through, but at various times from January, 1936 up to and including September, 1936. By "the low" I mean the low quotation in the Journal of Commerce for either the Motor or the regular. That was the same privilege that any broker had.

We were buying on the spot market, during the years 1935 and 1936, what is known as U. S. Motor specification gasoline for the cheaper grade, and we were buying from 65 up to 70 octane for regular grade.

456 U. S. Motor is what the ordinary consumer calls low grade or third-grade gasoline. The regular 68 to 70 octane rating is what the ordinary consumer calls regular gasoline. The ethyl wouldn't run as high as 80, but some high test would. The three kinds of gasoline we were buying were U. S. Motor, regular grade, and some high test, although a much smaller quantity of high test than of the others.

The low grade gasoline was what we sold to dealers who were buying the low grade product, and all during 1935 and 1936 I do not recall out of hundreds or thousands of cars we sold that there were any rejections from either the state on specifications or from the jobber on account of quality. The same holds true with reference to the regular gasoline.

We never purchased, to my knowledge and honest belief, one pint or gallon of "hot oil." I know what "hot oil" means very well. Every purchase order that we make contains the clause printed right in it that all products under this order must be according to municipal, state and federal regulations and laws, and we won't accept it unless it is.

Keith Fanshier is the petroleum editor of the Chicago Journal of Commerce and a very fine man. From 1930 to 1934 he called me several times, and then for some unknown reason I did not receive any calls for over a

457 year. I do not recall receiving any telephone calls from Keith Fanshier inquiring as to the prices I was paying during those years covered by this indictment, until after it was announced that I had appeared before the Grand Jury. Then he called me one day to ascertain some information about the prices. That was after May of 1936.

There was a change in the amount of gasoline that was available to me after March 1, 1935, as compared with the years previous to that date. We tried to buy gasoline several times from the same sources from which we had previously purchased, and we were told that they were sold up and had made large sales to the major companies.

I was down in the fields in the years 1935 and 1936 trying to buy gasoline.

We had bought from McMurray Refining Company prior to March, 1935, and during 1935 we at several times got some small lots, but when we wanted to buy in one instance I recall I wanted to buy 25 cars, and they told us they did not have it.

We bought from East Texas Refining Company previous to 1935, but none after that. I tried to buy after that. I was in Dallas personally, and tried to buy. They told us that a large part of their gasoline, which we had been getting before, had been sold to the majors, and the balance had been shipped to local points. When I had these conversations with them, I talked to Mr. Free-
458 man Burford, the president, and Mr. Ralph Bishop, the sales manager.

Regarding each company I name, I never had my negotiations with anybody any lower in rank than the sales manager, and frequently my negotiations were with the officers of the company, whom I previously knew.

We did no business with Dominant Refining Company at any time.

We did have business with Cascade Refining Company prior to 1935 and tried to buy in 1935 and also in 1936, and they informed us that they had made large sales. In one case it was Mr. Kennedy who told me he had sold 75 cars to the majors and consequently had no gasoline for us.

We had bought from Grogan Oil Company prior to and after that time, but there were at least 4 or 5 times during 1935, and at least that many times in 1936 when they advised us that they had sold bulk products to the major companies. When I was in Shreveport at their refinery I saw a large number of Cities Service cars on the tracks, and was told by Mr. Grogan, the president, that that gasoline was going out to them, and therefore he had none to sell to me.

We bought some from Mr. Jackson of Trinity Refining Company before 1935 and also a few cars afterwards, but no appreciable quantity, and less than we had bought before.

We bought none from Tower Refining Company at any time, as I recall.

459 I recall just a few purchases from La Pren, but they were very small. We never considered them as a regular source of supply.

We frequently bought from Southport Petroleum Company, and I was informed when I was at Kilgore, Texas, in the East Texas field, that they had made some large sales for several months, and therefore would be unable to quote us on what we wanted. I was told by Mr. Herzog, the sales manager at that time, that those sales were made to the major companies.

When we went into the market to buy after March 1, 1935, we were ready and offered to pay what any other marketer would have paid for the gasoline at the particular time.

We bought some from Century Refining Company, but not very much before 1935; and very little after 1935, less after than before. We purchased several lots from Tyreco Refining Company; we purchased considerable in 1934, very little in 1935 and 1936.

We purchased none from Wabash Refining Company that I can recall. We purchased none from Texover Refining Company.

We bought a few cars from Ocean Refining Company, but their Mr. Robinson, sales manager, told me that they had a number of big purchases from majors, and consequently with that and what they were shipping in 460 tank wagons, they did not have any to sell to the North. We bought from them in 1934, and we bought a few cars in the months of February and March, 1935, to my best recollection. Those purchases after March, 1935 were very much smaller than those prior to that time.

We bought nothing from Solvex Refineries.

We bought a little from Arrow Producing & Refining Company prior to 1935, and some during 1935, but we never asked for any big quantities because we figured they did not have it.

We bought none from Chief Refining Company.

We bought quite a little from Gilliland Refining Company before March 5, 1935, and after that time a few times we bought not to exceed, as I recall it, 10 cars at any one time. They also informed us they had made large commitments to the major companies.

We bought some from Texas Oil Products Company, some prior to that time and some after, but no large quantities because they were selling most of their gasoline by tank trucks from their plant, and shipping to the Gulf. We bought none from Matthews Refining Company, and none from Utah Refining Company.

We bought a little from Premier Oil Refining Company, from Mr. Dason down at Longview, Texas, prior to

1935, and we bought some during 1935, but in 1936 we could not get any of this gasoline for 7 or 8 months' time because he told us that he had large orders. They 461 were shipping a part of it to the Gulf and part of it he was selling, he said, to the majors. We inquired from Premier from 3 to 4 times a month during that 7 or 8 months period in 1936, and we received the answer that it had no gasoline to quote us.

Out of that list of 22 companies I have named over half that we had business with in substantial amounts before March 1935, we were able to do substantially less business with after March 1, 1935, for the reasons I have stated.

We bought practically no gasoline after 1934 from Champlin Refining Company. Prior to 1934 we bought odd lots of gasoline from time to time, but we never considered them a large supplier of gasoline. We did not try to buy from them after March 1, 1935. Champlin has a lot of jobber contract customers and sells a lot of gasoline locally and through a pipe line up to Superior, Nebraska, from Enid, Oklahoma, and they told us their gasoline offerings were pretty well taken care of on that account.

We bought none from Eason Oil Company.

We bought frequently from Bell Oil & Gas prior to 1935. During 1935 and 1936 we still bought some gasoline from them, but when we asked them for larger quantities, say 25 to 35 cars at a time, they told us twice in 1935 that they were sold out and had large orders going to the majors.

462 We were never attempting to buy in odd lots, partial tank cars, or anything like that. We buy nothing less than 1 tank car at a time. That is the smallest unit we handle.

We bought from Panhandle for at least 10 or 15 years. In 1935 and 1936 we tried several times to get some fair quantities of gasoline, 25 to 35 cars, and were informed several times that they were sold up and had quite a lot going to the Gulf and to the majors.

We bought from Olney Oil & Refining Company for many years, and we continued buying during 1935 and 1936, but only small quantities of less than 5 cars each. They advised us that they were in on a program of shipping to the Gulf and also to the majors, several times during that period.

We have bought from Omar Refining Company, but we did not consider them a regular source of supply. We knew they had certain contracts which took the major part of their gasoline, and consequently we deemed it was useless to ask them in 1935 and 1936.

Before 1935 we bought many times from Cushing Refining & Gasoline Company and considered them a good source of supply for us, because the president of their company and I used to work together. Several times when we came in 1935 and 1936, we were told that they had made large commitments and were in what they stated to be a buying program of the majors.

463 We did business regularly with Waggoner Refining Company for more than 10 years. But during 1935 and 1936 they were in on a so-called major buying program, and several times we could not get the quantities we needed.

What I have said about Waggoner applies to Taxman Refining Company.

We did very little business with Rock Island Refining Company. Prior to 1934 we did, but after 1934 we did not, because they had a great many of their own outlets, and consequently we figured they didn't have any gasoline to offer us.

Q. Dickey Oil & Refining Company?

A. We bought very many years from the Dickey Company in and prior to 1935, and also after 1935 or 1936, but we met with the same response there when we tried to buy two lots of 25 cars each during 1935 and 1936,—that they were committed on a large number of cars on a buying program with the majors.

Mr. Donovan: I object to this characterization for this reason; the charge here is a conspiracy to fix prices. No such attempt has yet been made to establish any such agreement. I object to any such testimony at this time until such proffer has been made.

464 Mr. Lewin: That is what we were attempting to prove.

Mr. Donovan: I move to strike out the part of the answer relating to buying programs.

The Court: Objection overruled. Exception allowed.

We bought from Dickey for several years prior to 1935 and have bought during 1935, 1936 and up to 1937. And the Dickey Company has sold out to another company and we are still buying from them. In 1935, when we were looking for 25 cars of gasoline in that territory, on a couple of occasions, they told us that they were sold up because they were supplying a major buying program. The sales manager of the Dickey Refining Company told me.

Mr. Donovan: If it please the Court, in view of your Honor's ruling, I ask your Honor to instruct the jury that these statements of the witness that any of these independent refiners now referred to told him that they were supplying a buying program, I ask that you instruct the jury that any such statement be disregarded as not binding upon any of the defendants here on trial before you.

Mr. Lewin: Until the connection is shown.

Mr. Donovan: I am making that objection now, and I ask that you instruct the jury to that effect.

465 Mr. Crawford: Of course the time to make the objection was when the question was asked, and counsel let these questions go uninterrupted clear through thus far. Certainly to strike out testimony he has not objected to is something that is not known.

Mr. Donovan: If it please the Court, I could not tell from the question what the answer of the witness was going to be. I now repeat my request that the jury be so instructed, in view of the present answer of the witness.

Mr. Lewin: The Government position is this. We proffer to show, and will show by later evidence that these companies, through their agents who have made those statements were co-conspirators in this indictment, and therefore their statement is a part of the res gestae and is admissible against the other conspirators.

The Court: For the time being I will reserve the decision on that motion. I want to go a little bit further into this. I will reconsider it. Your motion was to strike out his answer.

Mr. Donovan: In regard to the buying program. Do I understand that the answer still stands, your Honor?

466 The Court: It does, until I rule otherwise.

Mr. Donovan: May I take an exception, for the refusal so to instruct the jury?

The Court: Yes, you may.

I have testified as to my attempt to buy from these refiners. We had those conversations directly with some of the officers. We communicated with them principally by telephone; that is our method of doing business principally.

By the Court

Our office is in Chicago, and when we telephone we always ask for some individual in the company. They are person to person calls. We usually asked for the man that handled the sales of the company who had previously sold us products for a long time. In the East Texas field, when I was down there, naturally I talked with every one of them personally. I was down there in September 1936; also, I think, in July 1935.

Mr. Donovan: May it please the Court, I renew my request upon the further ground that it appears from the statement of the witness that it is a relation of a past event, and it does not appear that this was in the course of the conspiracy alleged in the indictment and in furtherance of that conspiracy.

467 The Court: Objection overruled.

Mr. Donovan: My exception. So that I will not be misunderstood, I am asking your Honor to instruct the jury to the effect that this shall not be considered as binding upon these defendants who are here on trial before your Honor, and I take an exception.

The Court: Proceed.

Mr. Lewin: We are agreeable to that instruction subject to our connecting it up; subject to our showing evidence here that these persons who made the statements are co-conspirators, which we expect to do by evidence aliunde.

Mr. Donovan: I have my exception, your Honor.

The Court: With counsel's statement that he intends to tie this up with additional evidence, we will let it stand for the time being.

Mr. Donovan: Then I merely suggest to your Honor, in view of all that is transpired, I am asking your Honor to give that instruction to the jury that I have asked, that in view of what counsel has said, and what has transpired, all is prejudicial and against the right of these defendants.

The Court: Proceed. Motion is denied. Exception allowed.

468 We bought from Danciger for several years from their refinery at Pampa, Texas. They moved their offices to Tulsa, Oklahoma, and during 1935 and 1936 we did not contact them on any gasoline. I don't recall any particular reason. We just passed them up.

We were buying from Shamrock Oil & Gas Company prior to that time, and have been buying up to the present time. In 1935 and 1936 I was told several times by Mr. Snyder, when he was in our office twice during 1935 and at least once in 1936 and we were then discussing purchases, that at that time they had large commitments with the major buyers. Mr. Snyder is sales manager of that company.

We bought considerably before 1935 but very little afterward from Wilcox Oil & Gas Company. We rarely contacted them.

I don't just at the moment recall any other independent refiners in the field with whom I had similar experiences.

I notice a correspondence between the prices for the same grade and quality of gasoline in the spot market from these independent refiners up to the Mid-Continent field with the prices for the same quality and grade of gasoline purchased in the East Texas field. We bought for several years out of the Mid-Continent field and in the East Texas field at identical prices. Assuming a freight differential, which is approximately 14 points, if it were 6¢ in the Mid-Continent field and we buy the same grade of gasoline in the East
469 Texas field, it would be 6¢ plus that differential. The normal differential is simply a freight differential.

In our experience the Mid-Continent and East Texas markets are practically the same. Very seldom different during the last 5 years up to the present time. We can buy in East Texas just as cheaply as we can in the Mid-Continent, and vice versa.

There were two reasons for the decline in the volume of our business in the last few years: First that so many jobbers took contracts with the majors and semi-majors for all of their gasoline. The second, that we were unable to get all the gasoline that we could have sold on account of the major buying program at high prices.

I am a member of two marketers' associations.

Mr. Donovan: If the Court please, so there be no mistake, as I stated before, my further objection was that the testimony of the witness, in so far as this period is concerned, is only a narration of the past events.

Mr. Lawton: I understand any objection made is an objection for all defendants. Is that not correct?

The Court: Yes.

Mr. Lawton: This witness is not testifying to any associations with any independent refiner, but he has now stated as a conclusion that the reason he

could not buy gasoline was because of a buying pro-
470 gram of the majors. That is entirely his conclusion, and I move to strike it out because it is a conclusion of the witness.

The Court: He is relating what dealers in gasoline told him when he endeavored to buy from them. I think it is a statement of fact. Objection overruled.

Mr. Lawton: May we have the exception?

The Court: Yes.

Mr. Donovan: Then, if I have not already done so,—but I thought I had—I move to strike out the testimony of the witness upon the ground as stated by myself and General Lawton.

The Court: Again, your motion is denied. Exception allowed.

I am a director of the Illinois Petroleum Marketers Association, which has its principal office at Springfield, Illinois. I am also a member of the National Oil Marketers Association, which has its principal office at Washington, D. C.

Paul Hadlick, Secretary of the National Oil Marketers Association in Washington, D. C., on complaint of several jobber members, lodged a complaint with the Department of Justice regarding the major company buying.

471 *Cross-Examination by Mr. Donovan.*

I have been down in the East Texas field many times and am familiar with it. The last time was in September, 1936, when I spent close to a week or ten days down there. Before 1936, I recall I was there in July, 1935. I am not positive as to that. It wouldn't be fair to say that I have been there some time in each year over a period of 5 or 10 years. In 1934 I wasn't in the East Texas field. However, I was at Shreveport, Louisiana, which is close to it, and saw a number of the refiners.

I have driven through the East Texas field. I had to drive through it in order to get to the sales offices of the refineries. I feel that I am very familiar with the conditions in both the Mid-Continent and the East Texas fields, as far as marketing goes, but not as to the details of the mechanics. I know how oil is produced and how it is refined. My business required me to know something about it. I have seen thousands of wells in operation. I also have seen refineries in operation.

Usually if new oil is found, a great many derricks are
put up. Everybody is very anxious to get oil as quickly
as possible in order to get their money out of the well be-
fore the pressure is exhausted. I heard one other reason,
that they wanted to pay their stockholders, and then make
a little money for themselves. The natural procedure
472 is for the oil to come from the other property to the
well of the first man in. So they all start in, to get in
there and start their operations. My understanding of
the law of capture is that the man that gets there first gets
that oil. Any oil that he can pump out of that field, no mat-
ter if it is under another man's land, he will get, excepting
for state proration laws.

I saw what is called a seismograph crew working in East Texas. They have certain kinds of electrical instruments, and they explode in some fashion and obtain the reaction to that explosion in the earth. That is as much as I know about it.

I have been in the oil business for 20 years, and before that I was a practicing attorney in Chicago.

When a well is drilled and the oil comes in, as it is called, they have tanks set up in the field to get that first oil. I have seen these tanks built of wood, and I have seen them built of steel; they are small tanks, what they call gathering tanks.

Then that oil is allowed to settle, and it is pumped out in smaller pipe lines to a larger tank, and then, from that larger tank, it goes into the pumping stations, and into the pipe line, and comes to the refining centers.

Settled production is the term given to those wells that
are on the pump. I have heard of the term "stripper
473 wells". My understanding of that term is that they
are usually very small wells that may produce only
from 1 barrel up to possibly 5 barrels in every 24 hours.
When I say a barrel of oil, I mean 42 gallons; that is the
standard in the oil business.

When the oil is out it is moved from Tulsa, Oklahoma, just using that as an illustration, from these large tanks it is pumped into the pipe line; and then there is a pumping station every 35 to 50 miles that keeps pushing it on until it reaches the refinery. And then, at the refinery, it is put into large tanks.

Some of those large tanks hold over 2,300,000 gallons; some of them hold over 3,200,000 gallons; and I am informed there are some now that hold between 4 and 5 million gallons of crude oil.

As to whether or not it is possible to have sufficient ca-

pacity of the tanks in the field to take care of the production, as it is termed, out of the wells, depends upon how the production comes in. If it is only a small well, you can have a tank or tanks that will take care of it temporarily until it is hooked up with the main big tank. I have seen production come in, 1,000 barrels a day, 1,500 barrels a day, and it was called flush production. I was in East Texas only once during the period of their flush production. I do not know whether or not they had capacity there to take care of that flush production in the field, but I
474 understand they did not.

Then this oil comes into these large tanks, usually called 55,000, 80,000 or 100,000 barrel tanks. Those oil tanks are connected so that the oil is fed into the stills or whatever kind of apparatus they have for refining. I have not had any experience in refining except what I have discovered on my visits to refineries. We have a bulk plant at Riverdale, Illinois, that has over 7,000,000 gallons capacity in 20 different tanks; and we have been thinking seriously for several years of building a refining unit at that plant. With that in mind, I have made some study of refining methods.

I have heard the term dumping used in the oil business. I know one meaning, dumping of fuel oil at times when stocks were heavy; also dumping of gasoline at times when stocks were heavy. Years ago the term "dumping" was also used in this sense: if a refiner did not have an outlet for his gasoline and he moved it to market without a customer, he sold it at whatever price he could get for it, even though it was below the market. I don't know if it is still used. We haven't come across anything like that for years. I think a fair definition of dumping is selling below cost.

It is my understanding that pipe lines which go across state lines are regulated as common carriers by the Interstate Commerce Commission, and they publish rates,
475 and must carry products for anyone who will pay the rate.

We make our profit by buying gasoline and reselling it at a higher price. It is not always the case that the cheaper we can buy it the more we can make, because we figure that a certain margin is all we want on that gasoline.

For instance, if we bought it at 1¢ a gallon under the market, we would not go ahead and try and get ¾¢ a gallon from our jobber more than what our ordinary margin is. That is true in every market, whether rising or not. The way we do business it is not true that the cheaper we can buy it the more we can make on it, because we generally limit our margin on a car of gasoline to ¼¢ a gallon. There are times when we have received higher than that, but then it has usually been in a gasoline where there is a lot of evaporation, in a blended gasoline, and where we would take a loss in mixing and storage.

We do not run any service stations any more. We had 2 service stations several years ago, but haven't had any since that time. We sold both of them.

Jobbers can and do in many cases buy direct from refiners.

At the present time, regular gasoline is 68-70 octane, but a few years ago regular gasoline was not 68-70. It
476 is not the same now as it was several years ago, because improvements have been made in the refining of gasolines, and the refiners have given the public a better grade of gasoline in late years than they did years ago. When I first started in business we sold gasoline that was worse than U. S. motor for a good grade of gasoline; because there wasn't any other gasoline manufactured at that time. We didn't know what octane rating was in those days; never heard of it.

My understanding is that hot gasoline is gasoline refined from crude oil produced in violation of a state proration law. In order to ship gasoline from states having proration laws, the shipper must get an O. K. on the bill of lading, a permit on the bill of lading to ship that out of the state. It is called just simply a tender permit in the business. I knew that there were tenders used during that period. I do not know anything about whether such oil was shipped on false tenders.

I don't recall that we ever bought gasoline as low as 1⅞¢. The lowest figure we ever bought any for was 2⅛¢. That was when the flush production came in, in the East Texas fields. The price of crude oil a barrel ran down to 10 or 15¢ a barrel at that time. The price of crude oil was placed at $1. a barrel about 2 or 3 years ago, I believe.

477 The jobber sometimes owns the service station so that he would get, besides his jobber margin, whatever the dealer would get. The total of the two, according to our information, is usually 5½¢.

The effect of the Iowa plan was to set up many more small businesses than there were before. It started in Iowa, I believe in 1936 or maybe 1935, and then it spread to other states. I know it is so in Illinois in a great many places.

We are only a jobber because we buy everything with our own money, take title to the products, and then resell them. And that, I am told, legally is the definition of a jobber.

"Broker" is the general title applied in the trade to our company and companies similar to it. We do not operate bulk stations, except this Riverdale plant. A jobber operates bulk stations. We do not now deliver to dealers, excepting in tank car lots. The jobber does deliver to dealers. We do not deliver to consumers in tank wagon. A jobber does that.

The independent refiners had no sales organizations in cities like Chicago, Kansas City, Cleveland, Minneapolis or places of that kind, and did not want to put on a separate sales organization at those places.

In later years some of those independent refiners have set up selling organizations, and then closed them up.
478 But there has been in general a setting up of selling organizations that didn't exist before. Also, some of the consumers have now begun to buy directly from refiners, instead of doing it through brokers. That would have its effect in the falling off in our business.

There has been a development recently of cooperatives. I don't know much about them, but I do know that they have increased their purchases of gasoline in various parts of the 10 states, according to the records published by the State Gas Tax Departments. We haven't a single cooperative on our books, to my knowledge. We are in competition with cooperatives; that is, the jobbers to whom we sell are. Between the cooperatives and the jobbers, there is active competition. I don't know whether or not the cooperatives are increasing in number, nor when they started coming in but I have noticed that their gallonage is going up, according to tax reports. We haven't noticed enough of that competition to amount to anything, maybe 10 or 15 cars a month, but it would be a factor in our sales falling off.

We did not buy from certain East Texas refiners during 1935 and 1936.

As to East Texas Refining Company, I talked with Ralph Bishop and Freeman Burford. We tried to buy some gasoline from them at that time, in 1935 and 1936. Mr. Freeman Burford is president of the company, and Mr.
479 Ralph Bishop is sales manager. I don't recall the month in 1935. I do know that in 1936 it was in September, because that is the time I made that long trip through there. I don't know whether or not East Texas

Refining Company was operating on federal tenders at that time. I did not ask about that when I talked to the sales manager.

We did not do any business with Dominant Refining Company to my knowledge. We did not attempt to do so in 1935 and 1936.

We did do business with Cascade Refining Company in 1935 and 1936. They were operating on Federal tender. Mr. Kennedy was the man I contacted. I did not ask them at the time if they were operating on Federal tender. I do not recall the total number of cars we bought during that period from Cascade Refining Company. Our records show both our purchases and our sales. We still have them, excepting for those that are here at Madison.

As to Grogan Oil Company, I talked with Mr. Kostelka, the vice-president and sales manager, and with Martin J. Grogan, the president of the company, who formerly worked for us. That was in September, 1936. During that period that I talked with him we did not get any gasoline from them.

I did not ask whether they were on Federal tender at that time. I did not make an offer to buy any particular amount. I asked whether they could let us have 25
480 cars of gasoline for shipment over the next week. They said, "We cannot, no; we are sold up." We asked the Grogan Oil Company several times. I did not ask the Chicago office whether they were on Federal tender.

We did business with Trinity Refining Company with Mr. Jackson. I don't know whether they were on Federal tender. I didn't inquire. We knew if we got the bill of lading and a notice came from them, they had complied with the Tender Board. We knew that they were on Federal tender only from the bills of lading that came into the office for those particular shipments. They might not be operating on Federal tender later, but they were on the shipments that we got.

I do not recall any business with Tower Refining Company, or having talked with any one there at any time.

We only bought a few cars from LaPren Refining Company during 1935 and 1936. So far as I know, that shipment came through on Federal tender.

We bought from Southport Petroleum Company. I do not recall the number of cars we bought from them. We easily bought 50 cars. We bought a few cars in 1935. It was not 50 cars at one time. Each of those shipments had the bills of lading with the Federal tender noted on them. I do not know what the notation on the bill of lading

stated. I have seen Federal tenders and affidavits on the desk of our traffic man, but I have never looked into
481 that proposition.

(Papers were handed to the witness).

I have never seen any papers like these before. The only thing that we received at the office was a bill of lading with some kind of a rubber stamp on it, and our traffic man, Mr. Alger, was instructed by me that if any bill of lading came in without one he was to bring it to me immediately, and he did not bring any bills of lading. But I paid no particular attention to what was on that bill of lading. I knew that the notice legalized the transportation of the gasoline.

We did only a very little business with the Century Refining Company, a very few cars. We did not consider them very responsible, so we did not try to do much business with them. We got probably 5 or 10 cars from them. We were not refused at any time. We just did not want to do business with them.

We did have a little business with Tyreco Refining Company. I do not recall whether we asked to do business with them over a period or whether we were refused by them.

When I was down there I talked with the men directly in each of these companies I have referred to here. I talked with them by telephone from Chicago and in a number of cases they came up there and I talked with them. On the occasions where purchases were made, those were direct conversations, and also where we tried to make
482 purchases and could not.

We did not do any business with Wabash Refining Company at any time. We did not consider them reliable. That is why we did not try.

The same applies to Texover Refining Company, not because they were dealing in hot oil, but they were a small outfit that we did not think could furnish what we wanted. So we did not call them up.

We did business with Ocean Refining Company during this period. I would say we got anywhere from 25 to 50 cars from them. It is correct to assume that when we did business with any of these people and got the gasoline, there were Federal tenders or permits or bills of lading with those notices upon them, and this as to each of those companies from which we received gasoline.

We did no business with Solvex Refineries. We did not try. That is a new concern that just started in, as I recall it, in 1935, and the output of that refinery was handled by Bell Oil & Gas from Tulsa.

We did some business with Arrow Producing & Refining Company in 1935 and 1936. I do not recall the name of the particular individual with whom we did business there. My recollection would be that we got at least 25 cars from them.

483 I do not recall Chief Refining Company at all. I never tried to do business with them personally. I don't think any of our employees did.

We did considerable business with Gilliland Refining Company. By "considerable", I would say I mean better than 100 cars during 1935, and the same in 1936.

So far as I knew, to the best of my knowledge, we never dealt in any gasoline produced from hot oil. Those refining companies, which I called on direct examination, during 1935 and 1936 were complying with the terms of the Connally Act and of the Code so far as I knew.

I did not know that McMurray was not on Federal tenders until June of 1935. I think this bill of lading shows that we had tried to buy from him prior to July, 1935. This shows June 28, 1935. So far as I know, I told you the other day that I had not inquired from McMurray. We wouldn't have done business with him if we knew he wasn't operating on Federal tenders.

I did not make a careful check of what companies were on Federal tenders. The fact that I say that, to the best of my knowledge, I didn't deal with those that were dealing in hot oil, is explained very easily, because when we bought from these various refiners, if they couldn't furnish a bill of lading we would reject the car, and not take it; and to my best knowledge, we had no rejections.

484 We bought indirectly from East Texas Refining Company; that is, we bought through a broker frequently, and we didn't know where the gasoline would be coming from. They would go and place the orders with various refiners. I believe that there were a few cars shipped by East Texas Refining Company on some orders that we had placed with a broker, but I don't recall that they were bought direct.

I did not make the statement that we had been unable to buy any cars of gasoline from Grogan Oil Company in 1935. I said we were not able to buy the quantities from the Grogan Oil Company that we wanted to buy.

My recollection is that we bought from Trinity Refining Company in 1934. I would not recall how many cars we bought at that time. I was not and am not aware that Trinity Refining Company in 1935 was not operating on

Federal tenders. If I knew of it at the time, I wouldn't do business with them.

The proration law of Texas, as we understood it, was where the State of Texas limited the production of each well to a certain number of barrels per day, so the refiner could get only a certain number of barrels from that well to his refinery each day.

When I asked the Grogan Oil Company if they would sell us 15 cars we didn't make a price.

485 If, in fact, Trinity Refining Company was not on Federal tender until the last month of 1935, I would think that would explain in some measure any difficulty we might have had in buying from them at that period.

I testified also that we made some purchases from La Pren Refining Company, and that we bought some few cars in 1935 and 1936. I have no knowledge and was not aware of the fact at that time that the only time between March 1, 1935 and the end of 1936 that La Pren Refining Company was operated under Federal tender was during the months of May and June, 1935. If La Pren was not operating under Federal tender, excepting during the months of May and June, 1935, that might be a reason why we were not doing business with them.

I did not know as a fact that the only time the Southport Petroleum Company was on Federal tenders, operated on Federal tenders, was from March to December 1935. If Southport Refining Company were not on those Federal tenders except between March and December 1935 and I knew it, I would not have an opportunity of buying there outside of that period.

To my knowledge we did no business directly with the Matthews Refining Company. I do not know whether or not Matthews Refining Company was on Federal tender at any time between March 1, 1935 and the end of 1936, except during the months of September and October, 1935.
486 If I had known at that time, I would not have done business with them, and they could not have sold us.

It is my recollection that we did no business with the Utah Refining Company. I do not know whether or not Utah Refining Company was operating on Federal tender at any time during 1935 or 1936. I do not know that the only time that they were operating was during the month of April, 1935. If I had known, I would not have done business with them, and they couldn't have done business with us.

I never heard of Acme Refining Company, Alton Refining

Company, American Oil Products Company, or Artex Refining Company at Artex.

As to Beacon Oil & Refining Company, I know there is a refinery up near Beacon, but we never bought anything from them, [illegible] don't recall that we ever tried to buy any from them.

We bought from several brokers in East Texas. One was Bradshaw of Dallas. We bought from him in 1935 and 1936. Richardson was another. He was in Tulsa part of the time and in Gladewater part of the time. There may have been more but I don't recall them just now.

We got some shipments indirectly from Primrose Petroleum Company. By "indirectly" I mean that we purchased from some broker, and he bought from Primrose and shipped to us.

487 I don't recall Blackstone Refining Company, Overton, Texas, nor that we bought 8 cars from them in October, 1934. I never tried to buy from them in 1935 or 1936.

I do not recall Blue Diamond Refining Company, Gladewater, Texas, Big Sandy Refining Company at Big Sandy, Texas, Carnation Refining Company, or Radio Petroleum Company.

I have heard of Chief Refining Company. I do not recall of any direct dealings with it. There may have been a car or two shipped by some broker, but I do not remember when it was. We were not refused in 1935 by Chief Refining Company, to my knowledge.

I did not try to buy from Condor Refining Company in 1935 or 1936. I never heard of Condor Refining Company, Consolidated Refining Company, Crescent Refining Company, Culver Refining Company, Friar-Topping Company, Gladewater Refining Company, Great Production, or Hub Refining Company.

If Herzog Petroleum Company is the same Mr. Herzog that is with Kilgore Petroleum Company at Kilgore, Texas, we may have made some purchases. He was doing some brokering, and he was also selling the products. We did some business with him in 1934 through Kilgore Refining Company, I believe. We didn't try to do any business through Herzog Petroleum Company at any time after that, that I recall.

488 I do not recall Keystone Refining Company at Gladewater, Texas. I didn't buy 1 car from them which was consigned to me at Acme Petroleum Company in March, 1934, to my recollection.

I believe we tried to buy from Kilgore Refining Company in 1935 and 1936. I know I saw Mr. Herzog in Kilgore, Texas, in September. I didn't ask whether they were on tenders in 1935 and 1936. Nothing was said about tenders.

Mr. Herzog, if he could buy from other refiners, would tell me, "I will try and get you something."

I would frequently talk to these men and say, "If you haven't anything, tell me where I can get something." They were friendly with us, and their sales managers would say go to such-and-such refiners, or I will get it for you, and they would do so. Even though we dealt with one man to buy it would be shipped by other people. I do not recall that I asked Kilgore if he would ship or sell us anything, and he refused me. I never heard of Kilgore-Topping Company of Kilgore, Texas, or Kiltax Refining Company, or L. & G. Refining Company, or Lake Refining Company.

We did business with Lone Star Refining Company. I do not recall whether or not that became Trinity Refining Company of which I have already spoken. We did not follow the changes in the corporate names down
489 there. There were a good many changes. I doubt whether some of them were in business.

I do not recall Modern Refining Company, nor the Outdoor.

If Overton Refining Company is the same plant as Hurricane Company at Overton, Texas, we did business with them in 1934. If you are speaking now of the same plant that Grogan Oil Company controls, we have done business with them, but not for several years, through Grogan Oil Company; not direct.

I remember Panama Refining Company, but I do not recall as to whether we ever did any business with them. To the best of my recollection we did not try to buy from them in 1935.

I never heard of Pelican Refining Company at Gladewater, Penant Refining Company, nor Badger Refining Company.

We have done business with Shore Line Refining Company at Shreveport, but not in Texas. I never heard of Shore Line in Texas.

I never heard of Sterling Refining Company in Gladewater, nor of Solarine Refining Company. I don't know whether that was taken over by Tyreco Company. I haven't any recollection that we purchased 2 cars in March, 1934, and 2 cars, in June, 1934, from Solarine. If we bought from them, it was indirectly.

490 We bought from Taylor Refining Company. My recollection is that it was in 1934. I think some cars came through in 1935. Mr. Kahoon was the manager down there.

My recollection is that we bought in 1934 and 1935 from Texas Oil Products. I do not believe we did in 1936, although we may have bought some. My recollection now is that we did not. We dealt there with Mr. McCallium. I have a letter to him written September 23, 1936. I had no difficulty in doing business with him, but I could not get enough. We did not discuss prices, because he didn't have anything to sell me. He told me he didn't have any. He told me he was sold up. He didn't say he would not sell us. He did not tell me he could not sell us because he was not on tender in 1935 and 1936. I knew nothing about whether he was or was not on tender. If he were not on tender he could not sell us.

I do not recall Texas Refining Company at Kilgore. So far as I know, we never did business with them.

I do not recall Tower Refining Company at Overton, Texas.

I never heard of Texas Refining Company at Willow Springs, Texas, Texas State Refinery, Kilgore, Texas, Texover Refining Company at Overton, Texas, Union Oil Refining Company near Longview, Texas, Union Refining Company at Willow Springs, Texas, Upshur Re-
491 fining Company, nor Linzie Refining Company at Gladewater, Texas.

I think that, under questioning from the Government counsel the other day, I was asked whether I attempted to purchase from 14 refineries operating in the Mid-Continent field. I didn't say Champlin was not a large supplier of gasoline. Champlin is at Enid, Oklahoma; they are large refiners, and make a lot of gasoline, but our understanding is that a great portion of that gasoline is under contract, and they ship a lot of it, I believe you will find in my answer, by pipe line to Superior, Nebraska, and from there it is shipped out, as I understand it, in the tank cars and the tank trucks. At any rate, I did not intend to say that Champlin was not a large supplier of gasoline.

We inquired several times from Mr. Snyder of Champlin and were told that they did not have any gasoline to offer. He did not say they were selling to jobbers; we knew that. What we wanted was gasoline below the price the jobbers were paying. We would have to have it, because we in turn sold to jobbers. We were in between the refiner and the jobber. Our customer was the jobber.

We knew that we did not need to ask Champlin if he was selling to jobbers; Champlin knew we were a broker. If he sold to us, he would have to sell at a lower price than he sold to jobbers. One of those jobbers, 492 Champlin's customer, was located at Galesburg, Illinois, and some up in Wisconsin. We did not keep any particular record of them, but we would frequently, in getting jobbers, find out they had a Champlin contract.

My recollection is that during 1936 we did not buy any gasoline from Eason. We may have bought some other products, or we may have bought a few cars, I am not sure about that. I don't know what the daily capacity of Eason was.

We didn't ask these various companies what their capacities were or try to find out what the daily capacity was. There is a list published in the Oil and Gas Journal giving the name of the refinery, the barrels capacity, and the barrels they run. We follow that list more or less regularly to determine which refiners we shall contact.

My recollection is that I contacted Joe Whittaker of Omar Refining Company once. He had called me from Milwaukee. Omar was supplying Dixie stations with quite a lot. The same reason applies to my testimony about Omar as I said applied to Champlin. It was serving jobbers. To sell to us it would have to sell at a lower price than it would sell to jobbers. Omar knew that. My understanding is that it is selling to jobbers in Wisconsin.

In the August 12, 1937 issue of the Oil & Gas Journal Omar Refining Company is listed as having a daily capacity of 4,000 barrels of crude oil, and in August that 493 year, 3,500 barrels, and in July, 3,000 barrels. That means a refinery capacity of 4,000 barrels of crude oil capacity per day.

We have bought from the Rock Island Refining Company off and on for several years. I don't recall just what purchases were made in 1935 and 1936, but I doubt if it was very much, if any. We inquired from Mr. Glover, sales manager at that time, several times. I imagine that having their own jobber outlets, they didn't need our services as a broker. It is probably right that I hoped they would, but they didn't and I knew if they sold to us, it would have to be below the price at which they sold to the jobbers. I don't know if Rock Island Refining Company were selling through other brokers or not.

We attempted to buy from Danciger during 1935 and 1936. I don't know whether in 1935 and 1936 we bought 26 cars from Danciger. The records would show the exact number. We did buy from them. It is correct that we bought from Danciger for several years from their refinery at Pampa, Texas. And they also have a refinery at Longview, Texas. The same company would ship from either plant. We may have gotten a few cars outside of these 26 cars from Danciger, but I don't recall any. Whatever the record shows is correct.

These 14 refineries, concerning which I was asked questions, were not the only refineries operating in the Mid-Continent field during 1935 and 1936.

My recollection is that we purchased some gasoline from Vickers Petroleum Company of Wichita, Kan-
494 sas, during 1935 and 1936, but we purchased principally fuel oils from that company. I believe we did try to purchase some gasoline from that company in 1935 and 1936. I don't recall whether we purchased any from that company during those years. We have bought from Vickers Petroleum Company for over 10 years. As to whether they sell through brokers or direct to jobbers, all I know is they sold us during that period.

We may have purchased a few cars of gasoline from Black Gold Refining Company of Oklahoma City, in 1935 and 1936, but our understanding was that their gasoline was sold principally around Oklahoma City by tank trucks. I don't know who bought it, but it was shipped out by tank trucks. We made some attempt to buy from them, but were told that they sold most of their gasoline in trucks around Oklahoma City. We have done very little business with them. I couldn't say if it was in 1935 or 1934.

I don't recall any purchases of gasoline from Anderson-Pritchard Oil Corporation in Oklahoma City in 1935 and 1936. I talked to Paul Mayhall, sales manager of that company, whom I knew very well, several times at Chicago during that period, and asked him to let us have any over and above what he was selling to others. I knew that he was selling to jobbers. I asked him to let us have what offerings he could, and my recollection is that during no time during 1935 and 1936 did we get a single offer
495 of a car of gasoline. In 1935 and 1936 I made further requests of him every time I saw him. During this

period, I saw him 5 or 6 times. I had lunch with him every time he came to Chicago.

He could sell us only under the price that he sold to his jobbers. There was no use discussing price with him. He didn't have any to offer. As to whether he knew that he would have to sell us below the price at which he sold to his jobbers, I don't know what he knew. I know what I knew. He knew I was experienced in this business, and he knew what I was accustomed to get.

My recollection is that we purchased from Sun Ray Oil Company prior to 1935, and kept purchasing from them right along. I would say we purchased from them in 1935 and 1936.

We didn't purchase from Lion Oil and Refining Company at Eldorado, Arkansas; we couldn't get any from them. I don't think we have done any business with them for 4 or 5 years prior to 1935. I don't know and made no inquiry whether other brokers did business with them during that period or subsequently. I know they had some jobbers of their own in the form of jobbers, because I saw their signs through Arkansas.

As to whether or not they were using other brokers, there was at one time one company—I believe it was the Petroleum Exchange in Chicago—that had a call on some of their products, but what number or to what extent, I couldn't answer.

496 I would say that ordinarily it is a fact in the business that if a refiner has sufficient jobber outlets, it isn't necessary for him to go to a broker.

I tried to buy from Atlas Refining Company at Shreveport several times. In fact, in September, 1936, when I was there, I saw both Mr. Jackson and Mr. Hardwick. I know that at some prior years to 1935 we had done some business with them. I don't know whether 1933 is the year or not. I do not know that they went into bankruptcy and closed down about September, 1936.

We didn't purchase anything from Root Refining Company for several years prior to 1936.

We had bought from Eldorado Refining Company, Eldorado, Kansas, prior to 1935. We were buying from them right along, and I believe we are still buying from them, but principally fuel oil. There may be a few cars of gasoline, but very little.

We bought none at all from Cosden Refining Company. They have what we understand is an exclusive sales agency in Chicago.

We bought from Johnson Oil Refining Company for several years from time to time.

We had bought gasoline from Henry H. Cross Company at Chicago prior to 1935. We called them several times in 1935 and 1936 and tried to buy. They were selling some of it directly to jobbers, and some of it not.

497 We had bought from Sun Oil Company at Yale, Oklahoma, prior to 1935. We tried to buy from them in 1935 and 1936. We were sometimes able to buy from them, sometimes not. Sometimes yes and sometimes no was true in 1934, also, I would say. That is always true, so it was nothing unusual.

While Russell Refining Company was operating, we bought some products from them. They were at Russell, Kansas. I don't remember the date when they ceased to operate. I don't believe they are operating now by the name Russell Refining Company.

A number of years ago we did business with McMillan Refining Company in Arkansas. I don't recall any at all in 1935 and 1936. I don't recall trying to do any business with them.

We did business with Falcon Refining Company in Kansas. We continued to do business with them in 1935 and 1936. We got both gasoline and fuel oils from them.

I don't recall any dealings with Western Refining Company at Chase, Kansas.

We haven't done any business with Major Petroleum Products in Oklahoma City. We never tried to do any business with them, to my recollection.

I don't recall any business with Monarch Refining Company at Oklahoma City. I don't know the concern.

I don't know Paramount Refining Company at Oklahoma City, or Triangle Producing and Refining Company at Oklahoma City.

498 We have done some business with Wickett Petroleum Company at Wickett, Texas, through Central States Oil Company of St. Louis. My recollection is that we did do business with them in 1935 and 1936.

We did some business with Texas-Pacific Coal and Oil Company at Fort Worth. There was some change in the set-up of the company, and up to the time that change occurred, we had bought gasoline from them. I don't believe there was any business after that time. I don't recall any attempt to do any business with them.

We bought principally fuel oils and distillates from Kanotex Refining Company.

The most of our distributing business is in Illinois, Indiana, Wisconsin, Michigan and Iowa; that is, the bulk of the business. I haven't checked on whether Illinois is our biggest. We have records for that.

We bought from Waggoner Refining Company in the year 1934. I don't know the dates in that year when we purchased.

(Witness examines letter handed to him by counsel. This letter marked Exhibit 4 for identification.)

I never saw that before. Our name is not mentioned on that letter. I do not know whether or not, as a fact, Waggoner Refining Company completed arrangements whereby American Petroleum Company would handle the exclusive sale of their products in Illinois, Indiana and Ohio. I did not say that I never received such a letter from Waggoner Refining Company. I don't know whether I did or not.

499 I do not know a Mr. D. J. Gray of Waggoner Refining Company. I don't recall ever having talked with him on the phone. The man we are dealing with now is Mr. Cocanower. We are doing business with Waggoner Refining Company now. We buy gasoline from them.

My recollection is that that buying program that I referred to in my testimony about our course of business with Waggoner started sometime in 1935, and continued through 1936. I couldn't answer whether it is a fact that we did not make a purchase from Waggoner Refining Company from October 23, 1934 until the date I say the buying program started without checking up on our records.

My statement was that Standard Oil of Indiana did more business than any other single company in the ten states I mentioned. This was based on information from the reports we get on tax payments. I don't know exactly what percentage of business Standard of Indiana does in these 10 states.

I would classify Champlin as independent, in spite of the fact that they have some production. I do not know how much. My understanding of where to draw the line, in order to classify a company as a semi-major or an independent, would be as to the size of the company. If Champlin Company produces, refines and distributes, as a larger company does, I still would call it an independent. Mr. Champlin was the man who ran the company, and practically owned the majority of it. That 500 would be my reason, in the Champlin case, for classifying him as an independent.

Cushing operates two refineries. I don't know whether they have production or marketing.

I don't know anything about the production of Eason Oil Company, or if they have stations. So I can't classify them very well except on the same basis as my answer about Champlin Company.

Waggoner Refining Company has large production in Texas, and do their own refining. I don't know whether they perform all the functions of a major company. My answer would be the same as to Wilcox Oil & Gas Company.

I described the trend of gasoline prices between 1930 and 1935 as a series of peaks and valleys. Then beginning in March, 1935, it went up, and then levelled off. That might allow for slight variations. I can now give you the exact prices from the Journal of Commerce from January 1, 1936 to December 21, 1936, showing just what I meant. I testified to my best recollection at that time, and I now have the figures.

The East Texas oil field came in about 1930. My understanding is that that is supposed to be the largest single oil field ever discovered.

When East Texas field first came in between 10¢ and
15¢ was the information we had as to what crude oil
501 could be bought for. At the same time, the price of
gasoline dropped down to 2⅛¢ a gallon. As I remember it, that was at a time when there were no restrictions of any kind in moving gasoline made from this hot oil in interstate commerce. I don't know whether it is true that there was much more hot oil produced in Texas during the months from January to July, 1933, than in the preceding year and a half, because I didn't check any records. That was the general report current through the trade, as I recall it.

The prices of gasoline went up after the regulation but I don't know what the figures were.

I read that, beginning in August, 1933, and running through for some months, there was a period of litigation in Texas in which injunctions were brought against the application of these regulations.

I haven't any recollection as to the definite dates on which there were price changes. I told the Court and Jury that prior to 1935 there were peaks and valleys. What I intended to convey was that prior to 1935, that is, in March, 1935, there were more changes, larger changes in the prices of gasoline, and more frequent changes in the prices of gasoline, than occurred during 1935 and 1936. That, I believe, was the question asked, and that was intended to be my answer.

In years back the fluctuations in prices would run
502 1, 2 and 3¢ per gallon, over a period of a year. There were frequent fluctuations, and I know of no period—I am saying this honestly—within the past 10 years where the market remained so constant as it did during part of 1935 and 1936. I cannot give you the dates or the information, but I am giving you my general statement.

I do not know any period prior to March, 1935, when there were in existence any effective Federal regulations such as under the Connally Act, over a long period of time. I don't know about the Federal restrictions. I don't know as to whether a time came when the Federal tender boards were disbanded in January, 1935. I heard of the decision of the Supreme Court in the Panama Refining case through the newspaper. I read it. I did not follow it to the extent of knowing that as a result of that decision the Federal tender boards were out. My understanding is that the Federal tender boards were operating under the law which the Supreme Court declared unconstitutional. I did not follow at all as to whether after that decision, for a period of 2 months, there was no Federal law which forbade the shipment in interstate commerce of illegal gasoline. I don't know about the production of crude oil in January and February, 1935.

I do not recall that the price of gasoline in East Texas in that period decreased from 4⅛¢ to 3⅜¢ per gallon.
503 I do not recall whether there was a decrease. I have no recollection now. My understanding was that about March 1, 1935, the Connally Act became effective in East Texas. My understanding is that since the Connally Act gasoline made from illegal oil has not been permitted to be shipped in interstate commerce. I would say that the enforcement of that law has resulted in preventing the shipment of gasoline made from illegal oil in East Texas. I do not know it to be a fact that during the period of 1935 and 1936 the illegal production of crude oil in East Texas has been reduced, but only what I have read occasionally. I do not know whether the volume of gasoline moving in interstate commerce from East Texas has been reduced as a result of the reduction of illegal crude, because I don't know what was shipped before or after.

We have been buying gasoline in the manner that I have described below the cost to the jobber, all during the time we have been in business, practically.

I have testified that we have purchased gasoline for as little as 3⅛¢ a gallon in 1935, f. o. b. Group 3, Oklahoma.

I do not know what the posted price for crude oil was in 1934 without looking up the records. The posted price of Mid-Continent crude Kansas, Oklahoma, for the first part of 1935, was $1 per barrel for 36 gravity. The Journal of Commerce usually printed the correct crude oil quotations.

504 On January 9, 1936, Stanolind and Sinclair advanced the Mid-Continent crude 10¢ per barrel. I got that from our office records. Frequently the reporters on the Journal telephone us and say that tomorrow there is going to be an advance, or today different companies advance so many cents per barrel, and that same day there was an advance in East Texas crude of 15¢ a barrel. I read from my records that the Sun Oil Company advanced East Texas crude on January 9, 1936.

The Mid-Continent field is a district in Oklahoma and Kansas where crude oil is produced, and it is grouped by the companies who buy oil in that particular field. They take a number of points where crude oil is produced, and they group them together, and they call that the Mid-Continent field, and say, "We will pay so much a barrel for crude oil coming out of that particular field of a particular gravity." If a lower gravity they pay less. They have each gravity from maybe 29 or 30 up. For each one or two points they will add a little to it. So that, for instance, today the Mid-Continent crude at low gravity is 95¢ and the high price is $1.42 per barrel. That is what they pay at the well. There is a gathering charge for that. If somebody wants to bring it to Chicago, they have to pay the pipe line charge for that crude from the pumping station to the place where they want that delivered, in Chicago, or East Chicago, or Whiting, or whatever place it may be.

505 The question of whether or not the price of crude would rise or fall is a very important question in the oil industry.

I know nothing about crude stocks. It doesn't affect our business. It affects our business to the extent it affects the price of gasoline. Gasoline prices will either go up or down when crude changes. The price of gasoline is an important element in our business. We go principally by what we are able to buy for each day, irrespective of what changes there may be.

Crude oil may remain the same for months, and the prices of gasoline may vary during that period. We are then only concerned with day to day trading at which we can buy gasoline and at which we can sell gasoline. Ordinarily, if the price of crude goes up, we expect an advance in the price of gasoline, and if it goes down, we expect a reduction in the price of gasoline.

We are watching only changes in prices that occur as a rule. We watch the price in anticipation of the changes. I would say that this territory differs from the general territory very materially in the respect of the amount of gasoline sold in December, 1935. There are plenty of states down South where gasoline from East Texas and the Mid-Continent field is shipped all winter long. They have no winters, and that same gasoline piped up to 506 northern Wisconsin, when you are snowed in, is absolutely out of place. But whether the consumption was in the Mid-Continent, or whether it was in the South, if it were a large consumption it would ordinarily affect the price.

(Copy of Order dated October 18, 1934, establishing Federal Tender Board, with attachments consisting of tenders for crude petroleum, Forms 1, 2 and 3, and tender for protection, Form No. 4, received in evidence as EXHIBIT 6.)

(Copy of Order dated October 22, 1934 appointing members of Federal Tender Board received in evidence as EXHIBIT 7.)

507 WALTER H. WINGROVE, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I am an oil jobber from Sheboygan, Wisconsin. I have lived in Wisconsin all my life. My company, Wingrove Oil Company, is a partnership located in Sheboygan, Wisconsin. I am one of the two partners. The partnership was formed in July, 1931.

Prior to that time I was a commission agent with Wadhams Oil Company.

Wadhams Oil Company was acquired first by Vacuum Oil Company. Shortly after the consolidation between

Socony and Vacuum I left the employ of Wadhams Oil Company to go into business for myself.

The function of an oil jobber is receiving petroleum products in tank car lots and distributing them to resellers, consumers, the farm trade, or anybody with a larger storage than just a tank on his automobile. Some of these persons may have their own retail outlets. We purchase in tank car quantities, and store the gasoline in bulk storage plants when it is delivered to us. We deliver from such plants to our reseller accounts or to our consumer purchasers by tank truck.

As an oil jobber we operate only one bulk storage plant. The capacity of that plant is 175,000 gallons
508 of light oils. That would be 20 some odd tank cars.

We distributed about 800,000 gallons of gasoline in 1935 and about 1,000,000 in 1936. 90% of it was so-called regular or house brand gasoline.

The capital investment in our business is approximately $60,000 or $70,000. We own 2 retail stations of our own, and operate 1. We had approximately 15 independent dealer accounts in 1935 and 1936. It may have been a few less in 1935 and a few more in 1936. We do the greater part of our business through independent dealer accounts, and not through our own stations.

From June 3, 1931 to June 3, 1936 we purchased our gasoline from Barnsdall Refineries, Inc. under a contract. The document you show me is that contract.

> (Contract referred to received in evidence as EXHIBIT 615.)

"B Square" is the house brand of Barnsdall gasoline. It is also known as regular.

> (Mr. Chaffetz reads the paragraph of this contract, Exhibit 615, entitled, "Number Five, Price B Square Gasoline.")

To simplify that provision of the contract in my own words, the Chicago Journal of Commerce, in its daily quotations, quotes prices on a gasoline corresponding with that described, and that gasoline would be invoiced
509 to us by the shipper on the date of delivery, the date
of shipment, taking the high and low of the quotations in the Journal of Commerce, and dividing them by two to arrive at the average.

> (Mr. Chaffetz reads paragraph number seven, "Guaranteed Margin.")

That provision means that in case the spot market price arrived at from the terms of the contract did not permit a margin equal to 5½¢, the shipper reduced the price of gasoline to us in an amount to make up the difference, and in doing so set up a debit against us. In case the margin exceeded 5½¢ the contract permitted the shipper to take half of that excess up to an amount equal to ⅜¢. Anything above that they did not deduct from the invoice and again credited that as a credit against this debit. So that the basic price, under this contract, is determined by averaging the high and the low price, quoted in the Chicago Journal of Commerce on date of shipment.

I don't think it is right to say that if the average of the prices quoted in the Chicago Journal of Commerce on the particular day of shipment was more than 5½¢ below the normal prevailing retail price in our area, 510 then only the prices quoted in the Chicago Journal of Commerce determine the prices that we pay.

In the absence of the marginal protection provision the prices quoted daily in the Chicago Journal of Commerce determine the price that we paid, only in case there was no debit on the debit side.

My explanation as far as it has gone, of what this contract meant to me, was true down until this contract expired in June of 1936.

Our new contract with The Texas Company was dated June 10, 1936.

(Contract referred to received in evidence as EXHIBIT 616.)

We received a letter dated December 16, 1936, from our supplier, The Texas Company. This is the letter you show me. I cannot make out by whom it is signed. My signature is also on the letter.

(Letter referred to received in evidence as EXHIBIT 617.)

511 The Texas Company, the other party to this contract, is a defendant in this case.

(Mr. Chaffetz reads the price provisions in the contract, Exhibit 616, which the witness then explained, such explanation is here omitted as the contract provisions speak for themselves.)

This was known as a split contract, a split 5½¢ marginal guarantee contract. By margins I mean the difference between the wholesale laid down price and the retail price; thus, if the margin between the normal prevailing retail price in our territory and the average of the tank car price as published in the Chicago Journal of Commerce doesn't equal 5½¢, then The Texas Company and ourselves split the difference. As an example, if it equaled 5¼¢ we would make 5⅜¢ instead of 5½¢ per gallon.

If the margin which prevailed between the retail price and the published tank car price was more than 5½¢ then the price we would pay would be the average of the high and the low of the price published in the Chicago Journal of Commerce. Then we would pay no attention to the margin at all.

In other words, our price is the average price published
in the Chicago Journal of Commerce as the going
512 normal price of the tank car gasoline to jobbers on
date of shipment.

If the Chicago Journal of Commerce today quoted a tank car price of from 5½¢ to 5¾¢ and if the normal prevailing retail price in our area was 12¢ for the same quality of gasoline, leaving out freight and taxes, we would pay only the spot market price as quoted in the Chicago Journal of Commerce. 5¾¢ and 12¢ would give you a difference of 6¼¢. And under our contract, what we would pay would be the average of the high and low spot market price, the average of 5½¢ and 5¾¢ or 5⅝¢. If the normal prevailing retail price should be reduced to 11¢, then, under our contract, the marginal protection provision would go into operation. We would determine the price that we would be required to pay under our contract for gasoline delivered at that time by splitting the difference. In other words, we would take the average of 5½¢ and 5¾¢, and would find that the average spot market price was 5⅝¢. We would subtract that from the going retail price of 11¢ and would get a difference of 5⅜¢. That 5⅜¢ is less than 5½¢ and, under our contract, if the margin between the normal retail price and the average spot market price is less than 5½¢, then we and the supplying company are to share half of the difference,
which in this case would be ½ of ⅛¢. We get that
513 ⅛¢ by subtracting 5⅜¢ which is the margin, from
5½¢, leaving ⅛¢, and then, splitting that, we would
have 1/16¢. We would add this 1/16¢ to the prevailing margin of 5⅜¢ and would pay 5 7/16¢ for our gasoline on that day.

I obtained my supply from a major oil company because the supply would be a little bit more sure, more uniform, and because I think that an advertised brand of a major oil company has a better consumer acceptance than an unknown brand.

Mr. Chaffetz: Q. I direct your attention to both contracts and tell us, if you will, what your experience under those contracts was during the years 1935 and 1936?

Mr. Donovan: I object to that question as too vague and general and indefinite and immaterial to this issue.

The Court: It is rather general, but we will see what it is.

The Witness: A. Well, assuming that I was going to have a contract with some major company, the contracts work out advantageously to us. They did not work out advantageously to us if we could not have done the same kind of business buying from independents, disregarding contracts, just buying on the open market.

514 Mr. Chaffetz: Q. Did you operate at a reasonable profit during 1935 and 1936?

The Witness: A. We did not.

Mr. Donovan: I object to that question and move to have the answer stricken, as to reasonable profit. That is determined, can be determined upon the presentation of figures, your Honor, and it is not an issue in this case.

Mr. Chaffetz: I am only getting at the question whether he was satisfied or not with the contract or whether he wanted to get a better contract.

The Court: Many things may enter into it.

In 1935 and 1936, we were tied to a contract with Barnsdall so we did not make any effort to obtain a more advantageous contract. When our contract was about to expire, we did make an effort. We got in touch with many of the companies, letting them know that our contract was expiring, and we were open for propositions. I got in touch with Mr. Stacy of Mid-Continent, their state representative; Mr. Walter Hare, their Chicago representative and district manager; and Mr. Fitzgerald. That was about May, 1936. We asked them what kind of a deal they could make with us. Stacy, Hare and Fitzgerald told us what kind of a proposition they could make us. As I can recall, they stated their contracts were
515 the same as other companies were presenting, but they could do a little something for us along the lines of local advertising. They said to me that the kind of contract they could offer us was identical with the kind of contract that other major companies were offering to jobbers at that time.

By the Court

That was the substance of the entire conversation. At that time, they did not submit copies of their contracts to me. They merely stated that the contracts were all very, very similar, or identical. I didn't make any agreement with them, because a salesman of The Texas Company sold me on the idea that it had better consumer acceptance. We are now doing business with The Texas Company.

By Mr. Chaffetz

During the time that we had these conversations with representatives of Mid-Continent Petroleum Corporation, we consulted with Sinclair. We talked to a gentleman by the name of Mr. Hamm, and a gentleman from their Chicago office, whose name I cannot recall, but who represented himself as being in tank car sales. I talked with these men in May, 1936 in our office in Sheboygan. They came to visit us in answer to a letter I wrote to Mr. Carnes, Vice-president of Sinclair Refining Company, in New York, in which I told him our contract was
516 expiring with our present source of supply, and inasmuch as they had no representative along the Lake Shore, I asked him if they would care to talk over a deal with us.

The man from Chicago stated to me that they had two methods of doing business. He said, "Our regular contract policy, or jobber contract proposition, there is no use of going into that, and you know all about that. It is just the same as all the rest." He did not show me the contract.

By the Court:

The conversation was relative to making a deal with us for the handling of gasoline and Sinclair products in our bulk plant and throughout our territory. I asked him what kind of a contract he would offer us, and he stated they had two methods of doing business, one was the regular jobbers' contract, and he said, "You understand what that is." He said, "Our other method of doing business is leasing our plant." He said, "That particular deal I know nothing about, and it will have to be handled through our real estate department." Later on Sinclair sent the head of their real estate department.

We did not have any other conversation with any representatives of Sinclair with reference to a jobber contract.

517 We discussed a contract with Anderson-Pritchard Company.

We discussed a contract with the present Barnsdall Company, of course, with Mr. Lee Potter, Mr. Hanson and Mr. Gluck, representing that company. Mr. Potter represents them in Minneapolis, and I believe has charge of this district. Mr. Hanson has charge of the operations in Milwaukee. Mr. Gluck is, I would say, an assistant under Mr. Hanson, and was at that time.

By Mr. Chaffetz

My discussions with each of these gentlemen, at that time, were with reference to a jobber contract. The place was in our office. I talked to Mr. Potter; Mr. Hanson and Mr. Gluck were not with Mr. Potter at the time I talked to him; and it was along generalities of making a new contract. This was sometime in May of 1936 in our office in Sheboygan. We discussed the deal in general, and they agreed that they would be a little bit more liberal than they had been the past year with advertising, and that is about all. There was very little said about the form of jobber contract that they would offer us. We did not ask Mr. Potter for a different type of contract.

I don't think we discussed the matter with representatives of any other company.

We did have negotiations with The Texas Company.

518 We negotiated our Texas Company contract with a Mr. Crabb. He was the salesman in Wisconsin in charge of the jobbing trade. We commenced our negotiations with him possibly 2 years prior to May, 1936. Those negotiations were all in anticipation of the ultimate expiration of the 5 year contract we were operating under at that time. We had negotiations with him just prior to the expiration of that contract in 1936. Those negotiations between Mr. Crabb and me took place in Sheboygan, in our office.

Mr. Crabb submitted to me a form of contract. That was the form that we later signed. There were only two changes in the form when we signed it. One part of the contract read, in arriving at the prices, it should be the average of the Chicago Journal of Commerce and Platt's Oilgram, Tulsa edition. We objected to the Tulsa edition of Platt's Oilgram because we knew nothing about it; and it was stricken from the contract.

The other change was in reference to the purchasing of motor oils and greases. We insisted on the right to include in the contract that we should be allowed to purchase and advertise a certain amount of Pennsylvania motor oil.

Those were the only two changes. We did not discuss with the representatives of The Texas Company any other type of jobber contract. Mr. Crabb did not make any statements to me with respect to the type of contract that he offered us, and which we accepted.

519 During the period from June 1935 to June 1936, I do recall getting some gasoline from the Great Lakes pipe line in Chicago. That is the north terminal of that pipe line. To my knowledge, that gasoline is shipped from the refineries in Oklahoma by the pipe line to Chicago, and then transported by tank car to Sheboygan.

Wherever this gasoline was shipped from, and by whatever means, which we received from Barnsdall Company between June 1935 and June 1936, under this contract, the freight we pay is based upon Group 3. The district in the Mid-Continent that we all understand as Group 3, around Oklahoma and a part of Kansas, I guess.

Referring to the period from June, 1936 down to the end of 1936, gasoline shipped under our contract with The Texas Company was sent to us from their refinery at Lockport, Illinois. There may be a few exceptions.

On the gasoline that we purchased from The Texas Company, that is delivered to us from Lockport, we pay the Chicago freight rate, but the difference between the Group 3 and the Chicago freight is added to the price of the gasoline, so, laid down, it costs us the same. In other words, we pay a total of the cost of the freight from Group 3, or Tulsa, Oklahoma, to Sheboygan; we pay part of that to the railroad company, covering the transportation from Lockport to Sheboygan; the balance we pay on our invoice to The Texas Company.

520 I am a member of some jobbers' association: Wisconsin Petroleum Association, and National Oil Marketers' Association. We have approximately 300 members in the Wisconsin Petroleum Association. I happen to be the president of the Wisconsin Petroleum Association at present, and a director in the National Oil Marketers' Association.

Cross-Examination by Mr. Donovan.

When we started in business in 1931, we had gasoline gallonage of approximately 500,000. We have increased each year. Now we have a gallonage of 1,250,000 gallons a year.

When I started in business, I found that I had run into a pretty heavily competitive business. But in spite of that fact, during the past 5 or 6 years I have built up my gallonage, and I feel that I have a good business now. When I started, the marketing outlets of these various refineries were pretty well developed.

During some periods there we had price wars while we were operating. The time came, also, when they would guarantee us the 5½¢ guarantee provided for in the contract, and we got that guarantee. And during that time, the operation was, under the contract, that they sold us at a lesser price than the price as reported in the Journal of Commerce.

521 At the time this contract expired, there was due and owing Barnsdall Company from us, as a result of the operation of that contract approximately between $8,000 and $10,000. When that contract expired in June, 1936, we were not obligated, under the terms of the contract, to pay that back. We didn't pay that back. I presume that Barnsdall wrote that off their books at that time.

The contract under which we were operating with Barnsdall was different from the contract that Sinclair talked to us about. I did not see a Sinclair contract, but it differed from the contract we are operating under now. I can't say in what respect, because I didn't see the Sinclair contract. The Barnsdall contract was different from The Texas contract under which we are operating now.

The marginal guarantee in The Texas contract was a splitting below 5½¢ instead of 5½¢ minimum guarantee. There is no pay-back in The Texas contract.

When we talked with these various companies relative to whether or not we would enter into any contract with them, we never inquired into the outlets they had in and about our neighborhood. The Texas Company told us.

We found that The Texas Company had several dealer service stations in and about Sheboygan County. The stations did not belong to The Texas Company. We
522 figured we would, and we did, get that business. Between June 1935 and June 1936, the gallonage of those stations was approximately 200,000 gallons. As a result of our dealing with Texas, we had a right to sell gasoline to those outlets, and we are still selling to them, so that we expanded our business by about 20%, maybe 25%, as the result of that deal.

That was one reason we wanted to enter into The Texas contract, because we would get those outlets. We wanted to expand our business.

Redirect Examination by Mr. Chaffetz.

In answer to Colonel Donovan, I said that one of the reasons why we took The Texas contract was that we wanted to get that additional gallonage resulting from the fact that we were to take over some dealer accounts that The Texas Company had in our neighborhood. Other factors that persuaded us were that of all the lines that were offered to us, The Texas Company had the best consumer acceptance. Also, I liked their advertising, and everything else.

There was no difference in the contracts that the various companies offered us.

Q. On examination by defense counsel, you testified to a very substantial increase in your business during the years from 1931 down to date, that is, so
523 far as the gallonage that you have handled is concerned. Will you tell us whether your financial operations during the same period improved in the same ratio—your financial result, I would say improved in the same ratio?

Mr. Donovan: I am going to have no objection to what the witness may say as to what he made or what he lost, if it is said in terms, but I do object to any question that will call for a conclusion as to whether he made money or not.

The Court: He may state what the fact is. You may answer that. Exception allowed.

A. Our best year in business was when we had the smallest gallonage, the first year we were in business. Our profits have been on a general decline since, in spite of the fact that our gallonage has been on the incline.

Q. Can you explain that phenomena?

The Court: That is, your net profits were more at that time?

A. Speaking of our net profit.

Mr. Chaffetz: Confining yourself to gasoline, and not accessories or anything else you handled.

A. The reason, as near as I could figure it, was
524 in 1931 and 1932 our margins exceeded the minimum guarantee of 5½¢.

Redirect Examination by Mr. Chaffetz.

We were at that time buying on the basis of the published journal prices only. Since that time there has been a steady decline in the margin, so that we are right around the minimum guarantee at the present time, all the time. The minimum guarantee does not give us a sufficient margin to operate on, so far as our gasoline is concerned. When we are operating close to or at or around the guaranteed margin of 5½¢, I mean we have a gross operating margin of 5½¢ at our own retail outlet.

We make 2¢ a gallon off the service station dealer's business. The dealer did get 3½¢ during the period we have been discussing. That is, out of a gross margin of 5½¢, 3½¢ went to the dealer, and we retained 2¢. That covered everything; that was the gross margin we had to operate on.

My understanding is that after June of 1935 we were being supplied with gasoline by the presently existing Barnsdall Company, whatever its real name may be. I do not remember whether we had any dealing with either Barnsdall Company with respect to who would supply us with gasoline when the former Barnsdall Company went
out of existence in June, 1935. There was not any
525 change in our course of business under that Barnsdall
contract with reference to our source of supply and the manner in which the gasoline was sold and delivered to us.

Cross-Examination by Mr. Lawton.

The term "regular grade" in gasoline, as used by the gasoline industry in 1935 and 1936, meant a grade equal to that of the house brand of the major oil companies. Under our contract with Texas, we purchase Fire-Chief gasoline, the name used by Texas to denote its house brand or regular gasoline in the year 1936.

In 1935 and 1936 the regular or house brand gasoline had an octane rating of 68 to 70. It was gasoline of that rating which we bought from Barnsdall and Texas during 1935 and 1936. When we paid the average price of the Journal for regular gasoline, we were paying for gasoline of an octane rating of 68 to 70.

Redirect Examination by Mr. Chaffetz.

90% of all the gasoline that we sold under that contract in our own operation was a regular house brand gasoline during 1935 and 1936.

526 **ELMER H. PEDLEY,** a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I live at Kenosha, Wisconsin. I am 46 and always have lived in Wisconsin. I am an oil jobber. An oil jobber is a man who has storage capacity in a bulk plant for at least one carload of gasoline, buys in tank car lots, and redistributes to the reseller in tank wagon lots.

My company, D. B. Pedley & Son, was established in 1903 by my father. I entered the business in 1914. My father and I were partners until he died in 1931. I then became sole owner. Our capital investment is about $30,000.

The business handles gasoline, lubricating oil and greases. It owns a bulk storage plant with total capacity of about 120,000 gallons in Kenosha, Wisconsin.

In 1935 and 1936 our volume was 600,000 gallons of gasoline a year. About 90% of that was regular or house brand.

We own one retail service station, now leased to an independent operator. We have about 10 independent dealer accounts. We purchase our gasoline in tank car lots, and distribute it from our bulk plant to independent dealers by tank wagon.

527 In 1935 and 1936, all our gasoline was supplied by Mid-Continent Petroleum Corporation, Tulsa, Oklahoma, with whom I have been doing business since 1933 under a series of one year contracts. The gasoline purchased from Mid-Continent, under contract was shipped to us from the point of origin of our gasoline, Tulsa, Oklahoma; some by the Great Lakes pipe line to Franklin Park, and thence by rail to Kenosha; and some direct from Tulsa by rail.

One of the contracts that we had with Mid-Continent Petroleum Corporation was dated March 16, 1935. We operated under that contract for one year. It was executed June 12, 1935, but the delivery of gasoline was to commence March 16, 1935.

(Contract referred to received in evidence as EXHIBIT 618.)

The brand name of Mid-Continent regular is "D-X Lubricating Motor Fuel".

My experience under this contract is that the basic price we were required to pay for our gasoline was determined by the spot market as defined in this contract, that is, the price determined by averaging the low and high published prices in the Chicago Journal of Commerce and Platt's Oilgram, Tulsa, edition. None of the eventualities mentioned in clause 6 ever occurred.

> (The witness then explained the price provisions and the provision defining spot market in the contract, Exhibit 618, which Mr. Chaffetz reads to the
> 528 jury, the explanation being here omitted because such contract provisions speak for themselves.)

After the contract expired on March 15, 1936, we secured our supply of gasoline from Mid-Continent Petroleum Corporation, but not under contract.

After the contract expired and until the end of the year the price I paid for house brand gasoline was based on the 5½¢ split margin basis, using the same definition for spot market price as appeared in the contract. Under the contract there was a guarantee, but we had no guarantee provision from March 1936 until the end of that year.

I preferred to purchase from a major oil company because I felt that a nationally advertised brand had more consumer acceptance. I didn't renew this contract with Mid-Continent because I felt possibly something good might appear in the picture, and I wanted to be free to go in whatever direction I desired when it occurred.

We were on a basis of 5½¢ margin, and as a jobber, I figured that perhaps during the immediate future, or perhaps during the next 6 months or year, there might be a change in that particular situation, and that there might be something more advantageous offered. I distinctly desired to be in a position to take advantage of it, if I could.

I also felt I might perhaps like to conduct my business
529 by buying gasoline on the market and selling it under
my own name as I did for several years prior to the time that I entered into a contract with a major company.

I made some efforts to secure another contract from Mid-Continent when this contract was about to expire. I discussed the matter with Walter Herr, division manager of their Chicago office, to ascertain whether or not there could be any better contract offered by their company. He told me that they had nothing better to offer than the last contract and in his judgment he would not have anything better to offer until someone else indicated that they would make a better offer. He did not indicate whom he meant by someone else.

I did not approach any other companies myself, but they did approach me, knowing that my contract was to expire.

Champlin Refining Company, Enid, Oklahoma, approached me. They had nothing better to offer. Anderson-Pritchard Oil Corporation also approached me. The sales representative for the territory came to me representing Champlin; I can't recall his name. He did not exhibit to me the type of contract he was offering.

In my business I ordinarily do not follow the trend of tank car prices of gasoline in the quotations of the Chicago Journal of Commerce and Platt's Oilgram. I have kept rather accurate track of the prices that I myself have been required to pay.

530 In March, 1935 we were in the midst of a fluctuating market the trend of which was generally upward. That continued on in that year, as I recall, until somewhere about June 10th at which time the peak was reached; and from that point on until the termination of the year 1935 that point remained stationary.

Q. Now, can you recall to the jury, from your long experience in the oil business, any other period of time when the prices that you paid for gasoline bore the same trend for a similar period of time?

Mr. Donovan: I object to that question as no comparison having been shown, no conditions of any other period having appeared, and no conditions in this period having been described.

The Court: Overruled. Exception allowed.

Mr. Donovan: And no foundation having been laid.

The Court: Let me ask you this question, first: How long have you been in the oil business?

A. I have been in the oil business since 1914.

The Court: All right, go ahead.

A. No, I cannot recall any other period.

Beginning in 1936 we had a series of fluctuations in the market, extending over a period of time, with
531 the trend generally upward until just about the end of May at which time prices attained a peak. During the months of June, July and August we had another series of fluctuations in the market, the trend of which was generally downward. At the end of that period the price again levelled off and remained stationary until the end of 1936, the price generally being at the end of 1936 1¢ higher than it was at the beginning of 1935.

I was a witness before the grand jury in Madison in May, 1936.

To my knowledge I never dealt in so-called hot oil; if I did, it came from my usual source of supply.

I am a member of the Wisconsin Petroleum Association, and of the National Oil Marketers Association. The qualification for a member of the Wisconsin Petroleum Association is that he must be an independent jobber. There are approximately 300 members in that association. I do not know but believe there are approximately 600 jobbers of gasoline in Wisconsin.

No cross-examination.

532 SAMUEL H. TRAINOR, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have lived in Wisconsin since 1915 and in Wausau for 10 years. I am president and majority stockholder of Marathon County Oil Company, a corporation organized in 1926, which is engaged in oil jobbing, and retailing. We have about 12 employees and 5 trucks on the road. Our capital investment is about $46,000.

We buy our gasoline wholesale in tank car quantities. We resell, usually in quantities less than tank cars, to some dealer accounts, some through our own stations; and some to large consumers directly from the tank trucks. We operate within a radius of 25 miles from Wausau. We operate two of our own service stations. We have about 25 independent dealers, just about the same as in 1935 and 1936, through whom the great bulk of our gasoline is sold.

We own or control 2 bulk plants, 1 at Wausau, and 1 at Edgar, in Marathon County, Wisconsin. The capacity of those bulk plants is about 75,000 gallons together.

We sold approximately 1,250,000 gallons of gasoline in 1935 and 1936. 85 to 90% was so-called regular or house brand gasoline.

Our source of supply of gasoline in 1935 and 1936 was Phillips Petroleum Company. Most of it was shipped
533 by rail from East St. Louis, Illinois. I don't think they have a refinery there. Most of the gasoline was pipe-lined into East St. Louis. Regardless of where the gasoline was actually shipped from, and the route, the freight was charged to me from what they call "Group 3 Tulsa".

All the gasoline I purchased from Phillips, during 1935 and 1936 was purchased under three contracts.

The first was the contract between us and Phillips Petroleum Company, executed April 17, 1934, under which we operated in the purchase of gasoline from April 6, 1934 until April 5, 1935.

(Contract referred to received in evidence as EXHIBIT 619.)

On November 26, 1934, I received a letter from Phillips Petroleum Company, signed by John Getgood, advising me of a change in that contract.

(Letter referred to received in evidence as EXHIBIT 620.)

I operated without a contract from April to June, 1935, but the contract, I think, carried over from month to month unless it was cancelled. On June 5, 1935 I entered into another contract with the Phillips Petroleum Company. I operated under this contract until September, 1936.

(Contract referred to received in evidence as EXHIBIT 621.)

534 That contract was what we call a 5½¢ split contract. The provision is for the price of gasoline to be determined upon the basis of the spot market price, and the spot market price is defined as the average of the average of the prices published in the Chicago Journal of Commerce, and Platt's Oilgram, Tulsa edition.

Then there is the additional provision with respect to a 5½¢ split margin guarantee. If, at any time, the average of the gasoline prices quoted in the Journal of Commerce went higher than the 5½¢ margin, then they refunded the difference, so that I would have a 5½¢ margin. The effect of the so-called split provision was that we divided that difference. If there was a difference between the margin between the published spot prices and the normal retail price on the one hand, and 5½¢ on the other hand, then we subtracted the former from 5½¢, and then divided the difference by two. I never paid any more; I didn't pay anything back to them. If the price allowed me only 5¢ instead of 5½¢ then they refunded that ¼¢, or one-half of that half. There was no refund to us in dollars; the price was determined on the basis of what I have told you, and taken off our invoices.

I have a preference for handling the major company brands because they are nationally advertised, and because of public acceptance. I think that the average consumer prefers to buy a nationally advertised brand.

535 Before I bought my gasoline from Phillips, I bought it on the open market, and through Omar Refining

Company. I had no contract. I have been buying from Phillips Petroleum since 1932. I have been selling to more filling stations and purchasers the last two years than I was prior to 1932.

I attempted to obtain a more favorable contract during the years 1935 and 1936. I talked about this with E. M. Kelly, and John Getgood, Phillips' tank car salesmen, two or three different times in 1934, ~~1935~~ and 1936. Once was at the signing of that contract in 1935. Getgood is the one who signed that contract.

> Q. What was the nature of this discussion that you had with Mr. Getgood on this subject, prior to the signing of that contract in 1935?
>
> Mr. Donovan: Just a minute.
>
> The Court: I think you better ask what the conversation was.
>
> Mr. Donovan: If that be the question, I object to it on the ground that it is hearsay and narration of past events, it is not in furtherance of this conspiracy, and cannot be binding upon anyone excepting those concerned with this immediate contract, and is not to be considered as testimony against these defendants.
>
> The Court: Overruled. Exception allowed.
>
> A. Well, I tried to impress on him that we needed more margin in order to continue in business with the jobber's end of it.

536 He said that was the best contract they had to offer. He said other things that I do not recall. He said it was the same contract they were giving all their jobbers.

I did not approach any other major oil company with reference to obtaining a contract for the supply of my gasoline during the years 1935 and 1936.

A representative of Shell Petroleum Company named Cooksie concerned with tank car sales called on me in the early summer or spring of 1935, with reference to jobber contracts. I don't know how he happened to come to me at that time. He asked me when my contract expired. He called on me several times during that same general period. Our contract did expire, I think, in June. He said that they wanted distribution in that territory, they had very little, and that if I signed their contract, they would put men into the territory to help me work up a business. He did not show me any form of contract. He offered me a contract. He said their contract was the same as I had; 5½¢ split contract. He referred to it in that way. I did not show him my contract but explained to him what I had.

He said the only thing that he had to offer me was a better grade of gasoline and help to sell it. He told me that Shell gasoline would be better than Phillips.

I have followed the trend of the prices that I have been paying for gasoline to Phillips Petroleum Company in 1935 and 1936. The trend was up in 1935. In 1935,
537 the prices fluctuated quite a bit, there was a fluctuation of a full cent.

To my knowledge, I never bought or dealt in so-called "hot-oil".

I am a member of two jobbers' associations: the Wisconsin Petroleum Association, and the National Oil Marketers.

No cross-examination.

538 **WILLIAM LANZER**, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I live in Chicago, Illinois. I went to public school and high school.

I have been with W. H. Barber & Company, a Delaware Corporation, for 13 years, and now am manager of refined oil sales. I held that position in 1935 and 1936. The principal office of W. H. Barber & Company is located in Minneapolis. I am in its other office in Chicago. It compounds lubricating oils and greases, handles and distributes linseed oil, turpentine, resin, and kindred products. It is sales representative of two refineries: In Chicago, Globe Oil & Refining Company of Illinois and Globe Oil & Refining Company of Oklahoma, defendants in this case; in Minneapolis, some Tidewater companies.

Our Chicago division has done a business since 1935 of about 60 million gallons of gasoline a year. Approximately the same quantity is handled each year by the Minneapolis division.

The principal states in which Barber Company does business and distributes gasoline are Illinois, Indiana, Michigan, Wisconsin, Iowa, Minnesota, North and South Dakota, and a little in Ohio. That territory has the name, in the oil business, of the Standard of Indiana terri-
539 tory, with the exception of Ohio. The Standard of Indiana territory has been a trade designation ever since I have been in the oil business, I presume because of the

position Standard Oil Company of Indiana holds in this territory. Standard of Indiana holds a dominant position in that territory being the largest single oil company doing business in that territory.

W. H. Barber & Company buys outright the gasoline it distributes. We have done business with the Globe Company under contract since 1931. The Chicago Division does not sell the gasoline output of any independent refiner other than Globe under a contract.

For about 5 years we have purchased material from Panhandle Refining Company that we weren't able to secure from our regular source, which was the Globe. We originally had a contract. It is my best recollection that that contract expired, but we carried on just the same. During 1935 and 1936 we bought from them at our selling price less ¼¢ a gallon. This was an unbranded product.

In 1935 and 1936 in our purchases from the Globe Company we paid ¼¢ a gallon under our selling prices in most instances.

For the Globe Companies we sold their Utility gasoline, which is third grade gasoline, their Globe Super-Bronze, which is regular, and their Globe Ethyl, which is premium. We also bought from the Globe Companies
540 great quantities of unbranded gasoline. Generally
speaking, the price on each grade was ¼¢ under our selling price.

We sell gasoline to jobbers. A jobber is an organization having facilities for accepting merchandise in tank car quantities, the storage of that merchandise, and the distribution of it in smaller quantities to resellers or consumers. Our Chicago Division sold to over 200 jobbers in 1935 and 1936. Those jobbers were not scattered throughout the states of the Standard of Indiana territory, but were located in Illinois, Indiana, a part of Wisconsin, Michigan and Iowa.

Our contract on branded merchandise negotiated in 1935 and 1936 involved a spot market price ranging from the low to the average of the Chicago Journal of Commerce with a 5½¢ split margin.

Our contracts to jobbers are predicated upon those quotations in the Chicago Journal of Commerce. By "predicated", I mean they are based on those prices, and the prices at which we sell are in terms of those quotations. That is true of all the gasoline that we sell under contracts to jobbers, with this qualification: we don't sell all our gasoline based upon the octane classification shown in the paper. We may sell the 68-70 octane gasoline based upon the price of third grade in a publication. In other 541 words, in the case of some of the grades of gasoline that we sell, we sell it at a differential either higher or lower than some quotation in the Journal of Commerce.

It is also correct that our prices for all of our contract gasoline are based largely upon those quotations in the Chicago Journal of Commerce in all cases, except where we employ the Oilgram. The Oilgram is another trade publication.

Approximately 90% of the volume of gasoline that our company bought in the years 1935 and 1936 was sold under these contracts that I have described.

The Globe Company's refineries are located at Lemont, Illinois; Blackwell, Oklahoma; and McPherson, Kansas. We do not handle any of the output of the McPherson Refinery, but we handle between 60 and 70% of the output of the other two refineries. Globe markets the balance.

We submit some of the jobber contracts that we make with these Globe outlets to the Globe Company since they underwrite some of their contracts. I would say approximately 90% of our business was done in those years under those underwritten contracts. By underwriting I mean this: We make contracts with jobbers on certain price bases. Those contracts are submitted to Globe, who in turn underwrite them for us and protect us for a margin of profit against the sales price.

542 In addition to buying gasoline under contract from Globe, and buying gasoline from Panhandle Refining Company, we buy gasoline on the spot market occasionally. The spot market is the market at which we can buy gasoline from sources with which we are not "under contract." They are day to day transactions. Our spot market purchases and sales are so very limited that our transactions were in small quantities. We buy on the spot market in tank cars.

We occasionally sell some jobbers gasoline on the spot market. We sold more to them on the spot market than we buy on it. We sell some of this gasoline that we buy under contract to jobbers on the spot market. They are day to day sales in tank car quantities.

When we buy on the spot market and sell on it, we act as a broker. That does not mean we get a commission. We buy it outright, pay our own money for it, turn around and sell it outright, and are paid by the jobbers buying from us on the spot market.

There are other persons transacting that kind of business in the Standard of Indiana territory. I think there was a substantial volume of business that used to be handled in that way in the former years in the Standard of Indiana territory.

I feel that the spot transactions were diminishing during 1935 and 1936 as against previous years. The
543 volume of broker spot market business was doing the same thing. I think there are a number of reasons for it. The jobbers are much more inclined, and were in 1935 and 1936, to know definitely where their merchandise was coming from and to know that it was of uniform quality. Marginal guarantees were beginning to cut in, in that period, necessitating or making it advantageous for the jobber to operate under a contract as opposed to a spot market set-up. By marginal guarantees cutting in, in that period, I mean that the margin of profit to the jobber based on his delivered cost figured against the spot price was less than it was under the marginal contract provision of the contracts.

That began around 1935. I mean by that that in former years prior to 1935, the jobber by buying on the spot market, or buying under contract, was able to sell the gasoline for a price which gave him a margin that was wider than the guarantees that were contained in the contracts. I don't think it began in 1935. I think it began in the latter part of 1934 by reason of the reduction in the service station price and the marginal provisions of the contract affording the jobber a lower cost than the spot market did. I mean that in 1934 the actual difference or spread between the tank car price and the retail price narrowed. It narrowed, generally speaking, 1¢ to 1½¢ a gallon.

544 The average total spread between the tank car price and the retail price that came about in the fall of 1934 ranged from 5⅜¢ to 5⅝¢ margin in that period. That contraction in the spread brought into operation these guarantees of 5½¢ that were in the contracts, in some instances. Beginning in the latter part of 1934 these marginal guarantee provisions in the contracts came into operation, and therefore, the contracts continued and then became more attractive to the jobber.

There was one other reason why the jobber tended to get away from the spot market business and to go over on contract in these years and that is the tendency of the jobber towards the refiner's brand as opposed to his own brand.

Prior to the period in question a great many jobbers were marketing gasoline under their own brands. There has been a swing from that to the major company brand.

Jobbers tell us it is because they want the public acceptance that has been created by those brands.

A jobber may have his own brand. It might be Colonial; it might be Johnsonite. The best known brands are the brands of the major companies. There was some advertising advantage that came about with the use of the major company brands. The advertising that they were doing
would naturally be a benefit to the jobber. Advertising
545 might be one of the reasons for the jobber to sign up
under contract and leave the spot market.

The major companies that market through jobbers in the Standard of Indiana territory are Sinclair, Shell, Socony-Vacuum, Texas Company, Pure, Barnsdall, Cities Service, Continental, Phillips, Mid-Continent, Skelly and Deep Rock.

During the year 1934 our company bought some gasoline in tank cars on the spot market. Those purchases were made through J. M. Bradshaw, a buyer located at Dallas, Texas and operating as Hercules Oil Company, from Gilliland Refining Company, Gladewater, Texas; from Danciger Refineries with its office in Tulsa, I don't know where their plant is; from Southport Petroleum Company, Kilgore, Texas; Shamrock Oil Company, Amarillo, Texas; Union Refining Company, Longview, Texas; Chief Refining Company, Gladewater, Texas; Blackstone Refining Company, Overton, Texas; Artex Refining Company, Kilgore, Texas; McMurray Refining Company, Arp, Texas; Panama Refining Company, Kilgore, Texas; Primrose Refining Company, Dallas, Texas; Waggoner Refining Company, Electra, Texas; and Cuiver Refining Company, Gladewater, Texas.

These companies are referred to in the oil business as independent refiners. They don't compare in size with the group of major companies, defendants in this case, that I
have named as marketing in this territory. They are
546 very much smaller. Most of them are located in the
East Texas field. I have named some in North Texas and some at Tulsa. All those independent refiners I have named are located either in the East Texas or Mid-Continent oil fields.

We didn't buy any appreciable quantity on the spot market in the year 1934. We bought 96 tank cars from these refiners from April until December, 1934.

We bought some gasoline on the spot market from the independent refiners located in those fields in 1935, but less than we did in 1934. We bought those cars in 1935 through Bradshaw.

We bought that gasoline in 1935 from Grogan Oil Company, Shreveport, Louisiana; Arrow Refining Company, Fort Worth, Texas; East Texas Refining Company, Dallas; Century Refining Company, Overton, Texas; Gilliland Refining Company, Gladewater, Texas; Marimac Oil Company, Tyler, Texas; and Octane Oil Company, Longview, Texas. They are all independent refiners. Most of them are located in the East Texas field. The one at Shreveport would fall into the general Mid-Continent field. We bought 37 tank cars in 1935.

In 1935 the purchases of gasoline on the spot market that we are specifically talking about averaged from ½¢ to ⅝¢ below the low of the Journal quotations. 26 out of the
37 cars were as much as ⅝¢ under the low quotations
547 of the Journal of Commerce for the day on which I
bought it for the same quality of gasoline. I bought 1 car of gasoline on the spot market from independent refiners in the year 1936. We sold this gasoline which we purchased in the spot market in the year 1935 to jobbers in tank cars.

I know the general trend of tank car spot market prices during the years 1935 and 1936. The market began to advance in the spring of 1935 in March, I believe. It advanced steadily until June at which time it leveled off and held constantly level for the balance of the year. In the early part of 1936 there was a crude advance, and with it an advance in the tank car market. That occurred in January, if I remember.

Gasoline prices, spot market prices, after the crude advance, advanced. Then they leveled off reasonably, and then they fluctuated, ending at the end of the year somewhat lower than they were at the peak. When I say they leveled off after the advance, my recollection is that that level remained in operation a couple of months into 1936 before the prices broke at all. My recollection is that they held level for a couple of months at the high level that they had reached after that crude advance in January, 1936.

There was no appreciable change in the market in that
period from June, 1935, through the year. There was
548 an advance in the level of the tank car spot market
prices from early in January, 1936 for several months into 1936. There was some fluctuation after that advance took place. My recollection is that the fluctuation started in June or July.

From January, 1936, when the crude oil price advanced and the tank car price advanced to where they broke in June of 1936, the prices were at a level; they were steady in that time.

Q. All right. Now, state whether or not that situation that you have just described, from June of 1935 down to about June of 1936, was unusual or usual?

Mr. Donovan: I object to that question, upon the ground that no foundation has been laid for it; it is not contrasted with any other period; there has been no foundation for it being contrasted with any other period.

The Court: Q. How long have you been in the oil business?

A. 14 years.

Q. Buying and selling gasoline?

A. For about 9.

The Court: You may answer that. Exception allowed.

A. There was an unusual stability to the market
549 in that period.

Q. Do you know of any other period in your experience in which the prices acted that same way, or anything like that same way.

Mr. Donovan: May I have the same objection, your Honor?

The Court: You may. Overruled. Exception allowed.

Mr. Lewin: Q. With respect to stability, and leveling uniformity and rigidity?

A. I have no recollection of it, no sir.

I have no recollection of any other comparable time through my whole experience.

In general, I have described not only the trend of one grade of gasoline, but the trend of all other grades of gasoline. They work pretty closely together. I would say that, in general, the trend of the prices of one grade parallels the trend of the prices of another grade.

Bradshaw functioned as a purchasing agent for us for which he received a remuneration of $2.50 for each car he bought. He handled these spot market transactions for us in 1935, 1934 and 1936 that I have testified about. He did not perform any other service for us. We kept in contact with him to see what the character of the market was. Bradshaw kept in touch with us more frequently than we did with him. He would wire us, with considerable
550 regularity his observations of the market.

From time to time we requested him to give us his observations on the market. The purpose of our having that information from J. M. Bradshaw was that it had a great deal of value to us with respect to our competitive picture from a sales standpoint. In other words, it was information that we had to have in order to know how to properly operate our business. We did rely on Mr. Bradshaw to give us that information. He was the principal source of our information as to the tank car price and the tank car market down there in East Texas in 1934 and 1935. We did, as a matter of fact, rely on and make use of that information that he gave us.

I don't recall having had any information from him over the telephone. Generally telegrams were used between us.

This paper, handed to me, Exhibit 153 for identification, is a telegram dated May 31, 1935, from Bradshaw to W. H. Barber Company giving us certain data with respect to the market, and conditions in the East Texas field. It is one of the communications that I have just described.

Mr. Lewis: I offer this telegram in evidence.

Mr. Donovan: Now, I object to the acceptance of that in evidence, your Honor, upon the ground that it is hearsay; that it is opinion; that it now appears 551 from the examination of this witness that it comes from a buyer that he had in East Texas, informing him of his opinion of conditions in East Texas; that it therefore cannot be considered as any evidence against any of these defendants.

Mr. Lewin: Coupled with that offer, may it please the Court, the Government proffers to show by competent evidence at a later time, and in orderly process, that Mr. J. M. Bradshaw is the buyer for the Gulf Refining Company and the Gulf Oil Corporation, defendants in this case, and was himself a co-conspirator in the conspiracy that is charged in this indictment.

Mr. Donovan: Now, I would like to have the counsel point out where Mr. Bradshaw is named as a co-conspirator in this indictment.

Mr. Lewin: It says, "And others to the grand jurors unknown," and groups a whole lot of people, and we are going to prove by competent evidence that he was a co-conspirator.

The Court: He has assured the Court that he is going to connect this up later on. For the time being, your motion is overruled. Exception allowed.

I can identify these telegrams marked Exhibits 153, 158-A and—no, 155-A, 155-B, 156, 159, 161, 162, 158, 157, 165, 167, 152 and 151 as being telegrams that were sent to me by

J. M. Bradshaw. I received these telegrams in the
552 usual course of business on or about the dates shown
on them.

Mr. Lewin: They are offered in evidence.

Mr. Donovan: I want to object on the ground they are incompetent, as not being the best evidence.

The Court: I think I will withhold ruling on those exhibits at this time. You have identified them, and have made your offer.

I testified yesterday that in 1935 I purchased 37 tank cars of gasoline on the spot market from independent refiners located in East Texas and the Mid-Continent field. I purchased 26 out of these 37 cars at ⅝¢ lower than the low quotation of the Journal of Commerce and the rest of them were all purchased under the Chicago Journal of Commerce.

I compared the prices that we obtained for cars of gasoline I sold to the jobbers with the low quotations for a similar grade of gasoline as carried in the Chicago Journal of Commerce on the day of the sale.

We sold it all the way down from the low to approximately ½¢ under the low. We sold 5 cars at ¼¢ below the low. This material was sold between April 25, 1935 and the early part of May, 1935. The material was 65 octane for which we paid 4⅝¢.

The Journal of Commerce figure that we compared
553 it with was the 63-70 quotation. The quotation in the
Journal was 5¼¢.

This is all 65 octane; and the price of the Journal in each instance, until I make further remarks, will be the low price quoted for 63-70 octane. The Journal lows don't change during the period from April 23 to early May, 1935. They are still 5¼¢.

We sold 5 cars at 5¢; 1 at 5.12¢; one at 5¢; 1 car at 5.16¢; 1 car at 4.81¢; 4 cars at 5¢; 1 car at 4⅞¢; 1 car at 5¢; 1 car at 5.15¢; 2 cars at 4⅞¢; 2 cars at 5¼¢; 1 car at 5⅛¢; 1 car at 5¼¢ and 3 cars at 5⅛¢.

Thus out of 26 there were 3 cars sold at the low and 23 cars below the low price in the Journal of Commerce for 63-70 octane.

The quotations that are published in the Chicago Journal of Commerce and in Platt's Oilgram for tank car gasoline have some effect upon the prices that the jobbers throughout the Standard of Indiana territory have to pay for the gasoline they buy. The jobbers' cost will fluctuate with those quotations. If the quotations advance, the jobber will pay more money, and if they decline, he will pay less.

Almost all contracts use as the basic price the posted or quoted price for gasoline of comparable specifications in the publications. Where marginal contracts are in-
554 volved, the publication price is subject to the operation of the marginal guaranty, so that when the marginal guaranty feature of the contract is operative the price which the jobbers pays is not the posted price in the Journal of Commerce, but some figure arrived at from the service station prices at which the jobber is selling in that territory.

When these guarantees are not operating then the prices the jobber pays under the majority of these contracts varies directly with the prices quoted in the Chicago Journal of Commerce and Platt's Oilgram.

During 1935 and 1936 there was a movement of the service station price with a movement in the tank car market. To what extent they were inter-related, I don't know, but the record shows that there was a movement. Thus if the tank car price went up the consumers' price at the station went up. If the tank car price lowered then the station price lowered.

During that period the usual difference between the normal retail price through this area and the tank car price, as published by the Journal of Commerce and Platt's Oilgram, was about 5½¢. It became less than 5½¢. That came about by an advance in the tank car market. It was not immediately reflected in the service station market. I would say that advance was eventually reflected in the service station market, from our records.

555 There was sometimes a lag between the amount of the tank car price, as reflected in the Journals, and these retail prices at the service stations. That delay in raising the retail price narrowed the spread between the tank car price and the retail price to below 5½¢ in some instances. That would reduce the margin that the jobbers would get and bring into effect this guaranty provision in the contract I have mentioned.

I can't say exactly how long a delay took place before the retail price was raised to meet a raise in the tank car price; generally there would be an advance in the service station prices after the tank car prices had advanced approximately ⅜¢ a gallon. As to whether this would be the same day or within 24 hours, I don't think that there was any general rule on that. My recollection is that it would be perhaps a week or two.

It is approximately correct to say that after that week or two expired, the normal retail price as posted throughout this territory in those years, rose to within 5½¢ above that raised tank car price. I mean that there were a few little fluctuations in there that didn't make that definitely true in every instance. My recollection is that, generally speaking, that was true during the period of 1935 and the first half of 1936.

As to whether, when there was merely ¼¢ advance in the tank car price, there was a corresponding advance
556 in the retail market, that is so fine a question, I don't know.

It was my observation that the service station price would advance or decline 3/10¢ a gallon with similar or closely similar advance or decline in the tank car price. The matter of cutting it to eighths is something I couldn't do.

In the period in which these marginal guarantees operated, the price the jobber paid for gasoline out of his own pocket through this area was directly connected up with the tank car price.

As to how the filling station owner fixed his price—excluding those areas in which the Iowa plan was adopted in 1935 and excluding that part of 1936 in which the Iowa plan was put in operation in all of the Standard of Indiana territory the service station price was established by the leaders in the field, by the major companies. I would say by primarily the Standard Oil Company of Indiana. They were the people who established the retail price. The dealers did not establish it at that time. In 1935 and 1936, presuming that I was buying from a jobber handling a branded product, I would sell that product at the same price as that established for a comparable product by Standard of Indiana Company. To the best of my knowledge that was the practice followed by practically all of the filling stations.

557 The price posted by the market leader is generally posted in a small bracketed sign attached to the pump.

The source of supply of the filling station owner is acquainted with the normal structure of prices in that particular city at that time, and I suppose if the filling station owner wanted to know what the price was he would go to his source of supply for the information.

These changes in the posting by the market leader in certain towns are carried in these journals we have been talking about. You could determine the general posting in the towns listed by looking in the Journal of Commerce.

During 1935, part of 1936, and the years prior to that time, the major oil company owners of service stations all operated those service stations themselves. They employed attendants, and conducted the business entirely within their own organization. The adoption of this Iowa plan involves the leasing of the stations by the major oil companies and by others to private individuals who then become a separate entity, so far as their business operations are concerned, from their source of supply. In other words they lease this place of business and go in business for themselves instead of being an employee of the supplying company. With the adoption of that plan of marketing, a dealer's price was established, which was the
558 price that the dealer, the lessee, pays for his merchandise. He then has the right to sell it at whatever price he pleases. The price that the dealer pays under that plan is called the dealer tank wagon price.

Since the Iowa plan came into effect, the spread between the tank car price that the jobber pays under these contracts and this dealer or tank wagon price that he receives from the dealer when he sells it is 1⅞¢ to 2¢ a gallon in the spot market, and 2¢ a gallon under a contract.

I don't know whether the owner of the filling station under the local price practice was prohibited from selling that gasoline under his contract below a certain price. There is now no large operator available for the naming of this price so that the rest of them can follow this price, today it is an individual proposition with the operator of the station. The amount that the filling station owner is expected to sell his gasoline for over and above what it cost him is a matter of his own judgment, but as a general rule the service station price will range 3½¢ a gallon over his costs.

3½¢, plus the 2¢, now takes the place of that 5½¢ we were talking about before. 3½¢ to the dealer, and 5½¢ to the jobber, if he operates his own station, takes the place of the over-all margin that we were talking about in 1935 and the first part of 1936.

559 During 1935 and that part of 1936 before the Iowa plan came into effect there were in this Standard of Indiana territory at least two different kinds of service stations; one, a service station that was owned and operated by the major companies; and the other, a service station that was operated by independent dealers. It was the cus-

tom, usually, for the independent dealers to follow the price that was posted by the major companies in their own service stations on branded products.

Since the Iowa plan, these major companies, who used to have these owned and operated stations of their own, have leased them out to independent dealers. Now, instead of having two classes of dealers, one, a dealer who is employed by a major company and is working the major company station, and the second, the independent dealer, you have one big class of dealers who are the independents selling under lease. I assume that the major companies have leased, rather than sold, these service stations throughout this territory to the independent dealers, so-called. I don't know their business. I can't definitely say that they haven't sold any of their stations. In general, I would say that it is correct that the Iowa plan has caused the major companies to lease out these service stations to these dealers rather than sell them outright to the dealers.

The jobber sells his gasoline to the dealer for 2¢
560 more than it costs him. The dealer ordinarily sells
this gasoline to the man who drives up and gets it in his car or tank wagon for about 3½¢ more than it costs him from the jobber. That was true in 1935 and 1936 and is still true with some exceptions. There are places where the dealers today are getting 4¢ to 4½¢ margin. There are others where they are working on a 2¢ margin or even 1¢ margin, but, generally, it is 3½¢.

Formerly when the jobber got this over-all 5½¢ margin, he usually paid out 3½¢ of it to the dealer, and retained 2¢ himself.

Even under the Iowa plan, the market leader, Standard of Indiana in this territory, still posts the tank wagon price. I think it is generally true that the other companies throughout usually follow that posting.

It does not follow from my testimony that under the Iowa plan the tank wagon price that the jobber receives from the dealer under the present contracts is affected by a variation with the tank car price as published in the Chicago Journal of Commerce and Platt's Oilgram, because at least our contracts at present are on a straight marginal basis. That is to say, if at any time the prices in these publications give the jobber less than 2¢ under the dealer prices, we will adjust the prices to that, an equivalent to 2¢ under the dealer margin. There is no split arrangement.

561 This thing under the Iowa plan is so new to me that I personally haven't any knowledge of the relationship between the posted or the published tank car prices and the dealers' prices to date. I don't know whether the dealer prices will or will not fluctuate with the tank car price.

This development I have been speaking about has come about since 1936 in the majority of the territory. The Iowa plan started in 1935 in Iowa.

562 *Cross-Examination by Mr. Donovan.*

From my experience in the oil business, I am familiar with the characteristics which distinguish an independent refining company from a so-called major refining company.

I don't think necessarily a major company could be defined strictly on the basis of crude production. It would be one factor. I think that there are other factors which, as a unit, would more clearly define a major as distinguished from an independent. Definitely it would be correct to distinguish its characteristics by saying that an independent refiner has either no investment at all, or no substantial investment, in facilities for the distribution of gasoline which he refines, as distinguished from a major. That is, it owns no bulk storage stations, and has no service stations.

I have done business with Globe Oil & Refining Company for a number of years. There are three Globe Oil & Refining companies. To the best of my knowledge it is a fact that no one of these three companies owns or controls any service station outlets. It is a fact that no one of these companies owns any bulk storage plants other than storage for their own refinery purposes. So it is very true that the Globe companies are entirely dependent upon independent jobbers for their marketing outlets. To the best of my knowledge, none of these companies own any crude production.

563 During 1935 and 1936, we were selling the product of Globe Company of Illinois and of Oklahoma, as I described. I think we started to do business with Globe in 1918 or 1920, and have conducted our business with them since that time without interruption.

My company contracts with the jobbers on certain price bases. Those contracts are underwritten by Globe Oil & Refining Company, which has the effect of requiring them o furnish the material against our contract commitment to he jobber, and also to protect us for a margin of profit, enerally ¼¢ per gallon.

By the Court

We make a commitment with the jobber to furnish this gasoline, and the Globe, by underwriting it, makes a commitment to us to furnish it to us for the account of the jobber at a price below that at which we sold them. There is no relationship between the buyer and the Globe Oil & Refining Company. The relationship is between Globe and Barber Company, and between Barber Company and the buyer.

By Mr. Donovan

By "underwritten" I don't mean the Globe guarantees the accounts of the jobbers to us.

> The Court: If Jones buys from you, and you have your accounts underwritten by Globe, wouldn't Mr. Jones have a claim against Globe if you didn't furnish it.

564 A. No.

Globe merely undertakes to deliver to us at a price less than that at which we sold the merchandise.

It is true that the major portion of this gasoline which is refined by Globe which we sell to jobbers, the jobbers sell under their own independent brand. The great proportion of the Globe gasoline that we sell is not sold under the Globe brand at all, but is sold under independent brands. The greater proportion of gasoline distributed by independent refiners is not sold by them under their own brand, but is sold under the independent brands of the independent jobbers.

It it also true, in the case of major oil companies, that they sell their gasoline under their own brands, or they sell it to jobbers who sell it under the brand of the major companies. So another characteristic of the independent refiner is that an independent refiner either does not sell any of his gasoline, or only a small part of his gasoline, under his own brand.

Barber Company markets a large proportion of the gasoline refined by the Globe of Illinois and Globe of Oklahoma. We distribute all of that gasoline to independent jobbers. But we also distribute a considerable amount of that gasoline to cooperative associations.

Those associations are associations of farmers who have collectively in certain counties established an oil job-
565 bing business, have provided facilities for receiving gasoline in tank car quantities, and facilities for the distribution of that gasoline by tank wagon to its members or any other consumer, and to dealers. They are inde-

pendent jobbing organizations. They differ, however, in that they distribute their earnings under the cooperative law generally at the end of their fiscal year.

These cooperatives to which I refer are located in the states of Illinois, Indiana and Michigan. It would not be very far off to say that we supply as much as half of the gasoline which we market for the Globe Company to these cooperatives. This gasoline, as I understand it, is not marketed under the Globe Company brand, and it may be designated by any name that the cooperatives choose to select.

Barber Company buys gasoline at times from independent refiners, and resells it to independent jobbers. When Barber Company buys and sells it in that way, it is acting as a broker. Independent brokers frequently buy gasoline direct from independent refiners. That was quite general. I cannot tell you what percentage of jobbers are buying from independents, but there are a substantial quantity of them. They can and do buy gasoline from the same independent refiners from which Barber Company buys gasoline to resell to the jobbers.

566 When Barber Company buys gasoline from an independent refiner and resells it to an independent jobber, Barber Company makes its profit by buying the gasoline at one price from the independent refiner and reselling it at a higher price to the independent jobber. In order to make that profit Barber Company has to buy the gasoline from independent refiners at a lower price than independent refiners would sell it direct to jobbers. In order for us to carry on a brokerage business, it is necessary for us to buy from a refiner at a less price than we sell it to a jobber.

I don't know if it is correct to say that whatever we make on a brokerage transaction comes out of the independent refiner. If you reduce it to the matter of the price that is paid him for the merchandise, that is correct.

So, when we are in the market for gasoline to resell to jobbers, we are never in the market for gasoline at the going market price to jobbers, but only to buy below the going price to jobbers. If we cannot get gasoline from the refiners at a price less than those refiners are selling direct to jobbers, we don't do business with them. If an independent refiner can sell his output direct to jobbers at one price, he is not going to sell it to the broker at a lower price.

567 I testified yesterday that during 1935 and 1936, I found that the volume of broker's business was declining. I said that one reason for that was because at the present time and in 1935 and 1936 jobbers became more inclined to want to know definitely where their merchandise

was coming from, and to know that it was of uniform quality. When a jobber buys from a broker, the jobber does not have such definite assurance of the source of the gasoline and of the quality, as when he deals directly. That is correct in a straight brokerage operation.

In 1934 and 1935 we bought gasoline for reselling to jobbers from the following refiners located in East Texas: Southport Petroleum Company at Kilgore; Union Refining Company at Longview; Chief Refining Company at Gladewater; Blackstone Refining Company at Overton; Solvex Refining Company at Kilgore; McMurray Refining Company at Arp; Panama Refining Company at Kilgore; Primrose Refining Company at Dallas, and Culver Refining Company at Gladewater. Primrose Refining Company, I think, has a small refinery. They also broker quantities of gasoline themselves.

We bought 96 tank cars of gasoline from those refineries in 1934. We may have bought from Ocean Refining Company, but I have no recollection of it. Those transactions are through Bradshaw.

568 We bought from Century Refining Company in 1935.

With the exception of Panhandle Refining Company, all our purchases were so entirely incidental to our operation that I have no recollection of them. With the passage of the Connally Bill, there was a considerable reduction in refining operations in Texas, but whether or not those particular refiners we bought from were unable to ship, I cannot tell you.

The Connally Act was to prevent the shipment of hot gasoline out of Texas. Based on my experience, I believe that the Connally Act was effective in preventing the shipment of hot gasoline out of Texas. There was a partial control of the shipment of hot gasoline out of Texas in the latter part of 1934 with the Federal Tender Board, but the Connally Bill seemed to be much more effective. My recollection is that that Tender Board that I speak of was effective in October and November, 1934. I think that something happened in December that made it rather ineffective.

As I recall, the first Tender Board regulations were in effect down there for 3 or 4 months. During that period, the price rose.

It is true that, after the passage of the Connally Act, the number of refineries in East Texas who had gasoline to ship out of Texas were greatly decreased.

569 Prior to the time the Connally Act went into effect, prices for gasoline were generally lower than they were afterwards.

I testified here that I have bought gasoline from Panhandle Refining Company. I bought this gasoline under contract from that company. I bought from them in 1935 and also in 1934. I recall having difficulty in getting them to supply our gasoline under that contract in 1934. I have a recollection of having had correspondence with Panhandle Company with regard to its inability to furnish us with gasoline under that contract. I do not specifically recall having written Panhandle Company in October 1934.

I have testified that beginning March 1, 1935 the price of gasoline in the Mid-Western area increased and beginning in June, 1935 it reached a level which was fairly constant until January, 1936. I also stated that beginning in January, 1936 there was a rise in the price in this Mid-Western area, and some levelling off thereafter.

Q. Is it not a fact that during this time the general trend of gasoline prices in the Mid-Western area was substantially similar to the trend of gasoline prices throughout the United States?

570 Mr. Crawford: That is objected to, if the Court please, as incompetent, irrelevant and immaterial.

The Court: Objection sustained. Exception allowed.

I am slightly familiar with the state proration laws. To my knowledge, proration laws were for the purpose of preventing waste of a natural resource. They limited the amount of oil that could be produced in any given area. I think that, prior to proration laws, there was little effort to curtail crude production.

Since March, 1935, when the Connally Act became effective, the shipment in interstate commerce of illegal gasoline has been practically eliminated.

From my own experience I know about the shipment of what is called hot gasoline, but I have not bought and sold it.

I don't think I have the same impression of hot gasoline as a lot of people do. Hot gasoline is made from crude production in excess of the allowables. Under this Federal Tender Board it was forbidden that such gasoline be shipped out of the state in which it was produced. Consequently, I can't see how any hot gasoline gets into this territory.

I do know that the condition which I have already described, connected with the existence of the Connally
571 Act, under which the Court has permitted me to say
that the shipment of illegal gasoline in interstate com-

merce has been practically eliminated, distinguishes this period from March 1st on to 1936 from any preceding period. As to whether, in my opinion, the existence of the Connally Act and its application during that period accounts, in some measure at least for the increased levelling off of prices beginning in March, 1935, I think it does have an effect. I know of no illegal gasoline that ever came into Wisconsin in 1935 and 1936, or this territory I am talking about.

I classify Globe definitely as an independent. My purchases from Bradshaw in 1935 had nothing to do with any Globe business or any of our contracts which Globe had underwritten.

I testified yesterday that 37 cars which we purchased through Bradshaw in 1935 were purchased for resale to jobbers in the open spot market. I believe I said that a number of those cars were purchased at from ½¢ to ⅝¢ below the low of the Journal of Commerce of the grade shipped. I said that the octane of this gasoline was 65, and that the Chicago Journal bracket was 63-70. I think the bracket was marked "regular" in the Journal.

Regular gasoline is synonomous with house brand gasoline. It was commonly accepted in the trade that regular or house brand gasoline was 68-70 octane, and that 65 octane gasoline would bring a lower price than regular.

572 *Redirect Examination by Mr. Lewin.*

I do not know of any regular gasoline during the period that had a higher octane than 68-70. 68-70 gasoline was the highest octane rating gasoline in that entire bracket for regular gasoline that the Chicago Journal of Commerce quoted. The Chicago Journal quotation for regular gasoline was 68-70 for that period.

Referring to the Chicago Journal of Commerce of Friday, April 26, 1935, the octane rating is for "U. S. Motor, 63-70 (regular)" gasoline. During that day the word "regular" in the trade meant 68-70 octane gasoline. The low quotation on that day for 63-70 octane gasoline was 5¼¢.

By Mr. Chaffetz

The high bracket for that would be 5⅜¢. The difference between the two is ⅛¢. I don't know whether the low grade gasoline in the bracket read would be bringing 5¼¢, and a high grade gasoline in the bracket would be bringing ⅛¢

above that, according to the Journal. I don't know how they figured this.

70 was the highest octane rating that fell into that bracket. The next highest was 69, and the next was 68. The high price in there would not necessarily be the price at which this octane gasoline should move. The way I understand it is that this minimum quotation is the price at which gasoline falling into that classification was offered according to the Chicago Journal of Commerce. The high is the price which the seller thought the product was
573 worth and wanted for it. I presume this is so, as I don't know how those figures are got up.

If I were to buy this gasoline, I would prefer the 70 octane rating. I would not expect to buy the 70 octane for the same price I bought the 63. I would not expect to pay the high for the 70 and the low for the 63. I would expect to pay lower than the low for the 63. I would expect to pay lower than the low for the 65, and actually did that through the year 1935. We were buying 65 octane gasoline for less than the low quoted in the Chicago Journal of Commerce for 63-70 gasoline, regular.

I don't personally know of any transactions moving on the spot market that moved during 1935 and 1936, at the high that is quoted there in the Chicago Journal of Commerce.

In my experience, I have not encountered a spot market price which was up to that high in the Journal of Commerce for that same gasoline. I think it is the seller's quotation, and I think he has a right to make that quotation, but I don't think he gets it in actual practice.

On cross examination, I testified to the fact that the existence of the Connally Act and its effect on hot oil being shipped in interstate commerce was an element distinguishing the period from March 1, 1935, as compared with periods prior to that time. As to whether from my experience, it was the only distinguishing element as affects
574 the price of gasoline, I think perhaps the time of the year maybe had something to do with it, the fact that the country was more optimistic at that time, and the fact that general price levels were advancing. In addition, there was some buying, naturally, to support a market. I think almost everybody was doing that buying.

My recollection could be refreshed on this subject of whether or not the buying during that period which supported the market was by any particular group.

By the Court

The factors entering into the price of gasoline in the Mid-Continent during 1935 and 1936 were these.

I think the Connally Act was a factor. I think that the time of the year had something to do with it. Jobbers generally buy gasoline in the spring. I think that the general advance in price levels of all commodities had a bearing; and I think also that the balancing of supply and demand was a factor in raising these prices. There were certain people buying gasoline, lots of people buying gasoline. This gasoline was also being purchased to some extent, so I am told, by major companies. I know nothing about the thing beyond that.

Severe weather conditions would affect the consumption. I don't recall the conditions in those years. Everyone of us knows that during some of the severe days in the
575 winter months in Wisconsin there are not many cars or trucks on the highways. That would cut down the consumption of gasoline. There is much more gasoline sold during the summer months than there is during those three winter months.

By Mr. Lewin

I don't think the season of the year that I spoke of was one of these causes of the advance of tank car prices in 1935 and in January 1936 and maintenance of that price from June, 1935 through 1935 and to the spring of 1936. Generally starting in March the season of the year had an effect on the price.

As to what I would think were the causes of holding that price up through the winter of December 1935 and January 1936, there was a crude advance in that period. In my judgment, the gasoline advance in January 1936 was primarily due to crude advance.

I think the Connally Act had an appreciable effect on those prices in the winter of 1935 and 1936. I don't think the season of the year did, though—not in the dead of winter. I don't think increased jobber demand did it. In my opinion, there was a balancing of supply and demand in that period. The business doesn't stop as soon as the winter comes.

By the Court

We had no difficulty in obtaining gasoline during the winters of 1935 and 1936 and no difficulty in obtaining gas in October, 1935.

576 ***By Mr. Lewin***

I mentioned "buying" as one factor affecting the price of gasoline. I don't think that I said that it wasn't jobber buying. I said that jobber buying at that time wouldn't be sufficiently strong enough to advance the market. However, the jobbers were buying gasoline.

I don't know whether the jobber buying would be sufficiently strong enough to keep that price up there on the level that it had been in December of 1935.

Beginning in 1935, the market was rather erratic. In March of that year, it began to advance. The advance, in my judgment, was due to a number of factors, particularly the Connally Bill, the season of the year, the general rise in commodity prices, and purchasing by various interests. As to what various interests I had in mind when I gave that answer, I had the jobbers in mind, and from certain data which I have I understood that the major companies were also buying at that period.

Q. Did you have in mind any program of buying then?

Mr. Donovan: I object to the question on the grounds that it calls for the conclusion of the witness as to whether or not there was any program, and it assumes there was one in existence, that it is pure hearsay, that the witness has answered the question and has stated the various factors that he had in

577 mind, and further, on the ground that this is cross examination of the prosecution's own witness.

Mr. Lewin: I want to refresh the recollection of this witness, if I can.

Mr. Crawford: We declare to the Court now that we are frankly surprised at the answer of this witness, and we have very good reasons for that surprise, which we will assert if permitted to do so.

The Court: Objection overruled. He may answer. Exception allowed.

A. It is my recollection that in March of that year there was a buying program, yes, sir.

Mr. Donovan: Now, I move to have that answer stricken out.

The Court: The motion is denied. Exception allowed.

Mr. Lewin: Who was conducting that buying program?

Mr. Donovan: The same objection, your Honor. He does not show that the witness knows, and it is improper, anyway, as coming from this witness, as being pure hearsay, and it is not proper redirect examination.

The Court: Objection overruled. Exception allowed. He may answer.

578 The Witness: A. I am not definitely or clearly familiar with that buying program. There was, as I recollect, a buying program in operation during the Code period, and if I also recollect correctly the Code was still in effect at that time, and the buying was being conducted by a group, the nature or details of which I am not familiar with, because we never became involved with it.

Mr. Lewin: Q. Did you testify before the grand jury that was investigating this case?

A. I did, yes.

Q. Did you testify before the grand jury on May 7, 1936?

Mr. Thomas: Just a moment. I object to this question on the ground that it is too remote in point of time. I ask the privilege of asking a preliminary question.

The Court: Very well.

Mr. Thomas: Q. When was it you testified before the grand jury?

A. As I recall, in May of 1936.

Mr. Lewin: Now, I want to know if I might be able to refresh your memory by reading you a question and answer from your grand jury testimony. Was this question—

579 Mr. Donovan: May it please the Court, I object to this upon the ground that it is an effort on the part of the counsel to impeach his own witness.

Mr. Lewin: No, no.

The Court: It is rather apparent to the Court that this witness may be just a little hostile right now.

Mr. Donovan: I respectfully object to that statement of the Court.

The Court: Well, that is the Court's impression. I am just giving you the Court's impression. You may proceed. Exception allowed.

Mr. Lewin: Q. On page 572 of that record of the grand jury proceedings for May 7, 1936, was this question put to you by counsel for the United States, and—

Mr. Donovan: If it please the Court, I must object to this mode of questioning.

Mr. Lewin: You have already done it.

Mr. Donovan: I think the proper procedure is that the counsel should show the minutes of the grand jury to the witness.

The Court: No, that is not necessary. Proceed. Exception allowed.

580 Mr. Lewin: (Reading) "Question: What about the price at which you are able to buy from independent refiners? Has that become stabilized any during the past year or two?" And did you answer: "Oh, yes, sir."

Mr. Francis: I ask the jury not to consider that question and answer because it is in no way impeaching the witness in what he said.

The Court: That seems to be consistent with what he says.

Mr. Lewin: Q. Were you asked that question before the grand jury investigating this case, and did you answer it as shown?

Mr. Thomas: I object to the use of the testimony before the grand jury because it is too remote in the point of time.

The Court: Objection overruled. Exception allowed.

The Witness: A. That question was asked, and that was my answer.

Mr. Lewin: Q. That was your answer. Was that a true answer?

Mr. Thomas: Same objection.

The Court: Overruled. Exception allowed.

The Witness: A. Yes.

581 Mr. Lewin: Q. Were you asked this question immediately following:

"Q. Did you know why that is?"

And did you answer:

"Yes, sir, because there has been a buying program inaugurated down in that territory supported by the majors."

Were you asked that question, and did you give that answer?

A. I did.

Q. Was that a correct answer?

A. To my knowledge, yes, sir.

Q. To your knowledge it was?

Mr. Donovan: Same objection as to the redirect examination of counsel. Furthermore, it appears upon the face of the answer that it could have been nothing but hearsay. However, it might have been available before the grand jury; it certainly is not proper here.

The Court: Overruled. Exception allowed.

Mr. Francis: I would like to make a motion in that connection. I would like to ask the Court to instruct the jury not to consider that question and answer because there is nothing in it that is inconsistent with what this witness has testified. It does not impeach him.

582 The Court: It does not seem to be.

Mr. Francis: It does not. He said there was buying by refiners and jobbers, and I would like the Court to instruct the jury to disregard that.

The Court: He has practically made the same statement this afternoon that he made before. Overruled. Exception allowed.

Mr. Thomas: I wish to make objection to the use of the grand jury testimony on the ground that it is too remote in point of time, it appearing this witness testified some time in May, 1936.

The Court: Objection overruled. Exception allowed.

Mr. Francis: The Court did sustain my motion?

The Court: It is apparent to the Court that his testimony this afternoon was similar in all respects to that before the grand jury, so there is nothing in the testimony before the grand jury that impeaches his testimony here this afternoon.

By Mr. Lewin

I kept pretty well informed as to the market conditions in Texas and Oklahoma during the years 1935 and 1936. My source of information was the trade publications and information sent us by J. M. Bradshaw down in the field. He was a buying agent for us. He kept us advised by the telegrams that were shown to me yesterday as to the
583 market conditions in that locality during that period.

Relying upon the information and telegrams we obtained from him, we were guided in some respects as to the price we paid for gasoline.

I have heard of the Artex Refinery in Oklahoma. I think it is a very small concern. By "very small", I would mean perhaps 1,000 or 2,000 barrel capacity.

Cross-Examination by Mr. Lawton.

I said that jobbers' prices are affected by the Journal of Commerce quotations, and that in turn the prices beyond the jobber are likewise affected. In turn the quotation of the Journal is itself affected by a rise or a fall in the market. My understanding of the way the Journal functions is that any rise in the market directly affects the Journal's prices, and then the Journal's prices directly affect other prices. I should say, ordinarily, the rise in price would come first.

It is my observation of events in the oil industry, that a rise in the tank car price of gasoline does affect the prices quoted in the Journal of Commerce.

Barber Company was not a large factor in the spot jobber market in 1935 and 1936. In 1936 we bought only 1 car. In 1935 we bought 37 cars on the spot market,
584 practically all in the space of the week of April 25th,
to May 1st. In the rest of the year, we were not purchasing in the spot market.

All of these 37 cars were 65 octane gasoline which was not what was known as regular gasoline. That quality was and is inferior to 68-70, or house brand gasoline. Gasolines of the 63 and 64 octane rating are not regular grade gasolines. I would call them intermediate grade. From general practice, I would end the third grade at 60. I would say 61 and 62, 63 and 64 are intermediate.

Many jobbers at that time used 67 octane for regular gasoline. In other words, some jobbers use 67 to 70 as regular gasoline, others use 68 to 70. By far the vast majority of majors, refiners, jobbers and brokers used 68 to 70 as regular gasoline. So far as our house brand was concerned it was 68-70. We quoted on a grade known as 67-70. That was one point lower than the octane number. 67 to 70 would not permit me to deliver a 67 octane gasoline. We sold it on its specifications. It was slightly inferior in quality to 68-70 regular, but it was better than 65. There was at some time in 1934, 1935, or 1936 a grading of gasoline used in industry known as 63-70. That was a recognized grading for the purposes of sale. Any octane from 63 on up was deliverable under that grade. So we could deliver 63, 64, or 65, if you could get the jobber
585 to accept it. We did some trading under such a restriction as 63 to 70 gasoline. Under that we delivered 68 to 70. In selling these lower octane gasolines you named your own price. Dealers never quoted a grade of gasoline of 63 to 70 to their buyers.

There was not such a grading as 63 to 70 at any time in 1935 or 1936, to my knowledge, where a refiner sold to a jobber.

I said before that there was such a grading as 63-70, but it was not used by sellers of gasoline. When I said there was such a grading, earlier in my answers, I was referring to that description or quotation in the Journal of Commerce. I am quite sure that Platt's Oilgram used 63-70.

In order to dispose of 65 octane gasoline, it was necessary, during the years 1935 and 1936, and particularly in April, 1935, that it be sold at a price under 68-70, or regular gasoline.

(Letter produced and marked Exhibit 622 for identification and handed to witness.)

Exhibit 622 for identification bears my name and signature. I wrote that letter.

> Q. Mr. Lanzer, I will call your attention to the letter I have just shown you, written on January 4, 1935, and to the following statement contained in that letter:
>
> 586 "'The established market to the trade on 65 octane motor method gasoline is one-half cent per gallon above the low price of U. S. motor 62 octane and below, as shown in the Journal of Commerce; and on 67-70 octane motor method gasoline, an alternative basis of three-quarters of a cent per gallon over the low price of U. S. motor, 62 octane and below, as shown in the Journal of Commerce, or the low price of U. S. standard 63-70 octane as shown in the Chicago Journal of Commerce, whichever is lower. We are using these prices in writing contracts with the trade, for material originating with our other sources.''

I understand the purport of what you have just read from my letter.

The relationship between the market values and the trading values of third grade gasoline, 65 octane gasoline, and 67-70 gasoline was correctly stated by me in that letter. I think those relations continued to exist throughout the year 1935 without any substantial change.

We found on branded merchandise that, throughout the year 1935, the general market price for 65 octane gasoline was ½¢ over the low for third grade gasoline as published in the Journal of Commerce upon the date of comparison. We found that the general market price for 65-70 gasoline

throughout the year 1935 was one of two things; either
587 ¾¢ above the low for third grade gasoline as published
in the Journal of Commerce, or the low of the bracket for regular gasoline published by the Journal. As to whether the low of the Journal for regular gasoline tended to be, and was substantially ¾¢ over the market for third grade, that relationship was in there some place; I don't know whether it was ¾¢. It was approximately around ¾¢. It is essentially correct that the difference in the selling value of 65 octane gasoline and 67-70 or 68-70 according to which one was used as regular, was ¼¢.

We would expect to buy 65 octane gasoline at ¼¢ over the Journal's quotation for third grade, and we would expect to sell it at ½¢ over. Our selling price for 65 was ½¢ over the low of third grade. That was general throughout the trade. As to whether the low of 67-70 or 68-70, the regular, should be ¾¢ above the low for third grade, I don't know what it should be. I know what we sold it for. The generally prevailing price was ¾¢ above the low for third grade for a 67 octane unbranded gasoline. There was generally a spread of ¼¢ between 65 octane gasoline and the low for regular gasoline on the assumption that there was ¾¢ differential in the quotations. In that vicinity, I don't know the exact differential.

588 I gave this morning our cost for the 65 octane gasoline, our selling price, and the Journal quotation for that grade. We would expect to find our cost at least ½¢ below the Journal's low for 65 grade. As to whether we would in turn sell it for about ¼¢ below the Journal's low for the 63-70 regular, that was about the way it lined up at the time.

I would say that would be a fair relationship between the worth of 63 and 65 octane gasoline, although the sale of 63 was extremely limited. I would think ¼¢ below 65 would be a fair market value. I told you that a fair price for 65 is ¼¢ under 67. Using your figures there, the difference between a low for 63 and a low for 67, using 67 and 68 synonymous for the present, would be ½¢. Then I would say this was essentially correct that, allowing for a bracket of ⅛¢ only between the high and the low for 67, it would be reasonable to find a spread of ⅝¢ between the high and the low of a bracket which included 63 and 70 gasoline.

If the quotation in the Journal of Commerce on 63-70 octane reflected the price of 63 and the price of 70, there should be ⅝¢ spread between the two prices. I would say that was true in April 1935, and throughout 1935. I think the spread between the high and the low for 63-70 regular

gasoline in the Chicago Journal of Commerce for the period from April 25 to May 1, 1935, was about ⅛¢. Based
589 purely upon our experience in the field, the Journal of Commerce quotations could not be justified on a 63 octane gasoline. I mean they were too high for a 63. The spread was too narrow. My recollection is that the spread was ⅛¢.

I told you that the difference between the low of third grade and the low of regular gasoline should be ¾¢, including 67 as a regular for the present. I did not tell you that the normal relationship between the low price of third grade gasoline and the low price of regular gasoline was ¾¢; I said that the normal relationship between the price of third grade and the price of 67 octane gasoline was ¾¢. I didn't say anything about the regular. The spread between the low of third grade and regular gasoline was generally at least ¾¢, possibly a trifle more.

(Witness examines the Chicago Journal of Commerce for several dates.)

The spread between the low of third grade gasoline and the low of 63-70 regular gasoline, as shown by the Journal of Commerce on April 27, 1935, was ¾¢; on April 29, 1935, ¾¢; on April 30, 1936, ¾¢; and on May 1, 1935, ¾¢. Those figures 63-70 came to be used in the petroleum industry as a group figure, or as an expression in August, 1934. At that time, the classifications were changed
590 in the publications. That 63-70 was a classification adopted by the Western Petroleum Refiners' Association, a Refiners' Association. The journals didn't adopt it initially.

By the Court

Before August 1934 gasoline was classified U. S. Motor below 59 octane; U. S. Motor 60-64 octane; and U. S. Motor 65 octane—not anything else that I have.

I think ethyl gasoline was placed on the market earlier than 1934.

By Mr. Lawton

I think the classification adopted in 1934 contained the word "regular" as a part of the classification. However, I don't have all my memoranda. In the memorandum of classification, just "63-70" is shown. I have no record of any classification other than 63-70 regular. Immediately upon that classification being founded, I do not know whether or not the Journal of Commerce commenced the publication of a classification 63-70.

The Journals you showed me of April, 1935, included the word "regular" as a part of their quotations. To my best recollection that had existed in the Journal for some time prior to that week. Then it continued to quote that way throughout the year 1935.

(Witness referred to documents.)

591 It continued to quote 63-70 regular gasoline in that fashion until April 20, 1936. As to whether it wasn't April 15 or 16, 1936, it may have been a day or two around in there.

At that time the same refiners' association which had made this bracket 63-70 back in 1934, now broke down that 63-70, and made two brackets of it, 63-67 and 68-70.

By looking at the Journal of Commerce for April 15, 1936, I see that the Journal quoted 63-70 octane, parenthesis regular, end of parenthesis at 6¢ to 6¼¢, a bracket of ¼¢. That bracket of ¼¢ was far smaller than the brackets that existed between the selling price of 63 and 68 gasoline, and far smaller than the bracket which existed at that time between 65 and 68.

There was no quotation 63-67 gasoline on April 15, 1936 in the Journal. On April 16, 1936 the Journal carried a quotation of 63-67 gasoline. There is also a quotation of 68-70 regular gasoline. The quotations on April 16, 1936 for 68-70 regular gasoline and on April 15 for 63-70 regular are the same price. The 63-67 gasoline on the 16th was ¼¢ less than 68-70 regular gasoline. That is the first time that appeared on those classifications. That continued for some months thereafter, and until September, 1936 at least.

There were other changes in classification made in 1937.

592 *By Mr. Hanning*

To the best of my knowledge, the classifications carried by the Oilgram were identical with the classifications carried by the Journal of Commerce as to the third-grade and as to regular gasoline in that period. In other words, they carried third-grade, 62 octane and below; and they carried 63-70 octane with the word, "regular" after it, as I remember it.

Redirect Examination by Mr. Leiwin.

In response to questions by counsel for the Chicago Journal of Commerce, Mr. Lawton, I was giving here what I thought was the proper relationship between the

spot market prices for various octane grades of gasoline. I was not attempting to vouch for or trying to testify to the accuracy of any of the Chicago Journal of Commerce quotations for any of that gasoline. I merely set forth the relationship between the grades as we have to sell them. I was asked this question also by Mr. Lawton, "From your observation and efforts in the oil industry, is it your experience that a rise in price paid for tank car gasoline would affect the prices quoted in the Journal of Commerce," and I answered, "I would say so." I did not necessarily mean by that to say that the Journal of Commerce correctly reflects any rise or fall in the tank car price. I simply stated that the
593 Journal of Commerce recorded the rise and drop in prices. I said this: If the market were advanced or declined, the advance or the decline was generally reflected in the publications.

I know of many transactions over a period of time that are made at lower prices than those quoted in the Journal of Commerce, for that grade of material. Those transactions are essentially our transactions, and it is the only thing from which I can judge the correctness of their prices.

By the Court

I have followed the actual market prices. We got those prices on the spot transactions from day to day from the seller, whatever price he would sell to us for. The lowest one was, quality considered, the source with whom we placed the business.

As to how the price we paid for it from day to day compared with the price paid for that same grade of gasoline in the Journal of Commerce, it depended on the market condition. Sometimes it was ¼¢ below those figures and sometimes a greater differential. It was at no time at the same figure; we couldn't afford to pay the Journal price.

By Mr. Lewin

We frequently sell spot gasoline at the low of the bracket in the Journal price. We frequently sell be-
594 low that Journal price. We do not sell at higher than the low of the bracket.

Spot transactions with us are generally at a price below the publication price, when we are on the selling end, and also when we are on the buying end.

By the Court

When we entered the buyers' market, we attempted to buy our gasoline at the very lowest price we could buy it, and others did the same. I have no knowledge as to what the other buyers paid for their gasoline except what I obtained from these trade journals.

Recross Examination by Mr. Lawton.

When I talk of our buying price, I am talking of our buying price as a broker. In order to do business, we must buy below the Journal's low. I know that the Journal does not include in its quotation of ruling prices any price paid by brokers.

595 A. C. BREUCH, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I am 44 and have always resided in Madison. For 18 years my occupation has been oil jobbing, which includes gasoline, oils, and accessories. Our company, Pennsylvania Oil Company of Wisconsin, incorporated in February 1919, carries on our business of jobbing gasoline in Madison and the immediate vicinity for about 50 miles. Our office is in Madison.

Last year our gallonage was about 3,250,000. Probably prior to the last 3 years our gallonage amounted to very close to 3,000,000.

We handle the third grade or competitive grade, also the regular, or what they call the refiner's house brand; and also Ethyl gasoline, which we call high test. The trade name of the third grade is Barnsdall Motor Fuel; that of the regular or house brand gasoline is B Square regular, and the brand name of the Ethyl or premium grade is Barnsdall Super Gas Ethyl. The Super Gas Ethyl and the B Square contain tetraethyl lead. The other high test gasoline I mentioned has no brand name. There is very little of it sold. The gravity specifications for these high test gasolines are about 64-66 gravity. I think about 65 is its octane rating.

596 Roughly, about 90% of our business is regular gasoline that is, B Square. About 3% is the third grade, or Barnsdall Motor Fuel, and 7% is the Ethyl or premium.

$450,000 is approximately the amount of capital we have invested in this business. That is a smaller capitalization than formerly.

Our plant and equipment cost about $250,000. We have 2 bulk plants in Madison, and 1 in Barneveld. These consist of tanks of 20,000 gallons capacity and 11,000 capacity, those two. We get our gasoline in tank cars. It is brought by rail, or partly rail and pipe line, to Madison where we put it in these tanks. There is no pipe line into Madison. From there we put it into our tank trucks and haul it to customers, to service stations, to dealer accounts, and also consumer accounts.

I think it is the Great Lakes pipe line, I referred to, that comes into Chicago. I understand that starts down in the Mid-Continent field, but I really don't know. I do know the northern terminus is about Chicago; the neighborhood of Chicago is where our gasoline is sometimes billed from.

Our gasoline in the last 5 years has come from either Barnsdall, Oklahoma; Okmulgee, Oklahoma; or from Wichita, Kansas. Not much has come from that refinery, or from the pipe line. When it comes by pipe line it comes from some point near Chicago.

597 We own 5 service stations. 3 are located in Madison; 1 is out of town; and 1 is at Barneveld in the country. At present, our company is operating 2 of those owned stations. We have leased the other 3 to some of our old service station employees. We sell gasoline to these men who have those 3 leased stations.

We do business with about 14 other independent retail dealers or service stations in Madison. I don't know how many retail service stations we do business with outside of Madison. We have about 50 dealers accounts. Some of those persons might have a number of stations.

In addition to selling to dealers, we sell to consumers. We sell to fairly large consumers direct, and deliver to them from our tank trucks. About 50% of our gasoline we sell to dealers. That leaves 50% that we sell either through the 2 service stations that we operate, or direct to the consumer.

I hardly know how to describe a normal service station price today. Before the Iowa plan went in, of course, Standard Oil Company of Indiana had always set the retail prices; that is, they were the aggressors, and the rest of the stations followed. Therefore, we had to post that price in the service station. There was a posted service station price which could be put on any ordinary piece of

stationery, but the price of the gasoline to the retail
598 trade had to be posted at those service stations. We have always followed Standard of Indiana in that posting. I believe that has been true of the business in this general vicinity.

A normal service station price is where there are no price cuts in that immediate vicinity. It is to be contrasted with a "subnormal" price. If we had, for instance, a sub-normal market in Madison, there would probably be a price cut in here. The service station margin—that is, our over-all margin to the jobber—has been 5½¢ in normal times. If there was a price cut in Madison, the margin would, of course, be less than 5½¢. By price cut I mean a price war. That is what usually happens to make a sub-normal market. When there is no price war going on, the price that is posted is regarded as the normal service station price.

By the Court

When a price war is on, the jobber usually suffers the loss. If a jobber is on contract, he is on protection.

By Mr. Lewin

He gets some protection from his refiner in a case of that kind. Whether he gets full protection or part protection depends on what his contract reads. He may get full, and he may get part. I don't know which he usually gets.

599 Our over-all jobber margin is 5½¢. It would be 5½¢ if we operated our own service stations, that is, if we sold it at our own service stations, which we hired men for and who just work for us on a salary. However, the jobbers have leased out most of the service stations today, as this Iowa plan has done; and our margin, therefore, is 2¢ a gallon, because the service station operator gets his 3½¢ margin.

The "margin" is the difference between the price that we pay for a gallon of gasoline and the price at which it is sold to the public. It includes the 2¢ we get, and the 3½¢ the dealer gets.

That over-all margin includes everything we get. Out of that we have to defray our expenses; we cannot put it all in our pocket as profit. Out of the 2¢ margin today, we would have to pay all our business overhead, all of our salaries, our equipment, repairs to equipment, taxes, insurance, interest, in fact, any overhead that applies to any business. Then, after we have paid out those expenses, what we have left out of that 2¢, if anything, would be profit.

Dealer margin is the difference between what we sell the dealer the gas for and what he is able to sell it to the consumer for. Out of that margin he has to pay his 600 expenses. If he owns his own service station, he, of course, has to pay the taxes and interest, if any, his own salary, and his help. If it is a leased service station, he will probably have to pay his rent; he would also have to pay his help.

Spot market is supposed to be the price for which we can buy gasoline on the open market. It is supposed to be an open market price. That is what I would call a spot market. "Open" would mean if you were not under a contract. I would distinguish spot market from contract market.

When we were on spot market we usually had our regular source of supply. You would usually send in your orders ahead of time, probably 30 days ahead of time—you can pretty well anticipate—and on the dates you specified for that month's shipment the cars moved.

I suppose those independent refiners from whom you can buy on the spot market at times are in any of the oil fields, but the only ones we ever did business with are in Oklahoma, that is, in the Group 3 area. They are located down there in the oil fields so that their crude will be accessible, and not up here near the consuming markets.

Most of them have no pipe lines to gather the crude; they usually buy their own crude. That means, then, that most of these small independent refiners who sell on the spot market have located themselves down there 601 near the crude supply. Then, when they sell on the spot market, they usually ship their gasoline by tank car. I haven't heard of one who uses pipe lines for that.

We subscribe to and receive the Chicago Journal of Commerce every day.

There are always two quotations, I believe. I guess both of them are supposed to be prices for which gasoline is sold on that particular day, or the day before. I don't know how they work that, but they are supposed to be on sales, as I understand. I mean to say that for each grade that is quoted in the Chicago Journal of Commerce you have a high quotation for that grade and a low quotation for that grade. To find the average spot market quotations carried in the Journal you add the high quotation and the low quotation for that grade and divide by two, and that would give you the average of the spot market quotation for that grade in the Journal.

We bought our gasoline under contract from Mid-Continent Petroleum Corporation, a defendant in this case, in the years prior to 1933.

We started doing business with Barnsdall Refineries, Inc. in 1933. Between June 15 and 19, 1934 I stopped doing business with that company, and started doing business with Barnsdall Oil Company. On May 31, 1935 we ceased doing business with Barnsdall Oil Company, and started doing business with Barnsdall Refining Cor-
602 poration, with whom we have since done business, and which is a defendant in this case.

By the Court

Our contract with that company was dated June 1, 1935. We are continuing to operate on that same contract, drawn in 1933, by one of the predecessors of the present company.

By Mr. Lewin

The Barnsdall Refining Corporation invoices shipments to us. We order from the refinery about the 20th of every month for the next month's supply; and then we specify the dates. In the summertime, of course, we order much more than we do in the wintertime; but the order will probably run from 15 or 20 or 40 cars a month. That was our practice in 1935 and 1936; it always has been.

Invoices come through the mail. I haven't any here with me. As to a description of these invoices, there is an invoice number, the date of the invoice, the shipping point, the routing, and the description of the gasoline; the car number, the capacity of the car, degrees of temperature, the price, and showing the tax, also separately.

By the Court

My estimate of the difference between the amount of gasoline we sell during December, January and Feb-
603 ruary, and other months of the year, the summer months, for instance would be probably 40 to 50% less in the wintertime. There is a falling off in the sales during the winter months. This is because people don't drive as much in the wintertime as they do in the summer.

By Mr. Lewin

Part of that contract that you have handed to me is typewritten, and part of it is printed.

(Document, being contract referred to received in evidence as EXHIBIT 623.)

Mr. E. B. Reeser, a defendant in this case, is the president of Barnsdall Refining Corporation. We did business with him while he was connected with Barnsdall Oil Company. I always thought, when we did business with him, that he was an officer of the company, and did business on that basis. I would not want to say whether or not he was the president of Barnsdall Oil Company because I don't know definitely. E. B. Reeser is an officer of Barnsdall Refineries, Inc. We did business with him on the assumption he was an officer of Barnsdall Refineries, Inc.

By the Court

I can tell by looking at the signature on the contract, who the representative who acted for the company with us in our business transactions was. The signature under Barnsdall Refinery, Incorporated, is by Mr. E. B. Reeser, the president of Barnsdall Refineries, Inc.

604 *By Mr. Lewin*

That is the original contract. I don't know if there was any change in his official position with the next Barnsdall Oil Company. I know that he is president of the company we are now doing business with, Barnsdall Refining Company. Before we did that business we had been doing business with Barnsdall Companies; Mr. Reeser was active in that business, and we have done business with him.

That is a standard form of contract, I imagine. I did not have anything to do with printing that form. It was on there, and presented to me when the negotiations for the contract were entered into. I did not make any changes in that printed form at all.

(Witness then explained the price provisions of the printed supply contract, Exhibit 623, which explanation is here omitted because such contract provisions speak for themselves.)

There has been a change in the differential between Super Gas Ethyl and regular.

Even when that protection feature is operated the price we pay Barnsdall Refining Corporation is directly tied up with the spot market quotations as published in the Chicago Journal of Commerce. When the Journal quotations for the spot market gasoline goes up, our invoices go up, and we pay out of our pockets that much more money to Barnsdall Refining Company. If the Journal
605 nal quotations go down, our billings go down, and

the money we pay out of our pockets to Barnsdall Refining Corporation also goes down.

The tank car prices as published in the Journal of Commerce affected the price at which our gasoline was sold to the consuming trade. If the price in the Journal for spot market gasoline went up, I would not say the retail price went up exactly at that time, but it eventually went up. And if the price in the Journal should go down, the retail price would come down.

By the Court

As to what regulates the price the consumer pays at the filling station, I would say it depends entirely on the Chicago Journal of Commerce quotations. Thus, the consumer price at the pump has to go up to correspond to this 5½¢ margin.

Mr. Lewin: Q. Now, have you been satisfied with that contract with the Barnsdall Company that I have offered in evidence?

A. No, sir.

Q. Have you been satisfied with the price arrangements in that contract?

Mr. Donovan: I object whether he is satisfied or not. None of us are ever satisfied.

There is a provision in that contract by which we may terminate it at the end of 5 years. Mr. Reeser has
606 given us privilege of cancelling on different conditions.

The chief thing in our business by which we can determine whether we can make money on gasoline is the margin. By the "margin", I mean the difference between what we pay for our gasoline under the contract and what we can sell it for. I believe there is nothing else that approaches that in importance, and of course, the reasonable overhead.

The retail prices during 1935 and 1936 varied at about 5½¢ above the tank car price as published in the journals.

I complained to several people in the Barnsdall Refining Corporation, one of whom was Mr. E. B. Reeser. One conversation with him was about 2 years ago, about Christmas time. I have complained at other times.

Q. Now, will you state for the jury the substance of Mr. Reeser's remarks to you on that subject.

Mr. Donovan: I object to that, if the Court please, being hearsay and improper and being an attempt to have this evidence adduced as against these defendants not made in the course of the alleged conspiracy, being a narration of a past event, and certainly not in furtherance of the conspiracy.

607 Mr. Lewin: Your Honor, one of the allegations of the indictment we are trying here is that these contracts were uniform and that money was exacted from the jobber. This is certainly a conversation of one of the defendants with this witness and certainly admissible against him, at least.

The Court: Objection overruled. He may answer. Exception allowed.

Mr. Donovan: May I ask the Court to instruct the jury that, if admitted, it shall not be considered as evidence against any of these defendants, excepting the person named.

Mr. Lewin: And the company. I am agreeable to that.

The Court: Yes, for the time being.

A year ago last Christmas, in Tulsa, Oklahoma, Mr. Reeser told me in substance, "I know that you can't make money on a 5½¢ margin. However, I can't do anything for you. If better contracts are written, we will be glad to write you a better contract." I don't believe he said better contracts were written by him.

To follow that up and find that there are better contracts written is a pretty hard thing to do. I know in my own mind from conversations with other jobbers there are better contracts, but I can't say that definitely,

608 because I never saw a better contract.

I subscribed to the Chicago Journal of Commerce. I make use of that in my business. The invoices that I have described contain on their face the basic price as of the date of that invoice. I have our office compare that basic price as appears on our invoice when we receive it with the quotations in the Chicago Journal of Commerce to see whether they compare to that average on the B Square, and in the case of the low, to see whether they compare on the low. That check is made from day to day.

We keep a record in our files of those clippings from the Chicago Journal of Commerce, showing price quotations and our invoices, to show that comparison. At your request I made a study of those records to see whether there were any changes in those basic prices as compared in our invoices for 1933, 1934, 1935 and 1936. I have that here.

Mr. Donovan: I object to any comparison between two periods.

The Court: Objection overruled. Exception allowed.

I have the records here from January, 1933, the time that we started on our contracts with Barnsdall.

There were 4 changes in February, 1933 in the basic prices which have been checked against the quotations in the Chicago Journal of Commerce; 6 in March; 7 in
609 April; 4 in May; 13 in June; 6 in July; 7 in August; 16 in September; 7 in October; 2 in November; and 2 in December; or a total of 74 for the year of 1933.

The grade of gasoline is regular only. There were 12 changes in January, 1934; 11 in February; 6 in March; 10 in April; 7 in May; 5 in June; 1 in July; 9 in October; 6 in November; 5 in December; or a total of 72 changes during the year 1934.

There were 4 changes in January, 1935; 1 in February; 6 in March; 5 in April; 3 in May, and 1 in June. These changes were all up. There were no changes from June 6, 1935 until January 13, 1936. That is the way my records show. The prices were absolutely level and uniform.

By the Court

I mean the prices as quoted in the Chicago Journal of Commerce were uniform. Our price was uniform.

From June 6, 1935 until January 13, 1936, we paid the average of between 5⅝¢ to 5¾¢ for regular gasoline.

By Mr. Lewin

In January, 1936, there were 5 changes, and all of them were up. As to the total raise in price in January, 1936 from the low to the high, they changed from 5¾¢ to 6⅛¢ in the low bracket, and from 5⅞¢ to 6¼¢ in the high bracket.

610 In February, 1936, there were 2 changes. Both of those were down. As to the amount of the total drop, the high quotation on regular stayed the same, 6¼¢, and the low dropped to 5⅞¢. On February 27th, there was a change from the one previously in February, down to 5⅞¢ to 6¼¢; that was ⅛¢ change down. That is the last change in February. The change in the average as a result of the first drop is 1/16¢. You have 1/16¢ plus 1/16¢ or ⅛¢, in the average, change down in February.

The prices changed again on March 4th. The average went up 1/16¢. There were no further changes in March or April, 1936. There was 1 change on May 27, 1936 the high dropped ⅛¢.

I appeared before the grand jury that was investigating this case in the first part of May, 1936.

There was no change in June or July. There were 3 changes in August. The total amount of that change was 5⅞¢ down to 5¾¢ on the low quotation, and from 6⅛¢ to 6¢ on the high quotation. In September there were 3 changes down. In October, there was 1 change, ⅛¢ rise on the low quotation. In November, 1936 there was 1 change down ⅛¢ on the low, and the high also changed. On October 10, 1936 the low was 5⅝¢, the high 5¾¢; on November 14, 1936 the low was 5¾¢ and the high 5⅞¢.

611 From March 1 to June 6, 1935 the trend of prices published in the Chicago Journal of Commerce and of prices that I paid was upward. That was a steady rise. The trend of the prices after June 6, 1935 on through the rest of the year was steady; they were the same, all on a level. The general trend of prices in January, 1936 was up.

The general trend of prices after January, 1936 and down to May, 1936 was down. I told you about some changes down in February, and a change up again in March. There were two drops in February. The price would run level to a little drop in February, and that drop is recovered. And then the prices continued on a level through the rest of March, through April and to May 27th. Then there is a drop in May 1936, and then not much drop until you get to August 1936, and then you begin getting some drops off.

The trend of third grade prices would not be substantially different; they are somewhat the same. I would say the price for the third grade, based on the low of the Chicago Journal of Commerce for third-grade gasoline, varied in about the same way throughout that period, and held steady in about the same way during those periods.

612 *Cross-Examination by Mr. Donovan.*

At the time of this contract (Exhibit 623) I purchased the interest of a partner, and I had several bank loans. Barnsdall Refineries, Inc. loaned me enough money to do that; that is the part of the financial contract. That was all part of the contract that I entered into with them.

I said that now we were doing a business of about 3,250,-

000 gallons a year. Besides gasoline, we sell oils, greases and accessories, such as tires and batteries. As I recall, I think our business was very close to 20% accessories, and 80% gasoline.

I don't want to say that conditions were the same in 1933 and 1934 as they were in 1935 and 1936.

Q. Now, I am going to ask you to go back to the conditions that existed at that time. Don't you know as a fact that all commodity prices were going down in that period of 1933?

Mr. Lewin: That is objected to.

Mr. Donovan: If it please the Court—

The Court: Objection sustained. Exception allowed.

Mr. Donovan: But it is very important as bearing upon conditions at that time, your Honor. What
613 this witness has been permitted to testify to under the questioning of counsel is this—

The Court: He has just testified to the rise and drop in the price of gasoline.

Mr. Donovan: And we objected unless it was shown that there was some standard of comparison, and unless it was shown that conditions were similar or the same. Now, it is a matter of real unfairness to these defendants, and of absolute injustice, your Honor, if as a result of this questioning we are not permitted to show exactly what those conditions were, because—

The Court: Just what conditions have you in mind?

Mr. Donovan: I have in mind exactly this: I want to show from this witness, because I am sure he will be able to testify, that at the period that he has testified to, in 1933 and 1934, that there was a general depressed condition of the country; that there was a bank holiday; that banks were being closed; that conditions got so bad that it was necessary for the Government to intervene—

The Court: Now, this man testified just as to the rise and fall in the prices of gasoline.

614 Mr. Lewin: That is right.

The Court: Now, that is all. Just confine your cross-examination to that.

Mr. Donovan: This man testified to a change that occurred, and to a series of changes that occurred;

and then he said that when it came to '35 and to '36, that there was a levelling off. Are we not going to be permitted to explain to this jury, so that they will comprehend the reasons for that?

The Court: You may on your defense, perhaps, but on cross-examination of this witness—he has testified simply to the fact that prices went up and down. Now, I don't know whether he knows the causes or not. If he does—

Mr. Donovan: Then all I want to ask is if he knows.

The Court: He hasn't testified as to the causes, or have you?

The Witness: No, sir.

Mr. Donovan: But isn't he permitted to testify what the causes were?

The Court: No.

Mr. Chaffetz: And he did not purport to state the
615 causes; and I am sure that if we asked the witness what the causes were after the time of the indictment, objection would be raised, and we would be told that the witness doesn't know of his own knowledge. That is the same situation we ran into with Mr. Lanzer.

The Court: Well, the objection to that type of cross-examination will be sustained. Exception allowed.

Mr. Donovan: Well, your Honor, I don't want to do anything that will be objectionable to your Honor, but shall I proceed with the form of my question, and each question, and have your Honor rule; or am I to consider that your Honor has now ruled that I will not be permitted to ask this witness if he knew of specific conditions that were in existence at the time that these specific changes were made and noted by him in gasoline prices?

The Court: This witness hasn't testified as to the cause of that fluctuation, so don't go any further with that. Exception allowed.

Mr. Donovan: Well, I want to have a ruling—

The Court: You may later, on your defensive
616 matter, go into that and show the causes; but that isn't proper cross-examination of this witness.

It is true that I was able to buy gasoline more cheaply in the period of 1933, 1934, 1935 and 1936 than I had ever done in my experience of 18 years in the gasoline and oil business. It was down as low at that time, in 1933, as 1⅞¢ per gallon or very close to it. I know that during that period refineries were closing down. During 1933 and 1934, there were a great many price wars through this territory, and I think that stabilization meetings were held in these local communities to try to settle them.

Q. And that the Government had set up these stabilization committees to deal with them?

Mr. Lewin: That is objected to.

Mr. Crawford: That is the very thing that the Court has said that counsel may not go into, except on direct examination.

The Court: Yes, objection sustained. Exception allowed.

I believe that during the period 1933 and 1934 the prices of all commodities were going down.

When you come to 1935 and 1936, you find a different condition; you find that there was an increased consumption of gasoline over 1933 and 1934.

617 I know what conditions are in other parts of the country. I know that the winters in other parts of the country aren't as severe as here. It is true that even though the consumption of gasoline may be low in Wisconsin, it may be high at the same time in other parts of the country.

I believe that production in certain of the oil states is regulated in accordance with consumptive demand. I believe that the consumptive demand in the winter of 1935 and 1936 was higher than the consumptive demand in the winter of 1934 and 1935 in Wisconsin. I do not know how much more.

Q. Now, also in '35 and '36, you know, do you not, that the price of wholesale dairy products increased, don't you?

Mr. Crawford: That is objected to as incompetent, irrelevant and immaterial; not proper cross-examination. Aside from not being proper cross-examination—

The Court: Objection sustained. Exception allowed.

In addition to selling to jobbers, we also sold to farmers, during the period beginning in 1933 and continuing to date. We sold to farmers at 1½¢ above the dealer price. We don't sell a great volume to farmers. We sold to farmers in lots of 50 gallons at a time.

618 We also sold to industrial plants direct. It seems to me that around 40% of our business is sales to these industrial concerns, to farmers, to large trucking accounts, and to such other accounts, large consumers as distinct from our jobbing business. The margin to our industrial concerns is 2¢, and to our farmers it is 1½¢ above the dealer's price, which would make a total of 3½¢. That was 2¢ less per gallon than the price that the farmer would pay, at the filling station.

By Mr. Francis

On that part of those total sales that we make to dealers, I said we let our dealers or retail service station man have 3½¢ out of our 5½¢ commission.

There was a time when the dealer got 3¢. Just what date I don't recall. When he got 3¢, we got 2¢. And then the dealer got 3½¢, and we still made 2¢ on that business. 50% of our total volume is sold to these dealer accounts under which the dealer gets 3¢ for part of the time and 3½¢ for the other, and we got the other 2¢. A very substantial percentage of the other half of our volume is sold to a class of customers under which we get a larger margin than 2¢.

At the two stations which we operate we get a full 5½¢. However, we have to take the overhead of the service station.

619 The farmer pays tank wagon prices, 1½¢ above our dealer's tank wagon price. That would be 3½¢ we would make on that volume of business in some instances. We have a great share of the farm business up at Barneveld and there we have a man strictly on a commission basis who hauls our gasoline.

In that class of business, there are places where we make a larger per cent than this differential of 2¢ which exists in these non-owned service station accounts.

There are quite a few commercial consumers' accounts that we handle, in which we make a larger commission than 2¢, that is delivered at tank wagon price. They get the same price as dealers provided they use 1,000 gallons a month. But if they don't use 1,000 a month, we charge them 1½¢ more than the dealer's tank wagon price. On that volume of commercial business we make 3½¢ instead of 2¢. There is quite a considerable amount of business done that way.

In handling branded quality gasoline at service stations, we figure we attract a lot of persons to these stations who buy gasoline who will also buy oils, greases and accessories. Of course there is a substantial profit in our oil, grease and accessory business which is separate and distinct from the profit made in gasoline, but which goes right along with it under our contract. But I have never made a study to find out how many tenths of a cent a gallon it would mean.

620 *Redirect Examination by Mr. Lewin.*

When I was talking about profits in answer to Mr. Francis' question, I was talking about just gross margin on this gasoline business. Our expenses come out of that.

Cross-Examination by Mr. Lawton.

There is a drop in the tank car price in September. Generally in the 10 states, you reach a consumption peak of gasoline in the month of August, about Labor Day, ordinarily, although September in Wisconsin is considered one of the best months of the year. Gasoline consumption declines around that time.

Redirect Examination by Mr. Lewin.

You can't call Labor Day the peak of the consumption season. That is a change. From that time on business usually drops off. The price in 1936 would drop off a little in September. You do not get a peak in the consumption for November, 1936; you get a decline in consumption. It was after Labor Day in 1935 that we looked for and there was a decline in the consuming season. The last change in the Chicago Journal of Commerce prices in June, 1935 was 5⅝¢ to 5¾¢. So that price carried through all the way to January 13, 1936. There was not any decline after Labor Day in that year in those prices.

621 **HARRY FEE**, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have lived in Waterloo, Iowa, for 47 years. I am an oil jobber. I have a company entirely my own, the Harry Fee Oil Company. That company has operated as an oil jobber the greater part of at least 12 years. I have a bulk plant in Waterloo with total capacity of 30,000 gallons. My capital investment in the oil business, including property, trucks, and everything, is $65,000.

My volume of gasoline for 1935 was about 250,000 gallons. We paid taxes in 1936 on 306,000 gallons. 90% or more of all the gasoline that we sold in those 2 years was so-called regular or house brand gasoline. I operate 3 retail service stations. I own 2, and lease 1 from Socony-Vacuum Oil Company. I had 1 independent dealer account in 1935 and 1936.

My source of supply of gasoline was Kanotex Refining Company in the early part of 1935; after that, in 1935 and 1936, it was Socony-Vacuum, White Eagle Division. I entered into a contract with Socony-Vacuum Oil Company, White Eagle, about June 1, 1935 for the supply of gasoline to me.

Kanotex Refining Company has only a refinery at Ar-
kansas City, Kansas, and no service stations. I de-
622 scribe it as an independent refiner. I did not sell the
Kanotex gasoline direct under my own brand name;
I sold it under the Dixie brand.

I ceased doing business with Kanotex and took a contract with Socony-Vacuum, because of the fact that in 1935 an advertising campaign was trying to be put on by Dixie Distributors, and there were many of those fellows living in small towns who did not want to spend their share of the advertising. For that reason, I felt I should have a national brand on account of public acceptance.

The gasoline I purchased from Socony-Vacuum had been shipped to me from Augusta, Kansas. I think it has all been bought from Augusta in 1936.

I have here a copy of my contract with Socony-Vacuum Oil Company, Inc., dated May 24, 1935. That contract was in effect until sometime in November, 1935.

(Contract referred to received in evidence as EXHIBIT 624.)

I have here a copy of a subsequent contract between me and Socony-Vacuum Oil Company, Inc., dated November 19, 1935.

(Contract referred to received in evidence as EXHIBIT 625.)

The first contract, Exhibit 624, was a split contract,
whereby they assumed half of anything under a 5½¢
623 margin, and I assumed the other half of the differ-
ential. The basic price provision in the contract was
the average of averages of the Chicago Journal of Commerce and Platt's Oilgram, Tulsa edition.

About July 1, 1935, the Chain Store Tax Bill became effective in Iowa. It then became a custom there for the various companies to re-write their contracts. While our contract hadn't expired, they asked me to write or to sign a new one, which I did.

The price provisions of both contracts were not alike. The second contract was based upon tank wagon price, which was 2¢ a gallon less than service station price, or a 3½¢ split contract. When the Iowa Plan was adopted in Iowa, the Standard Oil Company of Indiana ceased to post a service station price for that state. In the first place, they posted a tank wagon price, at which they sold 1½¢ under; and later, as I remember, they posted what was called a dealer tank wagon price, which was 1½¢ under normal tank wagon price, which gave the dealer a 3½¢ margin. I mean that there was a difference in contracts of 5½¢ to 3½¢. Then, later on, when the dealer tank wagon came in, the new contracts that were written upon that were based upon dealer tank wagon, and not upon consumer tank wagon. In other words, where originally you had a 5½¢ margin under a dealer tank wagon price, you then had a 3½¢ margin under a consumer tank wagon,
and 2¢ under a dealer tank wagon. When I talk about
624 a service station price, I refer to the price to the con-
sumer.

I mentioned two types of tank wagon prices. There is what they call a consumer tank wagon price, where the purchaser takes delivery in tank truck quantities, but not more than 1,000 gallons a month. That price is usually 2¢ below the normal service station price, or 1½¢ above the dealer tank wagon price.

So, we have this situation: We have a service station price, and then, 2¢ below that we have a consumer tank wagon price.

Assuming that a wholesale grocer operates 8 or 10 trucks, he buys his gasoline either through the service station, or has a pump and a tank. If he buys it and supplies his own pump and tank, or the company supplies it, he buys that off the tank wagon. If he buys less than 1,000 gallons a month, in Iowa, he pays consumer tank wagon. If he buys 1,000 gallons or more per month, he receives an additional 1½¢, or dealer tank wagon price.

Then we deliver to the fellow that is running the corner filling station; with him, we use the expression "dealer tank wagon price". When we are delivering to this wholesale grocer who has his own tanks near his garage, we refer to the price at which he buys as a consumer's tank wagon price. But if he buys 1000 gallons or more per month, he gets the same price as the dealer tank wagon.

625 Prior to the inauguration of the so-called Iowa Plan in our state, Standard Oil Company of Indiana used to post publicly a so-called normal retail service station price. With the adoption of that Iowa Plan, Standard Oil Company of Indiana turned its retail stations over to its dealers under lease and discontinued the posting of normal retail service station prices. It thereafter posted a consumer tank wagon price. The consumer tank wagon price which Standard Oil Company of Indiana posted was normally about 2¢ below the retail price that it formerly posted.

The retail price that it formerly posted bore approximately a 5½¢ differential to the published tank car market, after adding the cost of the gasoline at the refinery as indicated in the published market journal, plus the tax, plus the freight, or laid in tank car price. Of that gross jobber margin of 5½¢, 3½¢ was allowed to the person operating the service station, leaving the jobber a balance roughly of 2¢.

When the Iowa Plan was adopted, and the Standard Oil Company of Indiana published a tank wagon price instead of a retail price, I testified that that made our gross margin 3½¢ on consumer tank wagon business instead of 5½¢ on business done through the service stations. Our margin in our business with dealers was not affected at all. We
626 continued to allow our dealer 3½¢. We retained 2¢ gross over all margin to cover all our operations.

(The witness then explained the price provisions of his contract, Exhibit 625, which explanation is omitted because such provisions speak for themselves.)

The actual spread between the retail price and the tank car price during that period when I was operating under the May, 1935 contract depended entirely upon the price posted by Standard Oil Company of Indiana. The normal spread between the retail price and the tank car price would be roughly 5½¢.

During 1935, there was a gradual increase of tank car prices on through to some time in June, I would imagine, and there it leveled out and stayed about the same price. There might have been a very slight fluctuation in the market.

The retail price was advanced at times, and at other times it was not advanced, as the tank car price went up. The trend of the retail price was up, of course. When there was a raise in the tank car price, the retail price did not always rise at the same time. The retail price at times advanced, but it advanced by 3/10¢ in each advance. It didn't advance ⅛¢ or ¼¢, but it was advanced 3/10¢ on each advance. When there was a rise in the tank car price, if it was less than 3/10¢ that rise wasn't reflected in the retail price. But when the increase in the tank car 627 price did total 3/10¢ or more, then my experience was that the retail price went up. It didn't advance until there was 3/10¢ in differential between the laid-in cost and the 5½¢.

We followed the market maker's price. If the tank car price and the retail price both went up at the same time, I paid more for my gasoline, and obtained more for it by passing on to the consumer any increase to me. If the price was raised to me, it was raised to the dealer, provided the market maker raised.

We couldn't pass any part of the increased cost on to the consumer until the market maker did. So that for any increased cost that I had to pay to the supplier when the tank car price was raised, as reflected in the market journals, unless the retail price went up at the same time and to the same extent on a split contract, the refinery assumed half of it. We assumed the difference.

In 1935 the retail price didn't always go up when the tank car price went up. There were periods when the retail price did not go up with the tank car price, and we had to bear some additional cost that we couldn't pass on to our consumers, because of the fact that the price was never advanced less than 3/10¢, and whenever the tank car price was advanced less than 3/10¢, we had to stand our share of that. The split provision would be operating, but we 628 would have to stand the difference. But we were splitting the difference; we stood it then, however. Then we were in a situation where the retail price had not risen to a price 5½¢ above the tank car price. During 1935 we were always on an up-grade market, and would have to assume the difference between 5½¢ and actual margin. We had such a market during part of 1935, and the dealer market was on the up-grade. Of course we were asking our supplier for more margin; I think everybody did that.

By the Court

Assuming that in my business I lost $10,000 in one year, under my contract, I assumed half of that and my supplier assumed a half. Under the term of my contract, as to whether I could make up that $5,000 loss, the top was open, but the spread was never great enough so we would exceed a 5½¢ margin. Only once, I believe in 1936, for a few days we exceeded the 5½¢ margin and that was due to a drop in the tank car market, when they did not drop the dealer tank wagon or the consumer tank wagon price in that particular time.

During the life of my contract I suffered some small amounts of loss where I had to bear half of it. There was no time where the market fluctuations under my contract permitted me to recover that loss in 1935 or 1936, that I remember, because of the fact that it was an up-grade market. If it had been a down-grade market, we might
629 have been able to make a little profit.

But there was a provision in our contract which permitted us to make up that loss if the market was higher and there was more spread, but we were operating and purely following the market maker's price. We couldn't over sell the market maker.

I think there was a provision in the first contract on the 5½¢ that we would adhere to the market maker's price. It was generally understood in the industry that there was a market to follow.

By Mr. Chaffetz

I discussed the question of obtaining a more favorable contract during the years 1935 and 1936 with several representatives of Socony-Vacuum Oil Company. I discussed it with Ray Mering of the Kansas City office. I used to consider he was vice president of the White Eagle. I don't know whether he is now or not. I presume this was when he was assistant to Mr. Marcel. I don't know. White Eagle is a division of Socony-Vacuum Oil Company. I talked to him in 1935 and 1936.

Q. What was the nature of your conversation with him in 1935?

Mr. Donovan: I object to that question, your Honor, on the same grounds that I have made an objection to such conversations with any representa-
630 tives of these companies by these jobbers; more particularly being hearsay and does not relate to any issue involved in this case; that it is not a matter in furtherance of any alleged conspiracy or any act done in furtherance of any conspiracy; and for those reasons cannot be taken as evidence against any of these defendants, excepting the person making the statement.

Mr. Chaffetz: I have no objection to the jury being instructed to regard this statement as being binding only on the person making it and his company, the Socony-Vacuum Oil Company, which is a defendant here.

The Court: That is the only way in which it will be received, only on that basis. Objection overruled. Exception allowed.

The Court: What this witness may say will have no bearing, of course, on any of the defendants, except Socony-Vacuum Oil Company and the man making the statement.

I asked Mr. Mering if it was possible to get an increase in margin. He said they only had the one contract. He couldn't see how they could increase the margins, but that if later on there was an increase in margins, he would be one of the first ones to give us the increase in margin regardless of the length of contract. Mr. Mering told me
631 at that time there wasn't any better contract available. In other words, he meant by that if our contract was dated on November 19, and there was a better contract available, I presume, from his company or any other company, before that contract expired, he would give us another contract.

Mr. Fred Elliot was the man with whom I signed the contract, and he is the man with whom I signed the second contract. At that time he was working out of the St. Paul, which is under the Kansas City office. He was assistant to Mr. Halverson over there, and I presume he would be classified as assistant manager at the St. Paul office. I had a conversation with him.

Mr. Chaffetz: Q. Can you give us the substance of such conversation?

Mr. Donovan: May the record show that the same objection I made to the other question relating to a conversation with any representative of the company is objected to?

The Court: Objection overruled. Exception allowed.

At the time I was negotiating for this contract, I asked Mr. Elliott for a better contract, and he informed me that that was the standard contract, and the only contract that was being written by the St. Paul office.

632 I never bought or sold any so-called hot oil that I know of.

I am a member of the former Iowa Petroleum Association, and the new Association which is being formed in there, called the Iowa Independent Oilman's Association, and the National Oil Marketers Association.

No cross-examination.

633 OSCAR L. PETERSON, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I reside in Evanston, Illinois. My place of business is Chicago. I am vice-president and financially interested in George C. Peterson Company, a corporation, which has been in the oil jobbing business since 1916, about 22 years. I was one of its organizers.

The nature of my business as an oil jobber generally is buying gasoline, fuel oil and lubricating oils in wholesale lots in tank cars, and redistributing through bulk plants to dealers and consumers. The company has 7 bulk plants located in Chicago and vicinity. Those plants have a total capacity of about 1,500,000 gallons of gasoline.

The annual volume of our sales in 1935 and 1936 in gallons of gasoline, both at wholesale and retail was about 15,000,000 gallons each year. Of our total volume of sales about 50% was resold in tank cars, that is, we performed a brokerage business as well as a jobbing business. About 88% of the gasoline sold in our jobbing business in 1935 and 1936 was regular or housebrand gasoline. We have more than $1,000,000 capital invested in the oil business.

I think we are the largest independent oil jobbing company in Illinois. We perform a jobbing business practically the same as the other jobbers who have testified here, except on a larger scale. 634

A jobber buys his gasoline from refiners, has it shipped to him in bulk lots either by freight cars or large trucks, unloads it, puts it in his tanks; then re-loads it in smaller tank trucks, and delivers it to resellers or retailers, popularly known as dealers. The oil jobber also sells to commercial consumers, such as trucking companies or industrial concerns. Likewise, an oil jobber may own and operate his own service station, may hire the help, and run a regular retail business; or he may own property and lease it out to others. He would then become an independent contractor. His principal business is supplying these outlets with the products they sell.

In a general way the expenses a jobber has to pay out of the gross margin on which he operates are rents on property, real estate taxes if he owned real estate, personal property taxes, light bill, heat and power, fuel bills, repairs and maintenance of automobiles, traveling expenses and salaries and commissions to the sales department; just about the same kind of an expense that would enter into any business that was operating in any selling and distributing line.

George C. Peterson Company owns 24 retail stations,
most of which are leased out to re-sellers. It also
635 operates 25 or 26 stations itself. The great bulk of
our gasoline is sold to independent service station
dealers.

We received our gasoline from Socony-Vacuum Oil Company under successive one-year contracts dated December 1, 1934, and December 30, 1935.

(Copies of contracts referred to received in evidence as EXHIBITS 626 and 627.)

The price clause in our 1935 contract is known in the oil business as a 5½¢ split protection contract. I have heard it described this morning by several of the jobbers, and ours is substantially the same as any 5½¢ split protection contract that has been described here before. Our contract happens to state 6¢ because the margin is based on the dealer margin, or was at that time, that is, the allowance to the customer, and wherever that allowance is greater or less than 3½¢ then the margin is adjusted accordingly. It so happened in the Chicago metropolitan area when this contract was written that the dealer margin instead of being 3½¢ was 4¢, and consequently the contract was then written with a 6¢ marginal provision instead of a 5½¢ provision.

The basic price provisions in both these contracts relate to published market journals, and provide that we are to pay the average of the averages of the prices for comparable grades of gasoline, as published in the Chicago Journal of Commerce and Platt's Oilgram.

We had an understanding with Socony-Vacuum that
636 was not embodied in the contract that, since the Chicago Metropolitan area had been set up in a Government division when the Oil Code was in effect, that the Socony-Vacuum Company regarded the Chicago Metropolitan area, such as described in the old Chicago Code, as a separate district, so if there were a price change in the district instead of it being then subnormal, the selling price would be considered normal for that particular territory which at that time was an advantage to us. In other words, the split protection feature of the contract would operate in the Chicago Metropolitan area even though the prices were different than they were over the balance of the Standard of Indiana territory which comprises some 10 states. We did not, on that ground, ask Socony-Vacuum Company to give us a different contract. We accepted the written contract which they offered to us.

(Here occurred a colloquy between counsel during which Mr. Chaffetz made the following statement: "There is no charge in the indictment, and counsel has stated it repeatedly during the trial, there is no charge in the indictment of an agreement with respect to these contracts.")

We asked Socony-Vacuum for a different type of contract, one that would include the description of the territory, and the price as indicated in that territory; but Socony-Vacuum Company wanted us to sign their regular agreement, and take their word for the balance of it; and we, knowing that that was the practice that they pre-
637 viously indulged in, and had given to other jobbers in our territory, were willing to accept their spoken word for that part of the contract.

We had our negotiations with William J. Gerwe, sales manager of Socony-Vacuum Company at Chicago. He said that the contract that they had prepared for us was the same kind of a contract that they had had with all of their distributors.

During the period of 1935 and 1936 I discussed the question of a jobber contract with Empire Refineries, Phillips Petroleum Company, Skelly Company and Continental Oil Company.

I think Cities Service and Empire were the same, or substantially the same, or are now, at least. It was Empire at that time. I discussed the matter with Mr. E. C. Steffey of Chicago, a wholesale tank car salesman for them in the Chicago district.

Q. And what conversation did you have with him on the subject that we were discussing?

Mr. Donovan: The same objection as before as at Record pp. 241 and 292-293.

The Court: Objection overruled. Same ruling. Exception allowed.

(The following two paragraphs were admitted in evidence, at the suggestion of counsel for the Government, only against Cities Service Oil Company and Empire Oil & Refining Company:)

Mr. Steffey came out to our office to discuss with me a gasoline contract in August or September, 1935, and 638 I said that we had a contract, as he knew, with Socony-Vacuum Oil Company, which would expire later in the year, under which we were unable to make a living, and we were in the market for a few connections, if we could obtain a different proposition. Mr. Steffey said, "Well, our contract is no different from the one you have now; in fact, it is the general contract that is being used in the oil business by most of the suppliers, but we may have something else to offer you, which will be enough of an inducement so that you could better afford to have our contract than the one you have, even though they might be the same." And then I said, "Well, Mr. Steffey, what have you in mind?" And he said, "Well, you do a large fuel oil business, and we are large manufacturers of fuel oil, and perhaps we could supply you to a degree that would make quite a difference in your balance sheet." I said, "Well, that sounds interesting; what have you got to offer?" He said, "Well, that is rather a big proposition, and I will have to communicate with our sales office at Tulsa, to see just what the situation is."

A little later on, perhaps 10 days or 2 weeks, he again came out to see me and said that on account of the marketing set-up of Cities Service Company, which was then the marketing division of the Empire Refineries, that if they provided us with their gasoline to sell in that territory, that there would be duplication of outlets, in 639 other words, we would be selling in the same territory as they were selling, and at the present time they did not think it was a practical thing to do, and therefore they would be unable to go any further in their negotiations with us. However, we did come to an agreement about a supply of fuel oil.

There were many contracts in existence with jobbers and between many supplying companies, and, while they may have varied in some slight detail, the price provisions would come out the same in the end.

In the last 20 years there has been a great change in the type of contract. Going back as far as 1922, I think every refiner had his own type of contract, and his own idea of how he wanted to make a contract, and that carried on for a good many years.

For many years, there were periods when no publication was used, and no price except the posted price of the market leader in the district.

Then, along about 1929 or 1930 contracts began to appear more or less alike. The wording seemed to be a great deal the same, and the provisions the same; and then the price basis commenced to be based on the trade publications, with a split protection feature based on, generally, the price of Red Crown gasoline in the Standard of Indiana territory.

And then, a little later on, when the Iowa plan was
640 adopted, the price basis was changed from the service station price to the tank wagon price.

During 1935 and 1936, in my experience, I found that the contracts offered by the large major oil companies were generally pretty much alike.

In years gone by, we sometimes had no contract at all; we simply bought our supplies from whom we could get to supply us, and at an open market price. Other times, we had maybe a very simple contract with a refiner; it might last for a short period of time, or it might last over a number of years. There was no time prior to 1930 that we weren't free to buy from practically anyone, because at that time we sold all of our gasoline under our own brand, our own trade mark.

After that time we commenced selling major company brands. Naturally, if a jobber is selling the product of a major company that has an established brand, he sells under that brand. Then, of course, we became more or less restricted to that particular brand which we happen to be selling of the major company. In general, there was a greater latitude in which to buy than there has been of late. That was prior to 1930.

Our company preferred to handle a major company brand of gasoline because the major companies have ad-

vertised their brands extensively, and have a national system of distribution, so that a jobber, in our opinion,
641 is better off with a nationally known brand than he
would be to try to promote his own brand in any given territory. In other words, we found that consumer acceptance made it advisable for us, persuaded us, to deal in the product of a major oil company.

The tendency of the tank car price trend, as reflected in the Chicago Journal of Commerce and in Platt's Oilgram, from the beginning of 1935 until the first of June was upward; and then, for the balance of the year, it was practically stationary; it didn't move up or down. From June 1st until November 26, the price was stationary. On November 26, it was reduced ⅛¢ a gallon on the low bracket, and went back again on December 11 to the same level and stayed there until January 13, 1936.

I am referring to the price that was published in the Chicago Journal of Commerce for third grade gasoline. I do not have here the same information with respect to regular gasoline. The trend of prices on regular gasoline was substantially the same, as published in the Chicago Journal of Commerce, as third grade.

We had a very cold winter throughout this territory in 1935-1936. Cold winters normally affect the tank car market price of gasoline. If we had a normal market and a severe winter, and the demand for gasoline was not so great, we would have a weak market, and it would generally decline. In that winter the published market advanced during those 3 months.

642 We did business on the open tank car spot market
during those months. We bought gasoline from independent refiners during those 3 months, January, February and March, 1936. We bought from Phillips Petroleum Company, Waggoner Refining Company—Phillips isn't an independent refiner under the definition of a major company that has been made here—Grogan, Atlas, Danciger, Imperial, Eason Oil Company, Wilcox Oil & Gas, Kanotex, Deep Rock, and Henry H. Cross Company.

In these purchases on the spot market from the independent refiners I named, we bought some at the market, none above the market, and some below. By "the market" I mean the low of the published prices in the Chicago Journal of Commerce. We bought 84 cars of third grade gasoline below the low. We made those purchases from Henry H. Cross Company, Grogan, Danciger, Imperial, Eason Oil Company, Wilcox Oil & Gas Company. Whatever we bought from Atlas, we paid the low Journal quotation.

It is a general expression in the oil business, when you refer to the market, that you refer to the published quotation in the Journal of Commerce. Sometimes, depending upon the product spoken about, it would be the general assumption that the low would be referred to, and other times the average. It just seems to be that generally, when you talk about third grade gasoline, you talk about the low and when you talk about regular, you talk about the average.

643 I believe that it would get back to the prevailing type of jobber contract, because in these contracts, generally, regular is based on the average of the Journal; and the general thing, the third grade is based on the low of the Journal.

On December 27, 1935, we bought 3 carloads from Henry M. Cross Company. The low of the Journal was 4¾¢ for the third grade, and we bought at 4½¢.

This particular comparison I made with the published price and the actual buying price on the same day. The purchase was made on the same date as the Journal of Commerce carries for that quotation. The Journal price didn't change between those two dates. So, if I had used the Journal price for the following day, I would have reached the same result.

Next, January 6, 1936, we purchased from Grogan Company 1 car at 4¼¢. The Journal of Commerce was still 4¾¢. That purchase was ½¢ below the low. January 24, 1936, 5 cars at 4¾¢ and 10 cars at 4¾¢; both purchases from Danciger. The Journal low on third grade gasoline on that day was 5¼¢. The following day, it was the same. So that I bought a total of 15 cars from Danciger at ½¢ below the low.

On March 13, 1936, 15 cars purchased from Wilcox at 4¾¢. The low price published by the Journal for the comparable grade of gasoline the same day was 5¢.

644 On the following day the Journal price was 5¢.

From Eason Oil Company we bought 3 cars on March 11 at 4½¢, and 4 cars on March 11 at 4½¢. On that day the Journal price was 5¢. Those purchases were made at ½¢ below the low.

On March 5, 1936, we bought 5 cars from Imperial at 4⅝¢, and on that date the Journal was 5¢. On the next day it was the same. So we bought that gasoline at ⅜¢ below the low as published by the Journal.

In addition to these purchases I have enumerated I made some purchases at the low during that same period. We made no purchases above the low published by the Journal.

From my experience in purchasing on the open spot market during that period, I found that the actual open tank car spot market seemed to be less than the published price in the Journal of Commerce. The fact is that these purchases clearly show that they were made at less than the Journal published price.

To my knowledge our company has never purchased or sold any hot oil. Our company belongs to the Illinois Petroleum Marketers' Association, a jobber's association. This association has about 300 members.

Cross-Examination by Mr. Donovan.

I think I said the tank car market rose in the spring
645 of 1935. The price of third grade gasoline declined
from January 2 to February 1, 1935. It declined from
the high of 3¾¢ a gallon to 3¼¢ a gallon.

I have a memorandum taken from our records of the transactions we had during the period of January and February, 1935. I have the details. These memoranda are all of our spot sales except the spot purchases made from Phillips Petroleum Company. No Phillips cars are in these records. I believe there are several hundred spot purchases and sales beginning March 1, 1935.

On March 2, 1935, 1 car of gasoline, 65 octane, purchased from Grogan Oil Company at 3¾¢ a gallon and sold at 3⅞¢. There was no price in the Journal for 65 octane that day, unless the price of 63-70.

On March 2, 1935, 1 carload, 68-70 octane, purchased from Petroleum Exchange at 4¢ a gallon, and sold at 4¼¢. I haven't the record here of to whom the cars were sold. Generally these were all sold to jobbers. On that day the Journal of Commerce low was 4⅜¢ a gallon.

On March 4, 1935, 2 cars of third-grade purchased from Globe at 3¼¢ a gallon. That is the same price as the Chicago Journal of Commerce low. The price at which we sold it doesn't appear here on this record.

On March 4, 1935, 5 cars of third-grade purchased at
3⅜¢ from Shamrock, and sold at the same price. We sell
to both jobbers and brokers. On that day, according
646 to this record, the Journal price was 3¼¢. I will have
to correct my statement that we bought nothing above
the low of the Journal of Commerce. If we sold to a

broker, it generally would be lower than if we sold to a jobber.

On March 4, 1 car 65 octane, purchased from Grogan at 3⅞¢ and sold at 4¢. That is not quoted in the Journal.

On March 4, another car, 65 octane, purchased at 4¢ from Carson Petroleum Company and sold at 4⅛¢. The 63-70 low when we sold the 65 was 4⅜¢.

On March 5, 1 car, 65 octane, bought from Danciger at 4¢ and sold for 4⅛¢. There is no record of the date of sale, but the sales are generally made on the same day as bought. I can't say to whom it was sold.

March 5, 3 cars, 68-70 octane, purchased from Petroleum Exchange Company for 4⅛¢ and sold at 4¼¢. The low of the Journal for 63-70 octane was 4⅜¢.

On March 7, 1 car, 65 octane, purchased from Carson Petroleum Company at 4¢, and no record of selling price here. I have no record what became of it.

On March 8, 2 cars, third-grade gasoline, purchased from Globe at 3½¢ and sold at the same price, and the Journal on that day was 3½¢. I have no record to whom we sold that.

On March 8, 1935, 10 cars, 68-70 octane, purchased from Henry H. Cross at 4⅛¢ a gallon, and sold at 4¼¢ a gallon. On the same day the Journal of Commerce low
647 for 63-70 was 4⅜¢. I have no record of to whom we sold that.

On March 8th, 1 car of third-grade purchased from T. R. Vaughn, who is a broker, at 3½¢ and sold it at 3⅝¢. The Journal on that date was 3½¢.

I have prepared a summary showing the prices at which gasoline we purchased from independent refiners was resold and what sales were made to jobbers and what sales were made to brokers and consumers.

From January, 1935 to the end of March 1936, we sold 588 cars to jobbers, 76 to brokers, and 10 cars to consumers. All of those sales were spot sales in the spot market. The octane rating of some of these cars that I sold to jobbers ran between 63 and 67 octanes. I have a line which I call cars not classified. That includes cars that do not conform in specification to any bracket shown in the Chicago Journal of Commerce. That would include 375 end point material, and 360 end point, anything odd. That is not in my total of 588 to jobbers. I segregate that. The total sales of all cars equals 674. The cars not classified are 91; which would make a difference of 583 cars. That balance was third grade and 68-70 octane material.

I have compared the prices at which we sold those cars

with the low prices for the respective grade published in the Chicago Journal of Commerce for the day on
648 which the sales were made. 89 cars were sold above the low quoted in the Chicago Journal of Commerce for the days on which they were sold. 155 cars sold at the same price as the low of the Journal quotations for the days on which they were sold. The number of cars sold below the low of the Journal for the days on which the sales were made was 339.

We bought some third grade gasoline from Phillips Petroleum Company between April 1, 1935 and the end of May, 1936, which we resold to jobbers in the spot market. From April, 1935 to the end of May, 1936, we bought 366 such cars. 25 cars were sold at prices above the low of the Chicago Journal of Commerce on the day on which the sale was made. 281 cars were sold at prices equal to the low for the day on which the sale was made. 60 cars were sold at prices below the low of the Journal for the days on which these sales were made.

Taking all those sales to jobbers about which I have testified, both the independent refiners and' the sales we made of the products of Phillips Petroleum Company, 114 were made at prices above the low, 436 at prices equal to the low, 399 at prices below the low. There would be 550 at and above the low, and below would be 399. So that most of our sales to jobbers were at or above the low of the Journal during that period.

Some of the prices I have just given were prices in sales to brokers. There were 76 cars sold to brokers, and 10
649 cars to consumers. I haven't the information here whether they were at the low, above, or below the low. Generally they would be below what we would get from jobbers. Normally, that would decrease, in my total calculations, the number that we sold to jobbers below the low.

I have been in the brokerage business a long time. The volume of business we did in 1935 and 1936, compared with what we had done in previous years, was as good as the average years.

We are also in the jobbing business. We operate in Illinois, Wisconsin and Minnesota. I couldn't tell the number of jobbers there were in business in 1935 and 1936 compared to other years, but my opinion is that there were just as many then as there were previously, if not a few more.

By Mr. Lawton

I have a compilation of the sources of the gasoline sold to jobbers as well as that which came from other brokers

or majors or independent refiners. 366 cars came from Phillips Petroleum Company; 246 cars were bought from brokers; 409 cars bought from independent refiners; and 19 cars bought from major refiners. I do not know the source of the gasoline which we bought from the brokers at the time we bought it. There were 20 or 25 different
refiners from whom this material was assembled. We
650 buy a car from this independent refiner and a car from
that one, and so on, on different days, no extremely large quantities at any one time. There may have been as many as 10 cars in one purchase. They were not as large as those we purchased from Phillips. We purchased steadily from Phillips. I might describe the gasoline we sold to the jobbers, secured from the independent refiners and from the brokers, as an assemblage of gasoline.

Although I am not sure, I don't believe we sold gasoline on the same day of the same octane rating, sometimes above the low of the Journal, and sometimes at the low, and sometimes below the low. Perhaps within a week we did so. Generally speaking, when we sold at or above the low of the Journal we were always fully confident of our ability to guarantee quality and date of delivery; otherwise, we wouldn't sell. That was fully as true of the gasoline we sold below the low of the Journal. We knew the source of all of that gasoline, and we were as fully able to guarantee quality and date of delivery as fully as in the case of gasoline sold at or above the low of the Journal, since we always guarantee quality on anything we sell, regardless of price. The gasoline we sold at the various prices, at any grade, was not the same; that is, all we sold at ⅛¢ below and at or above that were not all of the same quality; there might
have been different specifications. The matter of spe-
651 cifications, however, would not enter into whether we
asked the low or above the low or below the low of the Journal. All third-grade gasoline would come within the third grade specifications, and within the third grade bracket, but there might be some variations with respect to cars we sold. That might be true of regular as well as third grade. During that period it seems we bought about 40% from Phillips and about 60% from others. Most of the Phillips was sold at or above the low of the Journal.

Redirect Examination by Mr. Chaffetz.

When a sale is made at above the market, above the low of the Journal, it is generally to either consumers or jobbers whose credit isn't so good. The low of the Journal is what we generally regard as the market.

If we have a jobber whom we think might not pay his bills, we might charge him ⅛¢ or ¼¢ above the market. We have to have a little insurance for credit risks.

652 H. E. MILLER, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I live at Festus, Missouri, on the Mississippi about 30 miles south of St. Louis. I have been an oil jobber since 1910. My company, H. E. Miller Oil Company, a corporation, has been in the business since 1920. The business of this company consists of buying gasoline in tank car lots and reselling it to dealers and consumers, and also working some on motor oils. We perform the usual functions of an oil jobber. We own 1 bulk storage plant having a capacity of 45,000 gallons. In 1935 and 1936 we had 3 retail stations, which we leased, and 20 to 25 independent dealer accounts. In 1935 we sold about 520,000 gallons and in 1936, 606,000 gallons of gasoline. In 1935 about 75% of that gasoline was so-called regular or house-brand gasoline, and in 1936 it was 85%. After depreciation, our books show about $42,000 capital invested in the business.

Our source of supply of gasoline in 1935 and 1936 was part of the time Barnsdall Oil Company and part of the time Barnsdall Refining Corporation. We commenced to do business with Barnsdall Oil Company under a 3-year contract beginning on August 1, 1934. We did business with Barnsdall Oil Company from August 1, 1934 until some time in June, 1935, and from then on it was
653 Barnsdall Refining Corporation, a successor corporation, under the same contract.

(Contract referred to received in evidence as EXHIBIT 628.)

On July 25, 1935, I received a letter from Barnsdall Refining Corporation, signed by G. F. Racette, vice president, with reference to that contract. Attached to that letter there was an enclosure addressed to Barnsdall Oil Company and Barnsdall Refining Corporation containing a place for my signature. I did as I was requested and signed that consent. The document attached to that letter is a copy of that consent.

(Letter and enclosure referred to are received in evidence as EXHIBIT 629.)

(The witness then explained the price provisions of his contract, Exhibit 628, which explanation is omitted here because such provisions speak for themselves.)

At that particular time, on the 6¢ margin, there was a 4¢ dealer discount. That was based on the 4¢ dealer discount, and whenever that dealer discount was reduced, our spread was reduced accordingly; or, if it was increased, our spread was increased accordingly.

(Witness continued his explanation.)

During the greater part of 1935 the prevailing spread between the retail price and the tank car price, plus freight,
plus taxes, was never up to the amount of our basic
654 guarantee. By that I mean 6¢ while the 4¢ dealer dis-
count was in operation, and 5½¢ while the 3½¢ dealer discount was in operation. I can't recall exactly when the 3½¢ dealer margin came into operation. I think it was sometime in 1935. After the dealer margin became 3½¢, our guarantee became 5½¢. The actual spread between the tank car price, plus freight, plus taxes, and the prevailing retail price hardly at all exceeded 5½¢ during 1935. There were some times in 1936 when it did, not very long periods of time.

Now, take during 1935, when it wasn't there, we really weren't getting 5½¢ because we were standing half of that excess, and sometimes it amounted to $8, $9, $10 and up to $30 a car, if I remember right. That condition was very general in 1935. The dealer got 3½¢ out of whatever margin we got. So our split, so far as we were concerned, was below 2¢. Part of the time we only had 1.7¢, part of the time 1.8¢, part of the time 1.9¢. We had to pay all of our expenses out of that margin.

Gasoline supplied under that contract was shipped during 1935 and 1936, some from Barnsdall, Oklahoma; some from Okmulgee, Oklahoma; and some from Wichita, Kansas. It was all shipped in tank cars by rail.

We preferred to do business with a major oil company
on account of the national advertising of their prod-
655 ucts, and better trade acceptance.

I have discussed with representatives of our supplier, during 1935 and 1936, the possibility of a change in the form of our contract.

Q. On what occasions, and with whom?

Mr. Donovan: I object to that upon the same grounds that I have stated before, may it please the Court: That it is hearsay; that it has no relation to any of the issues in this case; that it cannot be considered as evidence against any of these defendants on the issues presented under this indictment.

Mr. Chaffetz: We again yield to a ruling from the Court that any such testimony is limited in its effect to persons making the statements to the witness and to the company of which he is an authorized agent, and officers of that company who may be defendants here.

The Court: Any testimony of this witness as to those conversations will be so limited, and the jury may understand that.

The Witness: Should I answer?

Mr. Chaffetz: Yes.

The Court: Objection overruled, with that exception. Proceed.

656 In 1935, I made 2 or 3 trips to Oklahoma in regard to it, and again in 1936 to see the Barnsdall Company in regard to the price conditions set up on my contract. On both trips, I talked to Mr. G. F. Racette, who was vice president in charge of marketing.

I told Mr. Racette that it was impossible to continue in business with the present margin on our contract, and wanted to know if anything could be done about it. He said there wasn't anything that could be done, and I asked him what he thought the future of the jobber was in this business. I told him that it was impossible to go ahead on a 2¢ margin and stay in business, and I asked, "Is this going to be just temporary, this low margin for the jobber, or as time goes on, is there going to be a better margin?" And he told me, "Well, I don't see much hope for the jobber." And then I said, "Well, there ought to be some kind of relief on a condition of this kind." He said "Well, the only relief that I can offer is to lease your plant to us." He said, "We would consider leasing your plant, if you would be the agent down there." "Mr. Racette," I said, "That is putting me right back where I was 27 years ago. I wouldn't be interested in that proposition, being a commission agent." That finished the conversation at that particular time with him.

Then I talked, either on that trip or in September, with Mr. E. B. Reeser, the president of Barnsdall Company.

657 Mr. Donovan: Same objection.

Mr. Chaffetz: The Government suggests this evidence be admitted on against Mr. Reeser and the Barnsdall Company.

The Court: Yes. Same ruling. Exception allowed.

I asked Mr. Reeser if something couldn't be done in regard to a longer marginal contract, that it cost us more to do business than what our margin was, and we were losing money down there. He told me, "Well, Harry, it is a sad state of affairs when our good customers are losing money on our products", and I added: "Yes, even on a normal market". And I said, "Why don't you do something about it? You are a big company; why don't you put out a contract we can live on and let live?" And he said, "I can't change that contract one iota," or something to that effect. That was all he said.

I never contacted any other major oil company, but several have contacted me. My contract had a six months' cancellation notice on it, and they all knew it, and from time to time I was contacted by other major oil companies with respect to my signing a jobber contract with them.

Mr. Tom Koneke, tank car sales representative of Mid-Continent Petroleum Company called on me I would say 5 or 6 times during the course of 1935, and maybe 3 or 4 times in the early part of 1936. On most occasions I discussed the matter of a jobber contract with him. I
658 told him I would only be interested in a change if I could get a better contract, and he said, "Well, we have no better contract to offer than what you have, but we believe our merchandise would sell better and has better trade acceptance, and is better advertised." I said, "Well, Barnsdall is well known around here; we have no sales resistance on it, and the only thing I am looking for is a contract that is better than the one I have got. If you have one, I will talk with you", and he said he did not have it. I did not talk with any of the other representatives of that company.

I talked with Mr. Oscar Whateley of Lubrite Division of Socony-Vacuum. He and one other sales representative made 8 or 10 trips to see me, and my conversation with them was practically the same as with Mid-Continent.

Mr. Donovan: Same objection. (See objection stated at R. p. 292-3.)

The Court: Yes. Same ruling. (See ruling at R. p. 293.) Exception allowed.

Mr. Chaffetz: The Government suggests that this evidence be admitted only against Socony-Vacuum Oil Company, Inc.

I said that I was not interested in making any change until I could get a better contract; that the trade acceptance of Barnsdall was very satisfactory, and I was only looking for a better margin. He said they didn't have any to offer, but he believed that with their advertising
659 campaign, we would have more gallonage, and I said, "I am not interested in more gallonage unless there is a profit in it."

I talked with the St. Louis representative of Tidewater Company, but I do not recall his name. He called upon me in 1935 and once or twice in 1936. He was a tank car sales representative.

I discussed the matter with Mr. H. A. or W. A. Perriquey of Continental Oil Company during 1935 and 1936. He was in my office at least 5 times during the course of each year, and I cannot say when it was. It might have been one call in January, maybe another one in March, or April. They were 2 or 3 months apart. He was jobber or tank car salesman. I told him the same thing; that I was not interested in a change from Barnsdall unless I could secure a better contract, and he said "Our contract is the same as theirs, and I have nothing to offer you in that way unless it is a change in the merchandise which might be better."

The Court: I want the jury to understand that the testimony as introduced on this subject as to any company is binding on that company only.

Mr. Chaffetz: Q. Mr. Miller,—

Mr. Donovan: Just a moment.

(Mr. Donovan and Mr. Chaffetz conferred with the Court out of the hearing of the jury.)

660 (The following occurred in the hearing of the jury:)

The Court: Gentlemen of the jury, there seems to be some misunderstanding here. I want to say to you this; I say this to you now; that this witness has testified as to conversations he had with representatives of the Barnsdall and Socony and Continental Oil Companies, and any statement he has made as to conversations with each of those companies' representatives is binding thus far only on that company, and not upon the other defendants in the case.

Mr. Chaffetz: And we understand that the Court has made —

Mr. Donovan: I must object to the statement "is binding." It may be admissible, but it certainly cannot be binding.

Mr. Chaffetz: The defense counsel used the word "binding."

The Court: Can you suggest a better word? The evidence is admissible against these corporations and not as against the other defendants.

Mr. Lawton: I think I may have used the word "binding" the first day. It is a word we use down in Illinois, and it may be unfortunate.

661 The Court: So the jury understands they have made an objection to the admission of that evidence, your consideration of that, I am saying to you now that it is admissible as against the corporations or the officers of those corporations that this witness has had conversations with, and against them only.

Mr. Chaffetz: And the Government understands the Court has made the same ruling with respect to similar testimony from other witnesses.

The Court: Yes, let the jury understand that. Anything I may have said to you is qualified so as to correspond with what I have now said.

I am a member of the Missouri Jobbers' Association, and National Oil Marketers Association. I don't know exactly, but I think there are around 100 or 150 members in the Missouri Association. I have never to my own knowledge bought or sold any hot oil.

No Cross-Examination.

662 JACOB H. MIDDLETON, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I am 44 years old and reside at Bowling Green, Missouri. I was an oil jobber during the years 1935 and 1936, but discontinued that business in September, 1937. During that time I was also in the general insurance business. That is my business now. I am at present presiding judge of the County Court in Pike County, Missouri. That is not a legal position. I am not a lawyer.

My oil jobbing company during 1935 and 1936 was Pike County Oil Company, located at Bowling Green, Missouri, and established in 1930. I was a part owner of that company. My position was secretary, treasurer and manager. We owned 2 bulk plants and had storage for 56,000 gallons of gasoline. We did not own and operate retail service stations. We distributed to about 18 independent dealers in 1935 and 1936. The total capital investment in our business was about $11,000. Our annual gallonage of gasoline in 1935 and 1936 was between 300,000 and 400,000, and between 90 and 95% of that was regular house brand gasoline.

Tidewater Oil Company, an Oklahoma Corporation, supplied us with gasoline in 1935 and 1936. Until No-
663 vember 15, 1935, we were operating under our contract. There was no contract in effect after that date until September, 1936, but we operated under the terms of the contract and the price we paid for gasoline was determined by that contract. I have handed you a set of documents clipped together. They were all a part of a single contract. This separate document which you now show me is a contract I had with Tidewater Oil Company of Oklahoma and which was executed November 15, 1934. That is the contract under which we operated until November, 1935.

(Document referred to received in evidence as EXHIBIT 630.)

(The witness then explained the price provisions of his contract, Exhibit 630, which explanation is omitted here as such provisions speak for themselves.)

We permitted our contract to expire without making any further contract or without renewing that contract in November, 1935, because we couldn't make any money on the contract as it was, and we informed our source of supply, Tidewater Oil Company, that we wouldn't renew the contract, hoping that someone else or possibly they would have a better contract, and we would be free then to accept a better contract. They didn't offer us a better contract at that time. I discussed it with Mr. H. E. Perkins of Tidewater at about the time that the contract expired. Mr. Perkins, I think was sales manager for the Southwest Department of Tidewater Oil Company.

I can't say without refreshing my memory from these
664 contracts whether that was Tidewater Oil Company of Oklahoma or Tidewater Oil Company of New Jersey.

During the spring and summer of 1935 I had some discussion on the subject of jobber contracts with representatives of other major oil companies. I had such a discussion with the sales representative of Continental Oil Company, Mr. Perriquey, probably in April or May, 1935. A number of jobbers in northeast Missouri thought that possibly by pooling their purchases, they might be able to obtain a better contract, and with that in mind I talked the matter over with Mr. Perriquey and gave him something of a line-up of what we proposed to do if we could get a better contract. I was speaking to Mr. Perriquey on behalf of this group of jobbers. I couldn't say offhand how many jobbers there were in that group. Probably 8 or 10. I asked him if they would be interested in gallonage of that quantity at better than a 5½¢ split contract, and his reply was that they wouldn't. He said that they had nothing better than the 5½¢ split contract.

I had such a conversation with Mr. Lipps, jobber salesman representative of Deep Rock Oil Company at about the same time. I don't know that they would classify as a major. I presented the matter of the gallonage that we
could pool, providing we could get better than a 5½¢
665 split contract, and he said that they had no contract
different from that.

I remember, in a general way, the trend of the published spot market tank car prices in the spring and summer of 1935. I am familiar with the prices published in the Chicago Journal of Commerce. We did not subscribe to Platt's Oilgram, but I think it followed. In the spring of 1935 there was a gradual increase in the tank car spot market prices for several months. They then leveled off; and as I remember it, there was very little, if any change during the balance of 1935.

When the tank car prices would increase as much as 3/10¢ a gallon, then the retail price in our area would be increased 3/10¢ a gallon. When the tank car price went up ⅛¢, there was no increase in retail price. That affected us as a jobber, in that during practically the entire time our margin was less than 5½¢. The difference ran from $6.00 to $8.00 a car. That is, we paid from $6.00 to $8.00 a car more than we would have paid if we had received the full 5½¢. If the retail price had fluctuated directly with the tank car price we would have received the full 5½¢ margin. But if the tank car price went up and if the retail price didn't go up at the same time and to the same extent, then my margin was reduced below 5½¢.

Of that $6.00 or $8.00 a car, a half of it or from $3.00 to

$4.00 was taken care of by our source of supply. That
666 was due to the so-called split provision in our contract.

As a usual thing the retail prices would follow the tank car prices up in a few days, possibly a week. If the retail price went up at the same time that the tank car price went up, and went up exactly to the same extent, the consumer would pay that increase. The jobber would, through the retail price, pass that increase directly on to the consumer, and the consumer would pay the whole of it. If the tank car price went up and the retail price didn't go up, the jobber paid to the extent of one-half of the increase. That amount was never passed on to the consumer. That condition prevailed most of the time during 1935, namely, when the tank car price went up, the retail price didn't go up at the same time and to the same extent.

I was a member of the National Oil Marketers Association and the Missouri Oil Jobbers Association. I did not deal in hot oil.

Cross-Examination by Mr. Donovan.

I have been in the courtroom throughout these proceedings, for, I believe, 11 days. I have been listening to what has been going on here all of this time. I heard most of the various witnesses upon the stand. If one were taking
inventory of the cost price, it would be true that when
667 the tank car prices go up, the value of our inventory
increases. But the value that one received for that inventory does not necessarily increase. If you are inventorying at the market it is true that the inventory, what you have there on hand, increases in value.

If the tank car price decreases and the retail price does not come down correspondingly our margin widens. I think it is true that there is just as long a lag and just as long delay in the retail price, if it should lag, following the tank car price, as there is when the tank car price is going up.

I heard Mr. H. E. Miller on the stand. My contract was different from Mr. Miller's.

In addition to the provisions of my contract from Tide Water, in 1935 they took care of I believe half my local city tax. There was a price cut in Bowling Green, and during 1936 they took care of all of it. They also gave us protection on our local price wars in that instance in 1934, when we had a local price war.

I think a better way of stating the city tax matter was that there was a local 1¢ price cut in Bowling Green; that is, the price in Bowling Green was 1¢ sub-normal, whi they took care of. There was a 1¢ city tax in Bowling Gree and normally the price in Bowling Green would have bee 1¢ per gallon higher than it would be outside the cit

668 limits. All of that was in addition to the margin provision of my contract. I don't recall exactly ho many gallons I sold in Bowling Green in 1935 and 193 while the price war was on. They reimbursed me prob ably $600 a year, during those years. At one time, the took half of it. That might have been in 1934; but I thin it was in 1935 that they took care of half of it, and all o it in 1936.

Redirect Examination by Mr. Chaffetz.

When we had this sub-normal price situation in Bowlin Green, if our supplier hadn't taken care of all or part o that 1¢ differential between the normal price and the prevailing price it would have reduced the gross margin fro 5½¢ to 4½¢, as far as the city of Bowling Green is concerned. Out of that 5½¢, 3½¢ went to the dealer. I ha only 2¢ to start with. It would have reduced my margi from 2¢ to 1¢. That would have been my over-all margi in Bowling Green.

Cross-Examination by Mr. Lawton.

I think it is true that if the tank car price goes dow there is a lag of a few days before that is reflected in lowering of the price at the retail station. If the drop i the tank car price does not equal 3/10¢, then there is n drop at all in the retail station price. I think that was tru in 1935 and 1936.

669 *Redirect Examination by Mr. Chaffetz.*

To the best of my recollection, the tank car price didn go down after March, 1935. If it did, it was only a fe times. For the most part, during that year, the price were going up; tank car prices were going up, when ther were any fluctuations at all.

670 **HERBERT F. DAVIS**, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I live at Sullivan, Indiana. From November 12, 1934 until May 17, 1937, I was in the oil jobbing business. The name of my company was Wabash Oil Company. I was interested financially in it and was its vice-president and treasurer. The company from 1924 to January 1, 1932, was a partnership, and after that date was a corporation.

We owned 2 bulk storage plants, 1 of 90,000 and 1 of 47,000 gallons capacity. We had 8 retail stations of our own. We operated 1 and leased out 7. We had 34 independent dealer accounts. Our annual volume of business in gallons of gasoline in 1935 and 1936 was in excess of 1,070,000 gallons. About 92% of that gasoline was regular or housebrand gasoline. The capital invested in our business was $40,000, all paid in.

Our supplier of gasoline in 1935 and 1936 was Socony-Vacuum Oil Company, Inc., Lubrite Division. We operated under contract during those 2 years. Our gasoline came from Augusta, Kansas, from East Chicago, from East St. Louis, and from Robinson, Illinois. Socony-Vacuum Company has refineries at these places except Robinson, Illinois.

671 The gasoline happened to come to us from Robinson on what was known as an exchange arrangement. Refineries trade a certain amount of gasoline, to points where they have a more advantageous freight rate. In other words, Robinson, Illinois, was a nearer shipping point than East St. Louis, or some other point.

The gasoline that came to us from Robinson was supposed to be Socony-Vacuum specifications. I assumed that Ohio Oil Company made that gasoline. It came from its refinery. It was billed to me by Socony-Vacuum Oil Company. We paid a total freight charge equal to the cost of shipping from Tulsa, Oklahoma.

The gasoline that came to us from East Chicago, came from a subsidiary of Socony-Vacuum Oil Company. It has a refinery there.

All this gasoline came to us in tank cars from states outside of Indiana, excepting that which came from East Chicago, Indiana.

I have with me the contract under which I purchased gasoline from Socony-Vacuum Company in 1935 and 1936, dated April 13, 1935.

> (Contract with Socony-Vacuum Oil Co. dated April 13, 1935, received in evidence as EXHIBIT 631.)

Attached to the contract is a rider, dated August 11, 1936, modifying the printed language of the contract when the Iowa Plan became effective in Indiana. It is intended
672 to take into consideration the effect of the Iowa Plan upon our relations with Socony-Vacuum Company.

I am not certain whether the Iowa Plan became effective in Indiana before the date of the rider, August 11, 1936.

> (The witness then explained the price provisions of his contract, Exhibit 631, which are here omitted as such provisions speak for themselves.)

We preferred to purchase our supply of gasoline from a major company for many reasons. The line had a very fine acceptance, and we were able to secure their advertising material such as signs, globes and other material, which would cost us a lot of money. We also wanted the benefit of their national advertising program.

We planned to take the contract (Exhibit 631) when it was offered, the 5½¢ contract, in 1935. I had such a discussion with Earl Whatley, who is the manager of the tank car sales department of the Lubrite Division, Socony-Vacuum Oil Company, Inc.

When a new contract was presented—we had just gone through a disastrous price war, and we were willing to take it, but reluctantly, but we were told that this was the going contract, and that this was similar to all other contracts Socony-Vacuum Oil Company, Inc. was writing. We did not solicit any contract from any other company
673 in 1935 and 1936. But we discussed it with two salesmen in the course of their calls at our office. They were Mr. Johnson of the W. H. Barber Company; and C. H. Browning of the Empire Oil Company, a subsidiary of the Cities Service Company. I think Mr. Browning is a tank car representative, as I remember. He did not discuss with me in detail the basis of our taking a contract with his company.

I am familiar with, and recall, in a general way, the trend of published tank car spot market prices for gasoline during 1935 and 1936. I normally and regularly read the Chicago Journal of Commerce.

As I remember, the price of regular gasoline early in 1935 was about 4½¢. We were billed on the average, so that is what I am familiar with. I am now giving my prices. Either late in May or early in June the prices advanced to around a figure slightly in excess of 5⅝¢, and continued on almost an even keel until the end of the year. Early in January, 1936, we had a crude advance. Then the price of gasoline advanced to around 6⅛¢, and throughout the year it advanced and declined some, and about the end of the year it closed at around or approximately 5⅝¢. We were invoiced at 5⅝¢ from June down to the end of the year. The price of gasoline had not previously re-
674 mained constant in that way, not at any time that I have any recollection of, since I was in business.

I have never bought or sold any hot oil to my knowledge.

No cross-examination.

675 G. H. FALDER, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have lived in Rock Island, Illinois since 1916. I have been in the oil jobbing business for myself since 1920. Prior to that time I was in the oil business with Sinclair Refining Company, as manager of the Ottumwa, Iowa, branch.

My oil jobbing company, Midway Oil Company, located at Rock Island, Illinois, operates in eastern Iowa and western Illinois. It has been in the oil jobbing business since 1920. The capital investment in it is about $550,000. I own a substantial part of that company.

The volume of business with respect to gasoline only in 1935 was approximately 1,800,000 gallons; in 1936 about 2,250,000. Approximately between 85% and 90% of this was regular or housebrand gasoline. Our company owns 8 bulk storage plants distributed through our distributing territory with a capacity ranging from 30,000 up to 300,000 gallons. The total storage capacity in gallons of gasoline is in excess of 1,000,000 gallons.

We have 2 retail stations which we operate ourselves. We supply about 90 independent dealers. I would judge around 50 to 60% of our distribution is through independent dealer outlets. We have a consumer business be-
676 sides. In our own outlets we probably use about 15%.

Our source of supply of gasoline in 1935 and 1936 was Empire Oil & Refining Company, which is now part of the Cities Service organization. Either December 1936, or January 1937, the two companies were merged or the Empire Company was merged into the Cities Service. That is what they told me.

We have been receiving invoices from the Cities Service Company since that time. We did business under contract with the Empire Company in 1935 and 1936, down to the time when there was a change in the corporate set-up. We made a contract on February 14, 1935 with Empire Oil & Refining Company. The price provisions of that contract were ¼¢ below the average of the Chicago Journal of Commerce.

We had a contract which had been in effect since 1931. This contract was based on the tank wagon price, and it was also based on the average of the Chicago Journal of Commerce and the National Petroleum News, the two taken together. The average of those two papers was the price that we were to pay. We would buy on a Thursday, and the prices that came out on a Thursday would be our ruling prices for the following week. We had a guaranteed margin below the tank wagon price of about 5¢, just a fraction over 5¢, which gave us about a 7¢ a gallon spread under the retail service station price.

677 That contract, made in 1931, had a 30 day cancellation clause in it, but it kept on. It never had been renewed, but the same thing was operative until October or September, 1934, when they cut the tank wagon price. Prior to that time it had never given us any benefits at all; in fact, it cost us more, really, than if we had bought on the open market. But in 1934 when they cut the tank wagon price, and the retail price was also cut automatically, the contract became operative, and worked to our benefit.

In January, 1935, O. J. Tuttle of Tulsa, Oklahoma, a defendant in this case, sales manager, and E. C. Steffy, district sales manager at Chicago, both representing Empire Oil & Refining Company, which is now Cities Service, came to Rock Island and said they wanted to negotiate a new contract.

They said they wanted to negotiate a new contract. I said, "Well, the contract we have is all right." At that time, it was giving us about ¼¢ a gallon benefit under the posted prices of the Chicago Journal of Commerce. I knew that if we didn't take a new contract, they were going to make the 30 day cancellation clause effective. So we negotiated a contract, ¼¢ below the average of the Journal of Commerce, and that was made for a period of 1 year.

678 They told me that the new contract was different from the type of contract that Empire Oil & Refining Company was making with jobbers at that time. They told me that the 50-50 basis contract was mostly in effect, a 5½¢ split contract.

Q. When you say the 50-50 split, do you mean the contract based on the average of the averages of the Chicago Journal of Commerce and Platt's Oilgram, with a provision for a 5½¢ guaranteed margin, subject to that split?

A. Well, we asked to be released from Platt's Oilgram ourselves, or the National Petroleum News, rather; and they did that at our own request.

We do not and never during 1935 and 1936 did operate under the brand name of the Empire Company, or Cities Service Company. We operate under the brand name, Midway Oil Company, Midway brand, our own brand.

The contract you show me, dated Tulsa, Oklahoma, February 14, 1935, between Empire Oil & Refining Company and Midway Oil Company, is the contract to which I have testified. I operated under that contract down until I entered into the new contract with the Empire Company on March 11, 1936.

(Contracts referred to received in evidence, respectively as EXHIBITS 632 and 633.)

679 I had a discussion with E. C. Steffy, division manager at Chicago of Empire Oil Refining Company at the time that the contract in 1936 was made.

Q. Now, will you tell us what discussion you had with him at that time with reference to a jobber contract?

Mr. Chaffetz: The Government has no objection to this evidence being admitted only against Empire Oil & Refining Company.

Mr. Donovan: The same objection, if it please the Court to this discussion as appears at R. p. 241 and 292-293.

The Court: The same ruling. Objection overruled and testimony admissible only against Empire Oil & Refining Company. Exception allowed.

I told Mr. Steffy that we didn't feel that we were getting enough margin, that we couldn't operate on that basis. He said, "I realize it, as well as you do, but can you get any better?" I said, "Not that I know of. I would like to shop around a while." "Well," he said, "I will tell you, while I haven't seen all of them, I have seen a great many of the contracts and they are all exactly alike even to the dotting of the I's and the crossing of the T's, and I am satisfied that we will have to have a little more margin ourselves. 680 We feel that the jobber isn't getting enough margin, and for that reason we are willing to go a quarter below the low," which he gave us. Instead of the average, he made us a new contract, a quarter below the low.

Our contract was a little better than the other contracts, due to the fact that we operate under our own brand name, and not under the major's brand. That is what Mr. Steffy told me.

Cross-Examination by Mr. Donovan.

In my contract of February 14, 1935, the price was ¼¢ below the average of the quotations in the Journal of Commerce, and in the new contract of March 11, 1936 I was given ¼¢ below the low of the Journal of Commerce.

By Mr. Brazeau

The invoices were from Cities Service Oil Company, beginning in either December 1936 or January 1937, when the change came. Prior to that time they had been from Empire Oil Refining Company, which became Cities Service Oil Company.

By Mr. Lawton

Prior to our contract in February 1935, we bought on a different type of contract from Cities Service. Prior to 1935 it was not more advantageous to buy under that contract than to buy on the open market, but we had the contract because of the fact that we wanted a uniform product, and also a reliable source of supply. We never did use an advertised brand.

681 **J. MARSHALL THOMPSON**, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I live in De Soto, Missouri. I am 32 years old.

I am an oil jobber. My oil jobbing company, General Oil Products, Incorporated, has operated since February, 1929. I have been president of the company since that time. I have a substantial financial interest in it.

We do the usual business of an oil jobber, as has been testified to here by previous witnesses. We own a bulk storage plant with a capacity of 35,000 gallons of gasoline. We own a retail station, but do not operate it; it is under lease. We have somewhere between 12 and 18 independent dealer outlets.

The capital investment of our company is approximately $30,000. Our annual gasoline gallonage in 1935 and 1936 was around 300,000. Of the gasoline that my company sold during those years 96 to 97% was regular or house brand gasoline. Our source of supply of gasoline in 1935 and 1936 was Continental Oil Company. We bought from that company under contract. The point of origin from which our gasoline was shipped to us was Ponca City, Oklahoma. It was shipped in tank cars by rail as a general rule. Sometimes it was shipped out of the pipe line at East St. Louis.

682 The contract with Continental Oil Company which we made is dated on August 15, 1934. We purchased gasoline and operated under that contract for one year.

(Contract dated August 15, 1934, referred to received in evidence as EXHIBIT 634.)

On August 22, 1935 we made a further contract for a continued supply of gasoline to us by Continental Oil Company. The contract was in force from August 15, 1935 to August 15, 1936.

(Contract, dated August 22, 1935, referred to received in evidence as EXHIBIT 635.)

We made a subsequent contract with the same company on August 25, 1936.

(Contract, dated August 25, 1936, referred to received in evidence as EXHIBIT 636.)

The contract dated 1934 was based on the average of the averages of the Chicago Journal of Commerce and Platt's Oilgram, Tulsa edition. It carried a 6¢ split guarantee, which fluctuated according to the dealer margin. The 6¢ guarantee was based on a 4¢ dealer margin. I believe the dealer margin was changed during the life of the 1934 contract, Exhibit 634. The dealer margin was reduced from 4¢ to 3½¢ and the over-all guaranteed margin was changed from 6¢ to 5½¢ at the same time.

683 The contract dated in 1935 carried the same provisions except it was based on 5½¢ instead of a 3½¢ dealer margin. That was a 5½¢ split margin contract.

The contract of 1936 was essentially the same except it carried a provision that if Standard of Indiana discontinues the practice of posting normal service station prices throughout the state in which destination is located, then and in that event, paragraph three of paragraph B of the contract will be inoperative and the price to be paid thereafter will be determined by the remaining provisions of this agreement.

The contract of 1936 was modified by a rider on September 16, 1936. The rider became a part of the 1936 contract. It was related to the Iowa Plan for the State of Missouri. It put a clause in the contract so that the guarantee provisions were based on dealer tank wagon price instead of retail price. Instead of our guarantee margin being 5½¢ below the prevailing retail price it became 2¢ below the dealer tank wagon price, as posted by Standard of Indiana. The relation between that dealer tank wagon price and the previously prevailing normal retail price was 3½¢, so that the margin of the jobber was not changed in any way providing we received the guaranteed margin of 5½¢ under the retail price. Of that 5½¢, if we received it at all, we passed 3½¢ on to the dealer, leaving ourselves 2¢.
684 When the Iowa Plan was adopted, we just got the 2¢ under the dealer price. In each case the 5½¢ and the 2¢ guarantee was subject to the so-called split provision.

When the 5½¢ split margin contract was in effect, the split provision operated at times. I can't give you the dates. I believe it did during 1935 and 1936. The split provisions as contained in our contract mean that if the price which was determined by the average of the two journals mentioned plus rail freight, plus 5½¢, was in excess of the posted retail service station price of Standard of Indiana, the invoice price was reduced by half of the excess. Thus we didn't have a guarantee of 5½¢. Out of the 5½¢ guarantee, if we had gotten it, 3½¢ would go to the dealer anyway. So with respect to our own business, our guarantee was really a 2¢ guarantee both before and after the adoption of the Iowa Plan. If the margin was less than 2¢, the Continental Oil Company reduced our invoice prices by half of that difference.

Our company has preferred to purchase from a major oil company because of better consumer acceptance.

We have discussed with our supplier the subject of a new or different type of jobber contract every time a contract came up and many times between. In 1935 and 1936 we discussed it at frequent intervals with Henry Perriquey who was the jobber salesman for Continental in that territory.

685 Mr. Chaffetz: I asked you what was the discussion you had in 1935 and 1936 with Mr. Perriquey with respect to a jobber contract?

Mr. Donovan: I object to that question, if the Court please, because it is immaterial and incompetent and because it is necessarily calling for hearsay, because it is not pursuant to any allegation of conspiracy set forth in the indictment, because there is not proof of authority or agency of the party making the declaration, and it is not admissible against any defendant, individually or corporate, here, and because it is not within the allegations of the indictment.

Mr. Chaffetz: The Government suggests that this evidence be admitted only against Continental Oil Company.

The Court: Objection overruled, but so the jury may understand, the evidence of this conversation will be admissible only as against the Continental Oil Company. Exception allowed.

I knew what Mr. Perriquey's position was with the Continental Oil Company. I had done business with him over a period of time, and had occasion to confirm that he was in truth an employee of the company.

686 We simply asked if there wasn't some possibility of supplying a contract that would yield the company a better margin, and Perriquey said that of all the contracts he had seen it carried the same price provisions as the rest of them, and as far as his company was concerned, there was nothing better to be had.

Under our contract we were not required to sell the dealer at a certain price but we had to compete with the dealer margin offered by the Standard of Indiana. There was no provision of the contract that required us to sell our gasoline according to that figure. That was just a custom of the trade. We might sell a little gasoline, but certainly wouldn't sell much at a price higher than that posted by Standard of Indiana. Our dealers wouldn't get any business if they tried to sell at a higher price. I never saw it tried.

I talked at various times with J. S. Curtis, a division manager of Continental Oil Company at Kansas City, on the same subject as I talked with Mr. Perriquey. He was division manager and I had done business with him over a period of quite some time.

Q. Can you tell us what were your discussions with him on that subject during 1935 and 1936?

Mr. Donovan: Same objection as appears at Record pages 241 and 292-293.

687 Mr. Chaffetz: The Government makes the same suggestion that this evidence be admitted only against Continental Oil Company.

The Court: Same ruling. It is admissible only as to the Continental Oil Company. Exception allowed.

A. I would be unable to fix any definite time. There has been a number of conversations during the years we have done business with them, over this 5½¢ margin. But I discussed it with Mr. Curtis during the period 1935-36.

I never, to my knowledge, bought or sold any hot oil. I am a member of the Missouri Independent Oil Jobbers Association, and National Oil Marketers Association. The Missouri Oil Jobbers Association has somewhere between 100 and 150 members.

Cross-Examination by Mr. Donovan.

Under the contract I could sell at any price I pleased. We sell at a price which enables us to meet competition. We don't attempt to meet all competition, but any reasonable competition.

If I am a jobber and have a service station, and operate that service station in addition to my jobber business, I get my jobber margin and also my dealer margin. As we have discussed here, that might be 5½¢.

688 Q. Let's suppose that your station is standing at a very desirable corner, and you have an advertised brand, and you are doing a good business, in fact, in that sector you perhaps have the dominant business. Let's say I come along, and I get a good brand, and I get a store nicely painted up and some good tanks on the corner opposite to you. Now, I am a dealer, and I am getting only 3½¢. Suppose that I am green in this business, and I am foolish enough to think I can compete with you, and I, at the same time that you are selling at 20¢, I cut my price to 19½¢. If you began to see the business come to me after a week or so and you began to see your business decline, what would you do?

A. If I began to see the business declining, then I would meet your price.

By Mr. Kirkland

I believe Standard of Indiana has 1 or 2 jobbers in Missouri. But it is generally true in the Mid-Western territory that Standard of Indiana does not make contracts with jobbers.

689 *Redirect Examination by Mr. Chaffetz.*

In 1935 and until August or September, 1936 Standard of Indiana owned and operated retail stations through our territory. I think it is the only major oil company that operated their own stations during that period. The others were all operated by jobbers. It was known as the market leader, as far as retail prices were concerned, during that period. That term "market leader" signifies in the trade that it is the company that posts the price that is generally followed by all other marketers. Usually in practice, both major oil companies, jobbers and independent dealers, in their retail prices, have followed the prices posted by Standard of Indiana.

Recross Examination by Mr. Kirkland.

When Standard of Indiana operated its own stations in Missouri, it posted a retail service price at the station. When it ceased to operate stations, of course, it ceased posting retail service station prices. From then on, it posted at its bulk plants the tank wagon price to dealers, and the commercial consumers tank wagon price.

690 *Redirect Examination by Mr. Chaffetz.*

When the price was posted at the bulk plant by Standard of Indiana as the dealer's tank wagon price, after it had ceased posting the retail price, the dealer's tank wagon price posted by that company had the relation to the previously prevailing retail price of about 3½¢ less. It also posted a consumer's tank wagon price about the time the Iowa Plan was adopted in the fall of 1936. The relationship between the consumer's tank wagon price as compared with the previously prevailing retail service station price of the Standard of Indiana was 2¢ under. As far as the jobber was concerned, whether he bought at 5½¢ under the retail price, or 3½¢ under the consumer's tank wagon price, or 2¢ under the dealer's tank wagon price, his margin was 2¢.

691 J. H. CROWLEY, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I live in Beloit, Wisconsin. I have lived in Wisconsin all my life, about 50 years. I have been in the oil jobbing business, wholesale and retail, for 10 years. My company, Goodall-Crowley Oil Company, has operated as an oil jobber during all that time. The trade name is Goodall's. I am president and manager and am financially interested in the company. It operates in Beloit, Janesville, Clinton, South Beloit; we have a reseller in Milton Junction, and did have one in Edgerton.

The capital investment of our company is approximately $125,000. It sold, as a jobber, in 1935 and 1936 about 1,250,000 gallons of gasoline annually. We have 1 bulk plant now. We had 2 up until the last year or two. The capacity of that one bulk plant is about 275,000 gallons, and about 150,000 of it is for gasoline. Approximately 80% of that was regular or housebrand gasoline. We had about 13 company controlled retail stations and 5 independent dealer accounts in 1935 and 1936.

During 1935 and 1936 we bought most of our regular and Ethyl gasolines from Mid-Continent Petroleum Corporation under a 4 year contract made on February 21, 1933.
692 It continued in effect until February, 1937. Under it the gasoline was shipped to us, as a rule, out of Franklin Park, out of the pipe line; occasionally, out of Tulsa. By "out of the pipe line," I mean the gasoline is transported from Tulsa or the Mid-Continent into Chicago by pipe line, and then is put into tank cars and is shipped by tank car from Chicago or from Franklin Park to me. Under this contract the gasoline was to be billed on the average of the Chicago Journal of Commerce, subject to a 5½¢ guarantee.

(Copy of contract referred to received in evidence as EXHIBIT 637.)

We preferred to purchase our gasoline from a major oil company, because at the time we signed this contract Mid-

Continent was coming out with a new gasoline, a lubricated gasoline, and we hoped that it would improve our sales. Previous to that time we sold and distributed our gas at our own stations under our own name. After that time, the brand name we used was D-X, the nationally advertised brand name of Mid-Continent gasoline.

I have discussed the margins in jobber contracts with Walter Herr, the division manager of Mid-Continent Company. Possibly I had several such discussions in 1935 and 1936, but a specific discussion with him was in Milwaukee in January or February, 1936. That discussion concerned the subject of the jobber contract between our company and his.

693 Q. Will you relate to us the substance of that discussion?

Mr. Donovan: I object to that, your Honor, upon the ground that it is immaterial and incompetent; because necessarily calling for hearsay; because not pursuant to any alleged conspiracy set forth in the indictment; and as not within the allegations of the indictment, and not evidence against any of the defendants here.

Mr. Chaffetz: The Government suggests this evidence be admitted only against Mid-Continent Petroleum Corporation.

The Court: It will be so admitted. Objection overruled. Exception allowed.

The substance of the conversation was that I told Walter that we couldn't do business on a 5½¢ margin, and I suggested that he get us a confidential ½¢, with no results. I don't know that he said anything with reference to whether I could obtain a different contract.

I have discussed the same subject in a general way with a great many different representatives of major oil companies. I couldn't name the companies, only in a general way.

I never bought or sold any hot oil, to my knowledge. We have been buying our gasoline on the open market since February 1937.

694 We are a member of the Wisconsin Petroleum Association, and the National Oil Marketers Association.

Cross-Examination by Mr. Donovan.

We had a 5½¢ margin. That was not a local protection. That was guaranteed over the general reduction of Standard of Indiana service stations. There was no split provision in it.

We lease or own 15 service stations. We operate 13. We have a station that we rent out at Rockton. In 1935 and 1936 we sold to 6 dealer stations. We only have 3 at the present time. In addition to gasoline we handle fuel oil, lubricating oil, distillate, greases, alcohol, tires, batteries and other accessories and coal. We retail naphtha.

We try to take a profit on all of those items; and that is in addition to our gross margin on gasoline and on lubricating oil and on grease. Exclusive of gasoline our gross margin on those other items that we deal in is maybe 20% over-all.

When we delivered gasoline to our station, the gross over-all margin we had in 1935 and 1936 between our delivered tank car price and the price we charged the party at our station was approximately 5½¢. We make 3½¢ more on retail sales at our own service stations than we
695 do on our dealer business.

Our gallonage at the present time is something over 1,250,000. We do not have a contract with our dealers. We follow Standard of Indiana as to price. It is customary for us to bill the dealer at the prevailing tank wagon dealer price.

I think other jobbers charge the same price to dealers, and I think on the same margin. I presume some of those dealers have contracts. I don't know for a certainty. We have never followed any contracts. If a dealer asked us to sell at a margin below the margin that the other jobbers sold their dealers, I would tell him we could not afford to do it.

Redirect Examination by Mr. Chaffetz.

The margin that we make on those accessories and lubricants, other things that we handle in addition to gasoline, is very important to us in our business. The margin that we earned on lubricants and other accessories in 1935, affected the financial results of our entire operation. We don't break down our business, but I think we made a profit there. The financial results of our entire operation in 1935 was that I think we had a very slight loss. That includes gasoline lubricants and accessories combined.

696 *Recross Examination by Mr. Donovan.*

I think there is a vice-president, and secretary and treasurer of our company. The secretary and treasurer might be one office, or the two offices in one person. Usually the vice-president is not paid a salary. Occasionally the secretary is paid a salary, not regularly. But I as president and manager have been paid a salary.

By Mr. Dougherty

On the whole, with respect to price wars, Beloit has been quite stable during the past 2 or 3 years.

By Mr. Donovan

In 1936 I think I got a salary of around $8,000; in 1935, I would say $5,000.

Redirect Examination by Mr. Chaffetz.

The total investment we had in that business was about $125,000. In 1936, the secretary received $2,000, as I remember. None of the other officers received any salaries. We had approximately 35 employees.

697 WILLIAM J. O'BRIEN, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have lived in Superior, Wisconsin practically all my life, 44 years. I am an oil jobber, and proprietor of O'Brien Oil Company, a one-man company. It started in business in 1922 and has continued in business down to date. I think the capital invested in that business is about $34,000, approximately the same as in 1935 and 1936.

In 1935 we sold around 725,000 gallons of gasoline; and in 1936 about 800,000. Of that 90% was regular or house brand gasoline.

In 1935 and 1936 we had 4 retail service stations of our own which we operated, and 1 that we leased and operated. In 1935 and 1936 we had 3 bulk storage plants, 2 in Superior, and 1 in Duluth. The total capacity in gallons of gasoline of those 3 plants was 96,000. About 70% of all our gasoline is sold through independent dealer accounts. We sell 9 independent dealers.

Our source of supply of gasoline in 1935 and 1936 was Empire Oil & Refining Company. We bought from that company under contract. Under that contract some of our gasoline was shipped from Okmulgee, Oklahoma, by tank car to Superior; and the last year and a half it has come

from the East Chicago refinery by tank car. My un-
698 derstanding was that the crude came by pipe line to
East Chicago and was refined at Empire's refinery at East Chicago.

The contract under which we operated for one year was entered into between us and Empire Oil & Refining Company on July 11, 1935, effective August 8th. We had been buying gasoline from Empire Oil & Refining Company prior to that date, likewise under contract.

(Contract with Empire Oil & Refining Co., dated July 11, 1935, with attached sheet, received in evidence as EXHIBIT 638.)

That was what was known as 5½¢ split contract. The margin that I in my jobbing operations had under that contract during the period it was in effect was 2¢ or less. 3½¢ was the margin that the retailer was receiving.

The expenses that I as a jobber have run something like this: to begin with, this gasoline, as everyone knows, is a very hazardous liquid. It has to be protected by safe tanks and dikes in case of accidents; and if you are handling kerosene in connection with gasoline one mistake in delivery might cost you your business. You have to be protected with insurance to cover that particular item. Your bulk plant must be covered with insurance, and your men must be of course covered very thoroughly with all kinds
of insurance. As jobber in Minnesota and Wisconsin I
699 am required to have a license to operate in each state,
and that requires a cash bond, and that cash bond costs me about $60 in both states. I guess it cost about $80 in Wisconsin. In addition to that we are responsible to the state for all gasoline shipped in both states. We are audited by the State of Wisconsin and this end of it, I think, is very expensive to the jobber. We necessarily have got to do a substantial credit business in order to compete with other jobbers, and for them the larger oil companies usually furnish coupon books, credit cards, and all sorts of things. Necessarily we must do some credit business. We run into some bankruptcies; we run into some accounts that cannot be collected, and as a jobber we must absorb that.

I am referring now to State and Federal taxes. The jobber is responsible to the state for taxes on all gasoline distributed by him. He is responsible whether he actually collects this tax from the retailer to whom he sells. And it is one of the important functions of the jobber and it is one of the distinct differences between a jobber and a so-called agent, because we are directly responsible and must pay

that out of our pocket. And when we are collecting a 5¢ gas tax on a 1 7/10¢ or 2¢ gross profit, it is a difficult job. It is one of our expensive items. Of course, added to that has been an increase in wages and an increase in price of
equipment, especially new computing pumps that we
700 must have and install. These pumps used to be bought
for probably $100 or $125, and the best type of pump
now is $225.

Jobbers are often required to buy these. On a 2¢ margin, it requires a long time to pay for them. Then, of course, we have the accounting and bookkeeping demanded by two states, or any state if you are operating only in one state, as to your records and gas tax. In addition to these things, we have the usual expense of a wholesale business such as maintenance of equipment. We have bulk plant, salaries of employees, and insurance.

Our type of business I think is distinct from any other merchant. Another merchant is not responsible after he sells. He is not responsible for this tax, but the jobber is. That, as I understand it, is one of the difficult parts of a jobbing business.

In the early days of the jobbing business there was no tax. We have had a tax about 5 or 6 years. But the taxes have been increased. On a 2¢ gasoline tax our hazard of collection is not so great of course as on a 4¢ tax.

During 1935 and 1936 we had occasion to discuss with a representative of our supplier the subject of a change in the form of our jobber contract. On account of the narrow margin, and our expense increasing, we went to them sev-
eral times in 1935 for a better contract. I talked prin-
701 cipally to L. C. Trapp, assistant sales manager of the
Empire Company.

Q. What conversation did you have with him in 1935 and 1936 on that subject, and give us if you can the time and place of such conversation if you can recall it.

Mr. Donovan: I object to that, may it please the Court, as incompetent, and immaterial because necessarily calling for hearsay. It was not made in furtherance of any alleged conspiracy under this indictment, and certainly is not within the issues of the allegations set forth in this indictment, and not evidence against any of these defendants.

Mr. Chaffetz: The Government suggests this evidence be admitted only against Empire Oil & Refining Company.

The Court: Objection overruled, with this qualification; that it is admissible as to the Empire Oil & Refining Company. Exception allowed.

We spoke to Mr. Trapp regarding this contract at the time of the renewal. That would be in September, 1935, and like all jobbers, we complained of the narrow spread, and of course asked for a better contract, but could not secure it. Mr. Trapp did not tell me why he could not give
me a better contract, but he did tell me that if there
702 were better contracts obtainable then he would give me
the same kind of a contract, that is, as I understood.

During that same period I talked with Fred Wibert of Duluth, Minnesota, who I understood was the jobber salesman of Shell Petroleum, on that same subject. I asked him what kind of a contract the Shell was offering. I thought they were a big organization and might have a better contract. He told me it was the usual 5½¢ split and he could do nothing better; he said, "I can do nothing for you."

The house brand gasoline that we handle for the Empire Company is known as "Koolmotor". If I make a comparison, Red Crown would be the house brand of Standard Oil and Cities Service "Koolmotor" is the house brand, the name of the leading brand of Empire.

We prefer to handle a major company brand of gasoline because of the public or consumer acceptance, and the advertising. I find consumers prefer to buy an advertised brand of gasoline for this reason: that when you are dealing, like most jobbers have to, with re-sellers, they prefer a nationally advertised brand. So it is necessary for us as jobbers oftentimes to carry a major line if we hope to do business with re-sellers, which is the principal part of our business.

703 *By the Court*

The jobber suffers loss through the evaporation of gasoline in two ways: one, through evaporation, and especially in northern Wisconsin and Minnesota, what is known as shrinkage. That is 1% for every 20 degrees in temperature. For instance, if we have a car of gasoline shipped to us, which we often have, at 10 below zero, we would have an equivalent of 3% shrinkage, and on an 8,000 gallon car it would amount to 240 gallons of gas that we never could sell as long as the weather stays 10 below. It gets 40 below in Superior. In hot weather, of course, there is an expansion, but we have to buy this gasoline at 60 and in northern Wisconsin we don't have very many days much over 60. The mean temperature is 39 for the year. So we do stand a substantial loss in shrinkage.

Cross-Examination by Mr. Donovan.

I started in the oil busines in a small way in 1922. Since 1930 I have given pretty much 100% of my attention to this business. Over this period I inquired into the different phases of the business and into its business hazards and difficulties. The hazards that we happen to encounter certainly are the same kind of hazards that the whole industry has to encounter.

The refiners and the producers have to pay taxes, and all have to encounter the same kind of danger up to 704 the point where we buy. After a refiner, independent or major oil company ships a car of gas into a town, then he is relieved at that moment from any gasoline state tax.

Our expenses come out of our total income on all the products that we sell. 70% of the total income is the 2¢ margin on gasoline. We deduct our expenses from our total income when we make our income tax return.

When we sell to a dealer, we sell under an arrangement or a contract that allows him 3½¢ margin. When other jobbers have contracts or arrangements with other dealers they allow the same margin, to the best of my knowledge.

Q. So that normally, that margin of 3½¢ which the jobbers allow the dealers, normally, that margin is uniform throughout the trade, is it not?

A. It is based on the contract.

Q. Whatever it is based on, the margin is the same as allowed by the jobbers to the dealers; is that correct?

A. It is true, but it is right in our contract. It is based on the Standard Oil tank wagon market. 3½¢ to the dealer, and that is in the contract.

Q. Where is it in your contract that you must allow 3½¢ to your dealers?

705 A. I said it was based on that. That is why we compute our protection.

Q. You can sell at any price you please.

A. I couldn't sell it over that amount.

Q. Where is it in your contract that provides you are to do that?

A. It is not provided, but it would be bad practice to do it. You can't and be successful.

There is nothing in the contract that obligates me to sell at any particular price to a dealer. If we want our protection, if we want this 2¢ margin, we have to sell it at 3½¢. It is a common practice in the industry, among jobbers and majors—direct operators, to allow 3½¢ established by the price maker. I will explain it this way. If we were going to operate on that split contract, we surely couldn't allow more than that 3½¢.

The Court: The question is, was there any provision in your contract that prohibited you from selling to your dealer for less than 3½¢?

A. There is no provision in the contract that would prohibit you to sell. You couldn't do it,—

The Court: You have answered the question.

Mr. Donovan: Q. And as I understand you, you say that that 3½¢ margin to dealers is uniform normally throughout the trade; is that right? Yes or no?

A. Yes.

706 M. H. TEIGE, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have lived in Stoughton, about 17 miles from Madison, since 1922. I have been an oil jobber in the wholesale and retail oil business for 15 years at Stoughton. I run our corporation, the Wisconsin Petroleum Company. I am its president, treasurer, and manager, and own about half its stock. The capital invested in the company is about $70,000.

From our 3 bulk plants, located at Stoughton, Brooklyn and Belleville, we distribute gasoline to the 4 retail service stations we own but lease to dealers, to our 10 other dealers, and to consumers.

In 1935 and 1936 our total volume of gasoline sales was between 650,000 and 700,000 gallons each year. Between 90% and 95% of that was regular or house-brand gasoline.

We have been doing business with Mid-Continent Petroleum Corporation for about 7 years under contract. We secured our gasoline during 1935 and 1936 from Mid-Continent under contract dated April 3, 1933.

(A copy of contract with Mid-Continent Petroleum Corporation, executed May 3, and dated April 3, 1933, received in evidence as EXHIBIT 639.)

We operated under that contract from April 3, 1933
707 until March 1, 1934, as far as my source of supply was concerned; but until the expiration date, as far as we were concerned. There is some controversy, not yet settled, between us and our supplier as to the application of the contract after March, 1934.

All gasoline supplied to us under the contract was shipped to us in tank cars, and to a great extent came from the Chicago district; but some came from Tulsa, Oklahoma. The gasoline from the Chicago district was not refined there; it got there through pipe line from Tulsa. We paid full freight of 2.77¢ a gallon on the gasoline from Tulsa, except for a short period when it was practically 2.84¢, even where the gasoline came from Chicago.

On April 11, 1936, upon the expiration of this contract, we executed another contract with Mid-Continent Petroleum Corporation under which we have operated to April 1937 in much the same way that we did business under the preceding contract.

(Contract referred to received in evidence as EXHIBIT 640.)

Just previous to the time when this first contract expired and before we entered into the 1936 contract, in the course of our negotiations for the new contract I had a discussion with Mr. Berger, a jobber salesman of Mid-Continent Company, with respect to a jobber contract.

708 Q. Now, will you tell us the conversation that you had with him?

Mr. Donovan: I object, your Honor, because it is immaterial and irrelevant; because it is hearsay; because it is not made in furtherance of any alleged conspiracy in this indictment; because there is no proof of authority or agency of the party making the declaration; because it is not within the issues or the allegations of this indictment, and cannot be considered as evidence against any corporation or individual defendant involved in this proceeding.

Mr. Chaffetz: The Government suggests that this evidence be admitted only against Mid-Continent Petroleum Corporation.

> **The Court:** Objection overruled. Exception allowed. I will say to the jury that, at this state of the proceedings, it is admissible as to the Mid-Continent Petroleum Corporation only.

I told Mr. Berger I was dissatisfied with the new contract. The earlier contract, under which I had been operating, provided for a 2½¢ guaranteed margin, and they were cutting me down to 2¢. According to their invoices, they had cut me down to 2¢, beginning March, 1934. Of course, I realized that when the first contract was over the 2½¢ guaranteed margin would not apply to future shipments. I hated to be cut down to 2¢, so I ob-
709 jected to it. However, Mr. Berger stated that that was the best contract they would give; it was the same kind of a contract as others were giving, and I might just as well sign this contract, because I couldn't get anything better; and if there was a better one offered to me from the larger companies, that their company would no doubt go along with any similar contract.

I knew that I had to negotiate a new contract if I wanted to continue with them. Mr. Berger did make some concessions to me. He omitted the split of guarantee of 2¢, which provision was stricken from the printed form. I was given a flat 2¢ guarantee. Also, I endorsed a clause to the effect that if their company, any time during the continuance of this contract, presented a better contract, I had the privilege of cancelling this contract, and accepting the better contract.

Cross-Examination by Mr. Donovan.

I am now operating under a 5½¢ guarantee open top.

710 W. J. MILLER, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I have resided in Philadelphia, Pennsylvania approximately a year. I have been a special agent for the Federal Bureau of Investigation in the Department of Justice for something over 3 years, making investigations involving the examination of records. I had practiced as an accountant about 10 years before going with the Bureau. I am a certified public accountant in Texas.

At the request of Government counsel, I have made a study of certain provisions of jobber contracts that prevailed in the Standard of Indiana territory. I examined specimen contracts that had been sent here in response to a subpoena issued in October, 1936 by this Court. Pursuant to those subpoenas each of the several companies produced here certain forms of contracts, contracts and data pertaining thereto. That material was turned over to me at that time. It covered, I think, the period from January 1, 1930 to September 30, 1936. I segregated the material which pertained to the contracts made in the years 1935 and 1936. I have some of that material here. Some of it was impounded.

711 Mr. Chaffetz: These materials were supplied by the respective defendants, by their counsel, mostly, and I want to offer them in evidence. And I should like to offer it, if I may, company by company, according to the defendants here, and have noted in each exhibit all the material the company produced for that particular company.

These contracts are offered, your Honor, in order to establish the facts as alleged in the indictment, in which the conspiracy is alleged to have operated, and an understanding of them is essential to an understanding of the nature and effect of the conspiracy found in the indictment.

The Court: I will say to the jury that the contracts offered are received as evidence as to the corporations named in the contracts only.

(The forms of jobber contracts, referred to, used in the Standard of Indiana territory by the following companies were then received in evidence, as indicated below:

The 3 Globe Oil & Refining Companies (Oklahoma, Kansas and Illinois)	Exhibit	641
Mid-Continent Petroleum Corporation	“	642
The Texas Company	“	643
The Pure Oil Company	“	644
The Gulf Companies	“	645
Wadhams Oil Company	“	646
Continental Oil Company	“	647
Socony-Vacuum Oil Company, White Eagle Division	“	648
712 Socony-Vacuum Oil Company, Chicago Division	“	649
Socony-Vacuum Oil Company, Lubrite Division	“	650
Cities Service Oil Company	“	651
Phillips Petroleum Corporation	“	652
Barnsdall Refining Corporation	“	653
Standard Oil Company (Indiana)	“	654
Shell Petroleum Corporation	“	655
Barnsdall Refining Company	“	658
Sinclair Refining Company	“	659)

I have made a study of these materials for the purpose of determining the extent to which the various defendant major oil companies, in making contracts with jobbers in the Standard of Indiana territory, provide in those contracts that the basic price to be paid by the jobber shall be determined on the basis of prices on tank car gasoline published in the Chicago Journal of Commerce, or Platt's Oilgram, Tulsa Edition, or both.

I believe that one or two defendant major oil companies did not submit contracts. I have got the names of those that did. Those that my study covered are: Socony-Vacuum Oil Company; Wadhams Oil Company; Continental Oil Company; Gulf Refining Company; The Pure Oil Company; Shell Petroleum Corporation; Sinclair Refining Company; The Texas Company; Tide Water Oil Company; 713 Mid-Continent Petroleum Corporation; Phillips Petroleum Company; Barnsdall Refining Corporation; Globe Oil & Refining Company; Deep Rock Oil Corporation; Standard Oil Company (Indiana); Cities Service Oil Company. I think that covers all of them. Skelly was one that did not submit contracts for 1935 and 1936; their material covered previous years.

The total number of contracts covered by the data submitted by all those companies was 1729 contracts in 1935 and 537 contracts in 1936. In addition to the 537 in 1936, there was data submitted by Socony-Vacuum, Mid-Continent and Continental, I believe, in which they did not give us the number of contracts.

Specimen contracts, not actual contracts, were submitted in most instances. In one or two instances, I think they were photostatic copies of actual contracts in existence. But in general they were forms of contract.

In addition to the forms of contracts, there was submitted data indicating the number of the various types of contracts which were made by the respective companies, so that, for my purposes, I had all the material I needed just as if I had all the actual contracts.

That doesn't cover the whole year 1936, as the subpoena
was issued in October, so I think they covered up
714 through September 30. These cover only contracts that
were entered into in 1935 and 1936, and do not cover
contracts made in earlier years, which carried over.

Out of the total of 1729 contracts made with jobbers in the Standard of Indiana territory in 1935 by the defendant major oil companies whom I have enumerated, 1461 out of the 1729 provided that the basic price shall be determined on the basis of the average of the averages of the high and low quotations of the Chicago Journal of Commerce and Platt's Oilgram on spot market tank car gasoline.

The number of contracts that I actually examined, of course, was not 1461. I examined specimen contracts of each different type, but from the speciment contracts submitted, plus the other data supplied, I was able to determine that they made a total of 1729 contracts with jobbers in 1935. The data that I examined purported to cover all of the jobber contracts made by the respective companies with jobbers in the Standard of Indiana territory in the years in question, which is what the subpoena called for. The "other data", to which I referred, means the other data which was supplied by the companies in connection with the specimen contracts.

Of all the contracts or specimens and data, which I examined, made by each of the defendant major oil companies
mentioned by me with jobbers in the Standard of In-
715 diana territory in 1935, 84.5% provided that the basic
price shall be determined by reference to the average
of the averages of the high and low quotations of the Chicago Journal of Commerce and Platt's Oilgram. No contracts were based on Platt's Oilgram alone. Included in that group were 100 contracts based on the Chicago Journal of Commerce quotations alone, that is, the basic price paid by the jobber shall be determined by reference to prices

published in the Chicago Journal of Commerce on spot market tank car gasoline.

There were 168 contracts out of a total of 1729 on which the basic price was calculated on some basis other than those quotations in the Chicago Journal of Commerce or Platt's Oilgram. That group principally concerned itself with Sinclair Refining Company. Sinclair Refining Company had 122 contracts which were not based on either the Chicago Journal of Commerce or Platt's Oilgram. The basic price in their contract was the seller's open market tank car price. The Sinclair Company had 1 contract entered into in 1935 in which the basic price related to the Chicago Journal of Commerce or Platt's Oilgram. Included in that 122 contracts there was 1 contract with a supplemental agreement which defined the seller's open tank car market, as being the low of the Chicago Journal of Commerce, Oklahoma market.

716 For the year 1936 until September 30, there were 537 contracts made with jobbers by the defendant major oil companies I named in the Standard of Indiana territory. Out of the total of 537, I found 429 contracts on which I have the figures contained a provision that the basic price shall be determined by reference to the average of the averages of the high and the low quotations of the Chicago Journal of Commerce on spot market tank car gasoline. That is 79.9%. I did not find any contracts based on Platt's Oilgram alone. I found 90 based on the Chicago Journal of Commerce alone. 18 were not based on either journal.

In addition to those, there were specimen contracts submitted by Socony-Vacuum, Continental and Mid-Continent, in which the basic price was calculated in the same manner, but the number of those contracts was not given. So that, if I had the number of those contracts that were made in 1936, that would increase both the total number and the percentage of the total contracts that were made on the basis of the average of the averages of the two journals.

Cross-Examination by Mr. Francis.

I did not purport to list the number of contracts which were in effect in the Mid-Western area during the years 1935 and 1936, which had been signed in previous years.

717 All I purported to do, directing it with reference to The Pure Oil Company, was to list the number of contracts which they showed in their subpoena duces tecum,

as new contracts which were entered into with jobbers during each of those named years.

By Mr. Kirkland

I think there is just 1 contract from Standard of Indiana in 1936. None in 1935. There was 1 specimen contract, which I understood to be the only contract they entered into. It didn't purport to cover the number of contracts they had existing. That is for that one year only.

I don't know of any other jobber contract that Standard of Indiana entered into at that time, in that year.

By Mr. Gray

I received 14 contracts entered into by Gulf Refining Company in 1935; and there were none in 1936.

As far as the basic price was concerned, there was just one kind of specimen included in that 14. There may have been more than that, but the basic price was calculated in the same manner. All 14 of them contained the provision referring to the average of the averages of the high and low of these two journals. I don't believe Gulf Oil Company submitted any; just Gulf Refining Company.

718 *By Mr. Lawton*

Sinclair had a form of contract under which the buyer's price was to be the seller's open market tank car price. There was one contract which defined the open market tank car price of Sinclair to be the low of the Journal for that one contract only. It limited it for the purpose of that contract only. The low of the Journal shall be taken to be their open market tank car price for that one contract only. It had no application to a general definition.

Direct Examination (continued) by Mr. Chaffetz.

During my testimony about the percentage of contracts made by defendant major companies I named in the Standard of Indiana territory which contained price provisions based upon the average of the averages of the high and the low quotations of the Chicago Journal of Commerce and Platt's Oilgram, I said I didn't have the data as to Skelly. Skelly submitted the specimen contracts, with the data as required in the subpoena. The data submitted showed that there were 207 contracts adopted in December, 1934 which were in effect up through the date of the subpoena, October, 1936. Those 207 contracts all contained that same provision that the price would be based on the average

of the high and low of the Chicago Journal of Commerce
and Platt's Oilgram. I do not mean all the contracts
719 of Skelly in force during 1935 and 1936, but only those
that were adopted or put into force subseqnent to December, 1934.

If they had contracts made in 1933, which were 4 or 5 year contracts, they might still be in effect in 1935 and 1936, but I didn't consider those. There were no new contract forms adopted between December, 1934 and September 30, 1936, according to the data submitted. I don't know the exact date on which these contracts were made; but I do know that as to Skelly, all contracts made between those dates had the price provision that I have described.

Cross-Examination by Mr. Kirkland.

The subpoena asked for all the forms of contracts entered into by Standard of Indiana—taking that company for an illustration—with jobbers, not only for the year 1936, but for the years 1930 to some date in October, 1936, inclusive. I don't recall what the reply of Standard of Indiana was to the subpoena.

I had no reason to doubt the authenticity of that letter or the statements in that letter, wherein it is stated that the only 2 jobber contracts that company entered into from January 1, 1930 to October 1, 1936, inclusive, were enclosed, and that the company has never during this period had any form or type of contract for use in negotiating contracts
with jobbers.
720 I segregated the 1935 and 1936 material, and that is
what I testified from. I didn't attempt to testify to any information that was furnished for the period 1930 to 1934, inclusive, although the subpoena called for 1930 to 1936.

I don't know that the indictment in this case alleges that Standard does no business with jobbers. I don't believe the one contract that Standard of Indiana had and sent me made any reference to the prices of the Journal of Commerce, or to Platt's Oilgram or to any trade journal.

By Mr. Donovan

I used the term "basic price." All of these contracts use the term "basic price." By that term I mean the calculation is based on something to begin with. For instance, a contract might state that the price will be based on the Chicago Journal of Commerce and Platt's Oilgram, with further qualifications as to that price; it might be higher or it might be lower, but the basic prices are those quotations.

(Mr. Donovan read the following provision from a jobber contract:)

"For Texaco Fire-Chief Gasoline in tank car lots, F.O.B. Group Three, the average spot market price determined by averaging the high and low spot market prices quoted in the Chicago Journal of Com-721 merce and Platt's Oilgram (Tulsa Edition) F.O.B. Group Three on date of shipment, for gasoline of the grade corresponding to the Fire-Chief Gasoline shipped under this agreement; provided, however, (1) that if said average spot market price plus freight to point of distribution allows the Purchaser a margin (determined on the basis of Seller's normal price structure without regard to local price deflations) of less than .... below Seller's normal service station price, exclusive of tax, for Fire-Chief Gasoline at point of distribution, then the Purchaser and Seller shall share equally the difference between the actual margin and .... and the price shall be adjusted accordingly; (2) if the Seller increases or decreases Seller's regular posted discount to dealers substantially throughout the State of .... then there shall be substituted in the preceding part of paragraph for the words '.......... cents' wherever they appear an amount of cents equal to .... cents plus or minus, respectively, the amount of said increase or decrease; and (3) in no event shall the price to Purchaser hereunder be less than .... cents per gallon, F.O.B. Group Three."

722 I say the basic price in that paragraph of that contract is calculated from the average of the Journal of Commerce and Platt's Oilgram.

I examined all the specimen contracts. I haven't tabulated any figures. I understand there are a lot of qualifications to the basic price. I don't think I am familiar with the different types because there are an awful lot of them. I have read them. They qualify the basic price.

When the spread between the quotations used in the basic price provisions and the service station price, excluding freight, is such as to bring the marginal provisions of the contract into force, then the price is no longer determined by the publications' quotations. There might be several different reasons that might change that price. I have read in some of the contracts the so-called Q.D.A. clause, quantity discount agreement clause, by which the amount of the marginal protection varies with the amount of the various discounts. I do not know to what extent this clause was used in these contracts. I am sufficiently familiar with the above clause to know that there may be at least two other provisions in that contract which would prevent the so-called basic price from being the price paid under the contract.

723 For the most part, my examination was confined to printed forms or skeleton forms. There were some copies of actual contracts. For each jobber there could be additions to the contract, made out separately by the addition of certain typewritten sheets or handwriting. In fact, there were in many instances. These additions were called for and produced under the subpoenas. It is true that the extent to which the so-called basic price is the price paid by the jobber under the contract, it could vary according to the particular typewritten matter in each contract.

They told us in each instance how many of those typewritten pages applied to various contracts in various states; and I have taken that into consideration in compiling my figures.

By Mr. Morgan

I believe The Texas Company had entered into 80 contracts during 1935, and I don't believe there were any in 1936. I got that information from the tabulations submitted under the subpoena by The Texas Company. That tabulation shows the date the form was adopted by the company. It doesn't show when any of the contracts were entered into.

The first item on the list is Form Number S-1411. There
were two in effect on October 1, 1936. The next form
724 is S-1412. There were 20 in effect. I did not take those
into account at all in my tabulation; I assumed these
were all made in 1933, because that was the date that was
given there, the date the form was adopted.

I can't say how many of those forms that I did not take into account at all in my tabulation were executed during those two years; I didn't take into account any figures for contracts that were adopted prior to January 1, 1935. I say "contract adopted"; I mean "form adopted." I ignored all of those contracts if the form was adopted prior to 1935, regardless of when they may have been entered into.

My statement as to how many contracts were entered into during those two years is based on that assumption that I have just stated. If any of those contracts were put into effect in 1935, they are not considered. There seemed to be quite a few of them in effect during those two years and were still in effect on October 1, 1936.

I do not remember the provisions of Form S-1411 with reference to the price basis. That won't be on my tabulation; it is either impounded or it is in the file.

I don't know the number of forms that were still in use at that time that were submitted in response to the subpoena. I examined a good many of them. If the communication shows 12, that is probably what it was.

725 From that material submitted in response to the subpoena have been detached 9 of the 13 exhibits that were submitted in response to the subpoena. I have just taken out those in 1935 and 1936. I don't recall that there was a difference in the price provisions of those forms that were detached from those that were left attached to the letter. They weren't taken out because there was a difference, because in most instances throughout this entire period the basic price was the same. I don't know that these contracts, S-1411 forms, provided for a flat discount without regard to publication, or anything of that sort; I don't know what that was because I examined so many contracts.

I gave consideration to every contract listed on the tabulation. I was requested to segregate the material for 1935 and 1936. I can't say what the provisions of those forms S-1411 were with reference to price.

Direct Examination (continued) by Mr. Chaffetz.

At the request of Government counsel, I have conducted some studies of the trends of published prices of gasoline during the period covered by the indictment. I used the Oil Price Handbook published by the National Petroleum News Publishing Company, a defendant in this case, and
the Chicago Journal of Commerce, daily editions, as the
726 sources for those published prices. There are certain
data in the Oil Price Handbook which I used to compute the tabulations and graphs I made, namely, the spot market prices for house brand gasoline and third-grade gasoline, Oklahoma market, and the service station prices for 28 cities in the Standard Oil Company of Indiana district.

This book purports to be a summary of the prices as published in Platt's Oilgram on particular days during the preceding year. They published only the Monday quotations or prices in each week. I used the years 1934, 1935 and 1936. The publication of 1936 contains data for 1936.

I segregated from the Oil Price Handbook for the years 1935 and 1936, the prices published therein with respect to the low quotations on third-grade gasoline in the so-called Oklahoma or Mid-Continent market.

This first schedule purports to show all the Oil Price Handbook Monday low quotations of third grade gasoline, Oklahoma market, from March 4, 1935 to May 4, 1936. The Oil Price Handbook purports to cover only the Monday prices of each week.

(Schedule referred to received in evidence as EXHIBIT 663.)

I have prepared, at the request of Government counsel, a graph entitled "U. S. Motor Gasoline third grade 62 727 octane and below, Oklahoma market," which correctly represents the quotations shown on the schedule which is Exhibit 663.

(Graph referred to received in evidence as EXHIBIT 664.)

Platt's Oilgram also published prices for Tuesday, Wednesday, Thursday, Friday and Saturday in 1936. They are not in the book we have reference to. My chart or graph is merely based on quotations for one day out of six, just Monday's price quotations. The chart in no sense shows the price changes which may occur within a week. This chart only shows the low quotations on the Mondays named.

I have testified that a large proportion of the jobber contracts were based on an average of the averages of Platt's Oilgram, Oklahoma market, and the Chicago Journal of Commerce. To arrive at the average of the quotations of Platt's Oilgram we add the high and low quotations and divide by two. On those contracts the high and the low is what they call for. The basic price is considered when taking the high. According to the contracts to get the prices on any particular day we would have to add the high and low of the Chicago Journal of Commerce and Platt's Oilgram, and divide it by four. We would have to have that the day the gasoline was shipped.

There are very ~~few times when~~ the high quotation 728 would change and the low quotation remain stationary. It occurs now and then.

Each one of these vertical lines on that graph represents one week, and each one of these horizontal lines represents ¼¢. In other words, four lines up represents 1¢.

> (The witness then stated the Monday prices and price changes from March 4, 1935 to May 4, 1936 as they appear on the graph Exhibit 664, such statement being here omitted because Exhibits 663 and 664 show such prices and changes.)

I made a similar study of prices of third grade gasoline in the Oklahoma market as shown in the Oil Price Handbook for Monday of each week, which continues beyond May 4, 1936 down to December 31, 1936. I have a schedule of those prices. This schedule was compiled in exactly the same way as the schedule which is marked Exhibit 663, from the same source, and it continues the data down to December 31, 1936.

> (Schedule referred to received in evidence as EXHIBIT 665.)

I have similarly prepared a graph which accurately reflects graphically the prices stated on this schedule which is Exhibit 665. This chart merely carries the same low quotations for third-grade gasoline for Mondays through to December 21, 1936.

> (Graph referred to received in evidence as EXHIBIT 666.)

729 (The witness then stated the Monday prices and price changes from March 4; 1935 through December 20, 1936 as they appear on the graph Exhibit 666, such statement being omitted here because Exhibits 665 and 666 show such prices and changes.)

I have prepared from the same source, that is, the Oil Price Handbook showing Platt's Oilgram prices, a schedule of prices published as low quotations for regular or house brand gasoline, which I have entitled, "Monday Low Quotations, House Brand Gasoline, March 4, 1935, to December 21, 1936, Oil Price Handbook, Oklahoma Market". This schedule covers the low prices only published as of Monday of each week during the period covered for regular or house brand gasoline, as shown in the Platt's Oilgram.

> (Schedule referred to received in evidence as EXHIBIT 667.)

I have prepared a graph which is intended to reflect accurately the prices listed on this schedule, Exhibit 667, that is, Monday low quotations as published in the Platt's Oilgram and reprinted in the Oil Price Handbook for the period from March 4, 1935 until December 21, 1936.

(Graph referred to received in evidence as EXHIBIT 668.)

(The witness then stated each Monday price from March 4, 1935 to December 21, 1936, as each appears on the graph Exhibit 668, such statement being here omitted because Exhibits 667 and 668 show such prices.)

730 I attempted to make a study of the trend of average prices on regular or house brand gasoline as reflected in the Oil Price Handbook or Platt's Oilgram. I first prepared a schedule reflecting the average prices by months. The average monthly price is calculated on the average of the Monday quotations. There is a figure in the Oil Price Handbook which purports to show the average monthly price, and that is the manner in which it is calculated. For house brand gasoline, Oklahoma market, on any one of these weeks, they quote a high and a low of what they call the January average. It is based on the average of the high and low quotations for Monday only.

On page 13 of the Oil Price Handbook for 1935 are quotations of U. S. Motor gasoline, Oklahoma market, regular grade, 63 to 70 octane. Those quotations are the average monthly high and low Monday quotations. I have merely copied correctly these figures onto a schedule, and then I have plotted them on a graph.

I re-calculated those monthly averages and found they were accurate, as shown in the several books. On my graph the averages are by months of the Monday low and high quotations, as published in the Oil Price Handbook and reproduced from the daily Platt's Oilgrams for the preceding year. In my schedule on this data, I have 1934 and 1935 and 1936.

731 This document is a schedule of prices during 1935 and 1936, which are supposed to be the average of the Monday high and low quotations of the Platt's Oilgram during the years in question averaged on a monthly basis. I took the high and low for each Monday in a particular month, added them together, first averaged the high and low, and then divided by four to get the monthly average. When there were 5 Mondays in the month, I divided by 10.

(Schedule referred to received in evidence as EXHIBIT 670, such exhibit being later withdrawn from evidence.)

I have prepared a graph which accurately reflects the prices contained on the schedule to which I have just referred.

(Graph referred to received in evidence as EXHIBIT 671.)

The prices reflected in that graph are the average of the Monday high and low quotations on regular or house brand gasoline by months. I have prepared a comparative study of low quotations on third-grade gasoline with low quotations on house brand gasoline at retail price in the Standard of Indiana territory. I have also prepared a schedule reflecting low quotations for house brand gasoline as reflected in the Oil Price Handbook from January 2, 1934 to December 2, 1936. Those prices are Monday prices. This is the schedule of those Monday prices that I used in connection with the graph.

732 (Schedule referred to received in evidence as EXHIBIT 672.)

I also got my data with respect to retail prices from the Oil Price Handbook. It publishes retail prices for approximately 150 cities in the United States. I took 28 of those cities, which represent all of the cities for which they publish prices in the Standard of Indiana territory. I was unable to find any other sources which would give me the prevailing retail price data for a larger number of cities in the Standard of Indiana territory during the period which I studied.

This schedule covers the service station price, less city, State and Federal gasoline tax, for Standard Red Crown gasoline as posted and as reflected by the Oil Price Handbook for the period December 3, 1934 to December 21, 1936, and these averages are based on the 28 cities which I have also listed here. I computed the averages myself. I took the price as shown in the Oil Price Handbook for each city, deducted from those prices the gasoline tax, and then divided by 28 to get the average prices. Again the prices are Monday prices. Attached to my schedule I have listed the cities that were covered by my study.

(Schedule, with list of cities, referred to received in evidence as EXHIBIT 673.)

733 I have prepared a graph which accurately reflects the retail prices taken from the Oil Price Handbook which I have described, in comparison with a graph of housebrand gasoline published prices; and also a graph of published prices for third-grade gasoline.

The Standard of Indiana territory comprises the 10 states North Dakota, South Dakota, Iowa, Minnesota, Missouri, Illinois, Indiana, Kansas, Wisconsin and Michigan.

(Graph referred to marked Exhibit 674 for identification.)

Exhibit 674 purports to show, as listed by the Oil Price Handbook for the period March 4, 1935 to December 21, 1936, the Monday low quotations for third-grade gasoline; the Monday low quotations for housebrand gasoline; and the average service station price, less gasoline tax, for Standard of Indiana Red Crown gasoline for 28 cities in Standard of Indiana territory. Standard Red Crown is what they call their regular gasoline.

The lower graph is identical with that contained in previous graphs Exhibits 664 and 666 which I have identified here and refers to the Monday low quotations on third-grade gasoline. The middle graph relates to the low quotations on housebrand gasoline; and again it is identical with the graph Exhibit 668 which I have previously referred to here. The only thing new on this graph is
734 the graph of retail price.

(Graph, previously marked Exhibit 674 for identification, received in evidence as EXHIBIT 674.)

The names of the 28 cities represented by this graph are Chicago, Illinois; Decatur, Illinois; Joliet, Illinois; Peoria, Illinois; Quincy, Illinois; Indianapolis, Indiana; Evansville, Indiana; South Bend, Indiana; Detroit, Michigan; Grand Rapids, Michigan; Saginaw, Michigan; Green Bay, Wisconsin; La Crosse, Wisconsin; Milwaukee, Wisconsin; Minneapolis, Minnesota; Duluth, Minnesota; Mankato, Minnesota; St. Louis, Missouri; Kansas City, Missouri; St. Joseph, Missouri; Davenport, Iowa; Des Moines, Iowa; Mason City, Iowa; Sioux City, Iowa; Fargo, North Dakota; Minot, North Dakota; Huron, South Dakota; and Wichita, Kansas. Those were the only cities listed.

This graph Exhibit 674 purports to show the relationship existing between the prices for the Monday low quotations of third grade gasoline, Oklahoma market; Monday low quotation of regular gasoline, Oklahoma market; and retail prices, on the same date. These are all drawn on the same scale; and the space between each of these two heavy lines represents 2¢, and the space between each of the vertical lines represents a week. This graph contains the same data as the other graph. The only thing is the service station prices are superimposed on this one.

735 Illustrating that last graph Exhibit 674: on May 6, 1935, the low quotation for third grade gasoline was 4⅝¢. The low quotation for house brand gasoline was 5¼¢. And the service station price for regular grade gasoline was 13.56¢. On January 20, 1936, the low quotation on third grade gasoline as published in Platt's Oilgram on that Monday was 5¼¢. The low quotation on regular gasoline, as shown in Platt's Oilgram, on the same Monday was 6⅛¢. The graph doesn't take into consideration the possible high quotation on the same day at all. The average retail price in the 28 cities was 13.93¢ on that same date.

At the request of counsel, I have made a study of quotations on third grade gasoline in the East Texas market, as shown in Platt's Oilgram, during the period in question. I have taken those prices from the Oil Price Handbook, which reflect the low quotations on Monday in the East Texas market for third grade gasoline. These prices are prices quoted as pertaining to the East Texas market, whereas the comparable prices that I have described earlier purported to come from the Oklahoma market. In this study I covered the full year of 1935 and to December 21, 1936; practically two full years. I have prepared a graph depicting those prices during that period.

736 (Graph referred to is received in evidence as EXHIBIT 676.)

Thus far I have dealt only with prices published by Platt's Oilgram and reproduced in the Oil Price Handbook. I have made a study which includes the quotations of the Chicago Journal of Commerce during this period. I have attempted to make a comparison between the prices of the Chicago Journal of Commerce and the Platt's Oilgram prices as shown in the Oil Price Handbook on the same days. In order to do that I have prepared a schedule of averages that I compiled from the Chicago Journal of Commerce quotations and the Oil Price Handbook. Those are the averages of the high and low Monday quotations of each month for 1934 and 1936, inclusive. The quotations on this schedule from the Oil Price Handbook are identical with those used in connection with the previous exhibit which I said was based on a monthly average of the Monday high and low prices of Platt's Oilgram. I made a similar computation of monthly averages of Monday prices both high and low, as published in the Chicago Journal of Commerce, for third grade gasoline, covering the period January, 1934 until December, 1936. Those averages are contained on this schedule.

(Schedule referred to received in evidence as EXHIBIT 677, such exhibit being later withdrawn from evidence.)

737 These averages are accurate computations and accurately reflect the data derived from the Chicago Journal of Commerce and the Oil Price Handbook. The Oil Price Handhook shows the Oklahoma market.

The Chicago Journal of Commerce publishes only one set of spot market prices for the entire Mid-Continent area, whereas Platt's Oilgram publishes a different set of prices for different spot markets, particularly Chicago, the Mid-Continent field, the Tulsa, and East Texas.

I have attempted to reflect the price quotations or the average of the price quotations contained in the schedule, which is contained in Exhibit 677, on a graph. The graph which I have prepared accurately reflects the prices listed in my schedule. I superimposed a graph of Chicago Journal of Commerce prices taken from my schedule upon a graph of the Platt's Oilgram prices taken from the same schedule, and the result is contained in the graph which I have in my hand.

(Graph referred to received in evidence as EXHIBIT 678, such exhibit being later withdrawn from evidence.)

The Chicago Journal of Commerce purports to publish a composite quotation covering sales in the spot market in tank car lots for the entire Mid-Continent area, whereas the prices I used for Platt's Oilgram are prices which purport to be going prices in the spot market in the Okla-
738 homa refinery district.

The solid line on the graph represents the Oil Price Handbook, and the dotted line represents the Chicago Journal of Commerce, and of course where there is just one line, that represents both quotations. That indicates that on each of the Mondays, during the period from June, 1935 until December, 1935, both journals published identically the same average prices.

Cross-Examination by Mr. Donovan.

A chart similar to the chart you show me, which purports to be a composite of price quotations, Platt's Oilgram, Oklahoma refinery market and Chicago Journal of Commerce f.o.b. Group 3, showing the change in prices from day to day from January to December within that year, has been shown to me prior to this moment. The chart similar to the one you now show me for the year 1936 has been submitted to me. As a general picture they appear to be accurate, but I have not examined them in detail.

(Charts referred to marked Exhibits 679 and 680 for identification.)

I think in most instances I have taken March 4, 1935, as the beginning for my own charts. I don't know that March 4th was the day that the Tender Boards began operating under the Connally Act in Texas.

739 The price range for third-grade gasoline on January 7, 1935 was between 3⅞¢ and 4¢, and on March 4, 1935, when I began my comparison, the range was 3⅜¢ to 3⅝¢. So if you compare the rise from January 7th to any one of these other points, there would be a difference of ½¢.

On January 28, 1935, third-grade gasoline is 3⅝¢ to 3⅞¢ in Platt's Oilgram. On January 29, 1935, it is 3⅜¢ to 3⅝¢. On March 4, 1935, it is 3⅜¢ to 3⅝¢. March 5, 1935, is 3½¢ to 3¾¢. On January 27, 1936 it is 5¼¢ to 5⅜¢. On Tuesday, January 28, 1936, it is 5¼¢, just one quotation. February 24, 1936, it is 5⅛¢ to 5¼¢; Tuesday, February 25, 1936, 5¢ to 5⅛¢.

August 17, 1936, 4⅞¢ to 5¢, and on Tuesday, August 18, 1936, 4¾¢ to 5¢. September 7th apparently is missing. September 8, 1936, 4⅝¢ to 4⅞¢, comparing that with September 4th, 4¾¢ to 5¢. Now, September 14, 1936, 4½¢ to 4⅞¢.

(Stipulated by counsel that in 1935 and in 1936, there were 70 changes on the high and low quotations for house brand and third-grade, and that only 17 of these changes occurred on Mondays in the Platt's Oilgram. And as to the Chicago Journal of Commerce, that in 1935 and 1936 there were 83 changes in all of the high and low quotations on house brand and third-grade, only 13 of which occurred on a Monday.)

740 Looking at Platt's Oilgram, Tulsa edition, for January 27 and 28, 1936, on 62 octane and below, third-grade, the quotation on the 27th was 5¼¢ to 5⅜¢; on the 28th, 5¼¢, just one quotation.

Looking at my chart, Exhibit 674, the quotation reflects January 27th, but it doesn't reflect whatever change occurred between January 27th and 28th. January 28th was Tuesday.

Looking at the Oilgram for April 14, 1936, third-grade gasoline was quoted at 5¢ to 5⅛¢. On April 15, 1936, it was quoted at 5¢ to 5¼¢. On April 14, 1936, regular is quoted at 6¢ to 6⅛¢, and April 15, 1936, regular is quoted at 6¢ to 6¼¢, showing a rise in the high quotations of ⅛¢ on the 15th. April 14th is Tuesday; April 15th is Wednesday.

Looking at the Oilgram for June 5, 1936 regular gasoline was quoted at 6¢ to 6¼¢, and on June 8th it was quoted at 6¢ to 6⅛¢. June 8th was Monday, and June 5th was Friday, and the comparison I made was with Monday, June 8th.

> (Stipulated by counsel that in Platt's Oilgram Monday quotations are Monday's prices; but in the Chicago Journal of Commerce they are Saturday's prices, and that there is no Saturday edition of Platt's Oilgram.)

Looking at Platt's Oilgram, Oklahoma refinery market quotations, on May 4 and 6, 1935, the high quotations
741 of house brand gasoline increased ⅛¢, from 5¼¢ to 5⅜¢. May 4th doesn't show on my chart Exhibit 674. If it was below this, it would not be indicated whether it was below or above. These prices are merely the low quotations on those particular dates. They don't purport to be prices to jobbers.

Looking at the portion of my chart Exhibit 674 which shows June quotations for 1936, the low quotations are level. The Oilgram shows that the high quotation went down ⅛¢ between Friday, June 5th and Monday, June 8th.

The level on the average monthly chart, Exhibit 678, indicates the average monthly quotations based on Monday quotations. I think the Chicago Journal of Commerce is published every day except Sunday, and in preparing this chart Exhibit 678 as it now appears, I disregarded all of those days excepting Monday. I made no attempt to give effect to the prices paid on the other 26 days of the month, or to take into consideration the number of days in a month during which a given price was in effect. I have just taken the Monday quotations.

The Oil Price Handbook for 1936 under the Oklahoma refinery market shows the average price for third-grade gasoline for September, 1936 to be 4.6719¢. The figure for October, 1936 was the same. What I did was to plot these correctly on my chart by drawing a straight line across between the two for those two months. There 742 was a fluctuation in the market price in September and October, 1936.

By the Court

The Oil Price Handbook publishes Monday prices of each week except when legal holidays fall on Monday, in which case prices are as of Tuesday. In each September there was at least one holiday. I took that into consideration. Throughout the period there may have been another one, I would not say for sure just now, but I have taken just the dates that they give.

By Mr. Hanning

I disregarded all prices of the Chicago Journal of Commerce except the prices published in its Monday editions. I heard the statement made that the Chicago Journal of Commerce Monday's published price is the price of the Saturday before; so as a matter of fact, what I did here in making up these charts was to take the Monday price as published in the Oilgram, which is the Monday price, and take the Saturday price as published by the Chicago Journal of Commerce and which is the price that appears in the Monday edition of the Chicago Journal of Commerce.

(Exhibit 670, 677 and 678 withdrawn by government counsel.)

The Oil Price Handbook is published about January 15th of each year, and there is printed in it the Monday price 743 for the preceding year. It doesn't purport to set forth any price except that Monday price. It is my understanding that the Oilgram itself, which is the original record from which this Monday price in the Handbook is taken, is published each day except Saturday and Sunday and holidays, and it shows the daily prices.

Redirect Examination by Mr. Chaffetz.

If in the course of the period covered by my graphs there were a change in any week which lasted as much as a week, that change would be reflected on my graph. The only changes which are not reflected on my graph are those which did not continue for as much as a week.

If there is a change that occurs within a period shorter than a week, but if that change occurred on a Monday, then my graph would show it. In other words, if there was a change from Friday until Monday, my graph would show it. It would show the change on Monday. Any change that continued through Monday would be reflected even if it didn't continue for a full week.

744 **WALTER PAUL JACOBI**, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I live in Tulsa, Oklahoma. I am a buyer of petroleum products, and I work for Wadhams Oil Company and for various divisions of Socony-Vacuum Oil Company, Inc. I have been engaged in that work since 1922. I have an office and carry on my operations in and around Tulsa.

I post those companies and divisions as to conditions in the field. In my business I do, and it is necessary, to follow tank car prices on gasoline pretty closely.

Q. Is it necessary for you also to check on other wholesale and retail prices of gasoline?
A. Wholesale in particular.

I am not very well posted on the retail price that prevails generally throughout the Standard of Indiana territory, because my business is buying, not selling. However, I have from time to time checked on the retail price, and I am generally familiar with it. I was in active daily touch with the tank car market in the Mid-Continent field and in East Texas, particularly in the Mid-Continent field. The Mid-Continent fields where I operate center around the district known as Group 3, which determines certain freight rates to the north. I had this occupation in Tulsa and this contract with the market and active participation in it through the years 1935 and 1936.

745 The various divisions of Socony-Vacuum Oil Company, Inc., that I worked for in the way I described are the White Star Division at Detroit, Michigan; the Lubrite Division at St. Louis; the White Eagle Division at Kansas City; the Chicago Division, Chicago; and, of course, Wadhams Oil Company. The latter is a wholly-owned subsidiary of Socony-Vacuum Oil Company, Inc. The Perfect Oil Company, as I understand it, is a subsidiary of Wadhams. It transacts the business of marketing gasoline in Wisconsin. Wadhams also transacts business throughout Wisconsin in gasoline and sells to jobbers, dealers and retail customers. But my understanding is it has only a few jobbers. Socony-Vacuum, with its numerous divisions, does

business generally over the Standard of Indiana territory.

Charles E. Arnott is vice-president of Socony-Vacuum. His office is in New York City. I understand that he was president in 1935.

Charles L. Jones was active as a vice-president of Socony-Vacuum during the years 1935 and 1936. His work related mainly to the marketing phases in connection with the Western Divisions I mentioned, but his home office was in New York City. He left the company January 1, 1937. It may be true, but I am not certain, that as vice-president he was regarded as in charge of the Domestic Trade Department.

746 H. T. Ashton is general manager of the Lubrite Division of Socony-Vacuum at St. Louis. The next man in line in that division is Mr. Ware, the assistant general manager, although I have very few contacts with him. My main contacts with the Lubrite Division are with the traffic department, and Mr. Whatley.

In the Wadhams Oil Company I am responsible to A. G. Maguire, and report to him. He is located at Milwaukee, Wisconsin, and is chairman of the board of directors and head of the company. I have some contacts with him, but practically all my contacts are with the traffic division. My salary and office expenses are paid by Wadhams, but the other divisions contribute thereto according to the amount of business I do for them. I believe that they are charged by Wadhams.

Mr. McNally retired from Wadhams Oil Company on January 1, 1937. Before that time he was its vice-president, and I had some contact with him.

R. R. Irwin is assistant general manager of Socony-Vacuum White Eagle Division, and his office is in Kansas City. I have some contacts with him, but most of my contacts with the White Eagle Division, as with other divisions, are with the traffic department, and with Mr. McReynolds, traffic manager.

Bryan S. Reid is head and general manager of the Chicago Division. In that division, as in the other divi-
747 sions, and particularly so in the Chicago Division, my
contacts are with Harry Dolan, who is in charge of refiners' sales, and I was in touch with him with reference to the supplying of various products that he needed.

In the case of the White Star Division at Detroit, I was responsible to Howard Coffin, who was its general manager. The traffic man there is a Mr. Faharner, but I have other contacts there with Mr. Pike, the purchasing agent. Until he received a promotion, Mr. Sullivan was purchasing agent in the White Star Division. In 1935 and 1936 I had contacts with him in regard to lubricating oils mainly, and natural gasoline, not refinery fuels or gasoline.

At times I buy gasoline, usually in tank car lots, on the spot market in the Mid-Continent fields and East Texas field for these various divisions of Socony-Vacuum and for Wadhams.

I have occasion to make written reports to a superior officer, and I have sent a weekly market letter for a number of years, at Mr. Maguire's request. He asked me to send him a gossipy letter of news as I saw it and as I got it down in Oklahoma. I addressed the weekly letter to Wadhams Oil Company, attention Mr. Maguire. I sent copies to various divisions of Socony-Vacuum; for instance, to
Mr. Ashton's office at Lubrite, Mr. Irwin's office at
748 White Eagle, Mr. Reid's office in Chicago, and Mr.
Coffin's office in the ~~White~~ Star Division at Detroit.
Copies of that letter also were sent to the New York office, but that was a little later on. What I have said is true of 1935 and 1936.

I recall generally what the tank car prices of gasoline in the Mid-Continent fields and in East Texas were in the months of January and February, 1935. That is shortly after the Governmental buying program—

Q. I didn't ask you for that. I ask you whether you recall those prices?

A. Yes, I do. They were around 3¼¢ for third-grade gasoline and 4¼¢ for regular gasoline.

I am speaking of the price in the Mid-Continent fields. I don't remember what the prices of those two grades of gasoline were at about that same time in East Texas, probably ⅛¢ a gallon less. Generally speaking, the tank car prices of gasoline sold in East Texas are about ⅛¢ under the tank car prices for equivalent gasoline sold in the Mid-Continent fields. That difference is a matter of freight. When the East Texas refiner ships his gasoline north, he has to equalize the Group 3 freight, and that costs him about ⅛¢ a gallon.

As a general rule in January and February, 1935,
749 if the price for regular gasoline in the Mid-Continent
was 4¼¢, the price in East Texas would be about 4⅛¢.
That is for house brand gasoline which is also called regular gasoline, and which had an octane rating of 68-70. The third-grade gasoline had an octane rating of 62 and below. I don't remember whether or not the trend of those tank car prices in those two fields was irregular and fluctuating dur-

ing January and February, 1935. I remember it ranged around the figures that I mentioned. There may have been some changes; I don't know.

I testified three times before the Grand Juries which considered this case in Wisconsin in 1936. It was May 19, 20 and 21 when I first appeared before the first Grand Jury, and July 24 when I appeared the second time before that Jury; and December 18, 1936, when I appeared before the second Grand Jury. On those occasions I was subpoenaed and gave testimony. I claimed immunity from any prosecution.

Mr. Donovan: I don't see the purpose of this kind of examination. I object to the form of the examination at this time, and I move to strike it out and that the Jury should be instructed to disregard it.

The Court: Objection overruled. Exception allowed.

Mr. Lewin: Now, I wonder if you recall testifying on your third appearance in December, 1936, in 750 answer to questions from the Government counsel, that the price—

Mr. Donovan: It now appears from the question of counsel that he is directing attention to the Grand Jury testimony, and I object to the form of the question directing his attention to the Grand Jury testimony.

Mr. Lewin: I am merely trying to refresh his memory. If he doesn't remember, I am not going to press him.

The Court: You may do so. Objection overruled. Exception allowed.

Mr. Donovan: I object further, your Honor, on the ground that the events were too far removed from the date on which he is said to have testified to be a proper form or basis for recollection.

The Court: Objection overruled. Exception allowed.

Mr. Lewin: I wonder if you don't recall on that occasion of giving as your evidence the statement that during those months the prices of—tank car prices in those two fields were low, in your opinion, and fluctuating and irregular?

Mr. Donovan: I renew my objection and direct your Honor's attention to *Putnam* v. *United States*, 751 162 U. S. 687, which holds that the very essence of the right thus to refresh the memory of the witness is that the matter used for that purpose be contemporaneous with the occurrences as to which the witness is called upon to testify. Indeed, the rule which allows a witness to refresh his memory by writings or memoranda is founded solely on the reason that the law presupposes that the matter, used for the purpose, was reduced to writing so shortly after the occurrence, when the facts were fresh in the mind of the witness, that he can with safety be allowed to recur to them in order to remove any weakening of memory on his part which may have supervened from lapse of time.

Now, the Government witness has testified contrary to his testimony, and that does not appear here, but in the Grand Jury was interrogated—

The Court: What counsel is trying to do is to stimulate this witness' memory, and he may do so by referring to his former testimony before the Grand Jury.

Mr. Donovan: May I have my objection and exception?

The Court: Yes; go ahead.

Mr. Lewin: Mr. Jacobi, does that suggestion I made to you about your former testimony, refresh 752 your memory as to that point?

Mr. Donovan: May I state this, your Honor, that the witness should be shown the minutes of the Grand Jury—

The Court: It isn't necessary to show him. He may examine him without it.

Mr. Donovan: I object to that, your Honor, on that ground.

The Court: Objection overruled. Exception allowed. Now proceed.

I remember definitely stating to the Grand Jury that the price was low, and I may have said it was fluctuating. I am sure the price was low throughout those winter months and up until about the beginning of March, 1935 and it may have been fluctuating. I believe it was.

This paper you show me is a copy of one of my weekly letters to Mr. Maguire. It is dated February 8, 1935, and signed in typewriting: W. P. Jacobi. I don't know whose initials are the T. T. M. which appear in pencil on this copy. J. G. Pike is with Socony-Vacuum, White Star Division. I am pretty sure that this is his signature. This is the copy which I sent to Mr. H. M. Sullivan, and I recognize his initials on the copy.

The Court: Let me ask you this question:

Q. In making these reports by letter were you trying to give to the individuals receiving that letter 753 a true picture of the market conditions, and true information, correct and true information that they were interested in?

A. As I saw at the time—

Mr. Thomas: I object to that as calling for a conclusion and invading the province of the jury.

The Court: Objection overruled.

(Letter referred to marked Exhibit 71 for identification.)

Mr. Lewin: This letter, dated February 8, 1935, is not offered to refresh the witness' memory at this time. It is offered as a piece of original evidence in and of itself. This witness has testified this is a report that he made of conditions in this field. The relevancy of it will appear from looking at the letter itself. It went to Mr. Maguire, it went to Mr. Irwin, it went to Mr. Ashton, it went to Mr. Reid, it went to Mr. Jones.

Mr. Donovan: Objected to on the following grounds: that the letter is only the expression of opinion of the witness, and cannot be taken as a statement of fact. Therefore, it is hearsay. It is only the narration of something that has already taken place. It does not yet appear that the witness cannot testify as to those facts. No proper foundation has been laid for its introduction, it is not the 754 best evidence; and is not a statement that will bind anybody, if admissible at all, except the defendants that the witness says he wrote it to.

(Document previously so marked for identification received in evidence as EXHIBIT 71 only as to the defendants Socony-Vacuum Company, Wadhams Oil Company, and the officers of those companies who are named as defendants, upon condition that it will be tied up with later evidence. Objection overruled. Exception allowed.)

It was a part of my employment and duties to submit this report to Mr. Maguire and Wadhams Oil Company. He asked for a weekly letter.

This paper which you handed me is a copy of a weekly letter that I wrote to Mr. Maguire on February 15, 1935.

I sent this particular copy to Mr. Sullivan of the White Star Division.

Mr. Lewin: I offer this letter in evidence.

Mr. Donovan: On behalf of all the defendants—

The Court: Let the record show the same objections as were made by various counsel and the same request for instructions as appears at R. p. 361, and the same rulings.

(Letter, dated February 15, 1935, received in evidence as EXHIBIT 72 only as to the defendants Socony-Vacuum Oil Company, Inc., Wadhams Oil Company, and the officers of those companies who are named as defendants.)

I was invited by H. T. Ashton over the telephone to come to a meeting in St. Louis to be held March 5,
755 1935. When I got to St. Louis in the morning right after breakfast, I went right from the train to Mr. Ashton's office where there were some other men already gathered. I was in Mr. Ashton's office until noon; I would say for an hour or an hour and a half. I was in St. Louis until 5 o'clock.

There were present Robert W. McDowell, vice-president in charge of sales of Mid-Continent Petroleum Corporation; O. J. Tuttle, sales manager of Empire Refining Company, its name during 1935 and 1936; Mr. Ashton; I. A. O'Shaughnessy, president, I believe, of all three of The Globe Oil & Refining Companies; P. E. Lakin, then in charge of sales for Shell Petroleum Corporation, whose title I am not sure about, but whose office was in St. Louis; and Edward M. Karstedt who was then with Continental Oil Company of Ponca City, but who retired a few months later. All those men were representatives of major or semi-major oil companies.

There were also present Clyde M. Boggs, president of Kanotex Refining Company at Arkansas City, and, I believe, at that time president of the Western Petroleum Refiners Association; Mr. Cocanower, who was then sales manager of Olney Oil & Refining Company of Olney, Texas, and who later left Olney and took a similar position with Waggoner Refining Company; Rex Winget,
756 president or general manager of Cushing Refining & Gasoline Company of Cushing, Oklahoma; and a Mr. Simmons, who I understand is president of Rock Island Refining Company of Duncan, Oklahoma. Kanotex, Olney, Rock Island, Cushing and the Waggoner are independent refiners located in the Mid-Continent field.

My above statements are true as of the date of the meeting and for the rest of 1935 and 1936, except for Mr. Karstedt. So far as I know, we have covered everyone who was present at that meeting.

757 Q. State whether or not some kind of a proposed plan was outlined at that meeting in Mr. Ashton's office on that day?

Mr. Donovan: I object to that question as calling for a conclusion. That is a question for the jury.

The Court: He may state what was said and done.

Mr. Loucks: On behalf of the Barnsdall Refining Company and the defendant Reeser, we wish to make a specific objection on the ground that it is incompetent, so far as we are concerned because we were not born at that time.

The Court: Do you want to re-state your question?

Mr. Lewin: Your Honor, I prefer to narrow these questions, if we can. I think we will make more speed. I believe this is a preliminary question. I haven't asked him what the plan was, yet.

Mr. Donovan: I object to that form of question, for the reasons already stated, your Honor.

The Court: The objection is overruled.

Read the question, please.

Mr. Donovan: I thought you had sustained my objection, as calling for a conclusion.

The Court: No, he is just asking if a plan was made.

Read that question.

758 (Pending question read by reporter.)

The Court: Answer that Yes or No.

Mr. Donovan: Your Honor has overruled my objection?

The Court: Yes, I have.

Mr. Donovan: If it please the Court, I desire to object further upon the ground that it is immaterial and irrelevant and hearsay, for the reason that there has not yet been established that there has been any crime or any alleged conspiracy; and, second, that if there is any testimony here relative to what was said on that occasion, it can be considered as testimony only against those who were present and not as against any of these defendants here who were not present.

Mr. Lewin: Again, this is all subject to the offer on the part of the Government of the United States to connect this up completely with evidence.

The Court: Objection overruled.

Mr. Loucks: May I have my objection to the same line of testimony, without renewing it each time, if your Honor please?

The Court: Yes.

Mr. Lawton: May that be true also as to the Journal of Commerce? I don't care to interrupt each time.

759 The Court: Yes, it may.

Mr. Donovan: Now, in order to avoid unnecessarily interposing objections, your Honor, may I have the same objection as against this line of questioning?

The Court: Yes, you may.

Mr. Donovan: And I will interpose only when I feel that it is necessary to do so.

The Court: Yes.

Mr. Hanning: Your Honor, I understand that those objections go to the benefit of each of the defendants, do they not?

The Court: That is my understanding.

Mr. Hanning: All right. That was my understanding.

Mr. Lewin: Q. Will you answer that question, yes or no?

A. Yes.

Q. Yes. Now, state whether or not that proposed plan had to do with the purchase by these major oil companies named, of gasoline from independent refiners located in Oklahoma, Kansas and North Texas.

The Court: That question is leading.

Mr. Lewin: All right, I will withdraw that question.

Q. State, confining yourself simply to the plan itself, the proposed plan, state briefly what that proposed plan was.

760 Mr. Donovan: Now, I object to that, your Honor. If he is asking—

The Court: I think we will get further if you ask this witness to tell just what the discussion was there, between these men.

Mr. Donovan: That is right.

Mr. Lewin: All right. I prefer the other question, but if your Honor says—

The Court: No, I think we had better reach it this way.

Mr. Lewin: All right.

Q. Will you state what the discussion was with regard to that plan?

Mr. Donovan: No, I object to that, your Honor. If he is undertaking to ask what took place—

The Court: Let him state what the discussion was, that was had there at this meeting.

Mr. Donovan: The whole discussion.

Mr. Lewin: Now, your Honor—will you hear me a moment on that?

The Court: Yes.

Mr. Lewin: I don't believe the Government should be required to bring out from this witness any other discussions they may have had, relevant or irrelevant to the matters at hand. He has testified now 761 that they discussed a plan. I want him to confine his answer on the discussion of the plan to that plan itself, and I think we are entitled to prove our case in that manner.

Mr. Donovan: Now, if it please the Court, may I say this? This witness should not be asked to distinguish where the plan ends or where it begins. That is a question for these gentlemen here, who are sitting on the jury—

Mr. Lewin: I didn't ask him—

Mr. Donovan: Now, may I finish?

Mr. Lewin: Yes, excuse me.

Mr. Donovan: If he has chosen to ask what conversation took place at a meeting, the jury is entitled to know all that took place at the meeting, and counsel—

Mr. Chaffetz: Counsel will have an opportunity to cross examine.

Mr. Donovan: (continuing) —should not be permitted to direct attention to a particular plan or a particular episode. The jury must be permitted to determine from the whole conversation what is the fair inference to be drawn, and not the witness select what may have been the plan or may not have been.

Mr. Lewin: Now, we want this jury to have all relevant facts, but we don't think we should be re- 762 quired to ask this witness to give us something else that isn't directed to the issues.

The Court: No. You may direct your question to what the discussion was with reference to the plan.

Mr. Lewin: Yes.

Q. Now, will you state the discussion that took place at that meeting in Mr. Ashton's office on that day, with reference to this plan that you have testified about?

Mr. Hanning: If your Honor please, before the witness answers that question—

The Court: "To a plan", I think you had better put it.

Mr. Hanning: On behalf of the National Petroleum News and the Oilgram and Mr. Platt, I am certainly going to object; because, first of all, the Prosecutor in asking the question assumes that there was a plan; secondly, he is designating it "a plan". Now, his question should be, "What, if any," instead of these direct questions ne is asking.

The Court: I think—

Mr. Chaffetz: If your Honor please, he has already asked whether there was a plan, and the witness has said there was one.

Mr. Hanning: That is his designation, and an 763 assumption on his part that it is a plan, and that is what we are here to determine. What, if any, was there?

Mr. Donovan: I objected to that question primarily on the basis of its being a conclusion, your Honor, at the time.

Mr. Crawford: I am willing to take Mr. Hanning's correction of the question.

The Court: I think so, too.

Mr. Lewin: All right.

Q. Can you answer that question?

The Witness: This last?

Mr. Lewin: Yes. I want you to give what if any discussion there was at that meeting that had reference to this plan.

Mr. Crawford: No. The question was, "What, if any, plan was there?"

The Court: To a plan.

Mr. Lewin: To a plan?

The Court: Yes.

Mr. Lewin: But I don't want other plans than the one he said he discussed at this meeting.

The Court: Well, this is an intelligent witness.

He knows what happened at that meeting. Now, go ahead and tell us.

Mr. Morgan: That is right, tell the facts.

764 The Witness: I greeted the men present when I arrived at Mr. Ashton's meeting room, where they were congregated, and left them for half an hour or so, because I wanted to see Mr. Whatley before he left the office. When I went back to the meeting room, everyone was seated around the table, and I sat down also; and there was a discussion going on. Mr. Ashton or Mr. McDowell, one or the other, had a piece of paper before them, and one or both of them mentioned that this piece of paper was supplied by Mr. Bourque. And on this piece of paper there were—

The Court: Q. By Mr. who?

Mr. Lewin: Yes. Can I interrupt to ask who Mr. Bourque is?

A. Mr. Bourque is the Secretary of the Western Petroleum Refiners Association.

Q. Is that A. V. Bourque?

A. Yes, sir.

Q. And that is spelled B-o-u-r-q-u-e?

A. That is right.

Q. And is Mr. Bourque a defendant in this case?

A. Yes.

Q. He is. Is he in court?

The Court: I think I excused him some time ago, unless he has returned.

765 Mr. Horween: He is back now.

The Court: Yes, all right. Go ahead.

Mr. A. V. Bourque: (Rising) Did you call for me, your Honor?

The Court: Oh, you are here? All right.

Q. Is that the Mr. Bourque?

A. Yes. There were a number of names of small refiners on this list, and opposite each name was set a figure, and this figure purported to show the number of cars of distress gasoline that these various refiners would have available for sale in the month of March, 1935. The various representatives there of the larger companies, whom I understand were members of a Tank Car Stabilization Committee appointed by Mr. Arnott back in January—

Mr. Lewin: Now, I object to that and ask that that answer be stricken out. That is just what you see when you give the witness the chance to bring something in here that hasn't been called for.

Mr. Donovan: No—

The Court: Now, just a minute. We don't care who those men were, except what office they held with these corporations. Now, you just state what discussion was had. Don't go off on any side issues at all; just confine yourself to what discussion was had there that day, that you heard.

766 Mr. Donovan: If it please the Court—

Mr. Lewin: Yes. I move that that statement of the witness, the last part, be stricken out as not responsive.

The Court: It may be stricken.

Mr. Lewin: Yes, sir.

Mr. Donovan: May I say this to your Honor? That if it should appear that at this meeting this witness learned, while present at the meeting, that these men were members of the Committee, and that they were so acting, isn't that important?

The Court: We are asking now for the discussion they had. He knows what they want, and I want to let him answer it. If you don't interrupt quite so often, counsel for the Government as well as for the defense, we will get along faster.

Mr. Donovan: I am sorry, your Honor. I interrupt only when I find it necessary.

The Court: I understand that, Mr. Donovan. Now, go ahead in your own way.

A. The various gentlemen present, it seemed apparent to me, were—

Mr. Lewin: Wait a minute. That is objected to.

The Court: No, this discussion, what was said and done, what you heard discussed between those men.

Mr. Lewin: Q. What was discussed there about 767 the major companies buying this gasoline that was on that paper?

Mr. Donovan: Now, I object to that question. Your Honor has already told the witness what he is to say.

A. These men were attempting to figure out whether they could buy this gasoline that appeared on Mr. Bourque's survey.

Mr. Lewin: Q. Now, who were these men that were figuring that out, these representatives that you have named of the major oil companies, is that right?

A. Yes, sir.

Q. All of them were attempting to figure that, is that right?

A. Yes.

Q. And that answer doesn't apply to Mr. Cocanower, Mr. Boggs, Mr. Winget or Mr. Simmons?

A. No.

Q. That is right. They were figuring out whether they could buy it. Now, what conclusion did they come to, if any, on that subject?

Mr. Donovan: I object to what conclusion—

The Court: Go ahead with your answer. You know what we want.

Mr. Donovan: What was said?

768 A. Mr. Cocanower, Winget, Boggs and Simmons were—made various comments and were greatly interested in the conversation. They told us that they were in—

Mr. Lewin: Now, that is—I don't want that.

The Court: Go ahead.

A. (continuing) —in difficulty, due to the very unfavorable conditions then existing in the refining industry, and were quite encouraged over the efforts being made at this meeting, in trying to purchase this gasoline that appeared on this list.

As the meeting progressed, I was asked if I could take the gasoline set after the name of the Champlin Refining Company, and I told them that I thought that I could, and stated that I would have to check with the Champlin Refining Company as to quality and price. Various other of the representatives of the buying companies there indicated they could use the gasoline of other of the selling companies, whose names appeared on this list. And the names of certain companies were mentioned, who were not present; these were Sinclair, Barnsdall, Pure Oil, Skelly and Deep Rock.

Mr. Lewin: Q. How about Phillips?

Mr. Loucks: If your Honor please, I move to
769 strike out the reference of the witness to the word "Barnsdall". It appears definitely that it could not have meant this defendant, because it was not in existence at that time.

The Court: Q. Do you know the name of the Barnsdall Company, or the names at that time?

A. Well, it was whatever their name was at the time. I don't remember.

Mr. Lewin: Q. Could I refresh your memory by calling your attention to the fact that the name was Barnsdall Oil Company?

A. Yes.

Q. At that time, and do you know who was president at that time of the Barnsdall Oil Company?

Mr. Loucks: Oh, I object to that.

The Witness: Shall I answer?

The Court: Yes.

A. Mr. Reeser, as I understand.

Mr. Lewin: Q. Mr. Reeser, is he a defendant in this case?

A. Yes, sir.

770 *By Mr. Lewin*

Mr. Ashton or Mr. McDowell—I believe Mr. Ashton indicated that he would contact these companies, that I have just named, to ascertain whether it would be possible for them to take any of this distress gasoline appearing on this list.

If I didn't mention A. M. Hughes, I am sure he was at the meeting also. He is a defendant in this case, and has an office at Bartlesville, Oklahoma. He was then sales manager of Phillips Petroleum Company, a defendant in this case and a major oil company.

Q. Now, your recollection has been refreshed somewhat; were there any other representatives of any of the major oil companies there that you haven't named?

A. I believe I stated to you, Mr. Lewin, before, that Mr. McElroy of the Pure was there. That was an error.

Mr. Lewin: No—

The Court: You haven't testified to that.

Mr. Lewin: You haven't testified, and I don't think you testified before the Grand Jury to that effect.

The Witness: Didn't I?

771 Mr. Lewin: I might refresh your recollection by calling your attention to the fact that you did testify positively that Mr. McElroy was present at the Coronado Hotel meeting on the same day, in St. Louis, which followed this one; but we haven't reached that meeting yet.

The Court: Go ahead.

The Witness: Well, could I comment on that?

The Court: No, just confine your testimony to the discussion had at the first meeting.

Mr. Francis: Just a minute, your Honor. It seems to me like that is a very improper statement of the Government counsel to this witness, his own witness. This witness is not a party to this lawsuit, and for counsel to suggest that those things—

The Court: No—

Mr. Lewin: No—

The Court: I assume that counsel was going to follow up that with testimony as to some second meeting; if not, it was an improper statement.

Mr. Lewin: The Government intends to do that.

The Court: Yes, I understand so—at least, I assume so from what you have said. All right, proceed.

772 Many comments were made at this morning meeting as to the refining situation at that time and the very bad state of affairs that the refining industry was in. After staying in Mr. Ashton's office an hour or an hour and a half, we went to the Coronado Hotel for lunch.

By the Court

I, as a representative for Socony and Wadhams, was to contact Champlin Refining Company of Enid, Oklahoma. I don't remember exactly whom Globe and Phillips were to contact. I believe Shell said that it would contact Cushing Refining Company of Cushing, Oklahoma. My recollection is that Continental Oil Company was to get in touch with Shamrock Refining Company of Amarilla; Mid-Continent Corporation was to contact Johnson Oil & Refining Company of Cleveland, Oklahoma; Empire Oil & Refining Company was to contact Olney Oil & Refining Company of Olney, Texas.

This preliminary discussion was had at Mr. Ashton's office. Nothing was completed definitely there. We continued the discussion right after lunch, at the Coronado Hotel.

There were many comments made with reference to a plan to take care of the condition the refiners found themselves in. There was a distinct effort on the part of these buying companies to try and figure out something that 773 would relieve these small refiners of distress gasoline, which they had on track and in tanks and which they couldn't sell at the time. I have given you about what happened up until 12 o'clock. I was to contact these men with a view of purchasing this distress gasoline that they had on hand.

> The Court: Q. I see. And did each one of the companies represented at that meeting agree to do that?
>
> A. They indicated that they would try to work out their plans so that they could, after contacting their refiner, like I did.

By Mr. Lewin

I don't know what became of that paper that Mr. Ashton said Mr. Bourque had prepared. I have never seen it since that day and I don't know whether it is in existence.

When we adjourned last night I had almost, but not quite, completed a review of the morning session of March 5, 1935 in St. Louis. I had completed what was said about this plan except to say that Mr. Ashton made a rather comprehensive statement as to the purpose of the plan. I carried away the thought that the main purpose of the plan was to remove this distress gasoline from the plants and tanks of the small refiners, and in doing so, these
774 refiners would get the money to pay for their crude, they
would be put in a better frame of mind, and they would be in a position psychologically to go out and ask more money for their regular run product.

The 4 small refiners that I mentioned yesterday were asked in particular what their situation was. As I remember it, Mr. Lakin of Shell said that he felt sure that he could take such distress gasoline as the Cushing people had to offer. Mr. Tuttle indicated that he was going to need some gasoline in Texas, and could take such gasoline as Mr. Cocanower of Olney Oil & Refining Company had to offer.

Mr. Ashton brought out clearly that the purchasing was voluntary, that there was nothing compulsory about it, and that the men present would go back and call these small refiners whose gasoline they had indicated they would take, and try to get closer to them and find out what their problems were, and their specifications and so on, and make an honest attempt to work closer with them—something that I don't believe had been done before.

The only purpose of the plan that was discussed by Mr. Ashton and the other members of the major companies there was to remove this distress gasoline at fair prices.

Distress gasoline is gasoline that is on the hands
775 of the small selling refiners, in tanks or in cars on the

track, for which they have no market except at distress prices.

The men present at the meeting indicated that they were going to be buying some gasoline anyway, and that they always bought some gasoline. Mr. Ashton's and Mr. McDowell's idea was to get some coordination in the purchasing, and not to buy here and here and here, but to try and keep in touch with one refiner more particularly if he met their requirements on specifications and location.

Mr. Lewin: Your Honor, the Government is distinctly surprised by this testimony, which is in direct contradiction to testimony given before the grand jury; and the Government asks permission to lead this witness, and to confront him with his grand jury testimony for the purpose of refreshing his recollection.

The Court: You may do so.

Mr. Donovan: Now I enter the same objection to this as I did yesterday, your Honor, at R. pp. 359-360. In my opinion, as I already stated, this line of questioning is governed by the case that I cited to your Honor yesterday. So that there will be no mistake about it, I object to any reference to the grand 776 jury minutes at this time by counsel for the Prosecution, for these reasons: Because the transcript of testimony of the witness before the grand jury has not been properly authenticated; and there is no showing that such testimony was reduced to writing in the presence of the witness, or read over or examined by him at the time; and furthermore, the record of such testimony, if properly authenticated, is not contemporaneous with the facts or occurrences as to which he is now asked to testify; and because such testimony was given at a time too remote from the date of the occurrence or fact inquired about; and likewise too remote from the date of trial.

The Court: Objection overruled. Exception allowed.

Mr. Donovan: And I further move, your Honor, that the statement of Mr. Lewin that this is highly contradictory of the testimony before the grand jury, be stricken out as highly prejudicial, as being made in the presence of the jury.

The Court: Your motion is denied. Exception allowed.

Mr. Donovan: And furthermore, your Honor, if he is undertaking to examine this witness from the 777 testimony of the grand jury, that the testimony should be submitted to us in order that we shall be able to examine and determine and see whether or not the witness is being asked questions directly from the grand jury minutes.

The Court: I am clearly of the opinion that that motion should be denied. There is no necessity on the part of the District Attorney to even show the witness that testimony, to say nothing about showing it to counsel for the defense. Exception allowed.

Mr. Donovan: Your Honor, I would be glad to show your Honor the authority—

The Court: I am very familiar with that law, Mr. Donovan: I have made an examination of that law myself, and I know what I am talking about there.

Mr. Donovan: Further, may it please the Court, I am asking for it in order that we may properly cross-examine the witness.

The Court: Proceed with the witness. Objection overruled. Exception allowed.

Mr. Lewin: Q. Now, I understand that you have given as the main purpose, as expressed at that meeting, the altruistic motive of helping the independent refiners; is that right?

778 Mr. Donovan: I object to that characterization. He can state the facts, and not characterize it. I object to the form of the question, your Honor.

The Court: Leave out the word "altruistic." Go ahead, proceed with the examination.

The Witness: What is the question, please?

Mr. Lewin: That question has been overruled.

Mr. Lewin: Q. Let me see whether this refreshes your memory as to the purpose of that meeting. Do you recall this testimony given before the grand jury, in response to a question by the Special Assistant to the Attorney General, examining you?

The question:

"Wasn't your primary interest to raise the tank car price?"?

And your answer:

"The primary interest we had when this movement started, in March, 1935, was to remove from the market the surplus gasoline that these smaller refiners could not sell themselves.

"'Yes.

"A. That was the primary reason.

"Q. All right, and the major companies were not going into this program from any altruistic motive, were they?

779 "A. Naturally not. We felt that the removal of this distress gasoline, and the general improvement in conditions, which we felt were coming in 1935, that the price would respond."

Do you recall that testimony?

Mr. Donovan: I submit, your Honor, that there is nothing contradictory in that statement, to what the witness has already said.

Mr. Lewin: Q. Do you remember that? Do you remember giving that testimony?

A. Yes.

Q. Was that correct?

A. If you have it, I suppose it is correct.

Q. Well, isn't it correct now? Doesn't that refresh your mind?

Mr. Thomas: We renew the objection, your Honor, that was made to the use of the grand jury testimony for the purpose of refreshing recollection—

The Court: Objection overruled. Exception allowed.

Mr. Thomas: And we renew our motion to be permitted to examine—

The Court: I have heard that request. You don't have to renew it. I have heard it once, and I have ruled on it. Exception allowed. Proceed.

780 Mr. Thomas: Will it be understood, your Honor, that further testimony along that line will be received the same as if the same objection were made and the same ruling?

The Court: Surely, yes.

Q. Now, your memory has been refreshed, has it, by the reading of that former testimony?

A. Yes, sir.

Q. Now state what the fact was.

Mr. Lewin: Q. Now, wasn't the primary purpose to raise the tank car price?

Mr. Donovan: If it please the Court, I submit that that is a conclusion. Now, what he may have been asked to state as a conclusion, that may be called for in a grand jury hearing, but it can't be called for—

Mr. Lewin: However is it a conclusion?

Mr. Donovan: May I finish—but it cannot be called for here, before this jury. I submit, your Honor, that no matter what may be the purpose of counsel for the Government, words should not be permitted to be put in the mouth of the witness. The witness should be called on to state what occurred.

Mr. Lewin: There is no danger to your case from this witness. He is your own employee—

781 The Court: Never mind. Just forget your side remarks, both of you.

Q. Now, you have heard that question; have you got it in mind?

A. Yes.

Q. All right. Now, answer it.

Mr. Lewin: Q. Will you answer that question?

Mr. Donovan: May we have—

Mr. Crawford: I don't think, if the Court please, we are ever going to get any testimony in this case if there is going to be an interruption every time a question is asked.

The Court: I don't either. Answer that question, will you?

The Witness: Yes, sir. Could I have the question again, please?

The Court: Yes. Read the question.

(Question read by reporter, as follows: "Wasn't the primary purpose to raise the tank car price?")

A. No, the primary purpose was to remove the distress gasoline from the market.

Mr. Lewin: Q. Wasn't that for the purpose of raising the tank car price?

A. We hoped that that would result, yes, sir.

Q. Wasn't that the most important thing in the purpose?

A. It was very important to me, yes.

782 Q. Didn't you so testify, that it was the most important thing in the minds of those people present at that meeting, and that they so expressed themselves?

Mr. Donovan: If it please the Court, I must object to that question, because there has already been read the question that was put to the witness before the grand jury—

The Court: That objection is overruled. Proceed.

The Witness: Now, what was the last question again, please?

(Question read by reporter, as follows: "Didn't you so testify, that it was the most important thing in the minds of those people present at that meeting, and that they so expressed themselves?")

Mr. Donovan: I object further, your Honor, that this witness should not be asked to state what was in the minds of the other men present at the meeting. He can state what was said, and we are perfectly willing to have him state what was said.

Mr. Lewin: As expressed to you—you may add that to that question, as expressed to you by those people at the meeting.

The Court: With the correction, you may answer. Have you the question clearly in mind?

The Witness: No, sir.

783 The Court: Will you read the question as amended?

(Question read by reporter, as follows: "Didn't you so testify, that it was the most important thing in the minds of those people present at—")

The Court: Oh, no, wait a minute. He doesn't know what was in the minds of those men. There have been so many objections here, coming from every direction—I wish we could carry this thing on in a little more orderly manner. Ask another question, please.

Mr. Lewin: Q. I want to know whether the members of that group of major companies didn't express themselves at that meeting, that the attempt to raise the tank car price was the most important purpose of that plan.

A. They certainly discussed price, and expressed the opinion that they hoped the price would advance.

The Court: Q. Price of what?

A. Of gasoline.

Q. What price, the tank car price?

A. Tank car price.

Mr. Lewin: Q. Now, will you answer my question? Didn't they express themselves that that was the most important purpose of the plan?

784 A. I may have remembered it then, Mr. Lewin, but I don't remember it now.

Q. Now, I wonder if this will refresh your recollection:

> "Q. Of course, there was a feeling in your mind, and a hope and expectation, that the tank car price would respond?"
>
> "A. Yes, sir.
>
> "Q. As a result of the program's activities?
>
> "A. Yes, sir.
>
> "Q. And you feel that the members of the two committees felt so too, from what they said?
>
> "A. The committee and the sub-committee.
>
> "Q. Yes.
>
> "A. Yes, sir."

Does that refresh your recollection?

Mr. Donovan: Now, if it please the Court: You see what happens here if that course be pursued. The questions before the grand jury were directed to what was in the minds of people who were present, what was felt—

Mr. Lewin: What they said.

Mr. Donovan: No, that isn't the question, your Honor.

785 Mr. Lewin: That is the question.

Mr. Donovan: Will you read it again, so it will be made clear?

The Court: Q. Now, certain testimony has been read to you?

A. Yes, sir.

Q. Now, from what has been read, has your mind been refreshed as to just what the discussion was at that meeting, and as to the ends that were to be obtained, that were discussed?

A. Yes, sir.

Q. All right. Now, state it.

A. The purpose of that meeting was to find buyers for the distress gasoline, and remove it from the market at fair prices.

Q. What was the necessity of buying, or of finding markets for the distress gasoline?

A. It was evident that they couldn't find it themselves.

Q. Well, why were the major companies at that meeting interested in assisting these refiners in finding a market for it? Was that discussed?

A. Yes, sir. It must have been discussed.

Q. All right. What was the discussion as to that?

786 A. The major companies were interested, naturally, in trying to not only help the small refiners, but help themselves.

Mr. Lewin: Q. Now, how would they help themselves?

A. By the removal of this distress gasoline.

Q. Through the raising of the price?

A. Naturally, the price would respond.

Q. That would be the way in which they would help themselves; isn't that right?

A. Yes, sir.

Q. And I ask again whether they didn't express themselves at that meeting, that that was the most important thing they had in mind, to help themselves by raising that tank car price?

A. I don't remember that now.

Q. Now, let's see if I can't refresh your recollection. Do you recall these questions being put to you by the counsel for the United States, and your giving these answers before the grand jury:

Mr. Thomas: What was the date, Mr. Lewin?

Mr. Lewin: I don't know.

Mr. Thomas: Well, could we have the date?

Mr. Lewin: I don't think it is necessary for you to have the date. Do you?

787 The Court: Proceed. Go ahead.

Mr. Lewin: Q. (continuing.):

> "Q. Why did you take 600 or 800 cars per month, then, if not for that purpose?
>
> "A. We hoped that that would have the effect on the price."

Mr. Donovan: Now, if it please the Court, may I object to that question? It doesn't appear that any such thing was said at the meeting, and he is asking for what was said at the meeting.

Mr. Lewin: It does so appear—

The Court: Just a minute. The purpose of reading this is to refresh the witness' memory as to what did occur at that meeting. Proceed.

Mr. Donovan: I may have my objection, your Honor?

The Court: You may have your objection. Exception allowed.

Mr. Lewin: Q. (continuing to read.):

"Q. And that was your intent and hope, that it would?

"A. Yes, sir.

"Q. That was the primary intent, that that hope would be realized?

788 "A. That was very important.

"Q. And the specific purpose for meeting was to realize that hope, wasn't it, and that it would have effect upon that price?

"A. That was important, yes, sir.

"Q. And that was the purpose of the meeting, wasn't it?

"A. To a great extent, yes.

"Q. That was the major purpose, wasn't it?

"A. Well, it was an important part, yes.

"Q. And it practically remained constant from the inception of this association in February, 1935 until this day?

"A. Yes, sir."

The Court: Well, now, just a minute. There is nothing in that testimony that you have read that in any way is inconsistent with what he has already testified to.

Mr. Lewin: Well, I didn't so understand his testimony. I understood him to testify here—

The Court: Well, I did.

Mr. Lewin: (continuing.) —that his main purpose, as expressed there, was to help out the independent refiners.

789 The Court: He has qualified that.

Mr. Lewin: Oh, he has qualified it?

The Court: Q. Haven't you?

A. Yes, sir.

The Court: Yes. The jury may disregard what was read as to what this witness testified to before the grand jury, because it is not in any way inconsistent with what he has said here.

By Mr. Lewin

The same people were present at the meeting in the Coronado Hotel on the afternoon of March 5, 1935 as were present at the morning meeting with the exception of the 4 small refiners. That brings me to the point that I started to talk about yesterday regarding R. H. McElroy, Jr., who is and was at that time the sales manager, as I understand it, for The Pure Oil Company. He is a defendant in this case. I am positive that Mr. McElroy was not at that afternoon meeting. I was undecided about that, and after I was relieved from the oath of secrecy I asked Mr. McElroy and he told me that he was not there. He told me that he had sent telegrams from Chicago on March 5th and that he was in New York on March 6th and that he had never been in Mr. Ashton's office.

790 Q. But you testified, didn't you, 5 times before the grand jury that he was present at that first meeting?

Mr. Donovan: Same objection as appears at R. pp. 373-374.

The Court: Same ruling; exception allowed.

A. Three times.

Q. Five times. You appeared three times before the grand jury, but in the course of one of your sessions before the grand jury you testified a number of times to that same fact, didn't you?

A. Yes, sir, and it came about in this way, if I remember correctly. You asked me who was present at the Coronado meeting, and Mr. Ashton's meeting, and I stated that I was sure of several people; and I named them; and then I think you asked me if, on my second appearance, if I couldn't refresh my recollection and give you the names of others, and either you mentioned Mr. McElroy's name or I did, because I was honestly sure up until the time I talked to him, that he was there.

Q. Now, what made you believe that he was there?

A. I wonder that myself, Mr. Lewin.

I do not recall seeing Mr. McElroy at any of these other meetings. He never attended any other meetings. 791 Pure Oil's name was mentioned by Mr. Ashton, and I believe Mr. Ashton said he had talked to Mr. McElroy about buying some distress gasoline. My recollection now is that Mr. Ashton mentioned Mr. McElroy's name several times. That is why I might have pictured him in the meeting.

I never saw Mr. McElroy at some of these other meetings. We had a series of meetings after this one, but I am positive now that I didn't see Mr. McElroy at one of those meetings. I am positive I never talked to Mr. McElroy myself with regard to this plan at all or anything relating to it until I was released from my oath of secrecy. While the plan was in operation I did not discuss it with other persons at any time when Mr. McElroy was present. I did, however, have a discussion with Dewey K. Chamberlain, The Pure Oil representative in Tulsa, who is a defendant in this case.

We had luncheon in a private dining room at the Coronado Hotel and we stayed in the same room. That meeting lasted all afternoon. The character of our discussions at that afternoon meeting was not similar, however, to the ones I have given for the morning session. We went into the thing a little more extensively in the afternoon.

It is rather hard for me to differentiate exactly what 792 happened in the morning from the afternoon proceedings.

In the afternoon, after lunch, Mr. Ashton called me aside and asked me if I would be willing to serve on a subcommittee to the Tank Car Stabilization Committee. I said that I would be glad to, and I asked him who the other members were. Mr. Ashton told me that Mr. McDowell was chairman of the Tank Car Stabilization Committee and would serve with me in Tulsa, and that Mr. Tuttle would also serve. I asked Mr. Ashton why he selected me and he stated that he had felt that I was closely in touch with the small refiners and that I knew most of the other members of the committee that were present at the morning and afternoon meetings, and that he felt that I could do a great deal to help and assist in the operation of the plan. I agreed to serve in that way, and I am sure that Mr. McDowell and Mr. Tuttle did also.

The plan was to remove distress gasoline at fair prices from the plants of the small refiners in Oklahoma, Kansas and North Texas. We had nothing to do with the East Texas field; at least at that time. The plan contemplated removing distress gasoline when those independent refiners indicated to us it was distress and that they wanted to sell it.

793 Q. Over how long a period of time?

A. Over an indefinite period of time, but at that meeting we were considering March primarily; and we hoped that the plan would continue for a number of months thereafter.

The plan did contemplate buying from the independent refiners gasoline that they would manufacture later during March and thereafter. We were to buy that gasoline which we all felt might otherwise be sold by those independent refiners at lower prices. That is what I meant by distress. We were talking about the month of March, primarily, at this meeting in St. Louis; but Mr. Ashton stated that we should give consideration to the continuance of the plan, if we found that we could buy gasoline in the months thereafter.

At the meeting in the Coronado Hotel in the afternoon we took the name of each refiner appearing on Mr. Bourque's list, as I have stated. In the morning meeting, in Mr. Ashton's office, the Shell people indicated that they would be glad to take the distress gasoline as offered by Mr. Winget of Cushing Company. Mr. Cocanower and Mr. Tuttle seemed to feel that they could work the thing out so that the distress gasoline of Olney Oil & Refining Company would be moved. That took up the morning pretty well and the discussion continued more in detail in the afternoon.

794 As I stated yesterday, either at the morning or at the afternoon meeting I was asked if I could take the gasoline from one of these refiners appearing on the list. I looked over the names and saw the name of Champlin Refining Company, and I indicated that I had done business with them for years. They were a reputable firm, and I knew their products; and my people had told me that we were going to be short of gasoline. I talked to Mr. Ashton and he said he would need some, so I stated that I was reasonably sure that I could take that gasoline offered by Champlin, which, as I remember it, amounted to 40 cars for the month of March.

Then other people there stated that they felt they could take the gasoline from certain of the other firms whose names appeared on this list. Then Mr. Ashton stated that those firms not present,—I think I mentioned them yesterday, namely, Pure, Sinclair, Barnsdall, Skelly and Deep Rock,—he felt would be able to take some of this gasoline and he stated that they would be contacted.

By the Court

I had purchased gasoline and oil from Champlin off and on for 15 years prior to this meeting. I don't know the total amount of gasoline this company had on hand ready for delivery in March, but I know there were 40 cars of distress gasoline because it was so stated on this survey of Mr. Bourque.

795 Mr. Lewin: Q. I want to know whether each and every one of these representatives of the major companies attending that meeting did not then and there signify their approval of the plan and commit their companies to take certain definite quantities of gasoline. First, tell us about the approval. Didn't everyone there signify his approval of the plan?

I certainly got the impression that every one approved of it. I don't remember anything specifically being said. I heard no objection to the plan made by anybody present.

> Mr. Lewin: Q. Now tell us whether each and every one of those representatives of major companies there didn't commit their companies then and there to take certain quantities of this gasoline from independent refiners?
>
> A. My recollection now is that they stated they would check the specifications of the small refiners and get in touch with them and do that particular thing, and if they found that the products met their requirements they would issue orders for as much of that gasoline as they could take.

By Mr. Lewin

Mr. Ashton is my employer with Socony-Vacuum; Lubrite Division. He is the one who instructed me to 796 serve on the committee if I would. The offices of these 3 active committeemen—McDowell, Tuttle and myself, all are and then were in Tulsa.

The main part of my work was to contact the various independent refiners and find out where this gasoline was that the majors would have to buy. We divided that work up among us three. On March 6 or 7 when we returned to Tulsa, we took the list of the companies that were mentioned at the Coronado meeting as being probable buyers of this distress gasoline and divided it up. I stated that I knew the Sinclair representative in Fort Worth, Mr. Tracey, very well, and also Mr. Chamberlain of The Pure Oil in Tulsa. I also stated to Mr. McDowell and Mr. Tuttle that I was doing quite a little business with Mr. Lakin of Shell and with Mr. O'Shaughnessy of Globe, and I felt I could keep them posted as to any distress gasoline that might make its appearance and also any other developments. Our operations were confined to Oklahoma, North Texas and Kansas except that early in the program we did give some consideration to small amounts of East Texas gasoline in the hands of brokers.

Immediately after we returned to Tulsa, I got in touch with a number of refiners whose names were on that list in St. Louis and checked with them the amounts of distress gasoline that they had. I worked with Mr. Bourque in 797 the final analysis of the amounts of distress gasoline.

We differentiated distress from other gasoline by the statement of the refiners that it was distress gasoline they couldn't move.

Some of those independent refiners have contracts with jobbers under which they sell their gasoline. They then sell the rest of it on the spot market. This gasoline that I undertook to buy was gasoline to be bought on the spot market.

798 Q. When you say that a gasoline is homeless or distressed, it means they haven't got a regular purchaser for it?

A. That is true.

Q. That is right. And when they want to sell it they would have to sell it at a price lower than the price you wanted to see maintained? Is that right?

Mr. Donovan: I submit to your Honor that the witness has already described what distress gasoline was, and I don't see that that is the description the witness gave.

Mr. Lewin: We will ask the witness if that isn't it.

The Court: If he knows, he may answer.

A. May I have the question read?

(Question read)

Mr. Donovan: I submit that that isn't a correct statement of what the witness said.

Mr. Lewin: I am going to ask if that is what the witness means.

A. Your Honor, I don't understand the question. I understand part of it.

The Court: All right. Reframe the question.

Mr. Lewin: Q. All right. Let us see if I can make you understand it. This distressed gasoline was gasoline that wouldn't be sold to regular purchasers by the independent refiners, is that right?

799 The Court: Under contract?

Mr. Lewin: Under contract?

A. Yes, sir.

Q. It is gasoline they would have to shop around to get a purchaser for?

A. Yes.

Q. When they sold it they would sell it on the spot market?

A. Yes.

Q. And if your plan didn't take it up, they would sell it at prices, lower prices than each of you all wanted to maintain by the plan, isn't that right?

A. They would have to sell at any price they could get for it.

Q. And those prices you were afraid would be lower than t. prices you wanted to maintain by the plan?

A. Lower than the market, yes, sir.

Q. Lower than the price you wanted to maintain as a price?

Mr. Donovan: I submit he has answered the question, "lower than the market."

The Court: He may answer.

A. Well, I can only answer that "yes."

Mr. Lewin: Q. If it was permitted to be sold at those lower prices, it would in turn make a lower market, wouldn't it?

A. Yes.

800 Q. And therefore the purpose of your plan was to prevent that and make a higher market, isn't that right?

Mr. Donovan: I object to that question, if the Court please. The witness has already said that if the distressed gasoline was sold it would be sold below the market. That was one of the elements of distressed gasoline.

Mr. Lewin: The market is a varying thing. The market is made by the spot market. There has been testimony after testimony in this record as to that.

The Court: Read the question.

(Record read as follows:

"Q. If it was permitted to be sold at those lower prices, it would in turn make a lower market, wouldn't it?

"A. Yes.

"Q. And therefore the purpose of your plan was to prevent that and make a higher market, isn't that right?")

The Court: He may answer that.

A. Yes, we hoped a higher market would result.

801 After our committee met for the first time, on March 6 and 7, we split the list up, as I have told you, so we could keep the various companies that were doing the buying posted. At that time we also talked to these 10 or 12 small refineries to get the accurate number of cars of distress gasoline that they desired to move in March. Mr. Bourque had supplied this original survey, and I worked with him and finalized it at Tulsa.

I contacted some of the independent refiners and Bourque contacted some and I suppose McDowell and Tuttle did, too. I have read the list of independent refiners in Oklahoma, North Texas and Kansas that is set forth in paragraph 22 of the indictment. I don't think the committee contacted all of them because as the plan progressed other refiners called up and wanted to move distress gasoline.

(Indictment passed by Mr. Lewin to the witness)

The Court: Just read from that list those you did contact.

A. You mean myself personally?

The Court: Q. Or the committee? Every member of that committee, I suppose, was familiar with what other members of the committee were doing, wasn't it?

802 A. Yes. I can say that I contacted Champlin Refining Company on March 7th and made an appointment with them and went over to see them on March 8th.

I am sure Eason, Bell and Panhandle were contacted, but I don't know by whom. I am sure Mr. Tuttle talked with Olney. Some one of us talked to Omar. I believe I talked to Cushing. Waggoner Refining Company was called by one of the committee. I don't remember about Taxman, I don't know whether they were mentioned on this original list.

By Mr. Lewin

If Taxman was not on the original list they were contacted later. One of the committee called Rock Island. Dickey came into the picture later on, contacted by one of us. One of us, probably myself, contacted Danciger. I think one of us talked to Shamrock. I don't know who. Wilcox came into the picture later, but was contacted by one of us at that time. I have read the complete list of independent refiners set forth in paragraph 22 of this indictment and it is my testimony that everyone of them was contacted at some time by some member of our committee.

Other independent refiners generally called us up, and as a result of such calls some of these major oil companies would do business with them. One company 803 that called us was Russell Refining Company in Kansas; and there were several others whose names I don't remember.

I would say that the independent refiners that I have read from the indictment are the principal independent refiners in those fields.

Q. In addition to those that you contacted yourself and those who came in to see you, isn't it true that you also contacted others, a lot more?

A. Well, very possibly, but I don't remember who they were.

Q. I wonder if I can refresh your recollection. You were asked this question, were you not—

Mr. Donovan: Same objection as appears at R. pp. 373-374.

The Court: Same ruling; exception allowed.

The Court: Go ahead.

Mr. Lewin: (Reading) "Q. Will you tell us who and when?" And your answer was: "Well, we called a lot more than those listed, because a good many of them indicated that they were moving their gasoline all right."

"Q. Yes. Those 13 are really the ones you were mostly concerned with?

"A. That is true."

Is that testimony right?

A. Yes.

804 Q. Then you did contact a lot more than those listed, is that right?

The Court: He has already so stated to you.

A. Yes, or we contacted others. I don't know whether there were a lot more. I know we contacted others.

Q. Isn't it true you made a comprehensive survey of that entire field to try and find all the gasoline that might be sold at lower than the prices you wanted to be maintained?

A. Mr. Bourque made the most comprehensive survey, and we helped him, and when we arrived at the final figure, we felt that all plants that had distress gasoline in Oklahoma, North Texas, and Kansas, were on our list, and the amount was indicated.

Q. State how much gasoline your survey showed that the major companies would be expected to buy under your program in this area for the month of March.

Mr. Donovan: I submit the question assumes too much, and if we could have the question simpler, it would certainly be easier for all of us to follow. I do not like to object to this, but I must as the question is put.

The Court: You may answer that. Exception allowed.

805 A. 600 to 800 cars.

I don't know exactly how many cars they actually did buy but it was between 600 and 800 cars. As far as

I know the major companies took all that the survey showed.

The Court: Q. Just a moment. Do you know how much of that gasoline did move pursuant to this program during that month?

A. I know between 600 and 800 cars, yes.

By Mr. Lewin

I did not make a memorandum of that survey that Mr. Bourque had. If I did I did not keep it. I never saw it again after that first meeting. I don't remember meeting with Mr. Bourque on March 6th. Perhaps the committee met with him after March 6th, with reference to this same matter, but I don't remember. He lived in Tulsa and we were in constant touch by telephone.

All the gasoline purchased under the plan in March was purchased from those independent refiners whose names are listed in paragraph 22 of the indictment with the exception of Taxman, Wilcox and Dickey. I don't believe that in my survey I contacted Johnson Oil & Refining Company. Mr. McDowell told me that he contacted the Johnson people. They indicated that they would have surplus
806 gasoline in March and later, after Mr. McDowell contacted them, he said that they did not have any. I don't remember whether they had any later in the summer or fall of 1935.

807 Q. Give us now the names of major companies that bought that gasoline in the month of March, the 600 or 800 cars?

Mr. Donovan: It seems to me, your Honor, the question should be directed to who bought and how much, if he knows.

The Court: He just wants the names now. (To the witness) State the names.

A. I can give you the names of the major companies that bought gasoline on the program, your Honor, but I don't know whether that applies to the month of March specifically.

Mr. Donovan: That is just what my objection related to, your Honor.

The Court: (To the witness) Try and stimulate your memory now. Go back to that time; that was at the very beginning of the program, and that ought to be fresh in your mind, who bought gasoline in March. Now, just refresh your mind and give us your best recollection.

A. I will be glad to.

Mr. Donovan: May it please the Court, it seems to me with this witness he ought to be asked directly if he knows what each company bought, and how much.

Mr. Chaffetz: Counsel can ask that on cross examination.

808 The Court: We are not interested in that just now. The question directed to this witness was, who were the major companies that bought. Now, answer that.

Mr. Lewin: Your honor, may I assist the witness by giving him a copy of the indictment?

The Court: Yes.

Mr. Lewin: (To the witness) I direct your attention to a list of major companies, defendants in this case, listed in paragraph 22 of the indictment (showing indictment to witness).

Mr. Donovan: Excuse me, Mr. Lewin; may I have my objection to this unless it appears he knows.

The Court: I do not think he needs that indictment.

Mr. Chaffetz: I do not understand counsel objects to the indictment.

Mr. Donovan: I object to the question asked unless he knows.

The Court: Your objection is overruled. He is not going to answer if he does not know. Just leave the witness alone for a minute, and let him answer.

A. I can only say this, your Honor; that, as I have said before, there were certain tank car stabilization committee members at the Coronado—

809 Q. Just forget that. You are asked the direct question now what major companies bought that gasoline in March, 1935. Now, that is a separate question, and I wish you would answer it.

A. I am sure that those companies—

Mr. Donovan: If it please the Court—

The Court: Let him answer the question.

Mr. Donovan: If the Court pleases—

The Court: Will you sit down, please.

Mr. Donovan: I must ask this; I think it is only fair to your Honor and the witness and the jury; I am only asking that he should be asked if he knows.

The Court: You may answer the question I have put to you. Now, go ahead and tell us what major companies bought that gasoline in March, 1935?

A. I can only give you my recollection.
Q. Give it to us.
A. Socony-Vacuum. I know about that one.

810 *By the Court*

I am sure that Socony-Vacuum did. I feel sure Empire bought in March. I am reasonably sure Phillips, Midcontinent, Continental, and Globe bought in March, and I am not sure about the others. I don't remember whether they did; I think they came in.

By Mr. Lewin

When I said that Socony-Vacuum bought, I meant that Wadhams Oil Company, Socony-Vacuum White Eagle Division, and Socony-Vacuum Lubrite Division bought.

I had several conversations with Ira Smith but I don't remember when. I would not say that it was around the month of March. I think it was later on that I had my conversations with him. I do not know how much later,—a month or two. I feel now that I didn't talk to Mr. Smith until a month or so after March 1st. Ira Smith is the local representative in Tulsa of Standard of Indiana and he handles their purchases. I did not at that time contact anybody else of Standard of Indiana. I talked with Mr. McDowell regarding Mr. Smith shortly after the meeting in St. Louis. As I remember it, Mr. McDowell said that he had talked to Mr. Smith and had suggested that Standard of Indiana buy some of this distress gasoline. Mr. McDowell told me that Mr. Smith said that he would have to wait until he heard from his superiors in Chicago.

811 Right after this meeting in St. Louis I got in contact with Dewey K. Chamberlain of The Pure Oil Company, who is a defendant in this case. I told him that I had attended a meeting in St. Louis on March 5 and that there very probably would be some distress gasoline purchased by the larger companies. He told me he hadn't heard anything about it, and I told him that The Pure Oil Company's name had been mentioned at St. Louis and Mr. Ashton felt that it also would do some buying on the program. Mr. Chamberlain told me that he no doubt would hear direct from his Chicago office about it.

The Court: Now, for the information of counsel, it has been the practice in this court to make your objections fully, the Court makes a ruling, you have your exception, and there has been no further discussion. Now, that practice will be maintained from now on. Make your objections fully, the Court will make its ruling, and I don't want to hear from counsel on that particular motion after that. We will get along much better. All right, proceed.

Mr. Francis: Your Honor, may I ask a question right there, of your Honor? That objection and ruling carries along to all similar testimony, doesn't it, of the same kind and character, so you don't have to renew them?

The Court: Yes, but if at any time counsel is of the opinion that it doesn't carry, you have a perfect
812 right to make an objection. I just want to eliminate all of this needless jumping up and objecting, that is rather disconcerting, to say the least. Proceed.

According to my records I called William Tracey of Sinclair Refining Company on March 14th on the long distance telephone. Mr. Tracey is the representative of Sinclair Refining Company in Fort Worth who handles matters relating to the purchase and, I believe, sale of gasoline and lubricating oils. As I remember it I called Mr. Tracey on March 14 and told him that there had been a meeting in St. Louis, and that Mr. Ashton had indicated that his company would buy certain distress gasoline if it could, and I asked him if he had heard about it. As I remember the conversation Mr. Tracey said "I don't believe I have, but I will no doubt hear from my superiors on it." It was about the same conversation that I had had with Mr. Chamberlain of Pure. I told Mr. Tracey over the telephone about the plan as I understood it.

I don't remember having any similar conversation with James Nagle of Skelly Oil Company at that time. I have already told you that it was our practice to divide the list up, and Mr. Tuttle kept in touch with Skelly Oil Company. I don't know that Mr. Tuttle had a conversation with Mr. Nagle, sales manager of Skelly in Tulsa, but I understood that he was to do so. I don't remember hearing from Mr. Tuttle later that he did that.

813 I knew that Skelly Oil Company was contacted by someone, either Mr. Ashton or Mr. Tuttle, in March, for the purpose of interesting it in this plan. They didn't tell me who they contacted in Skelly Company in March. Mr. Nagle is the man that I talked to on matters relating to this program later during 1935 and 1936 when Mr. Tuttle was out of town. I talked once to Miss Clara Gartman of Skelly Oil Company, probably in March, 1936. I do not know whether she was the one who was approached in March 1935. I believe Miss Gartman was assistant to Mr. Nagle. Mr. Nagle's position has been changed since. I

talked to her about this plan and the Skelly Company did later make purchases of gasoline in our plan.

I am sure that I didn't have any conversations with Mr. Evans of Barnsdall Oil Company in March 1935. I did have at least 2 conversations with him between March 5 and April 1, 1936. I don't know who, if anybody, on our committee talked with Mr. Evans in March. The same situation applies there as with Mr. Nagle. Mr. McDowell said that he would keep Mr. Evans advised regarding matters on this program. I don't remember Mr. McDowell later telling me that he had been in contact with Mr. Evans about this time, but I remember him telling me about the Ira Smith talk. ~~I can't~~ remember all these details.

814 I had many conversations with Mr. Tracey of Sinclair Company after March 14th about this plan. I don't remember what Mr. Tracey said. My best recollection is that he seemed to know what this plan was all about. He did not state that in substance. He let me do most of the talking. I did not explain to Mr. Tracey in detail just what this plan was. I told him about the plan and what had transpired at St. Louis.

I told Mr. Tracey that it was my understanding that he was to take the gasoline from a certain small refiner and in that conversation, as I remember it, I told him about what had transpired on the program to date, and he said that he would have to get in touch with his superiors and he felt no doubt that he would purchase the gasoline I indicated. I don't remember that Mr. Tracey said with what superior he would have to get in contact. Mr. Tracey's superior in such matters was J. W. Carnes and Mr. Tracey worked directly under him. As I understand it, Mr. Carnes then was in charge of all the sales of Sinclair Refining Company. I don't know his title, but I think that he was vice president of that Company. His office was in New York City. He is a defendant in this case.

I heard nothing regarding the attitude of Standard of Indiana in March, 1935.

815 Mr. Lewin: Q. Do you recall testifying before the grand jury that the following companies when first approached signified that they were already well posted on the plan: Standard of Indiana, Sinclair, Skelly, Barnsdall and Pure?

The Court: You say, "when first approached." Does that mean April, May or June or at some later date?

Mr. Lewin: No, sir. May I read the testimony? It does bear out exactly what I said.

The Court: Go ahead.

Mr. Donovan: Your Honor, may I have an objection to that? The same objection as appears at R. pp. 373-374.

The Court: You may have an objection. Objection overruled. Exception allowed.

Mr. Lewin: Q. See if you didn't testify as follows before the grand jury and whether or not this doesn't refresh your recollection: The point I am making is that those men, particularly, Sinclair, Standard of Indiana and Skelly and Barnsdall and Pure were local; their local men were posted.

"Question: Yes.

"Answer: So I judge that the Tank Car Stabilization Committee members had informed them of 816 the plan so that they knew what the sub-committee was talking about when we returned."

Mr. Thomas: That is objected to as calling for a conclusion.

The Court: Objection sustained. You are trying to refresh this witness' memory on a conversation that he or some other member of the committee had in March, 1935, with the Standard of Indiana.

Q. Do you recall this testimony; was this testimony correct when you gave it?

A. Yes, I remember it was.

Mr. Donovan: May I have an objection?

The Court: Yes. That testimony has no bearing on this particular question. You are directing this witness' attention to what these companies knew about the proposed plan after March 5th—or before March 5th.

Mr. Lewin: The grand jury testimony shows that when they got back after March 5th, in Tulsa, they found that these companies were well posted, or posted. That is what this testimony says.

Mr. McDowell told me that he had talked to Standard of Indiana in March and had asked them if they would not participate in this buying. He told me that Mr. Smith 817 would have to check with his superior to see if he could. I don't remember him telling me that Smith said they already knew about it. Some time in March, I felt Mr. Tracey was well posted on the plan by someone; I don't remember the date. I knew that he was.

I feel sure that Skelly Oil Company was posted on the plan in March. The same applies to Barnsdall. I talked to Pure myself about the plan. Later in March Mr. Chamberlain apparently knew what the plan was. It is just contrary to my understanding, to my belief now, that when I first called Mr. Chamberlain he told me, in substance, that he and The Pure Oil Company already knew about the plan. In my first conversation with Mr. Chamberlain, as I have already stated, he said that he didn't know about it but would contact his Chicago office.

After our committee had made a survey of the amount of gasoline to be purchased, the next important part of the work was to keep in close touch with the smaller refiners. They had a lot of questions to ask, and we had a lot of questions to ask them, and we called them repeatedly throughout March, 1935. We likewise kept in close contact with the major companies along the lines I have mentioned. We were closely in touch with them in line with this list we divided up.

818 The Court: Have you stated what your testimony is here with reference to the whole buying program in your own way?

A. Yes, sir.

Q. And what was done pursuant to that?

A. I have already testified that when I returned from Tulsa, we had gained the impression at St. Louis that my particular part of this plan was to pass on information to the tank car stabilization members or their representatives in Tulsa as to the availability of distressed gasoline in the north Texas area and Oklahoma and Kansas. That was my main—that was the part that I played in the plan, the main part, in fact, passing on to these other companies information with reference to the availability of distressed gasoline.

Mr. Lewin: Q. Yes, and state whether or not you didn't also undertake to contact these major companies to urge them to buy more of this gasoline under the plan?

A. Well, in my enthusiasm I no doubt did that, and there was nothing obligatory on their part to take it, if they—

Mr. Lewin: I ask that that be stricken out.

819 Mr. Donovan: It was responsive, your Honor. He asked him what he did.

Mr. Lewin: I asked him whether he didn't urge them to buy more and more. Now, he says it wasn't obligatory upon them to take it.

The Court: That part, "it wasn't obligatory upon them to take it", may be stricken out. Exception allowed.

A. The question, please?

(Question read.)

A. Yes, I have urged them to buy.

The other members of that small committee, Mr. McDowell and Mr. Tuttle, certainly passed on information the same as I did to the companies that they were posting, but whether they urged them to buy it, I don't know.

Mr. McDowell and Mr. Tuttle and I got together to discuss our plan and its operations a number of times between March 6 and June 1, and then later on we discussed it in a general way, too. I believe you asked me before how often we got together to discuss our plan and I estimated 5 to 7 times between March and June, 1935. I also was in contact with Mr. McDowell and Mr. Tuttle by telephone more often than I met them face to face. I was in touch with them during the period March 5 to June 1, 1935 and even after that when they were in town. I was in touch with 820 them on the subject of our plan and our operations under it as well as on other matters. I kept in contact with the other members of the committee with reference to the matters we were handling under this plan until I was asked to appear before the grand jury some time in May, 1936.

For the most part our efforts at getting buyers for this gasoline were confined to getting major companies to buy. We did ask one or two of the smaller refiners to buy at times, people like Kanotex, and I think Anderson-Pritchard, and probably a few more that I don't remember. Mr. Clyde M. Boggs, a defendant here, was president of Kanotex Company. I don't believe that Kanotex responded to that request and made purchases. I called Anderson-Pritchard several times and asked them to buy and they always seemed to have some good reason for not buying. I don't remember anyone else other than those major or semi-major companies that we were able to get as buyers in this plan.

The Court: What we want to know is after this plan began to operate, what companies bought gasoline in that territory under that plan?

The companies were Standard of Indiana, Socony-Vacuum Oil Company, Inc., Wadhams Oil Corporation, Sinclair Refining Company, Shell Petroleum Corporation,

Empire Oil & Refining Company, Pure Oil Company,
Phillips Petroleum Company, Mid-Continent Petro-
821 leum Corporation, Continental Oil Company, Skelly
Oil Company, Barnsdall Oil—I don't know their cor-
rect name—but it was the company in existence in 1935
after March 5th. It was the company that Mr. Julius
Evans worked for. It is true that Mr. Julius Evans worked
for two companies. During the first part of the period he
worked for Barnsdall Oil Company, and from June 1, 1935
he worked for Barnsdall Refining Corporation. The Globe
Oil & Refining Company—I have no way of telling whether
I mean all 3 Globe Oil & Refining Companies. It has
headquarters in Chicago.

I have already testified that as far as I know Deep Rock did not purchase any gasoline in our program. I have named all the major oil companies, with the exception of Deep Rock, which are listed in paragraph 22 in the indictment as defendants in this case. There may have been other purchasers of gasoline in our plan besides those I have named, but I don't remember any now.

The same men held other meetings similar to the one
in the Coronado Hotel in St. Louis. The purpose of hav-
ing other meetings of this group of representatives of ma-
jor companies after the first meeting in March, 1935, was
to sit down and analyze another survey made by Mr.
Bourque near the end of each month or early in the month
following. At those meetings the buying companies
sat around and discussed the amount of gasoline on
822 the survey and indicated that they would be glad to
take it. In that way most of the gasoline was spoken
for at these various meetings. At these meetings it was
determined as a rule among those companies that were
represented which company each was going to buy from
and as the plan went along they continued to buy in many
instances from the same selling company through 1935
and part of 1936.

I have gone to a little trouble to check over my itinerary and telephone list and one thing and another, and I have here what I think are approximately the correct dates and places of the meetings.

The second meeting was held early in April, 1935 at Excelsior Springs, Missouri. My recollection of that meeting is a little vague, but I think a number of these men that I mentioned or their representatives attended. I am not sure that at that meeting all the major companies which were represented at the first meeting were again represented. I am afraid I could not list the persons who attended that meeting. I don't think it would refresh my recollection if you should call over the list of men who attended the first meeting. Approximately the same men or their representatives that attended the first meeting on March 5th at St. Louis attended the second, third and subsequent meetings, although, of course, there sometimes were some that didn't come.

823 Usually in attendance during the early part of the program were Mr. Ashton and myself. Mr. McDowell attended some of the later meetings, but he was away a good deal and in his absence Mr. Thomas Fitzgerald, of Tulsa, Oklahoma, who then was assistant to Mr. McDowell, and who is a defendant in this case, attended some of the meetings. There may have been a few meetings that neither Mr. McDowell or Mr. Fitzgerald attended, but usually one or the other was there.

The other men who usually were present at these meetings were Mr. Tuttle of Empire and Mr. Hughes or Mr. Gardner of Phillips. That is H. A. Gardner of Bartlesville, Oklahoma, who then was assistant to Mr. Hughes of the Phillips Company. I believe that Mr. Gardner's title was tank car sales manager and that he held that office through 1935 and 1936. He is a defendant in this case.

I only remember the Globe Company being represented at the Coronado meeting and possibly at one other. Mr. O'Shaughnessy was there. Mr. O'Shaughnessy never had a representative there.

I only remember Mr. Smith of Standard of Indiana being at 2 or 3 meetings late in 1935 or early in 1936. I remember Mr. Edward J. Bullock of Chicago, Illinois being at one meeting in Chicago. I don't know what Mr. Bullock's title then was with Standard of Indiana.

824 Mr. Kirkland: I will admit that he was Vice President in charge of purchasing.

So far as I know Mr. Bullock held that office through 1935 and 1936. I can't tell you when that meeting was held in Chicago without referring to my list.

(Witness referred to memorandum.)

That was at the Blackstone Hotel in Chicago either on or about May 6, 1935, or early in October 1935, or on December 4, 1935.

Mr. Lakin usually attended the meetings for Shell Petroleum Corporation, although I now recall that Mr. Ruether attended one or two in Mr. Lakin's place. I don't know Mr. Ruether's title, but he was an assistant to Mr. Lakin. I don't remember that any other persons from Shell Petroleum Corporation attended any of these meetings.

The Pure Oil Company never attended any of these stabilization meetings.

There was one representative of Phillips other than Mr. Hughes and Mr. Gardner at one of the meetings with Mr. Gardner, but I don't remember who he was. I do not think my memory could be refreshed if I heard his name. I never saw him before that time or since.

Mr. L. T. Cramer, who was assistant to Mr. Harry J. Kennedy, the sales manager of Continental Oil Company, usually attended for Continental. I thought that
825 Mr. Kennedy was sales manager, but he may have been
an officer of the company. He succeeded Mr. Edward Karstedt. Mr. Kennedy and Mr. Cramer are defendants in this case. There were no other persons present at any of these meetings for Continental Oil Company.

I don't recall any other representatives of any other major companies that attended any of these meetings.

I can't remember what the conversation was at that second meeting at Excelsior Springs. The conversations were all along the same lines. That is, this distress gasoline appearing on the survey of Mr. Bourque was discussed, and taken, in most instances, by the buying companies, present or represented.

Mr. Bourque was in touch with the small refiners and so was I. Whenever any distress gasoline was offered to me by the small refiners I would usually communicate with Mr. Bourque and tell him about it. If I didn't call him it usually meant that I was able to find someone that was interested in buying the gasoline, or in many cases I bought it myself. I believe that Mr. Tuttle and Mr. McDowell assisted in a minor way in getting up the first monthly estimate when we returned from the meeting in March. They did not to my knowledge assist in any of the later surveys. Mr. Tuttle and Mr. McDowell and I did not
826 have any discussions with regard to those surveys before we presented them to these meetings. Mr. Bourque attended many of the meetings himself after the Coronado meeting so he always had that material there. After the first meeting Mr. Bourque usually prepared the survey without any help from us except such help as I said I gave him from time to time.

My notes show that there were 13 of these meetings of these buyers such as that held in the Coronado Hotel in March 1935.

These dates and places of the meetings are right, to my best knowledge: March 5, 1935, I have already given you; April 5, 1935, Excelsior Springs, Missouri; May 6, 1935, Blackstone Hotel, Chicago; early June, 1935, in the Western Petroleum Refiners Association office in Tulsa. Sometime in July, 1935, at the Western Petroleum Refiners Association office in Tulsa; early August, 1935, at the same place; early September, 1935, at the same place. Early October 1935, at the Blackstone Hotel, Chicago. I did not attend that meeting, and therefore I could not have seen Mr. Bullock at that particular meeting. That leads me to believe that I saw him at one of those other two meetings. November 5, 1935, in St. Louis, at Mr. Ashton's office. December 4, 1935, at Chicago, Blackstone Hotel; December 27, 1935, at the Western Petroleum Refiners Office in 827 Tulsa; January 28, 1936, at the same place; February 27, 1936, in Chicago, at the Blackstone.

I do not recall any other similar meetings after February 27, 1936. The February 27 meeting was rather informal and there were only a few people there. I only remember myself and Mr. Ashton and Mr. Bourque as being there, but there were a few more that I don't remember.

I don't remember what the survey made up in the last part of March, 1935 for discussion at the April, 1935 meeting showed as to the amount of gasoline to be taken. It was about 600 to 800 cars. I don't remember whether that amount varied very much in the various surveys that were made from month to month after that date. The quantity as I remember it ran from 600 to 800 cars a month through the whole program. The quantity may have increased somewhat as the program went on but I don't remember. That was third grade and regular gasoline. One company bought a very small quantity of 65 octane gasoline. I believe that was Shell. Buying continued under that arrangement through April, 1936. I do not know what happened after that.

I discontinued my activities that I have described when I appeared before the Grand Jury in May, 1936. I had been active in it through the entire period until the day I appeared before the grand jury on May 19, 1936.

828 I am familiar with the Chicago Journal of Commerce and Platt's Oilgram. The Chicago Journal of Commerce is a financial newspaper as well as a newspa-

per that reports data and news on very many products. They have an oil page and it is considered in the trade a very good one, very responsible. They report a number of prices on products and those prices are representative of the ruling quotations f. o. b. Group 3 as shown by that paper. I believe ruling quotations is the way the paper reads. I believe the paper says they are on spot transactions to jobbers.

Platt's Oilgram is a daily sheet that is published from various centers, I believe New York and Cleveland and Tulsa, and Chicago. It reports ruling prices in spot transactions to jobbers on various grades of gasoline and also reports the ruling prices of a great many products. They are quotations on gasoline in tank car lots sold in the spot market. I have been familiar with those journals and with those quotations over a long period of years and I have taken them both. I use them and observe them.

829 Q. Now, tell us whether Mr. McDowell, Mr. Tuttle and you had any discussion in March of 1935 with regard to those tank car quotations for gasoline on the spot market carried in those two journals?

A. Yes, I remember—

Mr. Lawton: If the Court please, on behalf of the Journal I object to any conversation; so far as the Chicago Journal of Commerce is concerned, it is inadmissible against the Jounrnal.

The Court: Objection sustained.

Mr. Hanning: The same objection in regard to Platt's Oilgram.

The Court: The same ruling.

Mr. Donovan: And I understand that my objection is already in, in relation to those questions. That is why I haven't objected.

The Court: Yes, let the record show the objections were made, and have been overruled.

Mr. Lewin: Q. State what those discussions were.

A. The first one, Mr. Lewin, I now recall, occurred on March 14, 1936.

Q. 1936?

A. 1935?

Q. 1935.

830 A. And that particular discussion was brought about by the fact that reports had come from us—come to us, to one of us that some of these hard-

boiled buyers of these companies were trying to buy this distress gasoline at a price under the going price or a fair price.

Q. Could they do that?

A. What is that?

Q. Could they do that?

A. Yes, sir, they could have.

Q. They could have. All right. Where did these reports come from?

A. I don't know exactly, from one or two of the small refiners in North Texas, Oklahoma or Kansas. And that situation precipitated our discussion; and we felt that if that practice continued that it would have a very detrimental effect. That is, the idea of this whole plan, as I got it from the meeting at St. Louis, was to pay a fair price for this distress gasoline. I felt that if some of these companies started to purchase this gasoline at a price below the market, that the trade journals would hear of these prices, that the small refiner would be discouraged, as apparently was the case of these one or two that called us; their mental frame of mind would be affected; and that other buyers 831 hearing of those prices would hold off their buying; and the gist of the whole thing was that I felt that prices would go lower with that situation existing.

Q. Now, give us the discussion, will you? I didn't ask you for all of those reasons; will you give us the discussion.

A. Well, that was the discussion.

Q. Well, tell us whether you did not get a suggestion from one or more of the participating major companies as to how these trade journals would operate in quoting their prices?

Mr. Hanning: Can you understand that all of these questions are objected to on the part of both journals and are not binding on us at this time.

The Court: Yes. Let the record show that.

The Witness: Will you read that question, again.

(Pending question read by reporter.)

A. No, I remember no suggestion from any major company or any other company.

832 Q. Now, could your memory be refreshed if your attention was called to certain testimony on that point that you gave before the grand jury?

Mr. Donovan: The same objection to this, your Honor, as appears at R. pp. 373-374.

The Court: Yes, the same ruling. Exception allowed.

The Witness: What should my answer to that question be?

Mr. Lawton: May I say this: I don't believe that his memory needs refreshing according to the answer, in any event. He said there was no such thing said. If it is to impeach him, that is a different thing.

Mr. Lewin: I don't desire to impeach him.

Q. Are you positive that nothing was said or is it that you don't just recall what was said about that?

A. I am positive that nothing was said to us about the trade journals suggesting anything to us at that time or any other time.

Q. I didn't ask you that: I asked you whether your committee, McDowell, Tuttle and yourself, didn't get a suggestion from one of the participating major companies as to how the trade journals
33 operate in making their quotations, and how those quotations could be affected by you?

A. No, the only suggestion we got was the suggestion that originated from this situation of the small refiners who major companies were trying to buy from at too cheap a price.

Q. Well, did you get a suggestion from those independent refiners with regard—

A. Yes, they mentioned the effect of those smaller—these lower prices, its possible effect on the trade journals.

Q. And did they mention the possible effect on these trade journals of higher prices, if you paid them?

A. I believe so, yes.

The Court: I might say right now. I have been a little tolerant of these leading questions. From now on, let's eliminate leading questions.

Mr. Lewin: Q. State what if any suggestion was made to you and your committee, in March of 1935, as to what effect higher prices paid by the major companies in this program would have upon the quotations of the two journals that you have mentioned?

A. The suggestion was that we should pay a fair market price for this gasoline instead of a distress price.

834 Q. Did that have any reference to the trade journals and the way in which they operated?

A. Yes, because the price that the larger companies paid for gasoline certainly indicates the trend of the trade journals, even if they don't report the price.

Q. Even if they don't?

A. They report the jobber prices, as I understand it.

835 Q. Come back to my question, will you: State what suggestion, if any, was made to you in March, 1935, as to what, if any, effect your paying higher prices in this program would have on those trade journals' quotations. That is a simple question, I think.

Mr. Hanning: Your Honor, please, as simple as it is, the witness has already answered it. I don't believe counsel should be permitted to repeat questions all of the time. I submit that for your consideration.

The Court: He may answer it once more, if he has already answered it.

A. Will you read it again, please?

(Question read as follows:

"Q. State what suggestion, if any, was made to you in March, 1935, as to what, if any, effect your paying higher prices on this program would have on those trade journals' quotations.")

A. Your Honor, I have answered the question. I have stated that these smaller refiners that called us told us about these low prices, and suggested that we pay a fair price, and whatever the fair price was, that price would be indicated as the trend of the journal, and a small refiner could, when he sold that distressed gasoline, could then 836 ask and obtain higher prices for the gasoline that he sold to his jobbing trade, which the trade journals report.

Mr. Lewin: Q. Did you get any suggestion as to what consideration the trade journals gave to the preponderance of the transactions on the spot market in making their quotations?

Mr. Lawton: I object to that, your Honor. Why should you be bound by what they say among themselves?

Mr. Chaffetz: The journals were not bound, but that is very important as far as the other defendants are concerned, as they may be bound. The journals aren't bound by this testimony at this time, but counsel shouldn't insist on his objection.

Mr. Donovan: The Court has my objection already, and also I think he has answered it.

Mr. Lewin: I don't think any of his answers are responsive to my questions. I think I should be permitted to refresh his memory on the Grand Jury testimony.

The Court: Read the question.

(Question read as follows:

> "Q. Did you get any suggestion as to what consideration the trade journals gave to the preponderance of the transactions on the spot market in making up their quotations?")

The Court: That isn't binding on any trade 837 journals.

Mr. Chaffetz: Not at this time.

The Court: Not at this time.

A. Yes, we got the suggestion that I mentioned.

Mr. Lewin: Q. That wasn't any suggestion about their using a preponderance. Did you get any suggestion about their making use of a preponderance of the transactions in making up their quotations?

A. We discussed that—

Mr. Lawton: In what market?

Mr. Lewin: Q. You say you discussed that?

A. Yes.

Q. What discussion did you have about that, about the major companies using a preponderance of the transactions on the spot market in making up their quotations?

Mr. Hanning: Your Honor, let me say this—

Mr. Lewin: Trade journals, of course.

Mr. Hanning: You mean trade journals instead of major companies.

Mr. Lewin: Yes, that is a slip of the tongue.

Mr. Hanning: But the first question was a leading question, because it put in the witness' mouth the kind of answer that Mr. Lewin wants. And he answered it yes or no. Read back there and see if that isn't correct. Now, he comes along with a

838 follow-through question. Now, I submit he ought not to cross-examine his own witness. That is, your Honor, what is going on.

The Court: It is apparent to me that this witness is a little reluctant to relate all that transpired, and I think counsel may, if necessary, use leading questions.

Mr. Donovan: May I submit to your Honor that the witness is doing his best—

The Court: I know he is, but he has hesitated at times and then answered the questions.

Mr. Donovan: I think your Honor would say that his only hesitance is due to the fact that he wants to be accurate.

Mr. Crawford: All we can see is that he is doing the best he can to do the things he wants to do.

Mr. Donovan: Which is to tell the truth.

Mr. Lewin: Now, you can't help him by those remarks, I don't think.

The Court: I have made it pretty plain that I don't want any side remarks between counsel. I want you to proceed with the trial of this lawsuit in a lawyer-like way on both sides. Proceed with your questions.

Mr. Lewin: I think there is a question pending, 839 your Honor.

The Court: Read the question.

(Question read as follows:

"Q. You say you discussed that?

"A. Yes.

"Q. What discussion did you have about that, about the trade journals using a preponderance of the transactions on the spot market, in making up their quotations?")

The Court: If you understand that question, answer it.

A. That was my way of expressing myself in my testimony. We had this discussion, the subcommittee did, and we all felt that if the trade journals found that the preponderance of sales by small refiners to major companies were a preponderance, that those prices that the trade journals discovered would be very important to them as indicating a trend at least, because I understand now that all the trade journals do is report jobbers' prices.

840 Q. I am not talking about what your under-

standing was. In March, 1935, didn't you all discuss there that if you paid higher prices for your gasoline on the spot market, you major companies, that the trade journals would then raise their quotations and conform with them if your transactions were in the preponderance.

The Court: Try to put it this way: What consideration did your committee give to quotations on the market quotations or prices of gasoline as quoted in the journals?

A. Well, we gave a lot of consideration to them.

Q. Tell us what it was?

A. We felt that in paying a fair price for this gasoline, that the small refiners would move—would move this gasoline at a fair price. That would affect—they would be able to ask a higher price with their regular trade and would obtain a higher price, and the trade journals in contacting those small refiners, from whom I understand they obtain most of their information, would hear of those higher prices as sold to jobbers, and so report them.

Mr. Lewin: The Government is not satisfied with that answer, and is still completely surprised, 841 and I would like to cross-examine the witness.

The Court: All right, go ahead. We will save time if you go ahead, and break your questions down and measure your words.

Mr. Lewin: Q. Did you testify as a witness before the Grand Jury?

The Court: Before you get to that, just ask the witness what you want to ask him, ask it again and then—

Mr. Donovan: To this line I wish my same objection to stand as appears at R. pp. 373-374.

The Court: You may have your objection. Exception allowed.

Mr. Lewin: Q. (Reading) "Did you and McDowell and Tuttle in March, 1935, discuss among yourselves whether if the major companies in this program paid higher prices, and those transactions were in the preponderance on the spot market, that the trade journals would raise their quotations of that spot market accordingly?"

The Court: You can answer that.

A. In those words, no, sir.

The Court: Well, answer it in your own words, then.

A. We discussed the trade journals' prices. We discussed the price of gasoline that these major 842 companies were paying. We felt that if the trade journals reported a—that if the small refiners reported a preponderance of sales to major companies that the trade journals would certainly take that as a trend. That must be true, because I understand the trade journals don't report major companies' sales.

Mr. Lewin: Q. Mr. Jacobi, you are telling us now, adding gratuitously what you now understand. I ask you about discussions you had in March, and only that. Didn't you understand in March that if the major companies in this program paid higher prices, the trade journals would carry those higher prices if the transactions were in the preponderance?

The Court: That question is clear. Answer that.

A. If I said, that I certainly—well, I remember saying that or approximately that, Mr. Lewin, but if I said it in those words it certainly indicates that I didn't understand the methods of the trade journals.

The Court: Let me ask a question: How long have you been taking those two journals?

A. Probably 10 years.

Q. And I suppose you had some knowledge of 843 how they gathered their information that made up those quotations?

A. Some, but I testified that I didn't know how they gathered the information, and government attorneys asked me, and I gave them the best information I could on it.

Q. When your committee had this meeting in March, you knew at that time that if the prices of gasoline in that field were raised, that they would be reflected in the quotations in the Journal?

A. Yes, sir, we felt they would for the reasons that I mentioned.

Mr. Lewin: Q. All right. Now, will you answer my question as to the discussion between you and Mr. McDowell and Mr. Tuttle?

A. Yes, sir, I will give it to you again.

Q. If you are going to give me the same thing, I don't want it, and I object to it at this moment, your Honor.

A. We felt that the prices paid by the major companies would certainly have an effect upon the trade journals as they were reported to the trade journals in a—in many cases.

Q. Did you discuss that together?

A. Yes, sir. This whole discussion was together.

844 Q. Did you do anything with the result of that discussion? Did you pass it on to anyone else?

A. Yes, sir.

This discussion took place on March 14, and the subcommittee, Mr. Tuttle, Mr. McDowell and myself, arrived at what we thought was a fair market price for the week following. We arrived at what we thought the fair market price was. The prices were 3¾¢ and 4¾¢, and I called up Tracey of Sinclair at Fort Worth, Chamberlain of Pure, Mr. O'Shaughnessy of Globe, or one of his assistants, and Mr. Lakin of Shell as I remember it. I told them about some of the small selling companies giving us these reports that some of the major companies were buying too cheap, and its effect on the trade journals, and I passed on to them my idea of what the fair price was for shipments the following week, Monday to Saturday.

That price was 3¾¢ and 4¾¢. On March 8 I paid 3⅝¢ for 10 cars of U. S. Motor from Champlin. The Journal price on March 8 was 3½¢ and on March 9 the Journal reflected 3⅝¢.

The Court: Q. Right on that point, what kind of steps did your committee or representatives of the companies buying gasoline take to convey that message to representatives of the Journals?

A. Well, the journals called me every few days—

845 that is, the Oilgram does in Tulsa—and I tell them what I am paying on all products, and I told them I am sure in this case what I paid for gasoline.

That had been their practice for many years. I only talked to Mr. Fanshier of the Chicago Journal of Commerce 2 or 3 times in my life, I believe. That was after March, 1935, and during the period covered by the indictment.

I don't know what Mr. McDowell and Mr. Tuttle did with reference to the Oilgram and the Chicago Journal of Commerce. Mr. Bourque was in close contact with our committee. Mr. Bourque has told me that he has talked to Mr.

Fanshier on a number of occasions since March, 1935. He did not tell me what, if any, prices he gave Mr. Fanshier. Mr. Bourque just told me he talked to Mr. Fanshier and the market was so and so, whatever it was at time,—strong or weak. In this conversation, as I recall, Mr. Bourque called Mr. Fanshier and asked him how he found conditions in the Chicago area, and Mr. Fanshier evidently told him, and Mr. Bourque told me. Mr. Bourque told me on one occasion that he told Mr. Fanshier about market prices for Oklahoma, Kansas and North Texas. Those were all telephone calls. I don't know who made the calls; Mr. Bourque just told me that he had talked to Mr. Fanshier. No representative of either of the journals attended any of the meetings.

846 Mr. Bourque attended a number of our meetings. I don't remember his ever being present at a meeting where we discussed what the spot market prices were or the prices that I termed "recommended prices". We did not have those discussions of recommended prices at those meetings of buyers that I said we had about every month. Those discussions occurred when Mr. McDowell, Mr. Tuttle and I met. "Recommended prices" was a term I placed on it. Mr, Tuttle and Mr. McDowell and I arrived at what we thought the fair market price should be for the next week, Monday to Saturday, inclusive. When I left the meeting my practice was to go back to my office and call Mr. Tracey, Mr. Chamberlain, the Globe office, and the Shell office, and give them my idea as to what the fair market price was. I did not tell them that that was a recommendation from us three. I told them that that was my idea of the fair market price for the following week. I don't remember telling them that that was the committee's idea. Maybe I did, but I don't remember doing it. It was the committee's idea. I have told you exactly the people I called and gave my price recommendation to. I would call whenever we discussed the thing, which was usually towards the end of the week between March 5th and the early part of June. I don't know whether the prices that I recommended were paid by the major companies which participated in this plan. I did hear once or twice specifi-
847 cally from small refiners that a major company had paid a certain price. Some times they agreed with the prices I paid, and some times they did not.

The Court: Q. As those purchases were made on that market, did you and other members of the committee keep pretty close contact and keep well informed as to what prices were being paid by the major companies for this distress gasoline?

A. No, sir, because the whole plan was for the buying company to get in touch with the selling company direct and make their own price arrangements with them.

Q. But you say the committee called these various representatives of the different companies and gave them their suggestions as to what the price should be?

A. That is correct.

Q. Didn't you follow up to find out whether they followed your suggestion or not?

A. No, sir, I did not.

Q. So you carried on in the year 1935, giving them your suggestions as to what the price should be and what they should pay for distressed gasoline, but still did not follow up to find out if they followed it?

A. No, sir, I did not follow up, but in some cases 848 I learned that they were paying approximately the same prices I was.

Q. How did you learn that?

A. From the small refiner if he happened to tell me. Maybe I asked them; I don't remember.

Mr. Lewin: Q. Maybe you asked whom?

A. The small refiner.

The committee operated for the whole period until May, 1935, but we did not make any recommended prices after June 1, 1935 except for one instance, on January 10, 1936. In that instance I called those buyers and gave them the information as to what my idea was as to the fair market price for the week following.

The Court: Q. Let me get this straight. Did you make just weekly reports to those you were to report to on this plan?

A. Did I make the weekly reports to whom?

Q. To the company you represented. For instance, you had certain concerns you were going to buy for?

A. Yes, sir.

Mr. Donovan: Your Honor, there is an error in that. As I understand it, he was buying only for his own company.

The Witness: That is true. The other companies bought their own gasoline, your Honor.

849 The Court: Q. But there were other companies that you were contacting?

A. Yes, those four that I have mentioned.

Q. Yes. Well, did you contact them every week with reference to this program?

A. Yes, sir, more than that. Maybe several times a week.

By Mr. Lewin

I may on a few occasions have asked some of the major companies who were participating whether they paid my recommended prices. I don't remember what companies I asked. When I asked them they said they were or they were not. I don't remember them saying they were not.

Our committee of McDowell, Tuttle and myself met on 5 or 7 occasions after March 5th and arrived at what we thought was the fair market price and I recommended that price to these 4 companies that I mentioned.

The Court: Q. Do you know what the other members of the committee did with respect to recommending a price?

A. Well, I did not hear them, your Honor, naturally.

I know what companies they were in contact with. Tuttle was in contact with Skelly and Continental. Mr. McDowell was in contact with Standard of Indiana, Phillips and Barnsdall.

850 *By Mr. Lewin*

The only recommendation as to price that I recall definitely is the one made at the meeting of March 14. At that time the price was 3¾¢ and 4¾¢. That was the price I recommended to those 4 companies. I don't know whether that represented an advance over the price before. I don't remember.

851 The Court: Q. What is your best recollection on that?

A. Yes, it represented an advance of perhaps ⅛¢ on 68-70 octane.

The Court: Now, let me say to the witness, you have this pretty well in mind. Don't hesitate on that. Let us have your answer.

Mr. Donovan: Well, if your Honor please,—

The Court: That is a very good illustration. He had the answer in his mind—

Mr. Donovan: But the answer may be wrong. I think the best evidence is the journal itself.

The Court: No, I just suggest this witness should not be quite so reluctant about answering the questions. We will take a recess of 15 minutes.

Mr. Donovan: I take an exception to the statement of the Court.

852 I called Mr. Tracey, Mr. Chamberlain, Mr. O'Shaughnessy and Mr. Lakin, or some one in their office, probably 5 or 7 times during the period March 5, 1935, until June 7, 1935, and gave them the price recommendations of the committee. I called those men every time we made a price recommendation. When I called Mr. Tracey I told him that I was paying that recommended price or was going to for the following week and suggested that he do the same if he found that he could and if he approved of it. Mr. Tracey didn't have much to say except, "Well, I will see what I can do," or "I will check it up," or something of that sort. I don't remember that he said anything more than that. I cannot exactly remember his conversation. I told him what the price was, and he indicated that he would pay it if he checked it up and found it reasonable and in line with his views.

Mr. Tracey usually said he would have to check back with his superior officer in the company when I offered him gasoline and when I talked to him about these prices. I never checked Mr. Tracey up to see whether he paid the recommended price. Mr. Tracey did not say with whom he would check back on the prices. His immediate superior so far as I know was Mr. Carnes, and when Mr. Tracey said "check back" I presumed that he meant with Mr. Carnes. I knew that Mr. Carnes was Mr. Tracey's
853 superior officer, Mr. Tracey never told me that Mr. Carnes was the man he checked back with.

When I called Mr. Chamberlain on prices I told him about the same thing; that that was my idea of the fair price for next week, that I intended to pay that price, and that if he saw his way clear to do the same thing that would be fine, or words to that effect. I never remember Mr. Chamberlain saying whether he would or would not.

By the Court

His response on the matter of price, as well as on the matter of gasoline, when I called him about it, was this, "Well, I will check it up," i. e., check it up with his superiors. His superior was Mr. McElroy, I believe, in Chicago.

The Court: You see, you can help us along if you will just answer those questions. Otherwise, we will be here a long time.

By Mr. Lewin

I don't remember Mr. Chamberlain at any time when I made that price recommendation to him indicated to me in what he said that he, for The Pure Oil Company, would pay those prices. I don't ever remember his saying he wouldn't.

854 Q. Could your recollection be refreshed on that subject?

Mr. Francis: Now, just a minute. Your Honor, I want to object on behalf of the Pure Oil Company, keeping in mind that the Pure Oil Company, this gentleman doesn't work for the Pure Oil Company, he has got no connection with it. Bearing on my objection here, he said that he talked to Mr. Chamberlain, gave him a recommendation of what he thought was a fair price; that Mr. Chamberlain never said he would or wouldn't, but, "I will take it up with my superiors." We ought not to let, as against Pure Oil Company, this Prosecutor try to put more words in this witness' mouth—

The Court: But we ought to get all the conversation out of the witness, and if it has to be pried out of him—

Mr. Donovan: Now, your Honor—

Mr. Lewin: Colonel Donovan, just a minute.

Mr. Donovan: May I have an exception to that?

Mr. Lewin: Mr. Francis has misquoted the witness. He hasn't said that Mr. Chamberlain always said that he would or wouldn't. This witness said at one time that he couldn't remember whether he ever said he would or he wouldn't.

The Court: Well, the jury has heard what the
855 witness has said. Let's not have any dispute about that. Is there a question unanswered?

Mr. Lewin: I think there is a pending question. I am not positive of it. Well, let me put it again.

856 Q. Could I refresh your recollection from your testimony before the grand jury, as to whether or not Mr. Chamberlain indicated to you by what he said in these conversations that he, for The Pure Oil Company, would pay your recommended price?

A. Yes.

Q. You think if you were—

The Court: Well, maybe he knows it without refreshing his memory.

Q. Do you know? Will you answer that question?

A. Could I have the question again, please?

Q. State whether or not Mr. Chamberlain didn't say to you on some of these occasions when you gave him a recommended price, that he, for The Pure Oil Company, would pay those recommended prices, or that recommended price.

A. At this time, I can't remember him telling me that.

The substance of my conversations on these various occasions with Mr. O'Shaughnessy, the president of the Globe Companies, was the same as my conversations with Tracey and with Chamberlain. I gave Mr. O'Shaughnessy my idea of the fair market price on shipments for the week following. I mentioned the price to him, and
857 he said, "Fine, Paul", or words to that effect. My
purpose in passing along information regarding this buying program was that I felt these participating companies would be interested in it. I don't definitely know whether Mr. O'Shaughnessy followed my suggestions. My purpose was to give him the prices, and then it was up to him whether he wanted to pay them or not. I wanted to give him our idea of what we thought the fair market price was, down in Tulsa, and I hoped that he would follow them in his purchases. I don't know what he paid, I gave him those prices to give him an indication as to the going price, the fair price in our territory down there. He was in Chicago. I did this over the telephone. When I called him, I paid for it.

It was entirely optional with Mr. O'Shaugnessy whether or not he wanted to follow the price when I gave it to him. The members of the committee certainly hoped that the other buyers would pay the recommended prices.

By the Court

In making the recommendations, we had in mind conveying to them our idea of what the fair market price was, expecting them to act upon it if they saw fit. I don't know in how many cases they acted upon it. But I kept on, week after week, giving them that information. I
know they acted upon that, and purchased on those
858 recommendations, only in the few instances where the
refiners told me what the price was, or if they told me themselves. In those instances, I know that they did buy upon my recommendations.

By Mr. Lewin

During the period of time I was making these price recommendations, Mr. McDowell and Mr. Tuttle and I were watching the Chicago Journal of Commerce and Platt's Oilgram to see how their prices were going. I saw an increase in the price of probably 1¢ a gallon, maybe slightly more, in those trade journals from March 1, 1935 to June 7, 1935. Those price changes were made gradually throughout that period.

I don't remember any further price advances in 1935 after June 7. I believe there was one further price advance in January, 1936. I made my last price recommendation for 1935 some time near the end of May. Around June 6 or 7, 1935, is not correct. My understanding and recollection is that we didn't make any price recommendation after June 1. There may have been one price recommendation in the first week of June, 1935, but I don't remember now. I don't know whether I testified to that before the grand jury.

I don't remember how many changes there were in the tank car price quotations in the Journals from March 1, 1935 to June 7, 1935 on regular and third grade 859 gasoline. I don't remember how the number corresponded with the number of price recommendations I made. All I remember is that the price went up a little over 1¢ a gallon, ⅛¢ or ¼¢ at a time. During that period we made 5 or 7 recommendations of an advance of ⅛¢ or ¼¢ at a time.

I remember specifically the March 14 meeting and the price I recommended then but I don't remember specifically what the prices were after that time.

I don't remember whether the recommended prices were raised or not each time that I made a new recommendation. The recommended prices were not decreased when I made those recommendations. I don't remember making any recommendation that was the same. If I didn't make any declining recommendation and I didn't make any of the same, all of my recommendations must have been advances.

I believe I would say that there were between 5 and 7 of those recommended advances during that period. They were all advances of ⅛¢ to ¼¢ in price over the previous recommendation.

I looked in the trade papers before and after we made such a recommended price to see how changes in those prices compared with the price advances that I recommended. I made a comparison between what the trade journals carried and my recommended price for the 860 same time. Sometimes the recommended price was slightly above the trade journals' price because we considered shipments for the following week in our recommended price. Sometimes the recommended price was the same as the trade journals' low price. I don't remember whether the trade journals' price ever was lower than the price I recommended for shipments on the day for which the trade journal published its quotation. I don't remember any lower at all on that basis. There was no specific day on which the distress gasoline was purchased. It was bought by the various companies when they placed their orders. Saturday or Monday is of no significance.

We knew what the trade journals quoted for the same quality of material on the same day for which I recommended a price and I compared that quotation with what I recommended. As I said before, sometimes the trade journals were higher than the price I had recommended for the week past. Sometimes in that situation the trade journal price was higher, and we got up in line with the trade journal figure, and occasionally my recommendation to these 4 firms was over the trade journals' posting.

I don't remember what the comparison was between the prices I recommended and the prices carried by the journals on the date on which the recommendation was intended to be followed. Those prices did not cor- 861 respond. Sometimes the price was slightly over the low of the trade papers. That was because we were recommending the price for future delivery.

By the Court

The recommendation that I made to these 4 companies I mentioned was a certain price on third-grade gasoline, 62 and below; and a certain price on 68-70 octane gasoline, regular, for purchases and shipments that they might make for the week following; and as I have already stated, we generally discussed this thing about Thursday or Friday.

862 Mr. Lewin: Q. Now, I want to know what the comparison was between those recommended prices for the week following and the quotations in these two journals for the week following, and whether they didn't correspond?

Mr. Donovan: I submit, your Honor, that that question calls for knowledge which would be almost impossible to have, unless you had a record before you. It seems to me that if this is to be carried on, that a chart or record should be placed for the convenience of the witness, and certainly it would be for the information of the Court and the jury.

The Court: Well, if he can answer it, he may.

The Witness: Will you read the question again.

(Pending question read by reporter.)

The Witness: I can't answer that question.

The Court: (To witness.) Don't you understand that?

The Witness: No, sir.

The Court: Q. On Thursday or Friday of each week you made recommendations to the Globe—

A. Yes, sir.

Q. And the other companies that you have named?

A. Yes, sir.

Q. What did you expect to result from your recommendation?

863 A. In some cases the recommended price that I made for the week prior was under the trade journal's—

The Court: I don't care for that. What did you expect to result? For instance, if you made a recommendation, then the price of gasoline purchased in that territory, for the week following, would be a certain price?

A. Yes, sir.

Q. What did you expect would result from your recommendation?

A. Expected that the companies that I talked to would purchase at that price.

Q. Beginning on Monday?

A. Beginning on Monday.

Q. Did you examine the quotations in the journals which purported to give the price for that following Monday?

A. At the time I made the recommendation, your Honor—

Q. No, no, after the recommendation was made.

A. Did I examine them on Monday?

Q. Yes.

A. Yes, sir.

Q. How did they correspond with your recommendation?

864 A. For what period.

Q. For that following week. You made a recommendation on Thursday of the price which would be paid on Monday. And certain quotations appeared in the journals as to the price?

A. The trade journal prices were usually up slightly.

Q. All right. Why didn't you answer that long before? We have wasted 10 or 15 minutes here.

A. I was trying to understand.

The Court: You understood it.

Mr. Donovan: May it please the Court, I am sorry, I must take an exception to that statement.

Mr. Crawford: It does seem to me that these questions are so perfectly plain, that there is no excuse at all for the witness not answering.

The Court: They were very clear.

Mr. Donovan: I object to the remark of counsel.

The Court: They were very clear to me, Mr. Donovan. Go ahead.

Mr. Donovan: I am sorry, they weren't clear to me.

The Court: Go ahead. Proceed.

865 *By Mr. Lewin*

I have already stated that the trend of my recommended prices from March 5, 1935 to June 7, 1935 was upward.

(The witness was shown the chart Exhibit 664.)

I understand that chart and what it purports to show. My recommended prices would correspond pretty closely with the shape of the trend on this graph of the Monday low prices for third grade gasoline in the Oklahoma market between the first part of March and sometime in May, 1935. The shape or trend after June, 1935 to the end of 1935 would correspond to the prices that I was paying in the program. It is very much like it.

The last recommendation similar to the others I made here was sometime at the end of May, 1935. It might have been the first week in June, 1935. All my purchases of third grade gasoline for the period from June 1 or 7 on through the rest of 1935 were either at the low or under the low with the exception of a week in October and November when they were slightly above the low.

The trend of the prices I paid is the same as the trend

on that graph, Exhibit 664, for the same period. I note on the graph a slight dip in the third grade trend on the chart for December, 1935. On third grade I paid 4⅝¢ and 4¾¢ from November 25, 1935 to December 9, 1935.
866 On November 26, 4⅝¢. November 27, ditto. November 27, ditto. November 27, ditto. December 4, 4⅝¢. That was not an increase. December 5, 4⅝¢. December 6, 4⅝¢. December 6, 4⅝¢. December 6, 4⅝¢. December 11, 4¾¢. That shows an increase there. My purchases over that period from November 25, 1935 to December 11, 1935, conformed with the dip on the chart.

The trend of the prices I paid from December 11, 1935 until in January, 1936, on third-grade, was December 10, 4¾¢. December 11, ditto. December 10, ditto. December 11, ditto. December 12, ditto. December 17, ditto. December 18, 4⅝¢. December 18, 4⅝¢. December 26, 4⅝¢. December 27, 4¾¢. December 30, 4¾¢. The trend of those prices compares with the trend according to the chart.

The trend of prices in January, 1936, on the purchases of third grade I made for these 2 companies was January 2, 4¾¢. January 2, 4¾¢. January 3, 4¾¢. January 8, 4¾¢. January 9, ditto. January 9, ditto. January 10, ditto. January 10, ditto. January 14, 5¢. January 15, 5¼¢. January 15, ditto. January 17, ditto. January 22, ditto. January 23, 5¢. January 27, 5¼¢. January 29, 5¼¢. The trend on my purchases compared with the chart's prices is the same through January.

867 During the period when I was making recommendations for advancing prices, that is from March 4, 1935, up until some time in the early part of June, 1935, my price for the same quality of gasoline, house brand gasoline, as shown on this chart, Exhibit 668, went up with the chart. The trend of my prices during that period compared with the trend on that chart during that same period. On a quick examination, the prices I paid between June 7, 1935 and December 31, 1935, seem to compare with the trend of prices on this chart for that same kind of gasoline in the Oklahoma market. The trend of my prices shows this rise in January, 1936, and then the flat line following, as shown on this chart for the same kind of gasoline during the same period, January, 1936.

When I had these discussions with McDowell and Tuttle about the price recommendations, Mr. McDowell never said whether he would pay the recommended prices or whether he would not. I believe I did ask him whether he did pay them and he said in some instances he did, and in some instances he did not. I could not tell you when I asked him—from time to time. I only remember one instance when I did ask him. He said that he would pay that or he would not pay that, depending upon the price deal that he made with the refiner. He did not tell me whether or not he had paid the recommended price. I was not particularly interested in finding out

868 whether he had paid that or not. The three of us discussed the price, and I recommended it to these 4 people.

The Court: Q. This committee agreed on about Thursday of each week what the price would be for the following week, at least that you ought to recommend to certain corporations and representatives of the corporations; do you understand that?

A. Yes, sir.

Q. After you had your discussion, when you discussed this matter thoroughly?

A. Yes, sir.

Q. You decided then upon what the price should be, didn't you?

A. Yes.

Q. And that was the price you recommended to those you represented?

A. That was the price that I recommended to those four companies.

Mr. Lewin: Q. And that was the price Mr. Tuttle agreed his company would pay, and the price Mr. McDowell agreed his company would pay; isn't that right?

A. We didn't ever agree that any of them would pay these prices.

Q. Could I refresh your recollection on that

869 subject from your grand jury testimony?

A. Yes.

Mr. Lewin: Your Honor, may I have leave to do so?

Mr. Donovan: May I have that same objection, your Honor, as appears at R. pp. 373-74.

The Court: Objection overruled. Exception allowed.

Mr. Lewin: Q. Didn't you testify as follows, on your appearance before the grand jury:

> "Q. But who in the small group of McDowell, Tuttle and yourself was personally familiar with the situation?"

Your attention was being addressed to the price situation.

"A. Well, I think Mr. McDowell and Mr. Tuttle both were a little better versed on price matters than I was.

"Q. And they took more of the active responsibility than you did in deciding the price questions, that is, when to raise the price a little more, and when to stop, and what the objective should be?

"A. Yes, and they generally consulted with me as to what I thought about it. I would like to say that they always consulted with me as to what I thought. 870

"Q. Although you did not draw up any formal agreement, you all agreed as to the recommendations of the Committee?

"A. Yes, we all agreed, or we all decided that a certain recommended or objective price was advisable."

The Court: That is just what he testified to here.

The Witness: That is what I said.

Mr. Lewin: I didn't so understand it. Your Honor, I am at fault, then, because I certainly didn't so understand it.

The Court: It was very clear to me.

Mr. Lewin: Q. Now, that testimony is correct as I read it to you?

A. If it is there, it must be correct.

Q. Well, it is correct independently of being there, it is a fact, isn't it?

Mr. Donovan: I object to that.

The Court: It is exactly what he has testified to this afternoon. There is nothing inconsistent at all with what he has said here. Now let's just jog your memory a little. You have some knowledge of what the other members of this committee recommended to the people they were to contact?

871 *By the Court*

I don't know what the other members of the committee did with respect to recommending prices to the people they were to contact. I knew who they were contacting, so they didn't have to tell me that. As far as I know, they passed this price on to the companies they were calling, but I don't know whether they did or not definitely. The three of us met each week for a purpose. We finally decided in our mind as to what ought to be a fair market price for the following week, beginning Monday. That was one of the matters that we discussed every time we met during the period. I don't have any definite knowledge as to whether or not these men passed that information on to the people they were representing.

So far as I know Mr. Ashton had nothing to do with the prices that we men recommended each week. We three men discussed that subject and I don't remember ever discussing it with Mr. Ashton.

Mr. Lewin: Q. Now, I wonder if I might refresh your recollection on that? Didn't you testify before the grand jury as follows:

Mr. Donovan: May I have the same objection, your Honor, as appears at R. pp. 373-74.

The Court: You may. Exception allowed.

Mr. Lewin: Q. (Continuing)

> "Q. When you talked to Mr. Ashton, either
872 you or Tuttle or McDowell got Mr. Ashton's concurrence to the next step that was contemplated in prices?"

And your answer:

> "A. Yes, we all agreed."

Mr. Lewin: I want to address your mind to these meetings of this sub-committee in the period from March 5, 1935, to June 7, 1935.

The Witness: Yes, sir.

Q. The meetings at which you all came to an understanding about the price recommendations.

A. Yes.

Q. All right. Now, I want to know whether you didn't, each time you made one of those price recommendations, seek the concurrence or agreement of Mr. Ashton to those recommendations?

A. Well, I can speak for myself, and say that I didn't.

The Court: Q. You didn't?

A. No, sir.

Mr. Lewin: Q. Now, weren't you asked this question before the grand jury:

> "Q. When you talked to Mr. Ashton, either you or Tuttle or McDowell, you got Mr. Ashton's concurrence to the next step that was contemplated in prices?"

873 And your answer—didn't you give this answer?

> "A. Yes, we all agreed."

Mr. Donovan: Now—

The Court: Now, just a minute.

Q. Do you recall that question and answer, and what it related to?

A. No, sir. There might have been something else in the testimony about it. I don't know, your Honor.

Mr. Donovan: From the form of the question, that question is clearly incompetent and improper here, because he would not be permitted to be asked the question here. "Did you agree, or did you have concurrence?" This jury is entitled to know what took place. And, under the guise of refreshing recollection, this should not be adduced before this jury, and I move that it be stricken from the record.

Mr. Lewin: Your Honor, it is certainly very good refreshing material. It is perfectly clear in all I have asked—

Mr. Thomas: I object to the remark of the counsel that it is certainly very good refreshing material, and ask the Court to instruct the jury to disregard it.

The Court: Let me ask the witness a question.

874 *By the Court*

I attended all of the larger meetings which Mr. Ashton attended. Mr. Ashton did not attend any meetings which only members of the sub-committee attended. The only time I ever remember talking to Mr. Ashton about price was in January, February or March, 1936, when I told him the price that I was paying for gasoline.

Mr. Lewin: Q. May I see whether or not this testimony before the grand jury might refresh your recollection?

Mr. Donovan: May I have the same objection, your Honor, as appears at R. pp. 373-74?

The Court: The same objection, and the same ruling. Exception allowed.

Mr. Lewin: Q. Were you not asked:

> "Q. And, as I recall your testimony, your best inference was that presumably Mr. Ashton kept himself informed as to what you were doing.
>
> "A. All I can say is that I talked to Mr. Ashton about the plan. What he did, I don't know.
>
> "Q. You talked to him about the price?
>
> "A. Well, some of us did. I have at times, yes, sir."

Is that your testimony before the grand jury?

The Witness: That is what I said.

875 Mr. Lewin: It seems to me to be directly inconsistent with it.

The Court: Well, there is a little variance there.

Q. Now, do you want to explain that, or clarify that answer?

A. Well, all I can say is that Mr. McDowell was chairman of the Tank Car Stabilization Committee, and Mr. Ashton was vice-chairman. In answering that question, I was of the opinion that Mr. McDowell kept Mr. Ashton advised. As far as I am concerned, what I said before is true: I only talked to Mr. Ashton myself once, that I remember definitely, about the price I was paying for gasoline, and that was in February or March, 1936.

Mr. Donovan: In view of the fact, your Honor, that the recollection of the witness has not been refreshed, I move that the question and answer as quoted from the grand jury minutes be stricken from the record.

The Court: Yes, it may be stricken.

Mr. Lewin: May I attempt to refresh the witness further with other testimony before the grand jury on the same point?

The Court: You may.

Mr. Donovan: The same objection, your Honor,
876 as appears at R. pp. 373-74.

The Court: Yes, the same ruling. Exception allowed.

Mr. Lewin: Q. Were you not asked these questions before the grand jury, Mr. Jacobi, and did you not give these answers in response thereto—you were being asked about these price recommendations:

> "Q. So you think that your small committee as a group, McDowell and Tuttle and yourself, took all of the responsibility for determining on this matter, except for the fact that you communicated with each of the companies and got their approval?
>
> "A. As far as I know, that was the case.
>
> "Q. And of course, Mr. Ashton?
>
> "A. Yes, Mr. Ashton."

Mr. Donovan: Now—

The Court: Now, you are talking there about the weekly meetings for fixing the prices?

Mr. Lewin: Talking about prices, yes, your Honor.

The Court: Or the plan itself?

Mr. Lewin: Now, I will check that again, but I have it down here "for prices" in my notebook.

Mr. Donovan: I would only like to call the atten-
877 tion of the Court to the fact again that these questions would not be proper if submitted here in this Court.

Mr. Lewin: In response to your question, the question in the grand jury testimony immediately preceding the colloquy I have just read from the witness himself, is as follows:

> "A. My testimony would be on that, that as far as I know, Mr. Tuttle and Mr. McDowell, outside of occasional conversations on the matter of price with Mr. Ashton, talked to no one else about it."

Then follows the colloquy I have read to the witness in an effort to refresh his mind on his talks with Mr. Ashton about these price matters.

The Court: You have heard the questions and answers read from your former testimony. Have you anything further to say as to whether or not Mr. Ashton participated in any of these meetings of the committee?

A. Mr. Ashton never participated in a meeting of the sub-committee, as far as I remember; and as far as price is concerned, what I said before is my recollection at the present.

Mr. Lewin: Q. Well, what do you say about that testimony that you gave before the grand jury, which
878 was read to you?

Mr. Donovan: Now, I object to that question, your Honor, as improper. It was used only for the purpose of refreshing your recollection.

The Court: Objection sustained.

Mr. Lewin: Q. Will you state whether or not that testimony, read to you from your grand jury testimony, was the testimony that you gave?

Mr. Donovan: I object to that question as immaterial.

The Court: Well, he may answer. Exception allowed.

Q. Were those questions asked you, and did you make those answers?

A. If it is there, I must have made those answers, yes, sir.

Mr. Lewin: Q. And were those answers true when you gave them in response to those questions?

Mr. Donovan: The same objection, your Honor.

The Court: He may answer. Overruled. Exception allowed.

Mr. Donovan: May it please the Court, may I just make a further objection? It seems to me the question is incompetent at this time and improper as well.

The Court: Objection overruled. Exception allowed. 879

A. Yes, I was giving the facts as I remembered them at that time.

I am familiar with the Western Petroleum Refiners Association, which has been in existence for many years. Its members are small and large refiners, independent refiners and also major companies. It issues bulletins, and its main work is statistical. Its office is in Tulsa. My company, Wadhams Oil Company, is a member. I have attended a few special meetings of the Association.

Some of the independent refiners, that I testified about yesterday as being the principal sellers to the program, were members of that association. I don't know how many. I don't know whether all of them were members.

I testified yesterday that at times, in addition to these regular sellers in the program, there were some incidental sellers from time to time. The only one I could recall was Russell Refining Company. There were some purchases made from brokers. A broker is a marketer of tank car products, and he buys his gasoline in tank car lots and resells it. He buys outright, and then sells again. Certain brokers had gasoline at times, which apparently was distress gasoline, and that gasoline was purchased by various of the larger companies participating.

I believe Dale W. Moore was one of those brokers. His headquarters are in Tulsa. Tancel Petroleum Company, 880 of Tulsa, is another. I don't think Tancel Petroleum Company is a corporation. The owner of that business is R. B. Tancel. I cannot remember any others at the moment.

Purchases were made from those brokers throughout this period. I bought a few cars from them, as I remember it, and one or two of the other companies bought some; Mid-Continent, I believe, bought some.

The purpose of buying that gasoline from those brokers was that they had the gasoline available and wanted to sell it, and sometimes these companies called in to the committee and had orders for gasoline, and at the moment we didn't have any particular outlet in mind for them, so, if at that time the broker had called us, we suggested that he get in touch with that broker, and buy it.

Q. State whether or not your purpose in buying from the brokers this gasoline which he calls distress wasn't to prevent it from being sold by the brokers below the price that he was recommending?

Mr. Donovan: He cannot testify, your Honor, certainly, as to what anyone else's purpose was.

The Court: Objection overruled. He may answer that. Exception allowed.

A. Yes, we thought it would be advisable to purchase the gasoline.

881 Mr. Donovan: If it please the Court, just in the interest of accuracy here, the witness said "we thought." If he is undertaking to speak for what anyone else thought, then he ought to be made to say what was said, because that is the only way we can judge what someone else thought. He cannot express another man's thought except through that man's words.

The Court: Objection overruled. Let the answer stand. Exception allowed.

Purchases of this character were not made in our program from time to time from Johnson Oil & Refining Company. I remember buying 10 cars of gasoline from that company, but I don't know whether that was distress gasoline, or whether it was gasoline that I happened to require at the time.

There is a title attached to my position with Wadhams Oil Company. I am the purchasing agent of the Mid-Continent Division of Wadhams Oil Company, and for the Socony Divisions. That was my position in 1934, 1935 and 1936.

I aided particularly in making up the monthly survey after we returned from St. Louis on March 5th, and I checked with various refiners at that time and discussed the survey with Mr. Bourque. As time went on, I reported gasoline that came to my attention to him, but he was
882 mainly responsible for these surveys. As I assisted in making up the surveys, I was not necessarily confining myself to these regular sellers to the program. I told Mr. Bourque about any distress gasoline that came to my attention, in whatever hands I might find it. When I heard of this distress gasoline, I told Mr. Bourque about it when I

couldn't buy it myself; and as the plan went on, the practice became this, that he tried to find buyers for the distress gasoline when I told him about it. I don't know whether or not it got on the survey that we discussed at each month.

I told Mr. Bourque about this distress gasoline with the express purpose in mind that he could find buyers for it among the larger companies doing the purchasing. I have already stated that I didn't have much to do about the surveys after that first one; and this gasoline that showed up during the month, from April on, my express purpose in telling Mr. Bourque about it was to try to find buyers for it. If he used that for the surveys, I don't know. I wanted him to find buyers during the month for it. But if he didn't find buyers for it among the major companies during the month, then I intended it to be considered on the survey and be considered at our next meeting.

I know Mr. Warner of Tidewater, I am not sure whether his initials are "J. W." He is a defendant here. My understanding was that he was in charge of the sales in
883 the Tulsa office of Tidewater, and for the territory in the Mid-Continent field.

I know R. O. Audrain, a defendant in this case. During 1935 and 1936, my understanding was that he was Mr. Warner's assistant.

During the year 1935, while this program was operating, I had some discussions with Mr. Warner about it. I only remember one conversation with him specifically. He and some other men were having luncheon at the Tulsa Club, and Mr. McDowell and I were in there, and we stopped at Mr. Warner's table, and Mr. McDowell asked Mr. Warner if he couldn't purchase some distress gasoline on this program. The substance of what he said was that he hadn't been able to get any satisfaction from his New York office regarding it, and regretted that he couldn't give us any definite answer on it.

> The Court: Let me say now to the jury: The testimony of this witness as to conversations and transactions with certain corporations and their representatives is admissible as to those corporations and as to those individuals, and not as to others until you are otherwise instructed. Just bear that in mind.

Mr. Warner did not say anything more about the necessity for getting approval from his New York office. We didn't stay there very long. At least I didn't. I
884 don't remember whether Mr. McDowell left with me or not.

I don't remember any further talks with Mr. Warner about this subject. I wouldn't say that I did or did not have further talks with him. I don't remember. I do not recall having any conversations with him over the telephone on this subject.

I called Mr. Audrain on this subject twice, as I remember. I am sure it wasn't more than 3 times. I don't know whether it was more than 3 times. I am positive of two. I made these calls sometime in 1935. These 2 or 3 calls were not scattered through the year 1935. I believe they were rather early in the program. I think this conversation with Mr. Warner in the Tulsa Club was rather early, too.

I can relate the substance of the conversations with Mr. Audrain. There was some distress gasoline somewhere that I asked if he couldn't purchase, and I got a rather disinterested reply from Mr. Audrain, and as far as I know, he didn't purchase any that I suggested. That answer is confined to the particular gasoline that I suggested to Mr. Audrain.

I don't know whether the Tidewater Company, which Mr. Warner and Mr. Audrain represented, made some small purchases of distress gasoline in this field during the program. They may have. I cannot be more definite about that, because probably Mr. McDowell or Mr.
885 Tuttle or Mr. Bourque talked to them. I don't know about that.

I do not recall that the Tidewater that was in existence at that time made a few purchases in our program. I don't know.

Mr. Audrain handled the purchases for the Tidewater Company that was in existence at that time. He was an assistant to Mr. Warner. If I were told of purchases by this company in the Mid-Continent field from certain independent refiners and brokers and given the number of cars, it would not refresh my recollection as to whether or not Tidewater participated, because they might have bought that gasoline from a broker or refiner as they needed it, without being solicited by one of the sub-committee.

Referring to the conversations with Mr. Warner in the Tulsa Club, Mr. Warner seemed to know of the program. I cannot remember what Mr. Warner said which disclosed to me that he knew about the program. As I said, I was just there a short while, and I have told you what I know of that conversation. I can't remember his exact language on that point. All I can remember is that he indicated that he did know about the program.

I always tried to reach defendant P. E. Lakin of Shell Petroleum Corporation about these price recommendations each time we made them. My best recollection of my conversations with Lakin is: I told him that I was 886 going to pay such and such a price for the following week, and suggested that he pay the same price if he found it on check, to be the fair market price in his opinion. I did mention market to him. I was not referring to trade journals, but the market as I saw it down there in Oklahoma at the time. I mean my opinion of what the market ought to be. Sometimes the prices I gave him as my recommendation were higher than the market was then and sometimes they were not. I gave Mr. Lakin information a number of times during the first part of the plan, maybe 4 or 5. In some instances the price that I recommended to Mr. Lakin was higher than the market price on the day I called him.

Q. Now, in those instances did you tell him to check and see whether that price you were recommending was the market or did you tell him to pay that price, whether it was the market or not?

A. I never told him to pay any price.

Q. Well, you were suggesting to him to pay it, weren't you?

A. Yes.

Q. In those instances in which you recommended to Mr. Lakin to pay a price that was ⅛¢ higher than the market, when you made the recommendation, you did not ask him then, did you, to check and see whether your recommendation was at the market?

887 A. I know I did at times. I don't remember whether I did every time.

Mr. McDowell and Mr. Tuttle and I were particularly active during the start of the program. There were times when one or more of us was away from town. That is true of all three of us at times, but I believe Mr. McDowell and Mr. Tuttle were away more than I was. When Mr. Tuttle was out of town, if there was anything of interest, I called those people that he usually talked to, about quantities, not about price. I only talked to these four that I mentioned, on price.

Mr. McDowell posted Barnsdall, Standard of Indiana, and Phillips on all matters relating to the program, as far as I know. What he did specifically, I don't know. Mr. Tuttle contacted Skelly and Continental.

By the Court

I posted those companies when either Tuttle or McDowell was out of the city. When I say "posted", I mean I posted them as regards the availability of distress gasoline or other matters that I thought would be of interest. I don't ever remember talking price. If they asked me, I told them about prices. That was a matter that they would be interested in.

By Mr. Lewin

That is true of all of those 5 companies, Skelly, Continental, Standard, Phillips and Barnsdall. I have 888 talked to them all on a number of occasions, but not on this subject of price. If they asked me about the price I was paying, I told them. I don't remember whether they asked me about the price. I talked to those companies only when McDowell and Tuttle were out of town.

When I mentioned Barnsdall in that connection I was referring to the entire year 1935, and the portion of 1936 in which I was active. I referred to the Barnsdall Company that was in existence at that time. There are still several Barnsdall companies in existence, and I don't know them. The official of that company that I talked to after June 1, 1935 was Mr. Evans.

I talked to Mr. Cramer of Continental during 1935 on this subject of the program and many other subjects. I do not recall whether or not I talked to Mr. Cramer on the subject of price at any time during this program.

After our committee had ascertained that there were each month 600 or 800 cars for the program, the committee didn't do anything about dividing it up. All the buying companies at these meetings stated which gasoline they wanted to purchase. These major company participants took all of this gasoline that appeared there in the survey,—600 to 800 cars. Those that weren't present were contacted.

889 *By the Court*

The companies arrived at the amount that they were to take by stating how much they could use of the gasoline that the particular refiner had to offer. Sometimes there were several companies that bought from the same refiner, if the quantity was large.

By Mr. Lewin

I can only estimate the amount of gasoline that each defendant who participated in the program took each month.

I was at the meeting in March at which the survey was discussed and at which the major companies indicated what gasoline out of that survey each one would take. At the meeting what Mr. Ashton and the others felt they could take was discussed, and then they were contacted and asked if they could take that amount.

I can only estimate how much each one took out of that 600 or 800 cars that they all took for the month of March.

By the Court

The only one I know about definitely, of course, is Socony-Vacuum and Wadhams; and I took 40 cars.

Standard of Indiana, Sinclair, Pure Oil, Skelly, Barnsdall and Deep Rock were not represented.

Shell was represented, and my recollection now is that they didn't take any in March, but took some later, probably the latter part of March or April. I don't know the amount.

890 Empire was represented, and I believe they said they would take around 30 or 40 cars. I don't know exactly what they took. Phillips took 40 or 50 cars. That is purely an estimate. Mid-Continent, 20 or 30. Continental, the same. Globe, 20 or 30. That is my best recollection for the month of March, 1935.

At the March, 1935 meeting there were some companies not represented, and Mr. Ashton indicated that he felt that those companies would take certain quantities of the distress gasoline that the others hadn't spoken for.

The amount taken was not determined somewhat upon the size of the company, its financial size. It was the amount of gasoline that they wanted to take and needed at that time, their requirements. That was what determined the allocation, and the size of the company had nothing to do with it.

By Mr. Lewin

My best recollection is that 600 or 800 cars approximately were taken on that program during March. There were a number of companies that I couldn't answer on, that weren't represented. I gave an estimate and that is that was wanted. That is my best recollection.

By the Court

We talked with a representative of Standard of Indiana who said he would confer with his superior officer.

891 *By Mr. Lewin*

I don't know whether Standard of Indiana bought any of that gasoline in March. They may have, but I don't know.

By the Court

My recollection now is that those who took, took about 260 cars.

The companies that I did not refer to before are Standard of Indiana, Sinclair, Pure Oil, Skelly, and Barnsdall. They bought gasoline on the program, either in March or in April 1935, I don't remember which.

By Mr. Lewin

My estimates of the amounts of gasoline taken by each one of the major company participants in April, 1935 are: Standard of Indiana, 75; Socony and Wadhams, 40; Sinclair, 50 or 60; Shell, 40 or 50; Empire, the same. Pure, 20, 25 or 30; Phillips, 60 or 80; Mid-Continent, 25 to 35; Continental, 40 to 50; Skelly, 25 to 35; Barnsdall, 20 or 25; Globe, the same.

It ran about the same, probably a little more in the month of May. I don't know whether it was more for each company; the total quantity was a little larger, I believe. I know Socony-Vacuum took more later on.

My estimates of the average which each took through the program are: Standard of Indiana, 75; Socony, ditto—
that includes Wadhams. Sinclair, 60 or 70. Shell 40
892 or 50. Empire the same. Pure, 30 to 40. Phillips,
70 or 80. Mid-Continent, 25 to 35. Continental, 40 to 50. Skelly, 30 to 40. Barnsdall, 20 to 30. Globe, 20 to 30.

That is my best recollection of the average throughout the months of 1935 and 1936.

Those companies represented at the meetings spoke for that part of the total of gasoline that they felt they could use and wanted. The quantities that the various companies took depended upon their requirements and what they wanted. There was no other method of determining the amount which they were to purchase. That was the only method. They said what they wanted, and they knew what their business was and how much they needed and how much they could use. It was up to the company itself to say how much it wanted. There wasn't any yardstick to measure except by their requirements. They said what they wanted.

By the Court

When we arrived or attempted to arrive at our buying program there was consideration given as to what amount of gasoline each company would take. All of us who were present said what we wanted.

I could judge pretty accurately from my experience down there about how much gasoline I could take during that month. We have a refinery in Kansas. The monthly output or capacity of that refinery was about 14,000
893 barrels a day. We also have a refinery at East Chicago, Indiana, having the capacity of about 11,000 barrels a day. I know the requirements of our company per day. I was in touch with our various offices and knew from month to month approximately what their requirements would be, and I have always done that.

As to whether or not our company was capable of supplying its different requirements for the month of March without going out into the market to buy, speaking for Wadhams at East Chicago we were putting a new installation in our refinery, and I knew that we would use a little more gasoline in March and in April. In May and June our requirements were very, very much heavier, and as the year went on our refinery at Augusta ran short. It normally supplied our various divisions with a lot of their requirements. I was buying some distress gasoline elsewhere, and I discussed the matter with Mr. Ashton, and I knew from what Mr. Ashton would need and what Wadhams would need, in March, that I could take those 40 cars from Champlin without any difficulty. It was on that information that I spoke for the company.

The representative of the Phillips Company who was present at that meeting did not say anything with reference to their requirements and how their requirements were arrived at for March. The represent-
894 ative determined what amount he was to take himself, because he had the same information about his operations no doubt as I did for those of my company.

At that meeting each company indicated what they could take each month. They knew their own operations better than I did or any member of the sub-committee. I did not in our discussion make a statement as to how much I would take each month for any period of time—just for March.

By Mr. Lewin

Our requirements governed our buying for Socony-Vacuum and Wadhams in this program. I do not mean orders on hand. I knew about what we would require each month, and I have known that for years. I usually know that from orders that are sent to me from the various divisions, but I can estimate what the requirements will be, and then the orders come in. I did not have orders from my division at the time I committed Socony-Vacuum and Wadhams to this program.

I told you what I did about stimulating orders from the various divisions. I talked with Mr. Ashton at St. Louis and he told me he would need some. I was buying some gasoline at the time, so I knew between the two of us we could supply orders for Champlin's 40 cars. I felt reasonably sure we could. My testimony is that the only
part I took for Socony-Vacuum and Wadhams in the
895 program was based on the requirements of those
companies. We always had need for it, or I wouldn't have bought it. I was not governed in making those purchases in the program for those two companies by what I thought our fair share of the burden was of taking that gasoline.

I determined how much I would buy this way: I wanted to do my part in the program, and I also knew what our company would need and that is only what I said I would take.

Q. Were you motivated, then, by two reasons, one to do your fair share or what you thought was your fair share, and the other to supply your requirements?

A. Yes, both reasons were important to me.

By the Court

When I made these purchases of distress gasoline for my company, it was shipped to the various divisions of my company for which I purchased.

By Mr. Lewin

I did not make the allotments among the divisions. They sent me their orders as they needed. They sent me orders throughout the whole year. At times, I stimulated orders from them for this so-called distress gasoline. If a small refiner needed instructions, I would call the traffic departments, and after I had purchased, ask them

if they didn't have some instructions so that I could
896 give them to the small refiner. Upon receipt of those instructions, I gave them to the small refiner, and he shipped the gasoline out immediately. I only remember one or two instances. I talked to Mr. McReynolds of White Eagle once in that connection, and I believe I talked to Mr. Schuder of Wadhams, Milwaukee office. I never talked to the Chicago division about it. They sent me their orders. I never talked to Mr. Ashton that I remember, in that connection.

Q. Let me see if I can refresh your recollection on it. Did you give this testimony before the Grand Jury—

Mr. Donovan: May I have that same objection as appears at R. pp. 373-74?

The Court: Yes. Same objection overruled; exception allowed.

Mr. Lewin: Q. (Reading.) "Well, do you want your testimony to be now that you only bought what you required to fulfill the orders that came to you from these divisions, and that nothing was done to stimulate those orders or increase them?" And your answer, "Regarding the stimulation of orders, it is quite possible at times that I conversed with Mr. Ashton."

"Question: And with representatives of some other division?

897 "Answer: Yes, sir."

Does that refresh your recollection as to whether you talked to Mr. Ashton on the subject of the stimulation of orders?

A. I mentioned then and now, speaking of it to other divisions, and I might have mentioned that to Mr. Ashton, too.

By the Court

By "stimulating orders" I mean: When I place an order for 25 cars of gasoline, I notify the particular division that I have bought that gasoline. Then, they send me shipping orders against that 25 cars. Sometimes a small refiner has accumulated a few cars, and my shipping instructions are coming in slowly, so I would call that division and try to get a few more shipping instructions at that particular time to give to the small refiner.

By Mr. Lewin

I remember no consideration or discussion had in that meeting in March as to the ability of a larger company to take more of this surplus.

Mr. Lewin: Q. Let's see if I can refresh your recollection from your grand jury testimony—

Mr. Donovan: The same objection to this, your Honor, as appears at R. pp. 373-74.

The Court: Objection overruled. Exception al-
898 lowed.

Mr. Lewin: Q. Do you recall giving this testimony.

> "In that February meeting, when you allocated various independent refiners to various majors, were you somewhat governed in making those allocations by the sizes, the relative sizes of the majors?"

And your answer:

> "Yes, because we knew that, the larger the company, the better position they were in to take a larger quantity of gasoline."

Do you recall that testimony?

A. I don't recall it, no, sir.

Q. Well, the next question:

> "Yes, and you also felt that the larger the company, the more they would derive advantage from the program, too, didn't you?"

And your answer:

> "Yes, and the more we could call on them for."

Now do you recall giving that testimony?

A. No, sir, I don't, but I presume I did if it is there.

Q. Well is that correct testimony?

A. It is not the way I understand it now, no,
899 sir.

Q. Does it refresh your recollection as to whether or not you discussed the sizes of the companies and their abilities by reason of their sizes to take more of this gasoline, and discussed the relative benefits that these companies might derive from participating in the program?

A. No, sir, I never remember having that kind of a discussion at this March meeting you are talking about, as to the size of the company.

Q. All right. Did you have any discussion of that character at any of these meetings?

A. I don't remember it now, Mr. Lewin, no, sir.

Q. Would you say that you hadn't?

A. I would say that we might have, but I don't remember it now.

Q. You would say that you might have. Would you say that was a natural consideration?

Mr. Thomas: Objected to as calling for a conclusion, incompetent and improper.

The Court: Objection sustained.

Mr. Lewin: Q. Now, as a matter of fact, this gasoline—

Mr. Denton: If the Court please, I would like to move to have stricken from the record the questions 900 and answers read from the grand jury testimony, in view of the fact that the witness says his memory is not refreshed by the reading of it. In view of that fact, they are prejudicial, and I think should be excluded.

Mr. Chaffetz: The witness has said he might have had such discussion.

The Court: Objection overruled. Exception allowed.

Mr. Lewin: Q. Didn't, as a matter of fact, the larger companies take the larger amounts of gasoline in this program?

A. Well, I gave you the amounts of gasoline that the companies bought—

The Court: You can answer that.

A. The larger the company, as I have indicated, the more gasoline they took, yes, sir.

I have heard of the term "dancing partner." I have made use of that term occasionally. I heard it during this program. Mr. Ashton explained it to me one time. My understanding of the term "dancing partners" is the association of the name of the small refiner with the large refiner.

Q. All right. Did you work out a system of dancing partners in these meetings?

A. Well, it might be termed that, yes, sir.

901 It is true that these various independent refiners were selected by the majors, because of business location, or previous dealings, or whatever it may have been. Standard of Indiana's dancing partner was Waggoner Refining Company. Socony-Vacuum, Danciger—first of all, Champlin, Danciger and Wilcox—and that includes Wadhams, of course; Sinclair, Panhandle Refining Company; Shell, Cushing Refining Company; Empire, Olney Oil and Refining Company; Pure Oil Company, Eason, I believe; Phillips Petroleum Company, Taxman and one or two

others; Mid-Continent, Johnson Oil & Refining Company; Continental Oil Company, Shamrock Oil & Gas Company; Skelly Oil Company, I am not sure about, but I believe it was Rock Island Refining Company; Barnsdall, I don't know; Globe, I don't know. I don't believe Dickey had any regular company that purchased from them; they only called at times.

Q. Didn't you testify before the grand jury that Globe had Dickey?

Mr. Donovan: Same objection as appears at R. pp. 373-74.

The Court: Overruled. Exception allowed.

A. I think they did buy some gasoline with them, but I don't believe with any regularity, Mr. Lewin.

I believe Pure bought some from Omar. Pure bought from Eason, I don't know with what regularity. Eason
902 was another from whom Sinclair purchased.

Q. Now, was that same dancing partner arrangement carried on about the same throughout the program?

A. As far as I am concerned, I bought from the same firms with some degree of regularity throughout the whole program.

I am not sure about the others, but there was some regularity in the purchasing on those that I have mentioned.

At later meetings we either continued with those same dancing partners, or else some slight change was made. Generally speaking that is true of each one of our meetings. We all bought from about the same people. Each month, this company, for example, would state whether it would be able to buy the gasoline from that same party, the month that we were talking about, and would usually indicate whether it would or not.

I don't remember that there were any independent refiners in particular that no major company particularly wanted to take as a partner. The major companies selected these refiners that they wanted to do business with. I don't remember any one at these meetings being persuaded to take on any one.

Q. Don't you recall testifying before the grand jury that in certain cases where there might be an
903 independent refiner that the major companies did not particularly want to take, that major company was persuaded by the committee to take it?

Mr. Donovan: May I have the same objection, your Honor, as appears at R. pp. 373-74?

The Court: You may. Same ruling. You may answer that. Exception allowed.

Mr. Lewin: Q. Do you remember testifying to that?

A. I am sorry, Mr. Lewin, I do not.

Q. Does my suggestion to you refresh your recollection at all?

A. No, sir.

There were some independent refiners selling in the program that at times made more gasoline than any one major wanted to take. I testified this morning that in one or two instances there was gasoline offered by a refiner that several of the companies had to purchase from. I remember that Taxman Refining Company offered quite a little gasoline on several of the monthly surveys, and several of the companies participated in purchasing that gasoline that they offered. I don't remember any other independent refiners in that same situation. I don't remember any others at the time. I believe I stated Phillips bought from Taxman, and Socony-Vacuum bought from Taxman in late
904 1935 and early 1936, and I don't remember who else.

Q. Do you recall testifying before the grand jury that Taxman's output was so much that it had to be divided up among Phillips, Sinclair and Socony-Vacuum?

Mr. Donovan: May I have the same objection to that question as appears at R. pp. 373-74?

The Court: You may. Same ruling. Exception allowed.

A. Well, I forgot—Sinclair did you say?

Mr. Lewin: Q. I think you said Sinclair, didn't you?

A. Well, then, Sinclair bought from Taxman, if I said it.

These three companies bought it.

As to who called these monthly meetings, I believe I usually received word from Mr. McDowell or Mr. Ashton, but in most cases from Mr. McDowell. I got that word over the telephone, because I was right in Tulsa. I don't know who called the meetings. I just got word that there was to be a meeting. When I got the word from Mr. Ashton and Mr. McDowell, it would be my impression that those two men were calling and meeting.

At those meetings, each month was taken up by itself, and, as I stated before, at the first meeting it was hoped

that the program would continue for an indefinite
905 period, but every month was a month in itself. I don't know why that was. The only reference to a continuation of the program was at the Coronado meeting where I heard an expression that it would be a good thing to continue the plan for an indefinite period. After that they talked about continuing the plan simply for a month.

There was no agreement to continue it for a month. The men said they would take the gasoline for that month or the following month. You must keep in mind that some of the meetings were held around the 27th or the 28th. Some at that meeting said their companies would take gasoline in the program for the rest of that month, and some indicated they would have to check the quantity up, and so on. I don't remember any definite agreement. I don't remember any one agreeing to do anything. They said they would take this gasoline if they could use it, and as far as I know in most instances they did.

Mr. Lewin: May I endeavor to refresh his recollection on this subject from his grand jury testimony?

The Court: On what point?

Mr. Lewin: On the point as to whether there was an agreement at this meeting to continue for a month.

906 The Court: Yes, you may.

Mr. Donovan: I may have the same objection as appears at R. pp. 373-74?

The Court: Yes. Exception allowed.

Mr. Lewin: Was this your testimony before the grand jury:

"Q. Now, about March what was discussed there?

"A. March came along, and I believe the members had responded, and the survey indicated that the quantity was approximately the same, and everybody went ahead as before.

"Q. Agreed to continue on the same basis?

"A. That is right.

"Q. Did you take a vote, or was it just a nodding of heads?

"A. No, there was no vote.

"Q. No vote. Did you draw up a paper to express the agreement? It was simply an oral one?

"A. That is right They were all there, and discussed it, and that was all there was to it. We went on our way and placed our orders.

"Q. Is the same thing true of the April meeting?

"A. Well, I don't remember.

"Q. Do you recall any meeting which was different from that typical meeting in February?

907 "A. No, they were all about the same.

"Q. All just about the same?

"A. Yes.

"Q. They all came in, discussed the general situation, and some times they made little changes in the allocations to be fair?

"A. That is right.

"Q. And all agreed orally and verbally there to continue?

"A. That is right.

"Q. Did they say how long they would continue? Was it simply to continue for a month, or did they agree to keep on supporting it throughout the year?

"A. They agreed to continue. No definite time was set as to how long."

Q. Does that refresh your recollection?

A. Yes, I heard what was said.

Q. Did you give that testimony before the grand jury?

A. I must have.

Q. Was it correct testimony?

Mr. Thomas: Objected to as calling for a conclusion and invading the province of the jury.

Mr. Donovan: The questions themselves before the grand jury all call for conclusions. He cannot 908 use this now to ask him if that was the substance of the testimony.

The Court: The witness' memory has been refreshed now. You asked him the question you want him to answer.

Mr. Lewin: Q. I want to know what the discussion was at those meetings in regard to agreeing to continuing and whether you entered into an oral agreement at each of these meetings to continue for a month?

Mr. Donovan: I submit that question is improper, as calling for a conclusion.

The Court: He may answer. Exception allowed.

A. I never remember any agreement at those meetings. These men said that they would take this gasoline if they could. As far as I know, they took most of it, a part of it. I don't remember any agreement.

Mr. Lewin: Q. How do you reconcile that with the testimony you say you remember you gave before the grand jury?

The Court: I think that is improper. He said that they took what gasoline they could.

Mr. Lewin: Q. Did you, as representing Socony-Vacuum and Wadhams, receive assurances from the other representatives of major companies that they
909 would support that program for a time longer?

Mr. Donovan: That calls for a conclusion.

The Court: You may answer that. Exception allowed.

A. I heard them say that they would take the gasoline that a certain refiner had to offer for that month, and that was true in every one of those 13 meetings.

Mr. James Nagle of the Skelly Company did not attend any of these meetings.

Q. Did you testify before the grand jury that he did?

Mr. Donovan: Same objection as appears at R. pp. 373-74.

The Court: Objection overruled; exception allowed.

A. I am sure I did not.

My testimony is that at the meetings there was no representative from Sinclair or from Barnsdall or from Skelly.

Q. Now, was there anything done by you or your associates to inform these companies of what had transpired at those meetings?

Mr. Donovan: It strikes me the question should be limited to what the witness did, not what his associates did.

910 Mr. Lewin: Your Honor, it is perfectly clear that they were all working together.

Mr. Donovan: I object to that statement, your Honor.

The Court: He may answer that. Exception allowed.

A. Yes, sir, it was my practice, when I returned from one of these meetings, I am sure, to call Mr. Chamberlain and—

Mr. Chamberlain of Pure was never at these meetings.

As to doing anything to inform these companies of what transpired at the meetings—Sinclair, yes. I talked to Mr. Tracey occasionally about what transpired in the meetings, and told him in a general way what had happened. Barnsdall was the other firm. That is all there was about my conversation with Mr. Tracey. I made a note of what gasoline had been mentioned at the meeting that Sinclair might be interested in; and passed that information on to Mr. Tracey. I called him after most of the meetings. I may have called him after each one.

Q. Wasn't that your testimony before the grand jury, that you called him after each one of the meetings?

Mr. Donovan: Same objection as appears at R. pp. 373-74.

911 The Court: Objection overruled; exception allowed.

A. It may be, I don't know.

Q. Would you say that is correct now?

A. I would think so, yes.

Q. You would think so. All right. Now, then, proceed with what you asked him to do on those occasions.

On those occasions, I told him about the meeting and mentioned this gasoline that I had made a note of, and suggested that he buy it, if he could. I don't remember telling him in detail what had transpired. I don't remember telling him anything more unless he asked me some questions, and I can't remember what questions he asked me.

I mentioned the particular companies that had the gasoline. I told him the quantity and told him to buy it if he could. I don't remember the quantities now; there might have been 2 or 3 different small refiners. I think on some occasions he asked me what the others were going to do. If he asked me, I told him. I told him what I was going to buy, if he asked me. I don't remember that he asked me about the others. I told him that the others had indicated they were willing to continue for that month.

912 I did not have a similar conversation with Mr. Evans after each one of these meetings. I only called Mr. Evans on two or three occasions, and that was relating to distress gasoline that appeared during the month, and when Mr. McDowell was out of town.

Q. Did you go to see him in Tulsa and tell him about the meetings?

A. I don't remember doing so.

Q. Could I refresh your recollection on that point, do you suppose?

A. Yes.

Q. Did you give this testimony before the grand jury—

Mr. Francis: Just a minute. In addition to the objections that Colonel Donovan has made about this continuous detailing of matters from some source unknown to me, which I have had no opportunity to verify, and about which there has been no proof offered here, I would like to make the objection that this is a prejudicial and unfair method of examination being conducted by the prosecution; that it is a detailed narration of conclusions and opinions and in improper form, not relevant or competent testimony to be adduced before this jury; and yet, in the very method and way in which counsel is conducting the examination of this, a Government witness, he is reading from some unknown source, which we cannot verify or check on as to its accuracy, and trying 913 to put that in and is continuously putting that in as testimony, to which we object.

The Court: All right. I assume that when counsel asked this witness if he testified before the grand jury and reads questions and answers, that he is reading from the transcript of testimony of this witness before the grand jury. Am I right?

Mr. Lewin: I am reading a copy of it, made in my notes.

The Court: Have you the transcript there?

Mr. Lewin: Yes, the transcript is here.

Mr. Francis: Can't we be afforded a copy of that to see if there is further testimony on that?

The Court: What transpired in the grand jury room is confidential.

Mr. Donovan: I submit, your Honor, that the Government has waived that.

The Court: The Government has not waived that. Go ahead.

Mr. Chaffetz: Counsel is distinctly in error when he said that anything that transpired in the grand jury room is offered here as evidence. I think we have followed the practice very carefully of asking the witness whether he remembers giving that testimony; and whether that testimony refreshes his recollection; and I think on one or two occasions when 914 it didn't refresh his recollection we passed on. No effort was made to use that testimony as affirmative testimony.

Mr. Francis: Your Honor, they have been asking this witness if this testimony isn't true, from which they have been reading; and in that way trying to get into this record opinions and conclusions upon improper and misleading questions.

Mr. Lewin: I don't want to refresh his memory with false testimony. I just asked him if that is true. I assume it was.

The Court: Hereafter I think you better refresh his memory, and then ask him the question what the fact is.

Mr. Donovan: Your Honor, as to that question I objected on the grounds that I have already stated with reference to these grand jury minutes (R. pp. 373-74), and I understood Mr. Francis supplemented that objection.

The Court: Yes, the record so shows. Exception allowed.

Mr. Denton: In view of the statement by counsel that he is refreshing the witness' recollection as to what he testified to before the grand jury, that he is reading from counsel's notes rather than from the transcript of the evidence I would like to make the

915 request that Government counsel submit to the defendant counsel the notes from which he is reading, and from which he is attempting to refresh the witness' recollection.

The Court: I suggested, and asked counsel hereafter when you want to refresh his memory as to some other statements he made outside of this case—

Mr. Chaffetz: We have the transcript beside us, and almost invariably we have checked the transcript with the notes as we have read it.

The Court: Use the transcript.

Mr. Denton: I want to add to my objection, which is necessary to complete this record, a motion to exclude the questions and answers that have been read to the witness so far in this case by Government counsel, on the ground that the questions and answers appear to have been read from notes made by Government counsel and not from the transcript of the testimony taken before the grand jury.

The Court: Objection overruled. Exception allowed.

Mr. Lewin: Q. I want to know whether you didn't at the end of any of these meetings call on Mr. Evans or call him on the telephone, and tell 916 him what transpired at the meetings—Mr. Evans of the Barnsdall Company.

A. I don't remember doing so, no sir.

Q. You remember giving this testimony before the Grand Jury? You were being asked about companies represented at any of the meetings:

"Question: Barnsdall?

"Answer: I never remember of Barnsdall having any one present.

"Question: How did you communicate with Barnsdall?

"Answer: Well, they are right in Tulsa, their office.

"Question: So you would go around and tell them? Who would tell them?

"Answer: I would talk to Evans.

"Question: Mr. Evans?

"Answer: Yes.

"Question: And he always agreed with what transpired at the meetings?

"Answer: —."

The Court: Wait a moment. Does that refresh your memory as to any conversations you had with Mr. Evans at some time after one of these meetings?

A. I still never remember telling Mr. Evans about anything that transpired at the meetings. I 917 do remember talking to him several times about distressed gasoline that appeared and I suggested that if he could,—

Mr. Lewin: Q. Do you recall giving that testimony before the Grand Jury?

A. No.

Mr. Francis: Your Honor, would it be permissive if counsel for the defendants—this man doesn't work for my company—he has given testimony relating to my company. Would it be permissive for me to have an opportunity to examine what these gentlemen say is in the record in the Grand Jury proceedings to the end that I can see whether or not this witness in his testimony there didn't corroborate in other parts of the record what he testifies to?

The Court: There is nothing inconsistent with the witness' answer as to what—

Mr. Francis: I don't think there is, either.

Mr. Lewin: That is right.

The Court: And the jury may disregard what was read from the Grand Jury proceedings.

Mr. Francis: And that has happened a dozen times, your Honor.

Mr. Chaffetz: Your Honor, I think we have got to protect ourselves against these statements. The witness said he didn't remember. The Grand Jury 918 minutes said expressly in his own words, "I used to call Evans." The name "Evans" was suggested by the witness in his answer. I object to the criticism being made by counsel and object to that criticism being in the record.

Mr. Lewin: He does not now admit that he talked with him. I have read the minutes, and he denies that, and denies—his denial is in direct conflict with what I read from the minutes.

Mr. Loucks: I object to that statement, if the Court please. Improper.

(Mr. Lewin passes document to the Court.)

Mr. Donovan: If the Court please, would the Court instruct the Reporter that the record should show that counsel is showing all this to the Court.

The Court: Let the record show that the Court is now reading from the transcript of testimony taken before the Grand Jury. Do you think I have no right to read these Grand Jury minutes?

Mr. Donovan: I think that it ought to appear that counsel has the Grand Jury minutes here and that it is submitted to the Court, and that contrary to the request of Mr. Francis that he has not submitted it to Mr. Francis or counsel for the defendants.

The Court: Let me state for your information: That the transcript of testimony and the proceed- 919 ings in Grand Jury, the Court considers confidential, and no one should have access to them except Government counsel and Court.

Mr. Donovan: Your Honor, I have our objection and exception.

(Court examines Grand Jury transcript of testimony.)

The Court: Q. Now, just think back as to what conversations, if any, you had with Mr. Evans after the meeting and tell us in your own words just what that conversation was.

A. Yes, sir, I will be glad to. I have already testified that Mr. McDowell stated early in March, that he would talk to Barnsdall Company and to the Phillips Petroleum Company and to the Standard of Indiana on matters relating to this stabilization effort. And Mr. Tuttle said he would talk to certain other refiners. I said I would talk to certain others. I am sure that I talked to Mr. Evans on matters relating to the removal of some distress gasoline or the purchase of some distress gasoline during the month, but I am so sure about this, not talking to Mr. Evans about what transpired at the meetings, because that company was the company that Mr. McDowell talked to, as a rule. It was only an exceptional case when Mr. McDowell was out of town, that I ever talked to 920 Evans.

The Court: Q. And when you did talk to him, in the absence of Mr. McDowell, did that conversation cover what transpired at the meetings?

A. I don't think so. I don't ever remember talking to Mr. Evans about what transpired at the meetings.

Q. Were these questions asked you, and did you make these answers when you testified before the Grand Jury—

> "Question: How did you communicate with Barnsdall?
>
> "Answer: Well, they are right in Tulsa, their office.
>
> "Question: So you would go around and tell them? Who would tell them?
>
> "Answer: I would talk to Mr. Evans.
>
> "Question: Mr. Evans?
>
> "Answer: Yes.
>
> "Question: And he always agreed with what transpired at the meetings?
>
> "Answer: Yes."

The Court: Were those questions asked you and did you make those answers?

Mr. Donovan: Your Honor, may I have the same objection as appears at R. pp. 373-74, 446?

921 The Court: Yes. Exception allowed.

A. Yes, sir. If they are there, I answered that way.

Q. Now, with that in mind, does it refresh your memory as to what the actual fact was as to whether or not you talked to Mr. Evans with reference to what transpired at any of these meetings?

A. If I said that, your Honor, in Grand Jury, I clearly must have been in error, thinking about something else, because I don't remember it now.

The Court: All right, that is all.

By Mr. Lewin

I am sure that after some of these meetings, I called up Mr. Chamberlain of Pure and told him what transpired at the meetings. On those occasions, I told him that we had had a meeting and that certain things transpired—I don't remember what they were—that the companies had had their representatives there, and the meeting was at such and such a place, and that it was felt that his company could probably use a certain quantity of gasoline from so and so and so and so, and suggested that they buy it if they could. And Mr. Evans—or, Mr. Chamberlain's usual reply was, "Well, I will check it up and see." And that is about all I can think of that I would have said to him unless he would have asked me some questions and I
would have answered them. If he would ask me what
922 the other companies were going to do, I told him.
I don't remember that he asked me what other companies were going to do. I don't have any recollection on that point.

The situation as to calling Mr. Nagle on these occasions is exactly the same as Barnsdall. Mr. Tuttle was clearing these matters with Mr. Nagle of Skelly, and if Mr. Tuttle was out of town, and anything of that kind came up, I would call Mr. Nagle. I don't remember calling Mr. Nagle over two or three times over the entire period. When I did talk to him, it related to distress gasoline that some refiners wanted to move, and I called him and asked him if he could buy it. Sometimes he could and sometimes he couldn't. I don't remember ever talking to him with regard to these meetings.

I talked to Miss Gartman along the same lines as Mr. Nagle. She was his assistant and the only reason I talked to her was when Mr. Nagle was away. I think that happened once. I am positive that I did not talk with her about these meetings.

As to how Skelly Oil Company was informed of meetings, I know only that Skelly was talked to by Mr. Tuttle on almost all matters relating to the plan. I don't know what I talked to him about. I talked to him on various matters relating to the plan that he wanted to know.

On those occasions when there were absentees of the companies that were usually in attendance, I don't
923 know whether the absentees were informed about the
meetings, but certainly word was gotten to them as to the amount of gasoline that it was felt they could take in that month. I don't remember what persons in that class I called. My memory could not be refreshed by looking at a list of the persons who usually attended, because I don't know who the absentees were definitely, whether anyone was absent or not. I do not know definitely that there were absentees. My definite recollection is that at most meetings most of these men were present and in their absence they sent someone else to handle the matter for them.

I remember making a contact with some of these persons between the meetings, in addition to when I called them about my price recommendations; I called a number of them on the subject of distress gasoline that appeared during the month that Mr. Bourque didn't have on his survey. I couldn't give the jury a list of those persons that I called at any time during the program. I called many of them on that subject. I don't know that I called all of them.

I may have called Mr. Lakin. I believe I did tell Mr. Bacon, his man in Tulsa, on several occasions about distress gasoline. They have a direct wire from Tulsa to St. Louis, and he sent these messages up to Mr. Lakin for
me. I think I did sometimes get in touch with Lakin
924 personally between the meetings. I am sure I did
at some time during the program ask him to buy up gasoline.

I know Mr. Fred Koopman, a defendant in this case. He was with Phillips Petroleum Company. I believe he is assistant to Mr. Gardner, and Mr. Hughes. I remember getting in touch with him after these meetings on the subject of extra gasoline. I would get in touch with him on the telephone. He is in Bartlesville and I am in Tulsa.

I have called Mr. O'Shaughnessy on several occasions at least. If I didn't talk to him I talked to one of his assistants in Chicago. Sometimes I talked direct with Mr. O'Shaughnessy.

I don't remember talking to Mr. Cramer of Continental about this subject. I believe Mr. Tuttle talked to him if that situation arose. I am not positive I didn't talk to Mr. Cramer.

Q. Could your mind be refreshed by referring to your Grand Jury testimony?

A. Yes, sir.

Mr. Lewin: Give me 7332.

Mr. Donovan: May I have the same objection to this, your Honor, as appears at R. pp. 373-74, 446?

The Court: You may have. Exception allowed.

Mr. Lewin: Q. Were you asked this question when you were before the Grand Jury, and did you give this answer: 925

"Q. Mr. Cramer, you talked to him about quantity, I suppose; not about price?"

That question being in a list of questions about who you contacted outside of the meetings.

"A. That is right."

A. About quantity?

Q. Yes. Does that refresh your recollection?

A. Well, my memory was fresher then than it is now, and if that is what I said there, I must have—

Q. No, does it refresh your recollection now?

A. No, sir.

Q. Would this help to refresh your recollection? Were you asked these questions, and did you give these answers before the grand jury?

Mr. Donovan: The same objection as appears at R. pp. 373-74, 446.

The Court: The same ruling: Exception allowed.

Mr. Lewin: Q. (continuing)

"My contacts with Continental on the stabilization work were almost entirely with Mr. Cramer.

"Q. With Mr. Cramer?

"A. Yes, sir.

"Q. With Mr. Cramer; his initials are what?

"A. I don't know.

"Q. It is K-r-a-m-e-r?

926 "A. I don't know that. It is one or the other, a K or a C.

"Q. What is his position?

"A. He is assistant on sales to Mr. Kennedy."

Do you recall giving that testimony?

A. No, sir, I don't.

Q. Does that refresh your recollection as to whether or not you talked with Mr. Cramer about this program outside of the meetings?

A. Yes, I must have done so, or I wouldn't have so stated.

Q. Well, does it refresh your recollection, your present recollection?

A. No, sir.

Q. It doesn't do so?

A. No, sir.

I had 2 or 3 conversations with Ira Smith of Standard Oil Company of Indiana outside of the meetings during the plan, but I don't ever remember calling him on the subject of extra gasoline that appeared during the month. I talked with him about the plan in some form or other, but I don't remember what the subject was at this time. I cannot remember whether I told him what quantities Standard Oil Company was expected to take; I don't believe I did, because Mr. McDowell talked to Standard of Indiana on matters relating to the plan. I can't
927 specifically remember any of the details of my talks with Mr. Smith or anything that he said to me about the program. I can't give the substance of them. I am sure I got the impression from Mr. Smith that he knew about the plan; and, as I have already stated, he attended 2 or 3 meetings in 1936.

I had such conversations outside of the meetings with Thomas Fitzgerald, a defendant in this case. I talked to Mr. Fitzgerald about many matters relating to the plan. Mr. Fitzgerald was an assistant to Mr. McDowell during this time. I had quite a few conversations with Mr. Fitzgerald about the program. It would have to be a guess, but I would say 8 or 10 anyway. He represented Mr. McDowell in these monthly meetings when Mr. McDowell was away; and during the month I talked to him about subjects relating to the plan. The substance of my conversations with Fitzgerald related mostly to the purchase of distress gasoline that was called to his attention by some small refiner during the month, or that was called to my attention during the month. An effort was made between us to try to notify someone as to the availability of it. We discussed what various major compa nies were doing that particular month in the taking of this gasoline.

I am not at all sure I ever had any conversation with reference to this program with Harry J. Kennedy.

928 I never remember talking to Mr. Kennedy about the plan until sometime in February 1936. I can't say positively, but I think that he was one of the men present at the last meeting that I mentioned at the Blackstone Hotel, where there were only a few men present. That is the only time I remember talking to him, this meeting of buyers when there were a few of us there. I don't remember anything about the conversation with Mr. Kennedy. He was in the room, as I recollect it now. I do not know whether or not he was familiar with the program. I only saw him that one time in the whole 13 months, as I remember it.

Mr. Lewin: Q. Did you give this testimony before the grand jury:

> "A. I think I talked to Kennedy once, and he seemed to be pretty well posted on the general plan."

Mr. Donovan: Now, I object to that upon the grounds that I have already stated at R. pp. 373-74, 446; and, if your Honor will permit me, I would like to state another: That the cross examination from these grand jury minutes is improper because the prosecution singles out certain small portions of witness' testimony, and, so far as it appears, the witness might very well have explained in another part of his testimony, or corrected or amplified—

929 Mr. Chaffetz: There is no effort here, your Honor, to impeach the witness, or to show that he made a different statement at a different time.

The Court: No.

Mr. Chaffetz: It is purely for the purpose of refreshing, and any part of his testimony may refresh; if it doesn't refresh his recollection, nothing is lost.

The Court: I understand that is all you are using this testimony for, is to refresh his memory? Exception allowed.

Mr. Lewin: That is right.

The Court: It hasn't been offered in evidence at all.

Mr. Lewin: No, sir.

The Court: Q. Now, does that refresh your memory any?

A. No, sir, your Honor. I have told you all I know about it.

The Court: All right. That is all, then.

Mr. Lewin: (referring to document purporting to be transcript of grand jury testimony). State whether or not—

The Court: I think the safer practice would be for you to mark the questions, and let me look at them first.

930 Mr. Lewin: Yes, sir.

Mr. Chaffetz: Your Honor, counsel was not going to read from the grand jury minutes at that point. He was phrasing a question—

Mr. Lewin: Well, I was going to if I had to.

Mr. Chaffetz: Yes.

(Mr. Lewin submits indicated portion of document purporting to be transcript of grand jury testimony to the Court.)

The Court: You covered that yesterday afternoon.

Mr. Lewin: Not fully, your Honor.

The Court: What?

Mr. Lewin: Not fully.

The Court: It seems to me that you have. Ask your questions, before you read that.

Mr. Lewin: All right.

(Witness is shown Exhibit 73 for identification.)

I recall sending that letter. I sent the original to Mr. Maguire, and a copy to each one of the divisions; I circulated them. They did not always get one. I sent a copy to Mr. Ashton's office, a copy to Mr. Marcel's office, and a copy to Mr. Reed's office. I did not send a copy to Mr. Jones' office in New York. I sent it to Mr. Muller in the New York office. He is a statistician, I believe. I really don't know who it is that he works under. Mr. Muller wrote me and asked me for it.

931 I can tell you what the pencil notations on that letter are. That is the name Pyke written on there. He is not one of the officials of the White Star Division; he is its purchasing agent. His office is in Detroit. I believe he works under Mr. Sullivan. That was true at the time I wrote that letter. I don't know whose those initials are. I know a party with the initials "C. B. M." in that organ-

ization. That is C. B. McCullough. He is assistant under Mr. Coffin.

Mr. Lewin: This is EXHIBIT 73, marked for identification. The Government offers it in evidence. (Handing exhibit to the Court.)

Mr. Donovan: I object to that, your Honor, on all grounds stated a few days ago when this other weekly letter was offered, at R. p. 361, and on the additional ground it is not admissible against these defendants for any purpose in the absence of showing that the author of the letter, the witness who identified it, has no present recollection concerning the facts that are stated, and that his recollection cannot be refreshed after looking at it. I think I have already based my objection previously on the hearsay rule as against the other defendants, your Honor. Further, that this cannot be taken as evidence of the fact. That must be testified to by
932 the witness: I further object because it appears upon the face that they could not aid or be in furtherance of any alleged conspiracy because they are a narration of something that this witness has been doing, and simply refers to his personal opinion.

Mr. Lewin: Your Honor, they are clearly admissible, if for no reason, to show notice of the program and the way it is operating and what it is doing to these defendants who received it.

Mr. Donovan: No, if it please the Court, if counsel are correct in their statement that if it be an admission, that this should be construed as an admission, then it can be construed as an admission only against the witness who wrote it, and the witness is not on trial. It cannot be construed as an admission against any of these other defendants.

The Court: The objections are overruled. The exhibit may be received. Exception allowed.

Mr. Francis: I ask the Court to instruct the jury that, until otherwise instructed, this document will not be considered as any evidence whatsoever against The Pure Oil Company or any of its officials.

Mr. Donovan: I submit, your Honor, on behalf
933 of all the other defendants, it should be limited only to those immediately concerned with the letter.

The Court: Well, I will say to the jury that you have heard the evidence as to what major companies purchased gasoline under the program, as outlined by this witness, and which this witness has testified to. Now, this Exhibit 73 is admissible at this time as against those companies, and not as against the others, and may not be considered as evidence against the others until you are otherwise so instructed.

Mr. Donovan: May I have an exception, your Honor?

The Court: Yes.

Mr. Donovan: I ask that your Honor instruct the jury that the letter be considered as limited only to acts that may be adduced in furtherance of the alleged conspiracy, and not for any other purpose.

The Court: Let the record show, gentlemen of the jury, Exhibit 73 is received in evidence as affecting only the individuals and the corporations that participated in this buying program as described by the witness now on the stand, and is not received as evidence against any of the other individual defendants or corporations.

934 Mr. Francis: Let the record show that the motion of The Pure Oil Company is denied. Exception allowed.

Mr. Donovan: And my motion is denied, with an exception.

Mr. Kirkland: May I show my objection was made specifically upon behalf of the defendants Seubert, Bullock, Jackson and Ira Smith, as well as on behalf of the Standard Oil Company.

The Court: As I recall, they were not named by the witness as participating. Then they are excluded.

Mr. Donovan: Without reciting the roster of the names, may I not have that applied to all other individual defendants, as well as corporations?

The Court: Yes, who were not named as participating in the program as described by this witness.

(Letter referred to, dated June 7, 1935, received in evidence as EXHIBIT 73. It was later admitted as evidence against all the defendants generally at R. p. 907.)

(Exhibit 73 read to the jury by Mr. Lewin.)

The price recommendation around June 7, 1935, was the last advance that I recommended in 1935. As to the pre-

diction in Exhibit 73 that there would be no more
935 advances in the retail prices and in the tank car prices until there was an advance in the crude, I don't know about retail prices, but the chart there indicates that there were no more advances in the wholesale prices. After I wrote this letter of June 7, 1935, Exhibit 73, I don't believe there were any further advances in the wholesale price for gasoline in the Mid-Continent field for the rest of the year 1935, or until there was a crude advance. There were not.

The next advance in the crude oil price came in January, 1936. It was then that the first advance in the tank car price of gasoline occurred. At that time I called several of these buyers participating in the program. I told them that I had talked to various refiners, and they were asking me for ½¢ per gallon more because of this crude advance; and I said that I was going to pay the ½¢ more. I don't remember making any suggestion to them. My purpose in calling was to tell them what I was doing. As in the past I hoped that they would follow that price that I mentioned. I gave them information at that time.

Q. Had you had any previous discussion about that recommendation in your committee?

A. Well, yes, I called Mr. McDowell and Tuttle as soon as the crude advance occurred. I had a num-
936 ber of calls from small refiners, and the whole industry was talking about the advance. As I remember it, it came suddenly; and Mr. McDowell and Tuttle told me that they were raising their spot prices on gasoline as sold by their companies; and our own people had called me on the phone and asked me about the market, and the whole thing was in the air at that time. And I raised my prices, as I remember it, on the material that I was buying ½¢ on or about January 13.

Q. Raised the price on the material you were buying in this program at that time; is that right?

A. On that material I was buying from these small plants, yes, sir.

I don't remember discussing recommendations with McDowell and Tuttle at that time. I remember talking to them on the subject. I don't know what they were going to do. I don't recall anything about what they indicated they would do. I talked to them on the phone. I am sure we didn't have a meeting of our committee at that time.

We talked about the market after June 1, 1935. The last time that I called these 4 companies and gave them my idea of the fair market price was in June, 1935, with the exception of this January 13th period.

937 Mr. McDowell, Mr. Tuttle and I had had lunch off and on all through 1935. I did not have lunch with those gentlemen just before this recommendation of a price advance in January.

I told the other companies I had raised my price ½¢ a gallon, and as I mentioned to them before back in June, I told them that I hoped that they could see their way clear to do the same thing if they found that to be the market.

I believe there was a rise in the Chicago Journal of Commerce quotations or in the Platt's Oilgram at that time. As I remember, the Journal and Oilgram each raised its price ½¢ around the time of the crude advance in January, 1936. Platt's Oilgram advanced before the Journal did at that time. I don't remember how far before.

I wrote that letter marked Exhibit 75 for identification.

Mr. Lewin: I now offer in evidence Exhibit 75 for identification.

Mr. Donovan: May I object to it on the grounds stated at R. pp. 361, 457-58, not only by myself but other counsel, with regard to the other letter, Exhibit 73, and object to it on the additional grounds that it is immaterial and irrelevant.

938 The Court: You may take your objections. Objection overruled. Exception allowed.

Mr. Donovan: And if the Court please, following these series of letters, if they should be admitted over objections, may we have the same request for instructions and exceptions as were requested as to the others at R. pp. 361, 457-58?

The Court: They are admissible on the same conditions as I have already enumerated to the jury,—the same conditions as the last exhibit was admissible, 73, which counsel read to the jury. Exception allowed.

(Document offered received in evidence as EXHIBIT 75 upon the condition stated at R. pp. 457-58. It was later admitted at R. p. 907 against all defendants generally.)

(Exhibit 75 was read to the jury by Mr. Lewin.)

I recall sending that letter marked Exhibit 76 for identification. It went to Mr. Maguire and copies to the various offices as I have narrated with respect to the others.

Mr. Lewin: I offer that letter in evidence.

Mr. Donovan: May I have the same objections on the same grounds and the same exceptions as appear at R. pp. 361, 457-58, 460 for all defendants?

939 The Court: Yes. And this Exhibit 76 is admitted on the same conditions as the last two letters were received and will be so considered by the jury.

(Letter offered received in evidence as EXHIBIT 76 upon the conditions stated. It was later admitted at R. p. 907 against all defendants generally. Exhibit 76 read to the jury by Mr. Lewin.)

I meant 1936 in the seventh paragraph of that letter, Exhibit 76. What I mean by natural gas in those letters was 26-70 natural gas, a grade that is most popular from a consumption standpoint. Natural gas is gasoline that is made in natural gasoline plants, made from natural gas not made from crude oil. Natural gas was not involved at all in the program.

I am sure that during the period from March 1, 1935, through 1935 and 1936, I purchased on the spot market gasoline from independent refiners in the mid-continent field other than Champlain, Danciger, Wilcox, and Taxman which I named as our dancing partners. I don't remember exactly. I would have to refer to my records. I don't remember who they were.

When I purchased from those other independent refiners, I always paid the prices that the refiner and I agreed upon at the time. I bought some gasoline on the basis
940 of the trade publications as well as on the spot market, and of course they were based on my deal with the refiner at the time. Some of them were under contract.

In buying gasoline on the spot market from independent refiners other than our dancing partners, I paid all kinds of prices in some instances lower than the prices I paid our dancing partners. It isn't true that when I did that usually there was some question of lower specifications on that gasoline; I never bought anything except within our specification range even when I paid a lower price.

I have done business with Danciger for years, and every time I buy from it the basis is decided at the time.

I might have bought for a time from Danciger at about ⅛¢ under the price I was paying our other dancing partners. I don't know.

Q. Don't you recall giving that testimony before the grand jury?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446.

The Court: Objection overruled; exception allowed.

A. No, sir; I remember testifying before the grand jury that I had been doing business with Danciger for years on the basis of the trade journals, yes, sir.

941 Q. And didn't you testify that during a portion of this period when you did business with Danciger by reason of that old association you usually paid ⅛¢ below the journals, the trade journals, for the Danciger material?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446.

The Court: Objection overruled, exception allowed.

A. I believe that is true.

Q. You believe that is true. Then when you did that you did not regard those purchases from Danciger as being program purchases, did you?

A. You mean before the program started?

Q. No, during the time the program started.

A. Well, I bought lots of gasoline during the program in this way: Early in the month, right after the meeting of those buying companies, I called these refiners and told them what gasoline I would take over the month, and usually arrived at a price basis with them. That was my custom. Then during the month I had buying orders in 1935 that came in during the month unexpectedly, and I placed additional gasoline with any one that could meet my requirements on specifications.

942 Q. And that was no program business, was it? That was not the program purchases?

A. That was gasoline—additional gasoline that I needed during the month.

Some times I bought from Danciger at flat prices, and some times on a Journal basis. I believe I bought gasoline from Danciger a little cheaper than the others. I had been doing business with them for many years. There was no obligation on my part to pay them any set price.

When I bought independent gasoline on the program for various divisions of Socony-Vacuum and Wadhams, that material would be invoiced and billed to the respective divisions by the independent refiners.

L. Olson, is and was in 1935 and 1936 an assistant to Mr. Dolan who is in charge of our refinery sales in Chicago. Mr. Dolan's superior is Mr. Bryan Reid, a defendant in this case. From time to time during this period I received telegraphic communications from Miss Olson to ship a certain number of cars to a certain point, giving me orders for material. They were orders for the Chicago division of Socony-Vacuum. I filled those orders. I believe as a rule I filled those orders by buying gasoline from our dancing partners. That would include Wilcox Oil & Gas Company and Taxman Company.

I incurred extra expenses in my program work, 943 telephone expense, some travelling expense, not much, and telegraph expense. Until June 1, 1935, the Planning and Coordination Committee paid my telephone expenses. I received a check from the Planning and Coordination Committee directly, through Mr. Ashton. I don't remember who signed the check, not Mr. Ashton or some official of the Socony Company. I don't remember who signed it. I haven't got that check.

Q. Did you give that information to the grand jury when you appeared before it?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446.

The Court: Overruled; exception allowed.

A. No, sir, I don't think you asked me.

Q. Weren't you asked who paid your expenses, and didn't you reply that you were paid by the Wadhams Oil Company?

A. The Wadhams Oil Company paid the rest of my expenses, yes, sir.

I mean through the rest of the year 1935 and through 1936, these extra expenses that I incurred on the program, such as they were. I was paid my regular salary by Wadhams Oil Company. I did not get any additional compensation for this extra work.

I talked to Mr. Maguire every week or so on various subjects. I told him what I was doing on this program, 944 off and on through the whole year and a half. When he called me up or when I went to Milwaukee, every

60 days or so, I told him in a general way what I was doing.

I talked with Mr. Irwin of the White Eagle Division on this subject only once that I remember. When he came to Tulsa on a trip in the early part of the program, I told him what I was doing. My other contacts, relative to orders and application of orders, were with Mr. McReynolds, his Traffic Manager.

I talked with Mr. Marcell on this subject only once. He came to Tulsa at one time, and I visited with him a few minutes and told him what I was doing, approximately, and in a general way, on the program. He is the general manager of the White Eagle Division. He didn't know anything about the program.

I never talked to Mr. Bryan S. Reid or Mr. Dolan about it. All my contacts with Mr. Dolan were through the telegrams that I received from him.

Q. Did you give this testimony before the grand jury with regard to Mr. Reid and Mr. Irwin:

"Now, for Socony"—

The Court: Now, wait a minute. Are you reading from the transcript of the grand jury?

Mr. Lewin: I am going to do that.

The Court: Why not ask him if he knows.

945 Mr. Donovan: Your Honor, may I have the objection to this that I have had before at R. pp. 373-74, 446?

The Court: Yes, you may. Exception allowed. Let me see that transcript before you start reading from it.

(Mr. Lewin hands document purporting to be transcript of grand jury testimony to the Court.)

(Discussion between the Court, Mr. Lewin and Mr. Donovan, out of hearing of the jury and reporters.)

The Court: Maybe I can help you out here.

Q. You know Mr. Reid?

A. Very well, yes, sir.

Q. Now, just try and recollect whether or not you did talk with him at any time about the matter counsel has referred to. Just give us your best recollection on it.

A. My best recollection is that I never talked to him about the stabilization program.

The Court: All right.

By Mr. Lewin

There is usually a distinct relationship between the trend of spot market prices in the East Texas and the Mid-Continent markets. The two prices keep fairly well in line usually going up and down together.

During the time we were operating our program, I 946 knew of the East Texas Refiners Marketing Association. It was formed sometime in January or February, 1935. I knew that this group of refiners, some 10 or 12 of them, had decided to form this association, and that they were going to run legal crude only, and that their idea was to provide for themselves a more orderly sale for their gasoline. I did not know definitely but I believe they sold some to the major companies.

I didn't make purchases through that Association for Socony and Wadhams. I made some inquiries to know whether I could make purchases through it. I called Mr. Cline on one occasion that I remember, when Mr. Bradshaw was out of town, and I needed some gasoline. Mr. Cline suggested the name of two small refiners there. The reason I called him was that I wanted gasoline from responsible refiners that were running on legal crude. I don't even remember now who these small refiners were. Cline recommended them to me. I didn't and still don't know whether they were members of that association. I knew that Cline was acting as secretary for that Association, beginning in February of 1935 and running all the way through 1935 and 1936.

I have known Neil Buckley for years. He represents Cities Service Export Corporation in Tulsa, and did in 1935 and 1936. I sometimes do business with him on natural gasoline. I think the East Texas Refiners 947 Marketing Association desired his services, and he agreed to work with them. I believe he was working with them during this period of time. I do not know exactly what his work was. He never told me. My understanding of Mr. Buckley's activities was that he was to help these small refiners in the sale of their gasoline, with major companies and any other company that he could help in that sale.

I have with me my memorandum of the dates of the various meetings with the other buyers in the program during 1935.

We had one of these meetings in early October, 1935 at Chicago. That is the one I didn't attend. We had one

November 5th which I attended. I do not know any particular occasions for that meeting. I don't remember what happened at the meeting.

I don't remember the general conditions of demand for spot market gasoline in November, 1935, whether it was good or weak. In many years we have had very fine consumption in November. In January, February and March, consumption is lower. The demand is always smaller in the winter months. That is particularly true for third-grade gasoline. That fact did not have anything to do with the necessity for this meeting in November, 1935, because we had meetings there in August, September, October, November and December.

948 In January, 1936, the demand was lower, of course, than in the fall of 1935. But I don't remember anything particular after January, 1936, that would indicate a great falling off in demand. Weather conditions weren't so bad in January, as I remember it; but they were bad in February and March. I think our conditions became worse in February.

I don't remember that Shell, Standard or any other of the buying companies found it difficult to absorb the gasoline and use it at that time. It is my recollection that these same companies took about the same amount during the winter months that they took during the fall and summer.

(Mr. Lewin hands document purporting to be transcript of grand jury testimony to the Court.).

By the Court

I have not testified that during those winter months some of the major companies were having difficulties in handling the amount of distress gasoline that the committee wanted them to take. They all took the gasoline, as far as I know, that they indicated they would in the December meeting. However, it may be that they did not take it fast enough for some of these small refiners. On one or two occasions a small refiner may have called me, and then I might have called one or two of these companies, and asked if they couldn't give the small refiner some more instructions.

949 I do not remember calling Shell and Standard of Indiana in that connection.

The Court: You recall making this answer to one of the questions:

> "Answer: I think that many of the buying companies were having a little difficulty taking this gasoline, due to weather conditions."

Was that true, that some of them were having at that time a little trouble?

A. Yes, sir, as I have already stated.

The Court: Yes, you have, I know you have. This testimony relates to a meeting in January. (Reading.)

> "Question: Now at that meeting, how did you meet the problem?
>
> "Answer: We suggested that they find a way, insofar as they could, to keep up their schedule with the smaller selling refiners who needed the instructions at that time, particularly."

Was that the fact?

A. Well, I have already stated, your Honor, that at these meetings these companies said what gasoline they would take, and what they needed. Now, it may be that in January, when weather conditions were poor, after they said what gasoline they would take and after they bought it from the small refiner, 950 for some reason or other, due to weather conditions they were not still not giving instructions. It may be that at that time the fellows they bought from called me, and I called them, and asked them if they couldn't give them instructions.

Q. Was this question asked: "Which refiners had this problem at the January meeting?" "Answer: I think Shell was one." "Question: Shell was one?" "Answer: Yes." "Question: Any others?" "Answer: I believe Standard of Indiana was indicating that their sales were off." "Question: Any others?" "Answer: I don't remember any others." "Question: What did you say to Shell or Standard of Indiana in the meeting to induce them to take it notwithstanding the problem that they had?" "Answer: We asked them if they couldn't find ways and means of taking it, anyway, which they did."

Does that refresh your recollection?

A. I never remember urging anyone in any of these meetings to take gasoline that they didn't want. They said what they wanted, and went out and bought it.

Mr. Thomas: May we have the same objection to the testimony that was read to the witness as appears at R. pp. 373-74, 446?

951 The Court: Yes. Exception allowed.

By Mr. Lewin

Q. You remember giving that testimony before the Grand Jury that his Honor read to you?

A. I remember something about it, yes. I don't remember it exactly.

Q. In substance, do you remember that testimony?

A. Yes, sir.

We had no meeting in March or April, 1936. What I did was to call Globe, Shell, Pure and Sinclair, and suggest to them that they continue to buy from the same firms that they were buying from, if they could. I did that same thing the following month. McDowell, Tuttle and I discussed that method of giving information instead of having a meeting in those months. That was discussed at this last, February 27 meeting, as I remember it. I don't remember whether McDowell said anything about his calling any of these companies. I know I called them. I don't remember whether Mr. Tuttle said he would call the companies he usually called on program matters.

I remember something about these Exhibits for identification 83, 84 and 80. Exhibit 84 is a copy of a letter to me, dated August 16, 1935, from Charles L. Jones. The other exhibits you have handed me now are copies of enclosures in that letter to me at that time. I remember receiving that letter from Mr. Jones and these enclosures in the
952 letter.

(Thereupon a recess was taken, during which time documents submitted by Mr. Lewin were marked Exhibits 681 to 707, inclusive, for identification.)

I wrote the originals of which Exhibits 681 to 707, inclusive, are copies; they begin March 8, 1935, and the last one is April 24, 1936.

Mr. Lewin: The Government offers those letters in evidence (passing exhibits to the Court).

Mr. Donovan: May I have the same objection, your Honor, as appears at R. pp. 361, 457-58, 460?

The Court: Yes. They may be received and are admissible on the conditions that the other letters were admitted, and in the way I have already instructed the jury at R. pp. 457-58. Exception allowed.

Mr. Thomas: If the Court please, I understand the offer is general, that these various exhibits counsel has, being photostatic copies, I object to their re-

ception generally for the reason that any recital that may be contained in those letters, facts, purported facts, and rumors, such as we found in those other letters yesterday, are not established upon the writing of the letters and can be established only by
953 other competent testimony, according to such recitals.

The Court: Objection overruled. Exception allowed.

(EXHIBITS 681-707 received in evidence upon the conditions stated at R. pp. 457-58. They were later admitted at R. p. 907 against all defendants generally.)

Mr. Olberg is manager of Perfect Oil Corporation at La Crosse, Wisconsin, which I said was a subsidiary of Wadhams Oil Company. Exhibit 681 is a copy of the copy that went to Mr. Olberg.

(Exhibits 681 and 682 read to the jury by Mr. Lewin.)

The reference to "Q" there means regular gasoline. By "jobbers" in that letter, I meant the jobber demand, the orders from jobbers as they came into the field down there. Someone had made some remark to me about it, and I had put it in the letter. By "jobbers," I mean a company that buys gasoline in tank car lots and resells it to dealers in the territory. I was not referring principally to jobbers in the Standard of Indiana territory, because jobbing orders come into Tulsa from all territories, including the Standard of Indiana territory.

(Exhibit 684 was read to the jury by Mr. Lewin.)

By "pool" I mean a pool of crude oil, not a buying pool.

When I said "the bulk of the East Texas gasoline con-
954 tinues its movement south," I meant movement toward the Gulf of Mexico.

(Exhibit 686 was read to the jury by Mr. Lewin.)

(Exhibit 688 was read to the jury by Mr. Lewin.)

When I said, "The steady improvement in prices for products is having a stabilizing influence on the dollar posted price for crude," I meant all products made from petroleum, including gasoline.

(Exhibit 690 was read to the jury by Mr. Lewin.)

"Natural prices are holding," refers to natural gasoline.

Mr. Romer is in our New York office, and is in charge of gasoline exchanges. During 1935 Mr. Romer had the same office. I don't know what his title is. He worked directly under Mr. Jones. Exhibits 86 and 88 for identification are copies of letters from Mr. Romer to me; and Exhibit 87 for identification is an original letter from me to Mr. Romer.

The gasoline exchange might be described in this way: That if a large refining company has gasoline for sale at the Gulf, we will say, and another company has gasoline in Chicago, the firm that has gasoline at the Gulf can supply the Gulf needs of the other company and vice versa.

955 Mr. Lewin: I offer these three exhibits in evidence.

Mr. Donovan: Your Honor, may I object, on all the grounds already stated, as appears at R. pp. 361 457-58, 460, and on the additional ground that upon the faces of the correspondence it appears that this is an exchange of letters between the witness and a man who is not a defendant in this case. It seems to me that brings it clearly within the hearsay rule which we have already stated so many times to your Honor, and is therefore not admissible on that ground; it is immaterial and irrelevant to this issue.

By the Court

In Socony-Vacuum Oil Company, Inc., Mr. Romer handled one line of work, and I handled another. His particular work applied to gasoline exchanges, and my particular work applied to the purchase of products in the field. His work involved a large territory. My work involved the Mid-Continent area. I had some contacts with him, but my contacts with him related, as I remember it, particularly to the exchange deals that he was working on, and I don't remember anything else. He never was an officer of the company, I don't believe.

The Court: Objection overruled. Exception allowed.

956 Mr. Thomas: If the Court please, I further object to the reception of these exhibits as evidence against the other defendants, particularly the individual defendants in this case, unless shown that it was brought to the attention of such individual defendants.

The Court: They are admissible on the same condition as the other letters are.

Mr. Thomas: And will the Court so instruct the jury at this time, please?

The Court: I have already instructed the jury at

R. pp. 457-58 on the conditions under which they were admitted. These letters are admitted upon the same condition, and are not admissible as against any one or corporation who was not participating in the buying program as described by the witness. Exception allowed.

(Documents previously so marked for identification are received, respectively in evidence as EXHIBITS 86, 87 and 88 upon the conditions stated at R. pp. 457-58. They were later admitted as evidence at R. p. 907 against all defendants generally.)

(Exhibit 87 was read to the jury by Mr. Lewin.)

"Mag" refers to Magnolia.

I can identify Exhibit 85 for identification, purporting to be a letter directed to Mr. Jones, dated August 19, 1935.

I wrote that letter. The pencil notations on it read:
957 "Mr. Romer, note and return, C. L. J." C. L. J. is the defendant C. L. Jones. I recognize that signature.

Mr. Thomas: If the Court please, before the cross examination of the witness Jacobi starts, I have a motion that I would like to make with respect to grand jury testimony.

Counsel for the defense respectfully move this Court to direct counsel for the Government to make available for the purpose of the cross-examination of the witness, Walter Paul Jacobi, the transcripts of the testimony of said witness before the December 1935 Grand Jury and the December 1936 Grand Jury, which transcripts the counsel for the Government have utilized, both by reading from said transcripts to the witness and by commenting to the witness with regard to said transcripts in its direct examination of said witness, in order to refresh his recollection on points which are material to the issues in this case and material to the defense in exercising that right of full cross-examination to which it is lawfully entitled. Such an examination of each of said transcripts, in so far as they concern this witness, is necessary for the cross-examination of this wit-
958 ness, especially since, as stated by the counsel for the Government and testified to by this witness, he appeared twice before the December 1935 Grand Jury and once before the December 1936 Grand Jury, and each time testified to substantially the same matters which were referred to by counsel for the Government in order to refresh the witness' rec-

ollection. Counsel for the defense should, therefore, be permitted to examine said transcripts in order to determine if explanations or qualifications of any of said testimony were made by said witness on any of said occasions referred to by said witness or counsel for the government on direct examination of this witness.

The Court: There was nothing in anything that counsel for the Government read from the testimony of this witness before the grand jury that in any way impeached his testimony on the stand. That reading from the transcript was done simply to refresh this witness' memory; and the proceedings before the grand jury, as I said before, are confidential, except to the Court and to the Government counsel; and your motion is denied.

Mr. Thomas: And may we have an exception?

The Court: You may have an exception.

959 Mr. Thomas: Now, I have an alternative motion, may it please the Court:

Counsel for the defendants respectfully move this Court to direct counsel for the Government to make available for cross-examination of the witness, Walter Paul Jacobi, the transcripts of the testimony of said witness before the Grand Juries, utilized by the counsel for the Government in their direct examination in refreshing the recollection of said witness on points which are material to the issues in this case and material to the defense in exercising that right of full cross-examination to which it is lawfully entitled.

The Court: For the same reasons, that motion is denied also. You may have an exception.

960 *Cross-Examination by Mr. Donovan.*

I recall the questions asked by the Government relative to the payment of telephone calls that I made up to June 1st in the year 1935. I said that I had paid for those calls, and that I was reimbursed. My company did not reimburse me. I was reimbursed by the Planning and Coordination Committee of the Petroleum Code. Mr. Ashton did not sign the check. I was asked if I had the check. And I said no.

Mr. Donovan: Now, if it please the Court, a subpoena has issued to the custodian of the records of the Planning and Coordination Committee of the

Code, and I would like to ask if that custodian is now here in Court.

(One of the spectators in the rear of the courtroom came forward and handed certain documents to Mr. Donovan.)

The paper purporting to be a check of the Planning and Coordination Committee under the Code for the petroleum industry, made payable to me for $366.25, together with a voucher of the Planning and Coordination Committee, F-52, dated 6/18/35, "to cover telephone expenses in connection with code work, for a period ending 5/31/35, $366.25," are the check and the voucher that I received to cover telephone expenses in connection with code work, for a period ending 5/31/35.

961 I believe Mr. Collett was Chairman of the Planning and Coordination Committee at that time. Mr. Collett was an independent producer.

(Check and voucher above mentioned offered and received in evidence as EXHIBITS 708-A and 708-B, respectively.)

The only calls included in this voucher were the calls that I made in connection with the Code work. Those were the calls that I referred to in answer to the questions of the Government and to these various men that I called up in relation to the purchase under the plan which I described.

Mr. Donovan: I desire to offer the Code of Fair Competition for the Petroleum Industry, together with the certification of the Secretary of the Interior as to the approval of the Code, in evidence.

(A true photostatic copy of Executive Order No. 6256, signed by Franklin D. Roosevelt, August 19, 1933, titled "Executive Order. Code of Fair Competition for the Petroleum Industry," is marked Exhibit 709 for identification.)

(Document being the "Code of Fair Competition for the Petroleum Industry," as submitted to the Administrator and approved by President Roosevelt on August 19, 1933, is marked Exhibit 710 for identification.)

Mr. Crawford: We object to those as incompetent, irrelevant and immaterial for any purpose; because they are not admissible, in any event, under 962 any of the issues which are presented by this indictment; and it is not proper cross-examination.

The Court: Well, I don't think they are admissible at this time, at least, as proper cross-examination of this witness. But they may be offered at some other stage of the proceedings. For the time being, the objection is sustained.

Mr. Donovan: Your Honor, my first offer was, as I said, to show the authority of the Committee authorizing the payment of the check.

Mr. Chaffetz: We admit the fact that it was paid by that Committee, and that is proved, and that is all. Beyond that, I can't conceive of any other issue in this case—

The Court: That is the point I had in mind, and for that reason I don't think it is material at this time. However, if counsel offers them at some later time, it may be material. Exception allowed.

By the Court

Prior to May 31, 1935, I had about 3 or 4 telephone calls a day which I charged the Planning and Coordination Committee. All the long distance calls made in connection with this work were to small refiners and to companies doing the purchasing. I live in Tulsa. Those calls were
963 made to St. Louis—all around the Mid-Continent field —Wichita Falls, Chicago, various points in Kansas, Oklahoma and Texas. I did not submit a bill for those telephone calls to this Committee. I took my long distance records and added those calls that applied to the work, and gave the total to Mr. Ashton. It was after that that I received this check from the Planning and Coordination Committee.

(The jury retired to the jury room.)

(The attorneys and the Court continued the discussion out of the hearing and presence of the jury and the reporter.)

The Court: I think I have heard enough on this. The question now before the Court is simply this: How far on cross-examination can the defense go? Now, the Government has submitted proof of those meetings. On the cross-examination you may interrogate this witness to find out what he knows about those meetings, when they originated, and by what authority, and so on.

Mr. Donovan: Your Honor, as a preparation for that then may I have admitted in evidence the Code and the Executive Order as a basis, so that the jury will understand what we are talking about?

964 The Court: I think you must pursue your cross-

examination a little further before we really get to that, to the Code. Exception allowed.

(A certified copy of the Code of Fair Competition for the Petroleum Industry and Administrative Orders pertaining thereto, as of March 1, 1935, marked Exhibit 711 for identification.)

(The following proceedings were had, in the presence and hearing of the jury.)

By Mr. Donovan

On my direct examination I said that I went to St. Louis on March 5, 1935, in response to a telephone call from Mr. Ashton. I left Tulsa on the night of March 4. I got into St. Louis the next day.

In the course of our meeting there Mr. Ashton told me that he wanted me to serve as a member of a sub-committee of the Tank Car Stabilization Committee.

He told me that the Tank Car Stabilization Committee had been appointed by Mr. Arnott, the chief stabilizer. He told me or I knew that the Tank Car Stabilization Committee was operating under the Petroleum Code. We were operating under that code, under the refinery allocation provision.

I was buying for my company, from refiners.

Q. And you knew, did you not, that those refiners had allocations made to them, for the production of gasoline, by the Oil Administrator.

965 Mr. Crawford: Objected to as incompetent, irrelevant and immaterial; and the question is what he did.

The Court: Objection sustained.

Mr. Donovan: Exception.

966 Q. Now, you said on direct examination, did you not, that Mr. Ashton made a statement of the purposes of the Tank Car Stabilization Committee; is that right?

A. Yes, sir.

Q. And in the course of that statement did he say that the plan that was being discussed there did not involve any pool buying?

A. Yes, sir.

Q. Did he explain that the companies who would be asked to buy were companies that had been regular buyers in that market for several years past?

A. Yes, sir.

Q. When he said that, did certain members of the committee there present state their situation with reference to their plans and their needs and their requirements for gasoline during the coming months?

A. Yes, they discussed those things.

Q. Was any comment made by any member there present representing, and who were identified with the major companies, that they were having difficulty in getting their gasoline allocations through the National Coordinator and that they would be obliged to make purchases for that reason during
967 the coming months?

A. Yes, sir, there was some reference to that by several of the firms.

Q. Did Mr. Ashton also explain that there was to be no definite assignment of a given quantity to each buyer in each month?

A. Yes, sir.

Q. And did he say that the amount to be bought should be determined by the amount of distress gasoline in the particular month and by the amount each company in that particular month might find it necessary to buy in the regular course of its business?

A. Yes.

Q. Did he explain, Mr. Jacobi, that purchases by these companies were to be purely voluntary?

A. Absolutely.

Q. Did he say that each buying company would be asked to contact a particular seller having a distress gasoline in the particular month with a view to buying that distress gasoline if it suited the buyer's requirements and if the buyer needed that much gasoline at that time?

A. Yes, sir.

Q. Now, did he say, Mr. Jacobi, that the committee's function was completed when it put the buyer in touch with the seller and that the buyer ~~and~~ seller were to work out their deal themselves as to all de-
968 tails?

A. Yes.

Q. I believe you said in your direct examination that the only reference to prices at the March 5th meeting was the statement by Mr. Ashton or Mr. McDowell that the companies ought to be willing to pay a fair market price for the gasoline as contrasted with distressed prices?

A. That is true.

Q. Was there any reference made to the fact that the Connally Act had been passed, and that the Federal Tender Board had gone into effect on March 1st, which was four days before, and that the market was already on the up-grade, was there any reference made to that fact?

A. Yes, I remember the Connally Act being mentioned.

969 It had been the practice among buyers for major companies as well as others to take advantage of refiners who were in a distress position, and beat down those refiners in their prices. I had done it myself. I think I had the reputation as a hard trader in the industry. And it had been my practice, if I would find a buyer or seller in a distress position, to get the best price I could. What Mr. Ashton said was directed to that. That is, that advantage should not be taken of a distress situation and that a fair market or going market price should be paid.

The chart that has just been unrolled was prepared under my direction and supervision. It accurately represents to the best of my knowledge the purchase prices paid by Socony-Vacuum Oil Company, including Wadhams, to independent refiners on a flat price basis, excluding intermediate specifications, compared with the composite of the price quotations of the Chicago Journal of Commerce, f. o. b., Group 3, Oklahoma, and Platt's Oilgram, Oklahoma refinery market for the year 1935.

(Chart referred to received in evidence as EXHIBIT 712.)

Each line, right and left, on the chart represents the cents per gallon, subdivided into ⅛¢. As you look at it longitudinally, it is divided into months from January to December, both inclusive. In the lines below the lines January, February, and so on of the months, those designations,
970 "5, 10, 15, 20, and 25," indicate respectively the 5th, 10th, 15th, 20th, and 25th of the month. In the middle line from January to June is the designation, also, of the days of the week. And just above the middle line from July to December, the same designations.

In the legend, blue represents the Platt's Oilgram. The ash grey square represents the Chicago Journal of Commerce. The quotations of the Journal are on the dates which the prices shown are stated to have been paid. The issue on which such quotations are published is dated one or two days later. In other words, it shows the date of the price. The upper line there marked "regular 63-70 octane," indicate the course of the quotations for regular 63-70 octane during those 12 months, and the line below that indicates the quotations for third-grade 62 octane and below for that period of 12 months. The red dots indicate the days on which we made a purchase or purchases of third-grade 62-octane and below, and the green dots indicate the days on which we made a purchase or purchases of 63-70 octane or "regular."

These legends for Platt's Oilgram and the Chicago Journal of Commerce show the range of prices on that particular day.

There were 3 purchases of third grade in December made
at the average price of the Chicago Journal of Com-
971 merce and the low price of Platt's Oilgram. The rest
were all made at or under the low.

On 46 days we made purchases of third-grade gasoline at the low of the journals during that year. On 68 days I made a purchase or purchases below the low of the quotations as reported in the Journal.

There were occasions when I made more than 1 purchase on a particular day. There were some days when I bought 3 times. They are all shown by 1 dot on that particular day.

As it appears from this chart, the market for third grade gasoline had been as reported in the journals, on a level from February 10 to March 1, at a range of 3¼¢ to 3½¢. On March 2, there was an increase in the market as reported in Platt's Oilgram from a low of ¼¢ to a low of ⅜¢, whereas, the Chicago Journal still reported the market in a range from 3¼¢ to 3½¢.

On Monday, March 4, Platt's Oilgram reported the market as having a range from ⅜¢ to ⅞¢, and the Chicago Journal of Commerce as having a range of ⅜¢ to ½¢. On the following day, as reported in the Oilgram, there was a range from 3½¢ to 3¾¢, and, as reported in the Journal, a range of 3½¢ to 3⅜¢. On March 6 there was a range of the Oilgram from 3½¢ to 3¾¢; and, as reported in the Journal,
3½¢ to 3⅝¢.

972 There had been 4 increases in the market as reflected in the journals prior to my return from St. Louis.

On March 8, as appears from this chart, Exhibit 712, there was a purchase or purchases made by me in the market as reported in the Platt's Oilgram, at the low, the Oilgram having a range on that date from 3⅝¢ to 3⅞¢; and the Journal from 3⅝¢ to 3¾¢. That was a 10 car purchase of 62 and below octane gasoline that

I bought from Champlin Refining Company on March 8. On March 14, I made a purchase at the low of the market, as reported in the Journal, which was 3¾¢ and ⅛¢ below the low of the Oilgram, which had a range on that day of 3⅞¢ to 4¢.

(Witness examines Exhibit 682.)

I recognize that letter, dated March 15, 1935, which I wrote to Mr. Maguire. In that letter, I said, "Our committee decided on a price of 3¾¢ for third grade and 4¾¢ for Q. for next week." Q is regular gasoline. At the time that I wrote that letter, as appears from the chart, the market, as reported in both journals, since March 11 and 12 had been at 3¾¢. In Platt's Oilgram on the 13th, it ranged from 3⅞¢ to 4¢.

On March 14, when I made that purchase, the range of the market in Platt's Oilgram was 3⅞¢ to 4¢; and in the Chicago Journal of Commerce, 3¾¢ to 4¢. I said our Committee had decided on a price of 3¾¢ for
973 third grade and 4¾¢ for Q for next week, meaning beginning on Monday, March 18th and ending the following Saturday.

I said, in answer to questions by counsel for the Government, that whenever I recommended a price, I paid that price for purchases made on the program. When I made a recommended price, I was simply estimating, or giving my opinion of what the market would be. During that week, the price as reported in both journals on March 15, the day I wrote that letter, had risen so that the range was 3⅞¢ to 4¢. That price continued on the 14th, 15th, and 16th. The same price was in existence on Monday, Tuesday, and Wednesday of the next week. On Thursday the Chicago Journal reported the market as at a price from 4¢ to 4⅛¢, and Platt's Oilgram from 3⅞¢ to 4¢.

Mr. Ashton at the St. Louis meeting told what was meant by a dancing partner. He said that he had observed the situation, and it seemed to him that the thing looked like a ballroom with a lot of wall flowers around the wall, with nobody to dance with, and there was a lot of other people who wanted to dance but didn't have any partners. He thought it would be a good thing if the partners and the wall flowers could get together, so that they would have a good time.

Champlin was one of our dancing partners. This purchase that I made on March 14 from Champlin was
974 made under the so-called plan. I tried to buy at the price I recommended during the week beginning

March 18. I bought 5 cars of regular gasoline on March 18 at 4¾¢ from Champlin. I bought on the 22nd 9 cars of U. S. motor gasoline, 62 and below octane, at 3⅞¢ from Champlin. That was not gasoline that I had to pay a premium for. It was just the ordinary third grade. I, nevertheless, paid ⅛¢ more than the price that I had recommended on that day for this reason: On the first purchases of gasoline I bought from Champlin, I went over to Enid on March 8, and asked him if he could meet Wadhams requirements on octane, and he said that he could. This was rather important to me. Wadhams required a 55 octane gasoline. Socony-Vacuum Divisions did not. When this gasoline was shipped to Wadhams we checked it and found that it didn't quite meet our specifications; so I went back to him and told him I couldn't take the gasoline any more on Wadhams' order unless he did meet our octane requirements. He segregated a certain amount of cracked material from his cracking unit to meet my octane requirements, and guaranteed me what I had to have. He said this would cost him more money, so on their shipments I paid him ⅛¢ more. That was on March 22.

On March 21, I bought 1 car. That was regular, though.

On Monday, March 25, I made a purchase. On
975 Monday the price as reported in both papers had the
same range, that is, from 4¢ to 4⅛¢, that it had had the two last days of the preceding week, that is, Friday and Saturday. That purchase was at 4¢ from Champlin refining Company. It was a car of 62 and below, U. S. motor, guaranteed 55 octane. It differs from the ordinary third grade. The ordinary third grade in Oklahoma runs about 48 to 53 octane, as a maximum; most of it runs 48 to 52. Particularly in the case of Wadhams, that was below our requirements on octane.

On Tuesday, the 26th, as designated by the red mark on this chart, I purchased at 3⅞¢ a car of U. S. motor gasoline, but it wasn't guaranteed 55 octane. We paid ⅛¢ more for it when it was guaranteed than when it was not.

Both of those purchases at 4¢ and 3⅞¢ were under the plan.

I made purchases on March 21, 22 and 26 at 3⅞¢. On the 22nd and 26th, the purchases were ⅛¢ under the market as reported by both journals. The 1 purchase I made on the 25th, which I said was guaranteed, was at the low of both the journals. The price range in both journals from the 22nd to and including the 27th remained the same.

My purchases in the spot market were characterized as being refinery purchases.

976 The black line on this chart represents the Chicago Journal of Commerce. At this particular time, February 4 to 10, the Chicago Journal of Commerce showed a price range of 3¼¢ to 3⅞¢, while the Oilgram showed a price range of 3¼¢ to 3½¢.

"Inter-refinery purchases" are those purchases made by one refinery from another refinery.

I testified in relation to the recommendation that I made for the week of March 18th, as reported in my letter of the 15th, which recommendation was 3¾¢. At the time I made that recommendation for the following week the price had already been the low of both the Journal and Platt's Oilgram since the 11th and 12th, and was the low for the 14th and 15th of the Journal of Commerce, and was ⅛¢ below the low of Platt's Oilgram.

My recommended price from March to June was never higher in any given week than the highest red dot on this chart. I never paid higher than the recommended price as shown by the dots on that chart. Some times my recommended price was lower than the highest red dot. The highest red dot as appears here was never higher than the low of both Journals during that period.

I have my records with me. The purchase of 1 car which I made of third grade gasoline at the low of the Journal and Platt's on March 25 was 55 octane gasoline from Champlin Refining Company of Enid, Oklahoma.

977 I purchased that for Wadhams Oil Company.

On the next day, March 26, I purchased a car of third grade gasoline from Champlin Refining Company at 3⅞¢. I would have to refer to my records, but it was not purchased for Wadhams. It went to White Eagle at Lemmon, South Dakota. I also show a car going to Fond du Lac on March 26, 1935. Those dots on the chart represent the days purchased. On the purchase that went to White Eagle, I paid ⅛¢ below the low, whereas I paid at the low for the purchase for Wadhams.

I have said that that price which I recommended on March 14 had for 4 days been at the low of both journals for part of that time, and ⅛¢ below the low of Platt's Oilgram for 2 days. As appears from this chart, during the succeeding week, that recommended price was for 4 days ⅛¢ below the low, and for the remainder of the week ¼¢ below the low. When I say "¼¢ below the low," I mean ¼¢ a gallon below the low quotation.

The purchase I made on Monday, April 1, was a car of 62 and below octane gasoline, purchased from Champlin Refining Company. There wasn't any more purchased on that day. That purchase was at 4¢, as appears from the chart, and was ⅛¢ below the low of both journals on that day.

On the next day, as shown by the chart, I made a purchase or purchases at the low of both journals, and a purchase or purchases at ⅛¢ below the low of both jour-
nals. The 1 car purchased at 4⅛¢ went to a Wad-
978 hams destination, on account of our octane require-
ments. The 4¢ car went to 1 of our other divisions, because they didn't insist on the same octane at that time that Wadhams did.

I show a purchase here on April 3 of 4 cars at 4⅛¢ from Champlin. That was for Wadhams.

On the 4th, I show a purchase of 2 cars at 4¢. Those shipments were made from Champlin. Those were for shipment to Davenport, Iowa, on that order. It moved on April 5. That would be for Lubrite.

The spot market shown from this chart had remained at a low of 4⅛¢ as reported in both journals on April 1, 2, 3 and 4.

On the 5th, as reported in the Journal of Commerce, it was at a low of 4¼¢ and on the 6th, both journals reported the low as 4¼¢. I made, as shown on that date, a purchase or purchases at the low of both journals, and a purchase or purchases at ⅛¢ below the low. I made a purchase of 2 cars from Champlin on April 6, and 4 cars from Champlin on the same date, both of which went to Wadhams. They were not different in grade or quality, because Wadhams was buying 55 octane guaranteed at that time. The only explanation I can make on that is that Champlin would give me 2 cars only, perhaps 1 purchase was made in the morning and the other in the afternoon. At any rate, I paid Champlin ⅛¢ higher on the same day for 4 cars than I did for the 2 cars that I bought earlier in the day.

979 As it appears here, the low of both journals was
the same on Monday, April 8; and on the 9th the low of both journals was still 4¼¢, remaining the same, but the Journal of Commerce high had gone up ⅛¢. That continued to the 10th. I made certain purchases on the 10th, one or more at the low of both journals,

and the other at ⅛¢ below the low. 3 cars went to Wadhams points and were guaranteed 55 octane; and the other purchase was for one of the other divisions which did not require the 55 minimum octane at the time.

On the ~~next~~ day the market remained the same, and I made a purchase on that day at ⅛¢ below the low. That was at 4⅛¢. That was 2 cars of gasoline from Champlin, purchased on April 11. It went to divisions other than Wadhams.

I purchased on April 12, according to my records, 1 car of third grade gasoline at 4⅛¢. That car apparently, from my records, went to a division other than Wadhams.

I made a purchase or purchases which were ¼¢ below the low of both journals on the 16th. That was 2 cars of U. S. motor gasoline purchased from Champlin Refining Company at 4⅛¢, for divisions other than Wadhams.

On the 17th, as appears from the chart, I made a purchase at the low of both journals, which low was the same as the preceding day. I have a purchase listed on April 17, 1935, of 3 cars of U. S. motor gasoline from Champlin Refining Company at 4⅜¢. That was 55 octane guaranteed gasoline for Wadhams Oil Company.

980 On the following days, when the low of both journals was still the same as the day before, although the market had lifted ⅛¢ as reported in the Journal of Commerce, I made a purchase at ¼¢ below the low of both journals. On the 18th, I bought 3 cars of U. S. motor gasoline from Champlin at 4⅛¢; and according to my record here, that was for divisions other than Wadhams. These 3 cars that I have just mentioned at 4⅛¢, went to the White Eagle Division in Minnesota.

On April 20, as appears from this chart, the market as reported in both journals had a range from 4½¢ to 4⅝¢, and that remained the same during the succeeding 8 days. On the 23rd, I made 2 purchases, 1 car at 4½¢, and the other at 4⅜¢. One purchase on April 23 was for 1 car U. S. motor from Danciger Refining Company at 4½¢, Group 3, for Lubrite Division. There was no special specification on that. I have no notation on anything except that Danciger always supplies me with an octane ranging from 56 to 59. I also made a purchase on that day at 4⅜¢. That was a purchase from Champlin for 1 car, U. S. Motor gasoline, for White Eagle division, that car going to Mitchell, South Dakota. I also made a purchase at 4⅛¢ on that day. That was a purchase of 1 car of U. S. Motor gasoline from Champlin at 4⅛¢,

that car going to Socony-Vacuum, White Eagle division, at Hawarden, Iowa. That was ⅜¢ below the low of
981 both journals on that day. It appears from this chart that on 8 days preceding that day, April 23, I had purchased gasoline at that same price. It was the same kind and quality of gasoline and from the same company, Champlin.

On April 6th, I bought at ⅛¢ below the low of both journals. That price was 4⅛¢. I made purchases also on the 10th, 11th, and 12th. On the 10th, and 11th, the prices were ⅛¢ below the low of both journals, and on the 12th, ¼¢ below the low of Platt's Oilgram, and ⅛¢ below the low of the Journal of Commerce. These purchases were all at 4⅛¢. I show 1 purchase for Wadhams on April 6 at 4⅛¢, and the others are for divisions other than Wadhams.

On April 24, there is a purchase of 2 cars at ⅛¢ below the low of both journals. That was 4⅜¢, from Cushing Refining Company at Cushing, Oklahoma. That went to Kimball, South Dakota, and Red Oak, Iowa, for the account of Socony-Vacuum, White Eagle division.

On the next day, the 25th, from this chart it appears that I made another purchase at the same price which was still ⅛¢ below the low of both journals. I bought 1 car of U. S. Motor gasoline from Champlin for the White Eagle division at 4⅜¢, the car going to Lemmon, South Dakota.

On the 26th, I show the purchase of 1 car from Cushing Refining Company at 4⅜¢. That went to Lubrite
982 division at Decatur, Illinois. There was another purchase on that day of 4½¢, which was the low of both journals. That was a Wadhams purchase from Danciger Refining Company at 4½¢ for shipment to Wadhams Oil Company. The octane rating of the Cushing purchase was no guarantee octane, as I remember it. It might have been below 55.

It appears from this chart, that I made a purchase at ⅛¢ below the low of the market as reported in both journals on April 30. That was at 4⅜¢. It was for the account of Socony-Vacuum, White Eagle division, 1 car U. S. motor, from Cushing Refining Company, at 4⅜¢, the car going to De Smet, South Dakota. This was no guarantee octane.

On May 1, the market, as reported in both journals, was still the same as the preceding 6 or 7 days, and I made a purchase or purchases at the low of the market, as so reported, and a purchase or purchases at ⅛¢ below the low. 1 at 4½¢, and 1 at 4⅜¢. The 4½¢ purchase was 4 cars from Danciger. It was for the account of Wadhams Oil Company going to various points in Wisconsin. The purchase at ⅛¢ below the market as reported in both journals on that same day was on May 1, 1935, for the account of Socony-Vacuum, White Eagle division, of 2 cars, of U. S. Motor, from Cushing at 4⅜¢.

On the next day, May 2, I made a purchase at the low
of the market as reported in the Journal of Com-
983 merce, and ⅛¢ below the low of the market as re-
ported in Platt's Oilgram, or at 4½¢. I made another purchase or purchases at ¼¢ below the Journal of Commerce or at 4⅜¢. I made 1 purchase at 4½¢ from Danciger Refining Company on May 2 for the account of Wadhams Oil Company. The purchase at 4⅜¢ was of 2 cars of U. S. Motor gasoline from Cushing Refining & Gasoline Company for the account of Socony-Vacuum, Lubrite division.

I made purchases at ⅛¢ below the low of the Journal of Commerce, and ¼¢ below Platt's Oilgram or at 4⅜¢ on May 4. I have 2 purchases listed on May 4, 1935: 1 car from Cushing Refining & Gasoline Company at 4⅜¢ for the account of Socony-Vacuum, White Eagle division; and 1 purchase May 4 for the account of Wadhams Oil Company at 4⅜¢, Group 3, from Simms Oil Company.

On the following Monday and Tuesday, the market, as reported in both journals, remained the same as the preceding 2 days, and on May 7, it appears that I made a purchase at ¼¢ below the market as reported in Platt's Oilgram, and ⅛¢ below the low of the market, as reported in the Chicago Journal of Commerce, or at 4⅜¢. I show a purchase to the account of Socony-Vacuum, White Eagle division, 3 cars, U. S. Motor gasoline, from Cushing Refining and Gasoline Company at 4⅜¢, Group 3.

On the next day, the 8th, the market, as reported in both
journals, was from a low of 3⅞¢ to a high of 4¾¢.
984 It appears from the chart that I made 1 purchase at
⅛¢ below the low of both journals and 1 at ¼¢ below the low of both journals. I show on May 8 a purchase of 3 cars of U. S. Motor gasoline from Danciger Refining Company for the account of Wadhams Oil Company at 4½¢, Group 3; and a car of U. S. Motor gasoline from Cushing Refining & Gasoline Company for the account of Socony-Vacuum, White Eagle division, at 4⅜¢, Group 3.

On May 9 I have a purchase listed for 2 cars of U. S. Motor gasoline from Cushing Refining & Gasoline Company to the account of Socony-Vacuum, White Eagle, at 4⅜¢, Group 3. On May 10 I show a purchase from the same firm for the account of Socony-Vacuum, White Eagle Division, and at the same price, 4⅜¢, Group 3. That last one went to Grafton, North Dakota.

On the following day, May 11, the market as reported in both journals remained the same as it had been for 3 days preceding. I made a purchase at the low of the market of both journals at 4⅝¢. That purchase was from Danciger Refining Company of 4 cars of U. S. Motor gasoline for account of Wadhams, going to various Wisconsin points. That was the special octane rating that I have already described that was the requirement for Wadhams. Danciger always supplied us with an octane meeting our requirements.

985 On Monday and Tuesday the market remained the same as on the preceding 4 or 5 days, which was between 4⅝¢ and 4¾¢. I have a purchase listed here on May 14, 1935, 4 cars of U. S. Motor from Cushing at 4⅝¢, Group 3, for Socony-Vacuum, White Eagle division.

I show a purchase on May 15 for account of Wadhams, 11 cars of U. S. Motor gasoline from Danciger at 4⅝¢, Group 3, shipment to various Wisconsin points. It was not made specially for us. It was desirable for us because of the octane rating they have on their gasoline.

Generally speaking, I paid ⅛¢ a gallon more for the Wadhams shipments than on the other divisions.

When I say unguaranteed, that means third grade 62 octane and below meeting all specifications. It isn't off-specification, but the point is that on the Wadhams there is a distinct requirement, as regards octane, that the other divisions don't have. That requirement is 55 minimum. As I testified the other day, the average octane on third grade gasoline in the Mid-Continent field runs 48 to 53, maximum, I would say. That is what I was referring to in relation to these purchases other than the 55 octane.

By Mr. Lewin

It is not true that I can send the lower octane stuff to these divisions of Socony-Vacuum other than Wadhams because they know how to reform or retreat it. They
986 don't have the specific requirements on octane that Wadhams does. They don't have any definite minimum on octane.

By Mr. Donovan

The third grade to which I referred on this other chart you now show me is the regular third grade, the specifications being such as I have designated and that 55 octane is a premium grade, so to speak. In the case of Champlin, particularly, it was a premium.

(Document referred to marked Exhibit 713, for identification.)

Exhibit 713 for identification is a chart that has been prepared from records or documents under my direction and supervision. It shows the purchase prices paid independent refiners on a flat price basis by Socony-Vacuum, including Wadhams and excluding intermediate specifications compared with composite of price quotations Chicago Journal of Commerce F. O. B. Group 3, Oklahoma, and Platt's Oilgram, Oklahoma refinery market, for 1936. This chart is based upon the same kind of data as my chart for 1935 which I have just discussed.

(Chart referred to received in evidence as EXHIBIT 713.)

The Government has all the records from which this chart was prepared. The record from which I was reading was based on the records and documents which have been impounded by the Government. When I got back I prepared these from the same records and then turned the records back to them.

987 This chart, Exhibit 713, is a little different than the other, Exhibit 712, in coloring. The Chicago Journal of Commerce is represented by green and Platt's Oilgram is the gray hatching. The green dots represent purchases that I made of regular gasoline during the period designated on the chart. The red dots represent the purchases I made of third grade over that period. There were 22 of the red dots of third grade gasoline between January and April, 1936, at the low of the Journal. There were 2 below the low of both journals.

There were 7 purchases of regular shown on that chart. 5 were at the low of both journals. 1 was at the high of the Journal, and the low of the Oilgram; and the other was at the high of the Oilgram and at the average of the Journal.

The dots show the days on which I made a purchase or purchases. There are no dots for third grade at the high of both the Oilgram and the Journal.

I recall that about January 9, 1936, there was an advance in the price of crude oil. That advance in the East Texas field was 15¢ per barrel, from $1.00 to $1.15 on 36-40 gravity. That was followed a few days later by an advance in the Mid-Continent crude price of 10¢ per barrel, from $1.00 to $1.10 on 36 gravity crude.

The price paid for crude oil is an element in the cost to the refiner in producing gasoline, probably the most
988 important thing. If the price of crude goes up, the gasoline price advances. When the price of crude went up, I had certain conversations with refiners, small refiners and others, relative to the increase in the price of crude.

I talked to a great many people at that time, in my own firm, many small refiners, particularly those that I was doing business with at the time; I talked to various individuals. I talked to Tuttle and McDowell, and they told me that they were advancing their spot price of gasoline; that is, their price that they sell on. They were sellers as well as buyers. I was a buyer. At that time the crude advance was causing quite a little comment and quite a little excitement in the industry. The refiners were all talking higher prices and asking everyone what the price of gasoline would be in their opinion. The old rule of thumb formula, that the industry has recognized and used for a long time, was mentioned; that is, ¼¢ advance in the price of gasoline for each 5¢ advance in the price of crude. That seemed to be on many people's minds.

The small refiners that I talked to were particularly anxious to get more money for their gasoline, and they asked me, and I agreed to pay them ½¢ a gallon more, which advance, according to my records, occurred on January 13, 1936.

989 (Exhibit 690, being a letter dated May 24, 1935, from Mr. Jacobi to Mr. Maguire, was handed to the witness.)

(The following was read from Exhibit 690:

"With tank car gasoline prices at the highest point in months the only concern one hears expressed in the immediate outlook is the possibility of refiners disregarding allocations and increasing runs. Chiseling on runs could very quickly start prices downward.")

Yesterday the Court, in asking me whether major companies had need for gasoline they were buying, asked me to give the capacity of the Socony-Vacuum refineries. When I wrote that letter, I was, when I spoke of refinery allocations, referring to allocations made by the allocating committee under the Code of crude runs for all refiners, large and small. Those allocations limited the amount that refineries might run. The allocating committee gave them this allocation, and that governed the amount they could run. When I referred to refiners disregarding allocations, I referred to their violation of the allocation orders pursuant to the Code. My understanding was that the allocating committee told the refiners how much crude they could produce. I may be wrong on that.

When I spoke of chiseling on runs, I meant that some
refiners would run more crude than their last allocation
990 had been, and of course make more gasoline from that
additional crude run.

I testified that I attended several meetings of the Tank Car Stabilization Committee. I was never a member of that Committee. I was a member of the so-called Mechanical Sub-Committee.

In my testimony the other day I referred to the fact that 600 or 800 cars of distress gasoline as shown on the survey were bought in various months during this period that I described. I have already testified that Mr. Ashton made a rather comprehensive statement of the plans at the meeting in St. Louis on March 5. I remember a reference to this distress gasoline, 600 or 800 cars shown on the survey, being 1½% of the total gasoline sold in the Mid-Continent area.

The amount of distress gasoline they offered on the program in comparison with the total they manufactured varied considerably with the refiner. In some cases it was very small, and in some cases it ran considerably larger.

In March, 1935, as I have already testified, Champlin only indicated 40 cars of distress gasoline, and that was what I bought from them. I estimate that Champlin, being a rather large independent refiner, on the basis of 100% sold 70% of their gasoline on contract, perhaps 30% on the
spot market; so that the 40 cars I bought from Champ-
991 lin approximated only 3% of the gasoline that they
actually sold on the spot market. About 27% of the product that they manufactured was sold in the spot market to persons other than Socony-Vacuum. That would be my estimate for the period I bought from them. I didn't buy more than 40 cars in the succeeding months. I bought 40 cars in March, and I think 38 in April from Champlin.

Champlin had been in business a good many years and had built up quite an outlet for their gasoline. In the case of the other refiners that sold us distress gasoline the relationship of the distress gasoline to other sales ran higher than the Champlin Refinery.

By Mr. Treadwell

In speaking about the work I did for Wadhams and Socony-Vacuum, I named persons in each of the divisions with whom I had contact. I named the person in each of the divisions who was the head of the division and so my ultimate superior, and then some person in the traffic department with whom my regular day to day transactions in buying orders for the purchase of gasoline were carried on.

L. L. Marcell was manager of the White Eagle division of Socony-Vacuum. Mr. McReynolds was the person in that division with whom I carried on my day to day business of buying orders for the purchase of gasoline. R. R.
992 Irwin is assistant general manager of that company.
He is described in the indictment as manager of that division. That is incorrect. Mr. Marcell is the manager of that division and was in 1935.

During that period Irwin was neither the manager of the division nor the person with whom I had contacts on the daily carrying on of my business.

By Mr. Francis

After I returned from the meeting in St. Louis on March 5, 1935, which was a meeting of the Tank Car Stabilization Committee, I called Mr. Chamberlain, who was purchasing and sales agent of The Pure Oil Company, who resided at Tulsa. My best recollection is that it was sometime prior to March 14 when I called Mr. Chamberlain. I made inquiry from Mr. Chamberlain as to whether or not his company would be interested in purchasing some gasoline. I told him that I had attended a meeting at the Coronado Hotel in St. Louis, and that no doubt he would hear further details, and mentioned the fact that his firm's name was mentioned at that meeting, and that certain quantities of gasoline were mentioned there which Mr. Ashton felt The Pure Oil Company would be interested in buying. Mr. Chamberlain said he didn't know anything about it but would check with his superiors.
993 Chamberlain never reported back to me that he had consulted with his superiors. I don't remember him telling me afterward in response to any inquiry from me what his superiors had advised him.

Mr. Chamberlain never agreed with me nor did he ever tell me, so far as he or Pure Oil was concerned, that he would buy a particular amount of gasoline at any specified price.

By Mr. Brazeau

I stated that, at the meeting in St. Louis on March 5, Mr. Tuttle of Empire Oil & Refining Company stated he would be able to take gasoline from the Olney Refining Company. Tuttle stated to me as a reason why he would be able to take gasoline of Olney Refining Company that the plant of Empire at Gainesville, Texas, had permanently closed down, and he would have to buy gasoline from other sources.

By Mr. Marshutz

The Court asked the other day as to the capacity of the Wadhams plant at East Chicago. I understood his question to mean at the present time, and I replied 11,000 barrels. In 1935, it was between 5,000 and 6,000 barrels. I remember that in February, 1935, 1 of the cracking units of this refinery went down, and in March, its other cracking unit went down. So, instead of running 5,000 or 6,000 bar-
rels a day, we were running 2,000 barrels a day. That
994 refinery has only two cracking units. That necessarily
reduced its output materially during 1935. Its rehabilitation was completed in November. I was required on behalf of Wadhams to purchase large excess amounts of gasoline during 1935 by reason of the condition of its own refinery.

I know that Wadhams furnishes a very substantial amount of the requirements of the Chicago division of Socony-Vacuum Oil Company from its East Chicago refinery. By reason of the condition of the Wadhams refinery in 1935, I know it could not meet the requirements of the Chicago division of Socony-Vacuum. That likewise necessitated purchasing large additional amounts of gasoline for that division of Socony-Vacuum.

By Mr. Kirkland

(One of the defendants stood up.)

This is Ira Smith, one of the defendants, who is standing. He is a buyer at Tulsa for Standard Oil. I have known him many, many years, and very favorably. I had an office in the same building as he did at one time.

I have a recollection of Mr. Smith attending meetings of this tank car committee. I think it was in the latter part of 1935, or the early part of 1936. Mr. Smith never attended
any meeting unless it was in the Western Petroleum
995 Refiners' Association office in Tulsa. There were a
number of meetings in the W. P. R. A. offices in Tulsa
that he didn't attend. He lived in Tulsa all that time.

I was familiar enough with him and with the oil business to know something about the authority he had in 1935 and 1936. He has always worked very closely with Mr. Bullock.

Q. And you know he had no authority to even buy a gallon of gas, without taking it up with Chicago?
A. No, I don't know that.
Q. You didn't know that?
A. No.

I do not know how he happpened to come to this meeting the latter part of 1935 after this plan had been continuing since March. I didn't invite him. He hadn't been at any meeting before that. I do not remember anything that he said at that meeting. I don't remember Mr. Smith saying very much. He did a lot of listening. He is a quiet man. He was very quiet in the meeting.

Waggoner Refining Company has a very favorable reputation as being a good refining company in that part of the world. They have their own production. They had a 996 ranch upon which oil was discovered. I have been there many times. I am quite familiar with their outfit. They are able to produce enough crude for their own needs, and have crude to sell.

They have some retail outlets of their own. They have pipe lines from their crude production wells to their refineries. They also have their own storage. So they differ from the average independent refiner, in those respects. They are quite a little larger than the average small refiner. Their financial reputation was absolutely of the best.

I didn't know Standard of Indiana was buying in 1934 from Waggoner. I have no record now to show what Standard may have bought in 1935 from Waggoner. I don't know whether they bought any more from them in 1935 than they bought in 1931 or in 1933 or in 1934, or whether they bought any differently in 1935 than they did in 1934.

Mr. Bullock wasn't at the St. Louis meeting on March 5. My recollection is that he attended one meeting, which might have been in May or December. I did not keep any record as to who were present at each meeting. We had 13 meetings. We also had meetings of our sub-committee. I have told you all that I remember as to who was there. That is my best recollection. Mr. Bullock was a quiet man, too, like Mr. Smith. He was worse.

997 *By Mr. Loucks*

I stated on my direct examination that I had 1 or 2 conversations with Mr. Evans. He never stated to me that he would purchase any specific quantity of gasoline, or that he would pay any specific price for it. I just told him about the gasoline that I had in mind, and he didn't tell me whether he would or would not buy it, or what price he would pay for it.

By Mr. Foster

Mr. Hughes attended several meetings. To my best recollection, he was at the meeting on March 5, either the morning or the afternoon. If Mr. Hughes' records show that he was in Bartlesville on that day, I would absolutely say that I was mistaken about that, and that it was some other meeting. I have told you what I think on that matter, and which I believe to be true.

By Mr. Horween

I testified that I believed that all the participating companies in this so-called plan purchased about the same amounts from the same independent refiners during the course of the year. I gave you the average of what I thought Globe bought over the period that this distress gasoline was being purchased. I believe I said they bought about 20 or 30 cars a month. I believe I said that they bought from about the same independent refiners consistently. I don't know that. I am not positive of it.
998 When I made that statement, I was talking about the group as a whole, I believe. I never knew they bought anything in cargo lots. I would be surprised to learn that they didn't buy anything at all for 2 or 3 months at a stretch.

By Mr. Lawton

In speaking of the recommendations of buying prices which I made between March 14 and June 1, 1935, I stated that I based my recommendations upon the fair prices for gasoline. Independent refiners in 1935 sold some of their products upon contract, and they disposed of some in spot transactions to their jobber outlets. They also sold some through brokers. Generally speaking, what they couldn't dispose of in these channels was distress gasoline.

I don't remember stating in connection with recommended prices that it was my idea that a fair price for distress gasoline would be either the low or the average of the journals. I stated that the trend in my recommended buying price was always up, from March 14 to my last recommendation around June 7.

I don't remember that I stated that the trend of published prices in the journals was up, and that the upward trend in the journals' prices closely paralleled the up-

ward trend in my buying prices. I said that the
999 trend of published prices in the journals was up during that same period. The upward trend in published prices in the journals, in the period from March 14 to June 7, closely paralled the upward trend in my buying prices.

It is a fact that the upward trend in my buying prices and in the journals' prices, during the period in question, closely paralled a similar upward trend in the spot market prices to jobbers.

I recall that I made a price recommendation on March 14, 1935, which was a Thursday. I made from 5 to 7 recommendations between March 14 and June 7. I don't know whether all of my recommendations were made either on a Thursday or on a Friday. I stated that I usually made them towards the middle or end of the week. Generally speaking, every recommendation I made of a buying price was to go in effect for the week beginning the following Monday.

I believe that I recall stating, in response to a question by Government counsel, that I sometimes made a comparison with my buying price on Monday, with prices quoted by the Journal for the same day; and I found the Journal prices were usually up slightly.

There were some weeks during the period from March 14 to June 7, when I didn't make any recommendation for a price change for my own buying or those with whom I came in contact.

1000 *By the Court*

I said generally speaking that I was familiar with the outlets that some of these refiners had to jobbers in 1935. I was fairly familiar with what the outlets of Champlin Refining Company were to jobbers during the early part of 1935, just from what Mr. Snider told me over a period of years. Just in the same way I was familiar with their outlet to jobbers from June 1, 1935 to January 1, 1936. I couldn't tell you whether the number of jobbers that they were selling in that period decreased over the number that they were selling to, the first part of that year. I just said I was familiar in a general way with the set-up of Champlin, and I have told you what that set-up was. If they got more jobbers or less jobbers during any period, I wouldn't have known that.

By Mr. Lawton

Q. State whether or not it is a fact that there was no price change shown in the Journal of Commerce for any Monday, any change in either the high or the low for the entire period from March 14 to June 7, 1935?

Mr. Chaffetz: If counsel is trying to point out that there was no price change reported in the Chicago Journal of Commerce for Monday, as compared with the preceding Saturday, and if that is a fact, subject to our check, we will admit it.

1001 (Witness examines chart, Exhibit 712.)

The only definite price recommendation I know about is this one on March 14, when 3¾¢ for third grade and 4¾¢ for regular was mentioned.

I do know I made recommendations and that I followed them. I did not buy third grade at any time during the period March 14 to June 7, 1935, at a price above the low of the Journal. I check two or three instances on the regular, where I paid a price over the low of the Journal.

Limiting myself to third grade, it is a fact that every new price I paid, starting with a Monday, reflected a price or was in keeping with a price which had already been published prior to that time in the Journal; in other words, there was no change made on any Monday. I believe it is true that the price I paid on any Monday, or thereafter in any week, had already been reflected in the Journal of Commerce prior to that Monday.

My first price recommendation is the one I know definitely about, and that was ⅛¢ higher than my previous price. I don't remember now any times during the period from March 14 to June 1 when I made price recommendations or changes as high as ¼¢. I believe I said ¼¢, but I don't remember that definitely. I would rather say ⅛¢ now. I don't remember definitely making any changes of ¼¢.

1002 The prices of the journals during all or part of some week during the period we have been discussing were higher than the prices I had been paying during the same week, in a great many instances. In making my recommendations of fair prices for the following week, to use my own words as stated on page 417 of the record, "we got up in line with the trade journal figure."

The presence of a large amount of distress gasoline in the hands of a refiner tended to soften or decrease his spot jobber prices. If an outlet could be found for the refiner's surplus gasoline at a fair price it would enable him to secure a fair price for the gasoline he sold to his jobbers.

In attempting to determine the amount of distress on the market at any time, our sub-committee considered that the movement of refiners' gasoline, other than that which might be purchased by majors, would proceed on a normal basis. We considered the normal outlets of the refiners in their sales to their contract people, we considered the ordinary sales they made to brokers, and sales made to jobbers in the spot market. If they had no outlet for anything beyond those outlets, that would be distress gasoline.

I knew markets in the Mid-Continent area, not mar-
1003 keting, because I am not in the marketing end of the
business. I had a good idea of what the outlets were of the independent refiners. I knew that they sold a large part of their output to jobbers.

The possibility of major purchases of distress gasoline had been discussed by the tank car committee immediately prior to March 5, 1935. I had read about it and heard rumors about it.

In the course of my duties I came into contact with the subject of broker buying from the independent refiners, I have some friends who are brokers. I was not very well acquainted with the quantity sold by the independent refiners to brokers during the period from November, 1934 down to July, 1937.

I do not know whether or not the buying by brokers increased during the early part of 1935 in relation to the amount they had bought at the end of 1934. I know nothing about that.

Referring to my letter of March 8, Exhibit 681, to Mr. Maguire where I stated that jobbers are showing more interest in the market, it is a fact that jobbers were buying in the market at that time, in addition to any buying that took place by the majors. I cannot state whether or not there was any broker buying at that time. I don't know definitely whether or not broker buying in March, 1935
was far larger than it had been in February, 1935,
1004 or January, 1935, or December, 1934. I am unable
to state what effect, if any, any broker buying had on the spot market as early as March 8, 1935, or during the month of March.

Referring to my letters of March 15, 1935, Exhibit 682, and March 29, 1935, Exhibit 684, I recall stating in my letter of March 15, "Jobber demand has decreased somewhat"; and in my letter of March 29 I stated that prices were holding firm in spite of a light jobber demand during the month of March. Referring to the statement in my letter of March 29, 1935, that the light jobber demand was due to several things, among others to a feeling that present market prices would not hold, the prices did hold. My prediction was that the jobbers would be fooled on the market. What I meant to say was that the jobbers were holding off because they thought the price would get lower. But it did not get lower. I knew purchasing conditions pretty well at the time.

Referring to the statement as to jobber demand being slow, and that jobbers were buying light because prices were going up and they were skeptical as to prices holding up, if I wrote that on March 29, it is what I thought then. I thought that the week before. I do not know specifically whether or not the market price to spot jobbers on March 29, 1935, was affected in any way by large jobber or broker purchases.

1005 I recall the statement in my letter of March 29, Exhibit 684, as to third-grade, "A price of 4⅛¢, Group 3, for this grade, is expected next week." Third grade gasoline had been at the low of 4¢ and high of 4⅛¢ in both of the journals beginning March 22, 1935, one week before I made that statement. On March 28, the day before I wrote that letter, it was at low of 4⅛¢ and at high of 4¼¢ in the Journal.

It was generally true that each time I made a prediction of a price increase, both third-grade and regular, the journals had been carrying that price for several days prior to that time. I was merely following that price when I made the prediction, or made the change.

I stated in my letter on May 10, 1935, Exhibit 688, that an increase of ⅛¢ may be looked for next week, and on May 10 the journals generally were 4⅝¢ to 4¾¢ on third-grade; and the Oilgram had been that ever since May 2. There was no increase in the Journal of Commerce during the entire next week and the week after that. There was a holiday there, May 30, and the price advanced on May 31st, according to this chart, Exhibit 712, from a low of 4⅝¢ to 4¾¢ in the Journal. There was no change at all from May 8 to 29 on the low or the high, so that the change 1006 in the Journal low or high came 21 days after I wrote that letter that there would be a change in a week.

I recall my letter of September 20, 1935, Exhibit 75, in which you say I stated in substance that some softening in third-grade had been removed by distress buying. If I said that, there had been some softening prior to the 20th in the third-grade market, spot market. The Journal reflected that softening on September 15 and 16 by dropping its price ⅛¢.

In my testimony I made a comparison of my buying prices with the trend of the prices as shown in the journals at about the end of November and December 1, 1935. I do not recall saying it was true that the trend of my buying prices and the trend of the prices in the journals were the same or substantially the same, but I will take your word for it. Based on my knowledge at the time, I am sure that the spot jobber market declined in the same relative proportion as my buying prices and the published prices at that time.

I was asked whether or not crude oil advanced in the early part of January, 1936, and I said yes. Then I stated that the refiners called me up and some refiners told me they would have to have ½¢ more for their gasoline, and I said I would pay ½¢ more. Then it was pointed out to me that the prices of the journals jumped ½¢ also at
1007 the same time. Specifically, the spot price to jobbers went up ½¢ also at the same time. So that when that change was made in 1936 in the journals, that truthfully reflected the increase in the spot jobber market.

When the journals made these changes in prices in the end of November and the first part of December, 1935, they also truthfully reflected the changes in the spot jobber market at that time.

By Mr. Hanning

It simplifies discussion of the chart, Exhibit 712, to speak of fractions of a cent in ⅛¢, 4/8¢ instead of ½¢.

Third-grade gasoline 62 and below octane was quoted in the Oilgram on March 8 at 3⅝¢ to 3⅞¢. I paid Champlin on March 8 the low price that the Oilgram carried on that date for spot market sales.

On March 7, the price of the same grade was 3⅝¢ to 3¾¢. So the day before I bought this 10 cars of gasoline from Champlin, the Oilgram was carrying a spot market published price of 3⅝¢. When I called Steiger on March 8 and told him I paid Champlin 3⅝¢ for 10 cars of gasoline, I wasn't telling him anything new at all, according to this, because the day before that was the Oilgram low for spot market shipments on sales to jobbers.

1008 In the Oilgram of March 14 the jobber price in the going or open spot market for third-grade was 3⅞¢ to 4¢. So on March 14, 1935, the first day our sub-committee met, we arrived at what we thought was the fair price of 3 6/8¢, but the price in the Oilgram that day was 3⅞¢. In other words, it was ⅛¢ higher than even the price we thought was a fair price.

Referring back to March 13, the day before, under the

Tulsa market the price for that grade of gasoline, 62 and below octane, was 3⅞¢ to 4¢. So the day before we met, the going spot market price to jobbers was 3⅞¢, or, in other words, ⅛¢ higher than the price recommended for the 14th.

I said that I thought I recommended a price of 4¾¢ on regular. Of course, 4¾¢ is 4 6/8¢. Referring again to the Oilgram of March 14, it is a fact that the quotations as of that date on regular gasoline were 4⅝¢ to 4⅞¢. My price is 4 6/8¢ that I recommended. So what I did was to take the average of the high and the low in the Oilgram of March 14 as my recommendation on regular.

Referring back to March 13, the day before, I find that, on that day, the price of regular gasoline as quoted in the Oilgram was 4⅝¢ and 4⅞¢. In other words, my price of March 14 on regular was the average of the high and the
low for regular quoted in the Oilgram, not only on
1009 March 14, but also on the preceding day, namely,
March 13.

By the Court

That was not the manner in which I arrived at that price. We discussed the price and we had reports from small refiners as to what they were getting from jobbers, and the 4¾¢ price was our idea of what the fair market price was on that day, and we discussed it. It may be that we were posted on what the journals were on that day; I don't remember.

By Mr. Hanning

The price was based on what the jobbers were paying, as shown by the prices in the Oilgram and the Chicago Journal of Commerce.

Q. In other words, what you were doing was following the going price to jobbers in the spot market all the time, weren't you? In other words, these prices were reflected in the trade journals ahead of time?

A. That is right.

They were the going prices to jobbers in the spot market, and all I was doing was to recommend the fair going price in the spot market to jobbers when I made my recommendations, so that those who accepted my recommendations would not go in and chisel on the market and cut
the market.
1010 Referring back to March 12 of the Oilgram at
Tulsa, I find that the going price to jobbers in the
spot market for regular gasoline as reported in the Oilgram

was 4⅝¢ and 4⅞¢. So that 2 days before I made this recommendation as to what we thought was the fair price, the jobber price as reported in the Oilgram was 4⅝¢ and 4⅞¢.

Referring back to March 11th, 3 days ahead of time, I find 4⅝¢ to 4⅞¢.

1011 *Redirect Examination by Mr. Lewin.*

I kept no memorandum of the dates on which I made the price recommendations. The only definite memorandum I have is the letter, Exhibit 682, I wrote on March 15, 1935 to Mr. Maguire. When I said "we discussed" what the recommended price should be, I meant McDowell and Tuttle and myself.

I kept no memorandum of the various discussions as we made those price recommendations throughout that period. I don't see why I should have kept any memorandum. There were just two prices to remember. I don't remember them now. I have nothing to remember them by.

I never saw any minutes made in the meetings of our sub-committee. It wasn't my business to suggest it, and I don't even remember any discussion about minutes. Mr. McDowell was chairman of the meeting in Mr. Ashton's office. There was no secretary named at that meeting, nor anyone acting as secretary at any one of the meetings. I made a few memoranda of what happened at the meetings. I think others did, too.

I have none of these memoranda with me. I threw them away. It is my recollection that there were 5 to 7 different price recommendations.

Q. Don't you recall testifying before the grand jury that there were from 6 to 8?

Mr. Thomas: I object to that, your Honor, as immaterial.

1012 It may have been 8 times. I don't remember how many. I only remember McDowell, Tuttle and myself discussing this. I estimated 5 to 7 times during that period, March 5 to June 7. I recently talked to them about this after I was released from the oath of secrecy.

By the Court

We have small pools within a radius of 2 miles from Tulsa. There are a number in North Texas, in Kansas and all over Oklahoma. That would be all the way from 2 to 200 miles from my office.

The refiners I have named have offices or representatives in Tulsa. The small refiners from whom I was buying gasoline were spread all over.

The trade journals must have got the information they published from the buyers and sellers in that particular locality. They called many people in the business.

The 3 members of our sub-committee were in touch with small refiners every day. McDowell and Tuttle were well posted on the matter of sales. They had many contacts on sales matters that I didn't. They sold to jobbers, and with their information and with what information I had assimilated from talking to the small refiners, we used all of those things as a basis for our conversation at our meetings.

1013 It wasn't any information we got from any of the journals, except that we knew what the journals were quoting, because we all subscribed to them.

By Mr. Lewin

I have given information to the journals for years. I was doing it during this period.

At that first meeting Mr. Boggs, Mr. Simmons and Mr. Winget were all very much pleased with this prospect that we opened up to them.

At the Coronado Hotel meeting and the meeting in Mr. Ashton's room, the price was mentioned, and it was felt by everyone that a fair market price for this distress gasoline should be paid. I could not differentiate between the conversations had in the morning and those in the afternoon.

1014 The Court: Q. Why were the majors so interested in raising the price to these refiners?

A. Because, if they all felt like I did, your Honor, we wanted to pay a fair price for this gasoline.

Q. You have already said you were pretty hard, you drove pretty hard bargains down there, and that you had that reputation.

A. Yes, I did, and after attending that Coronado Hotel meeting I was very enthusiastic, and very happy to be associated with the plan, and at that time I changed from the—in my attitude of being a hard-boiled buyer, into one that wanted to pay a fair price for this distress gasoline.

Q. What was it that influenced you to have a change of heart?

A. From the conversation and the discussion of the plan, as outlined by Mr. Ashton and the others at this meeting.

Mr. Lewin: Q. You knew how important it was to the major companies at that meeting to get that price up, didn't you?

A. I have already testified—

Q. Isn't that right? Didn't you?

A. I have already testified to that, Mr. Lewin.

1015 The Court: All right, answer it again.

Mr. Lewin: Q. That you did?

A. Yes, sir. We wanted to see that price go up.

Q. And that is what gave you the change of heart and made you enthusiastic, wasn't it?

A. No, sir. The main discussion at that Coronado meeting—

Mr. Lewin: I am not asking you about that.

Mr. Donovan: I submit, your Honor, he ought to be permitted to answer the question.

Mr. Lewin: No, I didn't ask about the Coronado meeting.

The Witness: That is what we were talking about.

Mr. Lewin: That is the reason—

Mr. Donovan: Your Honor—I am speaking to the Court—I submit, your Honor that the witness should be permitted to answer.

The Court: Well, he is, if you give him a chance. Let him answer. Read the question, please.

(Question read by reporter, as follows: "Q. And that is what gave you the change of heart and made you enthusiastic, wasn't it?")

A. No, sir, I don't care to say yes to that question.

Mr. Lewin: Q. You don't care to say it.

1016 A. No, sir.

Q. You knew that these major companies represented at that meeting, and in your program, were selling millions of gallons of gasoline under contract to jobbers, at prices published in those journals, didn't you? Is that right?

A. Yes.

Q. And you knew, the higher that journal price went up, the more money they would get under those contracts with these jobbers up here in the Standard of Indiana territory, didn't you?

A. Why, certainly, I knew that they would get more money.

Q. All right. And you knew they would get a great deal more money than a few small independent refiners down there in the field, that you weren't even associated with, didn't you?

A. I have been associated with those refiners for 15 years.

Q. They paid your salary, did they?

A. No, sir.

Q. You were being paid by a major company, and you were working for a major company, weren't you?

A. Yes, sir.

Q. And that is true of McDowell?

A. I have already told you who he works for.

Q. And that is true of Tuttle?

A. Yes.

1017 Q. And the rest of these people that were in that meeting, that made that agreement to buy; isn't that right?

A. Yes.

Mr. Donovan: Now, if it please the Court, I submit that that is not a fair question—

Mr. Lewin: Oh, it is very fair, I think.

Mr. Donovan: I am speaking to the Court.

The Court: Read the last question. Tuttle was employed by a major?

A. Yes, sir.

The Court: Exception allowed. Now, what is your next question?

Mr. Hanning: If your Honor please, let me suggest this to your Honor: I think you have been very gracious with the prosecution here, in permitting them to cross-examine their own witness—

The Court: Now, just let me tell you this: It is very apparent that this witness is hostile to the Prosecution. If you noticed, when he was taken over on cross-examination by counsel for the defense he was very responsive; there was nothing evasive; he answered fully. Right now, on direct, he is hesitating, he is reluctant, he is hostile. They have a perfect right to cross-examine.

1018 Mr. Donovan: May we have an exception to your Honor's statement as to the witness being hostile?

The Court: Yes.

Recross Examination by Mr. Horween.

Q. Calling your attention to the March 5 meeting at St. Louis, did you know whether any of the men present there were members of any code committee?

Mr. Crawford: Object to that as immaterial, and not proper cross-examination.

The Court: Yes; objection sustained. Exception allowed.

Mr. Horween: Q. Mr. Jacobi, I would like to call your attention to at least two of your market letters, in which you refer to refinery allocations. Now, I take it that you were referring to the entire system whereby the Code Authority, under supervision and direction of the United States Government, prescribed the manufacturing quotas for each refinery in the country?

A. Yes, sir.

Mr. Crawford: Object to that, not proper cross-examination, and because it does not represent what the witness has said at all.

1019 The Court: Objection sustained. Exception allowed.

> (Stipulation signed by counsel for W. G. Skelly, James Nagle and Skelly Oil Company, relating to identification of certain documents marked for identification as Exhibits 93 to 128, inclusive, received in evidence as EXHIBIT 714.)

Mr. Chaffetz: The following Exhibits are offered in evidence by the government: 94, 95, 96, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 120, 122, 123, 124, 125, 126 and 127, each of the several documents offered at this time as being admissible in evidence only against such of the defendants who have been implicated by testimony thus far adduced, particularly the testimony of Jacobi with respect to the operations of the so-called Mid-Continent buying program.

Mr. Donovan: The following objections and requests for instruction are made on behalf of the defendants with respect to each of said Exhibits:

(1) It is hearsay.

(2) It does not appear that the letter (memo-

randum or telegram) was made in the regular course of business.

(3) It does not appear that it was the regular course of such business to make such memorandum, letter, telegram or record.

1020 (4) It appears on the face of the letter, telegram or memorandum that (a) it is a mere narration of a past event and therefore, not within the scope of any agency of the person making the memorandum; and (b) it is not in furtherance of any alleged conspiracy.

(5) Each and all of the defendants, excepting the defendant who signed the letter (or telegram), and the defendant company which he was authorized to represent, and the defendant who received the letter (or telegram), and the defendant company which he was authorized to represent, objects to said letter (or telegram) on the ground that said letter (or telegram) is not competent evidence and has no probative force or value to either establish the conspiracy alleged in the indictment as against these objecting defendants, or any of them, or to establish the connection with, or participation in, said alleged conspiracy by these objecting defendants, or any of them; and further request the Court to instruct the jury that said letter (or telegram) cannot and must not be considered by the jury in determining whether there was a conspiracy as alleged in the indictment, as against these objecting defendants, or any of them, or whether they or any of them were parties to such conspiracy; that the con-

1021 spiracy, if any existed, and the participation therein of these objecting defendants, or any of them, can only be established by evidence independent, separate and apart from any statements in this letter (or telegram); and also that the court further instruct the jury that this letter (or telegram) cannot and must not be considered by them as any evidence against these objecting defendants, or any of them, of the truth of matters and statements recited or set forth in said letter (or telegram).

The Court: Each and every such objection is overruled, and each and every such request for instruction is denied and the letters may be received on the condition in which they are described by counsel for the government. They are admissible only against those you have indicated. Exception allowed.

(Documents previously so marked for identification are received in evidence as EXHIBITS 94, 95, 96, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 120, 122, 123, 124, 125, 126, and 127, respectively, upon the conditions stated. All of these exhibits were admitted at R. p. 907 against all defendants generally.)

(Mr. Chaffetz reads Exhibits 94, 95, 96, 98, 99, 101, 102, 103, 112, 113, 120, 124, 126 and 127 to the jury.)

1022 JULIUS C. EVANS, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I am employed by Barnsdall Refining Corporation as assistant to the sales manager. I have been associated with Barnsdall Companies since December, 1920, performing similar duties for 10 or 12 years. I worked for Barnsdall Oil Company until June 1, 1935, and since then for Barnsdall Refining Corporation. Mr. E. B. Reeser, a defendant in this case, was president of Barnsdall Oil Company during the first 6 months of 1935 and for 2 years prior to January 1, 1935.

In the first 5 months of 1935 Barnsdall Oil Company engaged in the business of producing crude oil, and refining and marketing petroleum products. It owned 3 refineries, 1 in Okmulgee, Oklahoma; 1 in Barnsdall, Oklahoma; and 1 in Wichita, Kansas. Barnsdall Refining Corporation, the company I am now with has owned and operated those refineries since June 1, 1935. Barnsdall Oil Company, a Delaware Corporation, was engaged in marketing gasoline during the first 5 months of 1935, but since June 1, 1935 it has been producing and selling crude oil, but not refining and marketing gasoline. On that date the refining and marketing of gasoline was taken over by Barnsdall Refining Corporation. The activ-
1023 ities of Barnsdall Refining Corporation are confined to operating these 3 refineries and marketing gasoline and other petroleum products; it produces no crude oil.

E. B. Reeser has been president of Barnsdall Refining

Corporation from June 1, 1935 down to date, and was active in exercising his duties as president. The principal office of Barnsdall Refining Corporation is in Tulsa, Oklahoma. My headquarters are at Tulsa. Mr. Reeser is there part of the time. His principal office has been at Tulsa since June 1, 1935.

I have not worked so very closely with E. B. Reeser during the period from March 1, 1935 to date. His time is pretty well divided between the Tulsa and New York offices. I usually see him some time on most of the days that he is in the Tulsa office. I do not now conduct my duties under his general supervision. During 1934 and until May 1, 1935, I had no immediate superior in my department at Tulsa. Until May 1, 1935, at least, Mr. Reeser was my immediate superior. Since that time G. F. Racette, the vice president in charge of sales, has been my immediate superior. Since June 1, 1935 I have continued to have practically the same close contact with Mr. Reeser, seeing him every day when he is there, but not to the extent that I did previously.

Barnsdall Motor fuel is our third-grade. It is made at Okmulgee and Wichita. B-Square, the regular
1024 gasoline, is made in all 3 plants, but principally at
Barnsdall, and Wichita when Okmulgee is closed. The Okmulgee plant was closed during the latter part of 1934, for approximately 3 or 4 months. I don't remember if it was closed in December, 1935, but I remember it was closed from January to April, 1936.

Approximately 45% to 50% of Barnsdall Refining Corporation's crude oil was purchased during 1935 and 1936 from Barnsdall Oil Company, and the rest was purchased from independent suppliers. Since I have very little if any contact with the crude oil supply of the company, I couldn't give you a definite answer on whether the available supply of crude oil to our company was scarce in 1936. There were reports of scarcity in the latter part of 1935 and early January, 1936. I do not know at what per cent capacity our refineries were running in 1936. I have very little contact with the actual refinery operations.

Q. Didn't you testify before the Grand Jury that you were running at about 60% capacity in that period?

A. I don't know. That is not far from true in my present opinion, however.

I would like to explain that these are the total years' operations. It might not be true each month.

I believe that on the average throughout 1935 and 1936 our plants were only running about 60% of
1025 their capacity. By capacity of a refinery I mean skimming capacity, or the amount of crude that could be run and the stills would accommodate, by taking off gasoline and light oil products but not running the rest through the pressure stills. If our plant is running at 100%, that means it is taking all the crude oil it is designed to take on a skimming plant basis. If it is run only 60% capacity through the year, it means that it could refine very much more crude oil if we had the cracking capacity to take the residue after the skimming plant operation. The main reason why we only ran 60% was because we didn't have the equipment. In skimming operations you can skim much more crude oil, and take the gasoline and light oils off and sell the balance. We can run much more through our crude stills than we could put through the higher pressure cracking stills; and if we don't have the cracking still capacity we don't need to run more crude oil to obtain cracking stock. Our cracking stills were running more than 60% capacity but I don't know whether they went to 100% or not.

Our officials decided it would be better to close the Okmulgee plant in the first 4 months of 1936. What the actual reason was, I don't know.

Q. Wasn't it because you had excess stocks of gasoline at that time?

A. If that is true, I don't know it to be the fact, no.

1026 Q. Now, didn't you so testify before the grand jury?

A. I don't remember if I did.

Q. Could I refresh your memory by reference to your grand jury testimony on that point?

Mr. Donovan: May I have the same objection as appears at R. pp. 373-74, 446?

The Court: Exception allowed. Mark it and let me see it.

Mr. Lewin: Yes, sir.

(Document purporting to be transcript of grand jury testimony handed to the Court.)

The Court: Q. I am reading from the transcript of testimony taken before the grand jury. Was this question asked you and did you make this answer? "Why didn't you shut down your plant and buy gasoline instead?"

"Answer: We were shut down for six months there.

"Question: For what purpose?

"Answer: Because we had enough gasoline without running any more."

Does that refresh your recollection as to the reason why the plant was closed during that period?

A. No, your Honor, it does not, except that if

1027 we planned,—or our officials planned to close down that plant, we usually made up a sufficient stock to take care of the shipments we had to make on account of the freight differential out of that plant for the contemplated shut-down period.

Q. Were these questions asked you and did you make these answers:

"Question: At one plant, and you were not operating the same plant in all of the first four months of 1936?

"Answer: And December, I believe, wasn't it?

"Mr. Chaffetz: And December of 1935?

"Answer: As I recall it, December, 1935, and the first four months of 1936, our Okmulgee plant was shut down.

"Question: Is that your biggest plant?

"Answer: In total capacity throughput of crude from skim standpoint, yes.

"Mr. Lewin: And that was done solely because of excess stocks?

"Answer: Well, that is the governing factor.

"Question: That is, the governing factor?

"Answer: Yes."

1028 Does that refresh your memory as to the reason why the plant was closed during December, 1935, and the first four months of 1936?

A. Yes.

Q. With that in mind, will you answer why it was closed?

A. That was undoubtedly my opinion at that time, but as I said, I had no direct connection with it being closed down, and all I could do was merely express an opinion.

Mr. Lewin: Q. Is that your opinion now, as to why that plant was shut down during those months?

A. I don't see how I could give you a definite answer to that without consulting some records. You see this plant—

The Court: Q. Have you records here that would help you?

A. I am afraid not.

The Court: You were going to answer when I interrupted you. Finish the answer.

A. I wanted to say, your Honor, I think it will be fair to explain here that the operations of the refinery as a skimming plant is a very, very, costly operation. You can't take the cracking stock for 1029 24/26 fuel oil and 32/36 gas oil which is left from the skimming operation when the gasoline is taken off, if you can't take that cracking stock and put it through your pressure stills it is a losing operation to operate a refinery on the skimming plant basis. Of course, that had to be taken into account, I am sure, at the time this plant was closed down.

Crude oil is put through a crude still, and the light vapors are taken off and condensed into an average gravity of gasoline. There is another cut which is kerosene or naphtha or distillate, or whatever it might be required in that particular refinery operation to take care of its sales. Some refiners leave a residue of 32/36 gas oil and some probably 24/26 fuel. Those charging stocks or cracking stocks are then put through the higher pressure stills or crackers. Third grade gasoline is made mostly by skimming.

Mr. Lewin: Q. So was it your opinion that the reason Okmulgee was closed down during those months was because you had excess stocks of third grade gasoline there?

A. I am sorry, I know nothing only what I have said. What I have expressed is a mere opinion, and our officials always govern those things in the light of our operating problems and the cost of making the gasoline, crude cost and all that sort of thing.

1030 Barnsdall Refining Corporation makes the following grades of gasoline: third grade, which is our cheapest motor fuel; B-Square, which is the regular; and super-gas ethyl, which is our ethyl gasoline. During 1935 and 1936 we refined for the market approximately 20% to 30% of third grade; and from 2% to 4% ethyl. The balance was regular.

The marketing territory of our companies for gasoline in 1935 and 1936 has been the Standard of Indiana territory, and Arkansas, Oklahoma and Colorado. We have some distribution in all 10 states of the Standard of Indiana territory, but in some of them not very extensive distribution. We market, and did in 1935 and 1936, some of our gasoline through jobbers, some through independent dealers to whom we sell gasoline at the tank stations, and some directly through our own service stations.

We own very few service stations in some of these states since the Iowa Plan. We have never owned a great many. We have leased and then operated more than we owned, particularly prior to the Iowa Plan. There were different dates in the different states when our company came under the Iowa Plan in the Standard of Indiana territory. I had in mind July 1, 1935 for Iowa. This plan spread gradually into the rest of the territory, not becoming general until sometime in 1936.

1031 I know Al Breuch of Madison, but not intimately. I was not here when he testified. He is one of the Barnsdall jobbers in Wisconsin under contract. He was a jobber for Barnsdall Oil Company during the first 5 months of 1935, and then for Barnsdall Refining Corporation after June 1, 1935. Jobber contracts that Barnsdall Oil Company had in the first 5 months of 1935 were adopted and taken over by Barnsdall Refining Corporation since June 1, 1935.

I would rather not try to say what volume of gasoline our company marketed in the year 1935 unless I had some records before me. I have records that I would like to refer to.

Q. Would you want to refer to those records, or could you give me the approximate figure? Do you recall testifying about that before the grand jury?

A. I recall some questions about that but I do not recall what I told you.

The Court: If you have anything that will refresh your memory now, you may resort to those records, any memorandum that you may have made.

A. I would like to do that.

This is going down as a matter of record, and I would rather have it than what I said before the grand jury.

1032 In 1935 we sold 99,568,286 gallons; in 1936, 88,556,480. Those figures are the total of all grades of gasoline that was sold by our company in all our territory.

I would hate to guess how much of that total gallonage was marketed in the Standard of Indiana territory. I would say nearer 80% than 90% of it was marketed in the Standard of Indiana territory for both those years. From 40% to 50% of the total gallonage sold in Standard of Indiana territory in 1935 and 1936 was marketed through independent jobbers under contract with us. The other, the 50% to 60%, would be marketed or sold through our bulk plants to independent dealers and through our service stations.

We sell some gasoline to large consumers in tank cars or in tank trucks. We do not have a regular arrangement with Ford Motor Company. We have sold them during that period. We sell from time to time to state and political subdivisions. Whether we sell to them on accepted bids depends on what they require. Most of them buy only on that basis.

We do not sell any substantial amount of gasoline on the spot market, usually just a car or two at a time.

It has been my duty for 6 or 7 years to make up monthly estimates for the refining department of our company as to the amount we expected to ship during the following
1033 month. A copy goes to Mr. Reeser, the president, and
a copy to Mr. Holsten, the vice-president, general manager and chairman of the operating committee of Barnsdall Refining Corporation. He is in charge of refining operations. The purpose of giving Mr. Holsten those monthly estimates is to show the quantity of gasoline I think we will need to fill our requirements for the succeeding month. I usually make those up the latter part of the previous month. Mr. Holsten might use it to govern him in the amount of his refinery operations. Whatever the Executive Committee decides about the refining operation is another matter; but, it is for their information. The purpose of my giving it to Mr. Holsten is not primarily to govern him in the amount of crude he will run, and the amount of gasoline he will make, because he might be building up storage for delivery to the pipe line, or something else so his crude runs might not be based on that estimate every month. My purpose in giving him the monthly estimates is so that he can be governed as to his refinery operations.

During 1935 and 1936, our companies had a form of marginal contract with their jobbers. The last form was adopted in April 1936. I do not have anything to do with the making of those contracts with the jobbers. As assistant sales manager of our company, these jobber contracts come to my department, and I am familiar with them.
1034 I didn't have any authority to say what would be put
in the printed form that is now used, and had nothing to do with framing it, but I did know what was being

printed. The forms of our contracts are determined by our officials.

We had several forms of jobber contracts in force for the Standard of Indiana territory prior to April, 1936. Before April 1936, the last time we adopted a form of jobber contract for use in the Standard of Indiana territory was December, 1935, and before that, April 1935, and before that, December 1934. We had some 20 different forms of contracts, from the period 1921 to the end of 1936. I can't remember all the changes we made; but every time we reprinted, we usually made some change in the form.

By the Court

My position with this company was in charge of sales. I was the assistant to the sales manager. These contracts came to my desk from our various division offices to be checked over before they were executed. That was one of my duties. Another duty was the purchasing of gasoline, including natural gasoline for our refineries. At that time I was familiar with every provision of those contracts. I am familiar now with our latest form. It is hard to keep up with 20 of them over a 6 year period, and remember all the changes in them. The price provision was an
1035 important part of that contract, and I was familiar at
the time with the price provision of the prevailing jobber's contract in force in this territory in 1935 and 1936. As we marketed in competition with what we found to be existing, we changed our contracts. We changed it in April, and again in December 1935. I don't know the changes just now. Every jobber had the same kind of a contract on new business. We had contracts in existence, which hadn't expired, that had been going for some time. When we adopted the new contract in 1935, we used it with all of our jobbers that made contracts with us after its adoption with very few exceptions.

By Mr. Lewin

Reverting to those monthly estimates that I said I made up for Mr. Holsten of the amounts we expected to ship during the following month, I can tell you how close the estimates came to the amounts we did actually ship for those months. For instance, in March, 1935, we estimated we would ship 7,250,000 gallons. We actually shipped 6,679,694. We were usually as close as that. For the whole year 1935, our estimates were off 86/100 of 1%. July, I believe, was the month in which we had the greatest variation during 1935. We estimated 9,750,000 and we shipped

10,759,713. We never were farther away in that year than 10% in our monthly estimate, and some time we were
1036 very, very close, so that the average was very close.

That was true of 1936 also. The greatest variation in 1936 was for October. We estimated 6,900,000, and we shipped 8,022,000.

In 1935 and 1936 we had our marketing territory divided up into 8 marketing divisions. All but 2 were in the Standard of Indiana territory. Those division headquarters were in Tulsa, Toledo, Chicago, Milwaukee, Council Bluffs, Minneapolis and Kansas City. We maintain offices and a permanent staff of from 10 to 50 in each of those centers.

During recess I looked over the forms of jobber contract that our company had in force in the Standard of Indiana territory in 1935 and 1936. We had 3 forms we were using then. At the beginning of the year the price provision on B-Square gasoline was the average of the two publications, Chicago Journal of Commerce and Platt's Oilgram. On the next form of contract, that provision was not changed. It continued that way throughout the rest of 1935 and through the first part of 1936. When we made our new form in April, 1936, we made no change in that provision.

At the beginning of 1935 the basic price in the first form of contract for third grade was the average of the low of the Journal of Commerce and Platt's Oilgram. The next form, adopted in December 1935, remained the same. The new price provision on third grade, in April, 1936
1037 was the average of the averages of the two publications. That is, the average of the highest and the lowest of Platt's Oilgram and of the Journal of Commerce. We had some in which you add all 4 of those quotations together and divide that by 4, and some that were just the average of the 2 averages.

If you take 99,000,000 gallons shipped in 1935, and take 80% of that for the Standard of Indiana territory, you get about 79,000,000 gallons, and if half of that is sold to jobbers, you would have approximately 40,000,000 that year sold to jobbers. That is about right on the basis of the estimate I gave you. About 40,000,000 in that year was sold at a price based on those quotations in the two journals in the spot market, but this 80% is only an estimate. I do not have the actual figures.

In selling gasoline to dealers and through our own service stations and to consumers in the Standard of Indiana territory we followed the price set by the so-called market leader in the territory. Generally the retail price set by Standard of Indiana during the period that we are discussing was about 5½¢ plus freight and taxes above the quotations on the spot market in those journals.

The gasoline we sold through retail service stations of
our own, we sold at about 5½¢, plus freight and taxes,
over the spot market quotations in the journals, but
1038 during this period, 1935 and 1936, we sold to dealers
at a discount under the normal service station price.
However, the price that we got from the dealers was based
finally on the spot market quotations in the journals.

The retail market structure is a complicated thing but the quotations in the journals were a factor in the prices that we got in the Standard of Indiana territory for approximately 79,000,000 of gallons in 1935 and something less than that in 1936.

I am familiar with the so-called major company buying activities which commenced in the spring of 1935, to the extent that they informed us. I first learned of them from Mr. McDowell. Going back to the trade papers prior to any information I had from Mr. McDowell, I first discussed it with Mr. Reeser sometime during March of 1935.

Mr. Lewin: Did you have any connection with that work?

Mr. Donovan: I object to that question. Too indefinite, "Did you have any connection with that work."

The Court: You are still speaking about the buying program?

Mr. Lewin: Yes.

The Court: He may answer that.

A. That is still a rather indefinite question as
1039 far as I am concerned personally. No, I didn't.

Mr. Lewin: On behalf of your company, did you have any connection with that work?

A. We bought distress gasoline.

Q. Did you have something to do with that?

A. Yes.

The Court: You weren't in the oil business independently of the Barnsdall people?

A. No.

Q. All you did do during 1935 and 1936 in the oil industry was work you were doing for Barnsdall?

A. Yes.

By Mr. Lewin

I talked to Mr. Reeser about this and I got instructions from him that where we could use gasoline, it would be agreeable to purchase distress gasoline which was being offered as such.

Q. Did you learn from him that that so-called distress gasoline was being offered through a committee?

A. Well, my recollection is that Mr. McDowell told me that.

I can't say that I also learned it from Mr. Reeser.

1040 I am sure I already knew it at whatever time it was in March that I talked to him. We two discussed it together, our purchasing gasoline, the supply of distress gasoline and our requirements. I am sure we discussed the committee, and the fact that this distress gasoline was going to be offered to us through a committee.

As I remember, Mr. McDowell told me that he and Mr. Tuttle and Mr. Jacobi were members of what I believe he called the Tank Car Sub-Committee of the Stabilization Committee. R. W. McDowell was vice president of Mid-Continent Petroleum Corporation. O. J. Tuttle was with Empire Oil & Refining Company. W. P. Jacobi was connected with Wadhams Oil Company.

Q. Now, what did Mr. Reeser tell you in March of 1935 about what you should do?

The Court: Do about what?

Mr. Lewin: About buying this distressed gasoline through the committee.

Mr. Denton: If the Court please, I object to the question. It assumes something not in evidence, contrary to the evidence the Government has put in. No evidence yet that this committee sold any gasoline.

Mr. Chaffetz: We want to know what the facts are.

1041 Mr. Lewin: Q. I want you to tell us what Mr. Reeser told you you should do, if anything, with regard to buying distress gasoline that the committee might offer?

The Witness: A. The buying of gasoline was left to me, and he said: "Any time we need the gasoline", he said, "you have my permission to buy distress gasoline to apply against what we need to purchase from month to month".

He did not tell me that recommendations would come from this committee from time to time. I don't remember that he said "We will have recommendations for gasoline purchases offered to us, and subject to my instructions, we can probably buy some gasoline".

Mr. Lewin: Q. Did you so testify before the Grand Jury?

A. I don't remember.

Mr. Thomas: What was the date, if the Court please, of the Grand Jury testimony to which you are referring? What date was it given?

The Court: Q. You may state just what knowledge you had of this buying program and what you did under that program for your company.

1042 *By the Court*

Let me go back to the first conversation I had with Mr. McDowell. That is the first information I had other than the notices in the trade papers that some buying was being contemplated. Mr. McDowell said to me at that time that he was one of this sub-committee. However, he didn't say how many were on it, but he did mention the other two names which I have already given. And as I recall the conversation, he said, "We have some gasoline, I can tell you where to buy some gasoline, some distress gasoline, and we probably will be calling you from time to time." That was, as I remember, 3 or 4 days prior to March 11th. He mentioned and suggested places of purchases at that time, but I didn't take any action on it until I talked to Mr. Reeser on March 11th. As I remember, he suggested that we buy from Waggoner Refining Company.

When I talked to Mr. Reeser he said, "We are always buying gasoline anyway,"—and we were from month to month; had been for a long time—"And I have no objection to our using some distress gasoline as long as we can fit it into our picture." That is the substance of the conversation with Mr. Reeser on March 11th.

I had a half dozen or more conversations with Mr. McDowell after that date about this business of buying distress gasoline. I don't remember any other talks 1043 with Mr. Reeser about buying distress gasoline after that date, except sometimes when he was passing my office, if he asked me what we were buying or what we were doing, I told him. In this conversation I had with Mr. Reeser, he did not tell me anything about what the set-up would be for the buying of this distress gasoline.

The Court: Q. Was this question asked you when you appeared before the grand jury:

> "Question: What did he tell you were the objectives of that committee?
>
> "Answer: He didn't tell me. He said that we will have recommendations for gasoline purchases offered to us and subject to my instructions we can probably buy some gasoline."

Now, was that question asked you and did you make that answer at that time?

Mr. Thomas: If the Court please, on behalf of the defendants we wish to make this objection: We object, because the transcript of testimony of the witness before the grand jury has not been properly authenticated, and there is no showing that such testimony was reduced to writing in the presence of the witness or read over, or examined by him at the time. And, furthermore, the record of such testimony, if properly authenticated, is not contemporaneous with the facts or occurrences

1044 as to which he is now asked to testify; and because such testimony was given at a time too remote from the date of the occurrence or facts inquired about, and likewise too remote from the date of trial. I understand this testimony was given about a year after the date of the conversation with Mr. Reeser and with Mr. McDowell; is that correct, Mr. Lewin?

The Court: Yes, I think that is. He said his conversation was in March with Mr. McDowell, and he testified in July of 1936. Objection overruled. Exception allowed.

Mr. Thomas: Before he proceeds, if the Court please, in order to obviate the necessity of making this same objection to further use of the grand jury testimony with this witness, will it be considered that the same objection is made to the further use and the same ruling made by the Court?

The Court: Yes, let the record so show.

Mr. Thomas: Without making an objection each time.

The Court: Any use of the transcript of the testimony before the grand jury will be made subject to that objection.

1045 The Court: Q. Now I will read your answer that you made at that time: "He didn't tell me. He said that we will have recommendations for gasoline purchases offered to us and subject to my instructions we can probably buy some gasoline."

Did you make that answer at that time?

A. I suppose I did.

Q. Now, does that refresh your memory as to just what conversation you did have with Mr. Reeser?

Mr. Donovan: May I suggest to your Honor that the answer of the witness is in substance not inconsistent with what your Honor has read.

The Court: No, it is not, but I think while we are on the subject if he can,—if it does refresh his memory,—

Q. Will you state now what your recollection is as to whatever conversations you had with Mr. Reeser about this subject matter.

A. I don't remember his saying that. I don't definitely remember testifying to that effect before the grand jury. But at the time of our conversation I undoubtedly assumed that he had knowledge of it,—the fact that distress gasoline was being offered and some work was being done to formulate plans to purchase it. In substance he
1046 said to me about this: "You are authorized to buy such distress gasoline as we have a place for and will fit in with our regular estimates of what we need."

We bought 24 tank cars of this distress gasoline in March of 1935; in April, 29 cars; May, 20; June, 26; July, 15; August, 8; September, 17; October, 29. The amounts varied each month. One reason the amounts varied was because our requirements varied. Another reason was that we were buying other gasoline all the time, and we didn't take this distress material unless we could find a place for it among our other purchases. We purchased for freight saving and things of that sort.

Mr. Lewin: Q. Have you a record there of your purchases through the committee during 1935.

Mr. Denton: I object to the question because it is assuming something that is not in evidence. There is no testimony in this record so far, as I understand it, that the committee sold any gasoline.

The Court: This witness has not testified that he purchased through any committee.

We made the purchases of distress gasoline direct from the refiner from whom we purchased. The committee suggested sources of supply, and sometimes possibly amounts. But we didn't pay any attention 1047 to that if it didn't work into our picture.

Mr. Lewin: Q. Did Mr. Reeser tell you that you would get telephone calls from members of this Committee?

A. That I don't remember that he did.

Q. Did he tell you that most of the calls would come from Mr. McDowell?

A. No, he didn't tell me where the calls would come from.

(Mr. Lewin hands documents purporting to be transcript of grand jury testimony to the Court.)

At the time of that conversation with Mr. Reeser there was no object in my trying to tell him anything about some buying or his telling me anything about it. I assumed we knew each other knew about it. He only authorized me to purchase such of our requirements as we could apply as against such distress material as was offered. I told him that I had had a call from Mr. McDowell, and he may have said, "Well, you may have some more from him." I don't remember him telling me that sometimes he might handle the matter himself.

(Mr. Lewin hands document purporting to be transcript of grand jury testimony to the Court.)

The Court: That one question is too indefinite, but I will ask this question:

Q. Did Mr. Reeser in his conversation with you 1048 as to the distress gasoline that was to be purchased designate any company that you were to buy from?

A. Not except that he may have said, in his first conversation, that he had no objection to our buying from Waggoner. I don't remember at any other time he said to buy it from anybody, or that he did in that instance.

Q. I will read an answer that appears in this testimony taken before the grand jury:

"Answer: And some of the gasoline that was purchased early in 1935 he told me, let's buy it from certain companies, and he designated the companies."

Is it your recollection now that there was only one company?

Mr. Donovan: The same objection as appears at R. p. 518.

The Court: Overruled; exception allowed.

A. That is all I remember right now. May I have leave to explain that? I remember Waggoner, because we had not previously been buying from them. If there were others, I certainly don't recall.

By the Court

In 1935 we bought distress gasoline from different 1049 sources: Bell Oil & Gas Company; Waggoner Refining Company; Rock Island Refining Company; Danciger Refineries, Incorporated; Vickers Petroleum Company, Simms Petroleum Company; Omar Refining Company; McMurray Refining Company; L. O. Carter Company; Tansel Petroleum Company; Dale W. Moore Oil Company; Hercules Oil Company; Taxman Refining Company; Grogan Oil Company; Acme Petroleum Company; Falcon Refining Company; and Russell Refining Company.

As I remember it now, in practically every instance all of those companies were people that we had done business with before 1935, except probably Waggoner. There may have been one or two others.

By Mr. Lewin

We had not done much business with Rock Island before; apparently that is another one of the exceptions.

Mr. Reeser did not tell me that this buying was to be a month to month proposition, and that he would instruct me definitely as to the quantities that we would take.

(Document purporting to be transcript of grand jury testimony handed to the Court by Mr. Lewin for examination.)

The Court: Q. Now, for the purpose of refreshing your memory, I will ask you if, when you appeared before the grand jury, these questions were asked you and did you make these answers:

1050 "Q. No. I was interested in there from '35 on. What instructions did Mr. Reeser give you with regard to this extra purchasing that you were doing?

"A. That it was to be a month to month proposition, and he would instruct me definitely as to the quantity."

Now, after hearing that question, and that answer read; does that refresh your memory as to what your instructions were from Mr. Reeser, with reference to the monthly purchases of gasoline?

Mr. Donovan: Same objection as appears at R. p. 518.

The Court: Overruled; exception allowed.

A. I am sorry, your Honor; it does not. There is so much that has gone on since, that it is hard to remember back what was actually the fact at that time.

Q. Well, this buying program, was that something unusual or was it the usual thing in your business down there?

A. So far as our buying was concerned, it was nothing at all unusual.

Q. It wasn't?

1051 A. No, sir. We had a record of purchases, away back, in 1931.

By Mr. Lewin

I don't remember talking to Mr. Reeser about this buying of distress gasoline any more after that time in March; except when he might ask me from time to time what we were buying, not only from them, but from anybody. From that time on I operated on those standing instructions.

Q. Didn't Mr. Reeser tell you in March that there would be a committee that would suggest to you where to buy, and didn't he tell you to follow the suggestions of that committee, subject to his final orders?

A. No.

(Document purporting to be transcript of grand jury testimony handed to Court by Mr. Lewin for examination, and examined by the Court.)

The Court: The questions are so leading in there that I am not going to ask him that.

By Mr. Lewin

Mr. McDowell told me that there would be gasoline offered to Barnsdall Company through a buying committee. I don't remember that Mr. Reeser told me that too. I don't remember anything definite now that Mr. Reeser said about a committee, or the buying, after that conversation in March.

1052 The Court: I think you can help us out a lot.

You have that whole set-up in mind down there, just as clear as anyone. Now, you know what Mr. Reeser said to you, and you know what conversations you had with this committee, don't you?

A. Yes, sir.

Q. And you know what they were doing, and what Mr. Reeser was doing.

(Document purporting to be transcript of grand jury testimony handed to the Court by Mr. Lewin.)

Q. Well, did you know whether or not there would be gasoline offered to you through this committee, or by this committee?

A. As I remember it, Mr. McDowell told me that they would be telling us of this gasoline from time to time.

The Court: Yes. All right, that is sufficient.

Mr. Lewin: Q. Have you ever heard the term "dancing partner" used in connection with this buying committee?

A. Yes, I have.

I don't believe I ever used that term myself outside of our own office. It just meant the company that we made that particular purchase from. In 1935 all those com-
1053 panies I read to you a while ago were our dancing partners.

In March, 1935, we bought 25 cars from Waggoner, the last 10 of which were bought March 29th for shipment in April, and 1 from Omar, and 3 from Rock Island.

In April, 1935, we bought 30 cars from Waggoner or 40 cars if you include the 10 cars purchased March 29th, 1 from Cushing; and 1 from Danciger. There was 1 car from Bell Oil & Gas, but I don't know whether it was distress gasoline, or a special grade.

We bought some of both grades, regular and third, from dancing partners during the period. We bought some third from Waggoner, and the purchase from Danciger was third grade. We bought more regular gasoline from Waggoner than any one of the others during the first part of this period. Waggoner and Rock Island were our principal sources for distress gasoline or regular grade.

(Witness examines memorandum.)

The exact number of cars for March, 1935, is 35 from Waggoner; 3 from Rock Island; 1 from Omar; and 1 from Bell. That would be 40 for March, 1935, from independent refiners located in the Mid-Continent field that is Oklahoma, Kansas and North Texas.

In February, 1935, we bought a total of 34 cars from independent refiners located in these fields. 4 cars were from Bell and 9 from Anderson-Prichard. They were
bought on the month to month basis. There were 4
1054 cars that we bought on the spot market from inde-
pendent refiners in those fields in February from the Tulsa office. All these distress gasoline purchases that I am speaking of were bought out of the Tulsa office. Those 4 cars were from Bell. There weren't any others in February.

The way I have this, 6 cars would be about right for purchases in January, 1935, on the spot market, from independent refiners located in those fields. They came from American Petroleum, Tansel, and L. O. Carter Company, all brokers. As to purchases on the spot market in January, 1935, from independent refiners located in those fields, we had 1 car here from Bell Oil & Gas. There were no others, except those we have mentioned.

I can't tell you from this record when the orders were placed, but we had 4 cars from Tansel, 1 from Boutell. I am sure that the Boutell order was in January, and most of the Tansel. That changes the final figure for January: Tansel, 4; Boutell, 1; James B. Berry, 2; L. O. Carter, 1; American Petroleum, 1; Bell, 1. That is 10 in January, all from brokers, except 1 from Bell.

Then 4 cars in February from Bell. The others in February from the brokers were: James B. Berry, 1; Hurley Gasoline Sales, 2; Boutell, 2; Sun Oil, 2. That makes 11 for February. January and February were months before I had this conversation with Mr. McDowell. After my conversation with Mr. McDowell, I took 40 in March.

1055 In April we purchased 31. They were purchased from Waggoner and Danciger; some of the others were carried over from the previous month, which were purchased on the 29th. 30 of them came from Waggoner.

We purchased 30 from Waggoner in May and 5 from Vickers. 1 is all I have here from Western Oil & Fuel. I am not sure about Western Oil & Fuel; it may have been purchased by our Minneapolis office. I have some more here, than 36 or 35 cars. The list I read to the Judge was the list of the cars that were shipped, that actually went out in that month. You see, purchasing these in the latter few days of the month, there will be a lap over. Now, I am giving you the dates the purchase orders were placed. There were 50 cars in May. Dividing them among the independent refiners from whom we purchased them—30 from Waggoner, 5 from Sims, 5 from Omar, 5 from Bell, and 5 from Vickers.

In June, Waggoner, 5; and McMurray, 5. The 5 from Omar and 5 from Bell, given you in May, were on the 29th so they were shipped in June. There were only orders for 10 cars placed in June.

Now, July: Waggoner, 10; L. O. Carter, 2; Tansel, 5; Dale W. Moore, 5; Hercules, 5. All except Waggoner are brokers. The total amount for July is 27 cars.

Now, August: L. O. Carter, 3; Tansel, 3; Hercules, 5. We did not buy any from Western Oil & Fuel unless it
1056 was handled through the Minneapolis office. That would be 11 for August.

Now, September: Dale W. Moore, 7; Tansel, 5; Taxman, 10; Grogan, 3. There was none from L. O. Carter unless it was handled by our brokerage department in Minneapolis. There was none from Omar. If there were, the same thing would be true there. There was 105,000 gallons from Anderson-Prichard but there was not a purchase order placed that month. I have 25 cars as the total amount bought on the spot market from those independents in that month.

Now, October: Waggoner, 25; Rock Island, 5. That is all. We had 2 cars from Omar and 1 from Tansel in that month, but they were probably handled by our brokerage department. That would be 30 that I handled, and possibly 3 more handled by our brokerage department, or a total of 33 for October.

Now, November: Rock Island, 5; Bell, 15; Rock Island, 10 more; Tansel, 1; Acme, 3. There was none from Waggoner. There may have been some carried over from the previous month. There was no new purchase placed during November with Waggoner. The total for November is 34.

December, 1935: Bell, 15; Rock Island, 15; Dale W. Moore, 2; Russell Refining Company, 1. I am giving them on the date of order basis. We placed an order with
1057 Falcon on December 2nd for 40 cars, or our requirements out of that quantity to be shipped as we needed it at the rate of 10 cars per month. I think over a 2 or 3 months' period we only took 13 cars. I don't know how it will show up in your tabulation. We had 1 car purchased from Omar in December, 1935, for Minneapolis. I don't

know how many were taken from Falcon. Excluding Falcon, the total for that month was 33. That 1 from Omar I am not counting because I did not place the order.

Now, January of 1936: Bell, 15; Russell, 3; Rock Island, 15. My figures show 33 for January, 1936.

Now, February, 1936: Bell, 15; Rock Island, 15. 1 from Omar was a brokerage transaction for us. I did not place the order. Wilson Oil Products Company took that. That was on March 29. It may not have been shipped in February. There was 1 more purchase for Bell, 15 cars for shipment in March. That makes a total of 46 in February, 1936.

Now, March, 1936: Rock Island, 15; Sunray, 1. There were no others. Any others would be carried over from the other month.

April, 1936: Bell, 15; Rock Island, 15; Tansel, 1; Bell,
another 15 on the 28th, many of which were carried over
like all of them where they were purchased for May ship-
ment. On the 28th, 15 for Rock Island for May ship-
1058 ment. 1 from Wilcox on the 15th. That is all except
some compartment car shipments. The total for
April, 1936 is 62.

Looking at that whole period, beginning March 1, 1935 and running through April 1936, I would hesitate to answer for a matter of record without checking it what percentage roughly of these purchases would be third grade and what percentage would be regular, but most of it was regular. We had some purchases of both grades from Bell. There is a little confusion in my mind as to just what you mean about third grade purchases from Bell. Up to April, 1936, it is true that we bought our third grade usually from Bell, but we probably bought some regular also.

During this time I remember only one or two telephone conversations with Mr. Jacobi with regard to purchasing this gasoline, and I don't remember what time during the year. It was undoubtedly after March 1, 1935. I cannot recount the conversation. The substance is that he was advising me of distress gasoline, the source of supply, and the quantity suggested to me. He suggested the place to purchase it. I don't remember now who it was or anything about it.

Q. Did he suggest the names of the companies from whom you should purchase it?

A. Well, he did that by saying where the gasoline was available, yes.

1059 Q. And named the quantities from each one?

A. I don't remember the exact conversations about that, but he undoubtedly did suggest some quantity as being available from a certain refinery.

I had some talks with Mr. McDowell on these six occasions when I talked to him about the buying of this gasoline. On those occasions McDowell suggested the source of supply and the amounts they had to offer.

I don't remember the names he may have told me in any particular time, but he probably included those that we bought from during this period. I live and work in Tulsa. I do not see R. W. McDowell often; 3 or 4 times probably during this period. I probably saw Jacobi 2 or 3 times. I think I saw O. J. Tuttle a little oftener than that during this time, probably a dozen times going and coming from his office. His office was a little closer. When I got these suggestions from Mr. McDowell or Mr. Jacobi, I did not refer them to Mr. Reeser, except on the first occasion.

We did not pay our dancing partners the same price for the same quality of gasoline at each time we bought from them, because the price was determined by my idea of the market on the day of the purchase. I don't remember any purchases from different dancing partners on the same
day, but if there were any we probably paid the
1060 same price to those different dancing partners when
we bought the same quality. I don't remember that
we gave any of them special treatment.

Q. Did you during this period get any recommendations as to special prices from anybody?

A. No, I got no prices from anybody. I checked markets with Mr. McDowell, I know. I don't remember whether I even discussed market prices or anything else with Mr. Jacobi or Mr. Tuttle.

Mr. Reeser did not tell me that I would get a price from this committee that I was to follow. The committee never suggested a price that I was to pay. My only discussion of price with the committee was as one refiner to another. I asked them their idea of the market from time to time.

By the Court

I was here a part of the time while Mr. Jacobi was testifying. I heard his testimony with reference to calling up certain individuals, certain oil men, about what the price was to be the following week. I never received any calls of that kind from McDowell or any of the committee, stating what the price was to be on Monday.

By Mr. Lewin

I understand this Exhibit 712 is a chart of the quo-
1061 tations carried in the Journal of Commerce and Platt's Oilgram for the period from January 1, 1935 to December 31, 1935. I recall that the trend of quotations carried in those journals during that period corresponded to the representation made on that chart. In the period from March 5, 1935 to June 7, 1935, I notice that chart shows the prices are rising step by step. During that time I was not getting suggestions from this committee to pay higher prices than the quotations in the Journal of Commerce.

By the Court

I never got a suggestion from any member of that committee to pay a higher price than is quoted in the Journal. I discussed prices with them. I am sure I asked them what they were paying on their purchases. The discussion was, "What is your idea of the market today?" Or something like that. That information we exchanged every day between various refiners as such. It was the same kind of conversation with one of this committee of three as a refiner rather than as a committee.

Q. We are talking about conversations with this committee. You heard Mr. Jacobi testify that the committee told him what the price would be on the following Monday—on Friday what it would be on the following Monday?

A. Yes.

1062 Q. Were you interested in that information the committee was disposing of after their meeting?

A. I never received any such information as such.

Q. Did you make this answer to this question when you were before the Grand Jury:

> "Question: Yes. Well, I think that is all right. I have no quarrel with that. My only point is that you testified that while that price was rising, you were getting suggestions from this committee to pay higher prices than the Journal.
>
> "Answer: Yes."

Does that refresh your memory any?

Mr. Donovan: Same objection as appears at R. p. 518.

The Court: Objection overruled; exception allowed.

A. Well, I must have confused a suggested price with a discussion about a going price.

Q. What is the fact as to whether or not any member of this committee ever phoned you advising you what price they had agreed upon should be the Monday price?

A. No, your Honor.

1063 Q. You never got any information of that kind from any member of that committee?

A. Not as such, no. I talked price with them, but not like that.

My discussion of prices with members of that committee would be the same as with any other refiner. That is, if they called and said so and so had some gasoline, I might say, "Are you buying gasoline now? And if so, what are you paying?" I don't remember even such a conversation with Mr. Tuttle or Mr. Jacobi, but I do remember such a conversation with Mr. McDowell. In substance, it was about what I have already said, "What is your idea of the price? Are you buying gasoline, and if so, what are you paying for it?" and without any promise on my part to pay the same price. He was buying gasoline for Mid-Continent Petroleum Corporation at that time.

Q. How many times did you have a conversation with Mr. McDowell or any member of that committee about the prices to be paid the following week?

A. I am unable to make a separation of—such a separation of prices and discussions that there was agreed prices for the following week.

Q. Well, what discussion did you have with Mr.
1064 McDowell as to prices that were to be paid on this program of buying distressed gasoline?

A. Nothing except a price—asked him, "What is your idea of the market now?" It was always left up to me, as far as Mr. McDowell was concerned, to make my own purchases at my own price.

Q. You asked him what his ideas were. Did you follow his suggestions—or, did you pay the price that he said he thought ought to be paid?

A. I don't remember I ever did, and if I did, it was entirely accidental.

I don't remember calling Mr. McDowell at all during 1935 except probably to discuss the market with him. I heard from him every month for a while when he was in town, I should say. I did not call him or discuss the market with him very often. Probably 2 or 3 times a year. I wouldn't want to say he called me every month. On these calls he would suggest gasoline available from certain refineries, and that is about all there was to it. He would not say anything about a price the committee thought ought to be the fair market price. He never gave me a committee price.

By Mr. Lewin

I made purchases of distress gasoline during the period after March 1, 1935 on the same basis and with the
1065 same authority I had had all of the time. Mr. Reeser
said it was up to me to handle it. I did not get instructions from Mr. Reeser during that period to pay a certain price for the gasoline we were buying, except my authority was from him because of the fact that my superior at that time lived in Milwaukee and he was hardly ever in Tulsa.

Q. But you do recall definitely receiving instructions from Mr. Reeser from time to time during this period that you were to pay a particular price which you understood was higher than the Journal of Commerce?

A. He left that entirely up to me.

(Mr. Lewin passes document purporting to be transcript of testimony before grand jury to the Court.)

The Court: The question was, do you remember receiving instructions of that kind from Mr. Reeser?

A. No. He relied entirely on my own judgment.

The Court: Q. You never received any such instructions from him?

A. Except in a general way as given to me to apply the distress gasoline purchases against our total requirements. If he asked me any time later what was done, I had the record.

1066 Q. Did you ever receive any instructions from him that you were to pay a particular price that you understood was higher that the Journal of Commerce price?

A. Only in the blanket authority given me to act in purchasing.

Q. How many times did you get that blanket authority?

A. Well, I had it all the time until March, 1935. He was out of the city in February, and came back to Tulsa on March 11th. He was in California, in fact. And on March 11th, we had this first conversation, and he turned this part of it up to me, and left it up to my own judgment.

Q. That was the only time you ever received any instructions from Mr. Reeser—about purchasing distress gasoline?

A. Yes. I undoubtedly talked to him some time later and we would make purchases when we needed them, and he probably would ask me.

Q. How many times did he talk to you on those occasions?

A. Mr. Reeser had a habit of strolling up and down the hall, and when I met him, he would tell me. That is all there is to that. In other words, 1067 your Honor, I was acting in the capacity of sales manager, and this was turned over to me to handle, and if Mr. Reeser had any condemnation or commendation for the way I did, he didn't say it.

Q. Did he ever have any suggestions for you about what you ought to do in buying gasoline?

A. I don't recall that he ever did. I am sure, though, that he was in accord with me that we should pay a fair market price for our purchases.

Q. Was this question asked you and did you make this answer when you testified before the Grand Jury:

> "Question: And did he say, 'Buy an eighth above the Journal,' or did he say, 'Five and three-quarters'?
>
> "Answer: I don't know that he discussed it in that way.
>
> "Question: But you recall very definitely receiving instructions from Mr. Reeser from time to time that you were to pay a particular price that you understood was higher than the Journal?
>
> 1068 "Answer: Yes, from time to time. I do not recall a great many times, but I do remember some times."

Does that refresh your memory as to what instructions you received from Mr. Reeser with reference to buying this distressed gasoline higher or lower than the quotations of the Journal?

Mr. Donovan: Same objection as appears at R. p. 518.

The Court: Objection overruled; exception allowed.

A. What time was that supposed to have been, in early 1935?

Mr. Chaffetz: In the spring of 1935.

A. Undoubtedly we discussed those purchases. It was after the fact rather than before.

The Court: Q. Now, was this question asked you and did you make this answer:

> "Question: Do you remember that during that time the tank car price of gasoline was rising?
>
> "Answer: Yes.
>
> "Question: And it reached its peak in June, 1935. Now, it probably was during that period when the price was rising that you were in-
> 1069 structed at that particular time to buy above the Journal of Commerce. I want you to tell us all you know about that, any particular instructions of that sort that came from Mr. Reeser. What were the instructions when you buy at such and such a price? Did he say, 'Buy an eighth above the Journal' or did he say 'Five and three quarters?'
>
> "Answer: I don't know that he discussed it in that way.
>
> "Question: But you do recall very definitely receiving instructions from Mr. Reeser from time to time that you were to pay a particular price which you understood was higher than the Journal of Commerce?
>
> "Answer: Yes, from time to time. I do not mean a great many times, but I do remember some times."

Does that refresh your memory as to what those instructions were from Mr. Reeser?

A. I know I never received any instructions from him to buy by the Journal. I don't remember all of this or what the circumstances were surrounding it. The only price discussions I remember of are those after the fact.

Q. What do you mean "After the fact"?

1070 A. After the purchases had been made.

Q. What was your reason for discussing it after that?

A. He quite often would go by and ask me what I was doing.

Q. Wasn't he also equally interested in what prices you were going to pay?

A. No, he seemed to have confidence in my ability to pay the fair market price.

Q. But he was interested in what you had done after you had done it, without making any suggestion to you as to what you ought to do in the case, is that right?

A. That is the way I recall it. I might say that the testimony before the Grand Jury there—

(Discussion off the record and out of the hearing of the jury between Mr. Lewin and the Court.)

(The following occurred in the hearing of the jury:)

The Court: Q. You testified twice before the Grand Jury, didn't you?

A. Yes.

Q. Do you remember testifying in relation to the same—giving substantially the same testimony the second time as you did the first time?

1071 A. No, I do not, your Honor.

Q. I am going to ask this particular question we are discussing now.

A. I don't recall it on the second appearance at all.

The Court: I will read from the testimony that you gave before the grand jury on December 21, 1936:

"Question: You remember that during that time the tank car price of gasoline was rising?

"Answer: Yes."

Q. Now, that time was from March, 1935, to June, 1935?

A. Yes.

"Question: And that it reached such a peak in 1935, in June, 1935. Now, it probably was during that period when the price was rising that you were instructed, at particular times, to buy above the Journal of Commerce. Now, I want you to tell us all about it.

"Answer: Any particular purchases of that sort, those instructions came from Mr. Reeser.

"Question: What were the instructions?

1072 "Answer: To buy at such and such a price.

"Question: Did he say an eighth above the Journal or did he say five and three-quarters?

> "Answer: I don't know whether he designated it in that way.
>
> "Question: But you recall very definitely receiving instructions from Mr. Reeser from time to time that you were to pay a particular price that you understood was higher than the Journal of Commerce?
>
> "Answer: Yes, from time to time; I do not mean a great many times, but I do remember some times.
>
> "Question; Is that your testimony?"

Was your answer this: "Yes, the thing that I didn't seem to get over to you there in that testimony is that if we made a purchase at the suggested committee price, it was checked back to him for confirmation"?

Do you remember giving that answer?

A. I do not, your Honor. I don't remember that second reading at all.

The Court: That appears to be a qualification of what your former answer was before the first grand jury.

1073 The Witness: My authority for making these purchases—

Mr. Donovan: Your Honor, if I may respectfully suggest: I think it would be fair to the witness since he has said that he does not remember that taking place, if we could find in the second grand jury how these first questions were called to his mind.

The Court: I should have gone back a question before that. Q. Is this your testimony before the former grand jury, at page 7050:

> "Question: You do remember that during that time the tank car price of gasoline was rising?"

And then after reading that, then the answers:

> "Yes. The thing that I didn't seem to get over to you there in that testimony is that if we made a purchase at the suggested committee price, it was checked back to him for confirmation."

Now, that is what was done. I didn't read the first two questions.

Mr. Francis: Did you read the date of that?

The Court: December 21, 1936.

1074 Mr. Donovan: And as I understand it now, your

Honor then read question and answer from the previous grand jury and said, "Was that your testimony."

The Court: The question is, was this your testimony before the grand jury at page 7050. Then they read it to him, and his answer was: "Yes. The thing that I didn't get over to you there in that testimony is that if we made a purchase at the suggested committee price, it was checked back to him for confirmation."

Q. And by "to him", who did you mean,—Mr. Reeser?

A. That is what I meant by that. Of course, as I say, by the time it got back to him it was already done. If he had objected to it, there was nothing that I could do except probably—

Q. Did he ever object to it?

A. I have no recollection that he did.

Mr. Lewin: Your Honor, will you look at page 738 of that record?

(Mr. Lewin hands document purporting to be transcript of testimony before grant jury to the Court)

The Court: Those questions are too leading.

1075 Mr. Lewin: Q. Wasn't Reeser telling you to buy at higher than the Journal of Commerce during that time?

A. I remember of no such instances?

Q. Do you recall giving this testimony before the grand jury—

(Mr. Lewin hands document purporting to be transcript of testimony before grand jury to the Court)

The Court: Q. Now, will you say now Mr. Reeser never told you to pay a price higher than quoted in the Journal of that date?

A. Except under his general authority to me to purchase at my own best judgment.

Q. What was that general authority?

A. Shall I say, by virtue of my position, that was my position, to make the purchases.

Q. What was there in that—

A. The authority I refer to was to apply our purchases of distress gasoline against our total requirements.

By the Court

There was nothing in that general authority, or specific authority, that directed me at any time to pay a price for gasoline higher than that quoted in the Journal. We didn't buy higher than some of the prices of the Journal.
1076 The Journal quotes a range of prices each day.
Taking our total record of shipments for the year, they compare very favorably with the low prices on the day of purchase; some below the low; a few above; and many at the low. In 1935, we had 32 purchase transactions which were below the low of the Oilgram; 23, which is 39%, at the low of the Oilgram; 4 purchases, or 6.8%, were above the low of the Oilgram on the day of the purchase. We have no purchases at all during 1935 that were above the high price shown in the Oilgram. I can give you the same comparison in the Chicago Journal of Commerce. Still speaking of 1935, 30 purchases or transactions, or 50.8%, were on a basis below the low price in the Chicago Journal of Commerce; 21 transactions, or 35.6%, were at the low price of the Chicago Journal of Commerce; 8 transactions were above the low. There were none above the high price published in the Chicago Journal of Commerce.

Q. Now, referring to your testimony before the grand jury on July 23, 1936, was this question asked you and did you make this answer:

"Question: When he told you to buy at higher than the Journal of Commerce, what he was doing was boosting the price and telling you to pay it?
1077 "Answer: Well, he was telling me to do it.
"Question: It was Reeser boosting the price?
"Answer: As far as instructions to me, that is right, yes."

Now, with that in mind, will you answer this question: Did he ever tell you to pay a higher price than that quoted in the Journal of Commerce?

Mr. Donovan: Same objection to the use of the grand jury testimony as appears at R. p. 518.

The Court: Objection overruled; exception allowed.

A. No, your Honor.

In explanation I only want to say this: That after it was all over, if he had any objections to those prices, he would have told me.

Q. That is the way you want to reconcile your testimony now with that?

A. Yes.

Q. But you never had any talk with him about the prices that you were to pay until after the sale was made?

A. That is right.

1078 *By Mr. Lewin*,

I have a purchase here from Bell on January 2, 1936, my only purchase in January, of 15 cars of third grade at 4¾¢ to be shipped over January. I have no record of what the quotation of the low in the Journal was on that day, except by referring to the chart. On January 2nd the low of the Chicago Journal of Commerce was 4¾¢. On January 9 there was an increase of 10¢ per barrel in the crude oil price.

Q. I asked you whether you didn't in that month buy 4 cars from Bell Oil & Gas, 3 of them at ⅛¢ above the low of the Chicago Journal of Commerce; and one at ¼¢ above. Will you answer that?

A. I don't know the 4 cars that you refer to. On account of a request from the seller of this gasoline, we adjusted that price on January 11th.

Q. Then is it true you bought 4 cars from Bell Oil & Gas in January of 1936 at above the low of the Chicago Journal of Commerce; 3 of them ⅛¢ above; and 1 at ¼¢ above?

A. I am sorry you are dealing with certain shipments as taken from invoices, and all I know is that on the 9th we adjusted the price to 5¼¢ at the request of the seller.

1079 The Court: He wants to know what price you paid for the gasoline.

A. The only way I can answer is, take the 5¼¢ price and compare it with the date the cars had been shipped. The 15 cars were purchased, to be shipped over January. I don't remember how many had been shipped up to January 9th, but at the seller's request we changed the price on the balance of the order, to 5¼¢. I think—

Q. Changed it from what?

A. From 4¾¢ to 5¼¢, on account of the crude advance. Now, some had been shipped, but not very much—I don't have the record of the dates of those cars; that is the reason I can't answer your question.

By Mr. Lewin

That is the best answer I can give you.

On February 29, I placed an order to be shipped as instructed for 15 cars of third grade from Bell, which must have been carried over into March. I am sure they were to be taken out in March. We bought them at 5⅛¢ until further advised. We made some purchases subject to correction, and I believe at that time that was ⅛¢ over the low of the Chicago Journal. That was third grade.

1080 Q. Look at January 1936, and tell us whether you didn't buy 3 cars from Rock Island at ⅛¢ above the low of the Journal of Commerce in that month, and 1 car at ¼¢ above the low—no, at ⅜¢ above the low of the Journal of Commerce?

A. The cars you refer to were out of a total purchased of 15 cars, on January 2nd. This was regular gasoline, purchased at 5⅝¢. That was the low on that date.

The price was understood at the date the purchase was made, and if there is any discrepancy between the price at which the shipment was invoiced and the price on the purchase order, it is because the price was adjusted.

By the Court

As to the terms on which we bought our gasoline during that period, we went out in the market and bought it and agreed to pay 4½¢ for instance. Some of these purchases about this time were made on the basis of a definite price agreed upon, which were later adjusted. Some of them were made on a basis of the publications.

In January, 1936 we bought from Bell and from Rock Island. The 15 cars of regular were purchased from Rock Island at 5⅝¢, without any adjustments of any kind, to
be shipped over January. That was a closed deal.
1081 We did not buy any gasoline during that month on
any other terms or conditions except a closed deal.
This was our only purchase. The purchase order was placed on January 2nd. 3 cars were shipped on the 8th, 3 cars on the 9th, and 1 car on the 10th. Now, at the seller's request, we adjusted the price on the balance. That was a closed deal when we bought the cars. It was closed at that time, but we reopened it. There were no conditions that if the price of crude changed, we were to make an alteration in the price we were to pay for the gas. We made the adjustment because they requested it on account of the higher cost for crude. We were not under any obligation to make the adjustment under our contract under which the purchase was made, but the price no longer remained a fair market price after crude oil went up. It had long been a practice of changing gasoline prices, when

there was a crude change, at the rate of ¼¢ a gallon for each 5¢ change in the crude oil price.

We made some other adjustments of price in the first 6 months that year. We had a purchase of 15 cars from Bell on February 1st, third grade at 5¼¢ a gallon. We later, by agreement with the seller, adjusted the price to 5⅛¢, and finally wound up with a price of 5¢, so that was adjusted downward. We worked closely with these sellers; we wanted to be satisfied, and we wanted them to be satisfied.

1082 *By Mr. Lewin*

On March 2, 1936, the low was 5⅞¢, which was the low of Platt's Oilgram for a number of days at the first of March. Then the low went up to 6¢ in both these journals for the rest of March. We made a purchase on March 2nd from Rock Island of 15 cars of regular at 6⅛¢ until further advised. That is ⅛¢ above the low of both those journals during March. We made no further adjustment of that price. It was probably an oversight on my part.

The only record I have of a purchase from Rock Island in February, 1936 is February 1st, 15 cars of regular at 6⅛¢, for shipment over February. There was no adjustment made on that price. I have no record that we bought 5 cars in that month at ⅛¢ above the low of the Journal of Commerce. If there was any adjustment made in the last part of February when the low went down to 5⅞¢, I have no record of it here. We made no purchases in the latter part of February, except third grade.

By the Court

On February 29th, we made a purchase from Bell of 15 cars third grade at 5⅛¢ until further advised. I believe that was ⅛¢ over the low of the Chicago Journal. 5¼¢ was the price in the Journal that day. Apparently the prices we paid during April were all at the low of the Jour-
1083 nal. The prices we paid were all at or below the low quotations in the Journal in May. The same thing was true in June of the same year.

By Mr. Lewin

I know Thomas Fitzgerald. He was Mr. Robert McDowell's assistant during this period in Mid-Continent Petroleum Corporation. I had conversations with him during this period, with regard to these purchases, probably a similar number as with Mr. McDowell, probably 6 or 8. I don't remember that my conversations with him were in any way particularly different from those with Mr. Mc-

Dowell. When he called me and suggested sources of supply for gasoline, I didn't understand that they were to be my sources unless I wanted to take them. In a very few instances I called those sources dancing partners. We called them dancing partners.

I am sure he recommended these companies that I have named here, from whom I bought. He did not suggest how much we should buy from each one. With respect to quantities, he may have said how much they had. He told me that to be sure there was enough for my needs, I guess. We did not have any particular difficulty in buying gasoline. Sometimes these companies when we would ask them to fill our orders, urged us to take more. That was generally true throughout this period; I think we could have bought more.

1084 Mr. Fitzgerald never suggested a definite quantity on any particular occasion for me to take. He may have told me that they had 10 cars, but he didn't suggest that I take them. That depends on the point of view. I didn't understand it to be so.

It is my best recollection now that Mr. Fitzgerald called me 6 or 7 times. I had only 1 call from O. J. Tuttle that I recall. His conversation with me was very similar to these others. I don't remember that he even mentioned dancing partners. He mentioned companies, but he did not say I was to buy from them. Undoubtedly the companies he mentioned were out of that list. I don't know any individual ones at this time. I don't remember that he mentioned quantities at any time for me to purchase.

I know John Steiger. He is an employee of Platt's Oilgram at Tulsa. He was calling me throughout this period, probably 2 or 3 times a week. He calls me on Monday morning I know particularly for market information, for prices if we had any sales to report. I don't recall ever reporting any purchases to him. If I did I told him it was from another refinery. I probably did some time or other if he asked me. I don't remember definitely that I ever told him any price I ever paid for gasoline, but if he asked me and I had purchased from someone, I undoubtedly told him. I don't remember whether he asked me.
1085 Unless he asked for refinery purchases I seldom had any prices on gasoline to give him because I only reported spot sales which were very few. I have given him our spot market quotations, but not very often, because if we made no sales we had nothing to report. We could give him what our idea of price was. I did that many times.

By the Court

I don't believe Mr. Steiger was with the Oilgram during the years of 1934 and 1933, but somebody from the Oilgram called me for information during 1932, 1933 and 1934 similar to the information I gave Mr. Steiger in 1935. Many of those calls never mentioned gasoline. They mentioned burning oil and fuel oil, and things of that sort.

One of Mr. Steiger's favorite expressions would be, "Anything new in the market today?" I understood he was asking for the market in oil products, and anything of particular interest. Then we would probably branch off on fuel oil, bright supplies, kerosene, gas oil, and so on. He never asked me the price any one else was paying than ourselves. That is about all he asked me or talked to me about. It was the same information they were gathering for years past. They have been gathering information since.

1086 *By Mr. Lewin*

Our company posts a spot market quotation for regular gasoline and third grade. We do not, at this time, publish it and post it in these 8 different division offices throughout our marketing territory. It is quite probable that we did some time during the period of 1935 and 1936. That quotation was what our idea of the market was at that time. We arrived at it by our contacts in the markets and with particular refiners. We are now taking the average of the Journal of Commerce quotations as our spot market quotation, but I don't know that we have always done it. As I recall, that was generally true throughout 1935 and 1936.

Q. And when you gave Steiger your spot market quotations you were simply giving him the average of what the Journal carried; is that right?

A. It is not.

Q. When you gave Mr. Steiger that spot market quotation wasn't that the same as the average of the Journal of Commerce?

A. I do not recall giving him spot market quotations unless we made sales. If he asked me the price I told him what I thought the market ought to be.

1087 A conservative figure of the average amounts of cars that we purchased on spot from independent refiners from March 1, 1935 through April 1936 would be about 32 cars a month. That would be about 3% of our monthly sales during that period.

The estimates for Mr. Holsten of the amounts we would probably ship over the succeeding month included all our gallonage, regardless of the source from which it was to be shipped. I would take into account how much we were purchasing. I received from Mr. Holsten or other of our officials, based on that estimate, a rough guess as to what we would need to purchase outside for that month. When I made up the estimate and gave it to Mr. Holsten I did not subtract from the final figure I gave him the amount of gasoline we would purchase from outside sources. Mr. Holsten would make the calculation of how much he ought to run at the refinery. I would not say that Mr. Holsten had to cut down his refinery run a small part so that our company could accommodate this 3% purchase. We did not have enough gallonage to operate our 3 refineries at capacity all the time, and it became necessary some times to close one down. It was costing us more to make the gasoline than we could buy it for practically all the time.

Q. I think you said he was probably running at 60% of capacity. When you buy 3% on the spot
1088 market, wouldn't he have to cut his runs down to something below 60% capacity in order to accommodate this outside material.

A. From one standpoint, yes.

Q. And is my illustration right? If you were running at 60% capacity, then when you buy 3% of the total of your monthly sales, he would cut down to say 58% or 57%. Is that the principle?

A. Yes, only it won't hold true all the way through.

The Court: Q. Why did you buy this distress gasoline in 1935 and 1936?

A. We had always made similar purchases, and it took them to make out our total shipments added to what we actually shipped from our own refineries.

We had the crude oil and equipment to supply our own demands without going out in the market and buying from smaller refineries at that time, but it cost us more to make it than to buy it. We have 3 plants, and not enough business for all 3 of them, so we cannot run them all 3 together. We have more than enough business for 2, but not enough for the third. They cannot all at the same time be operating on a profitable basis. 2 of them operated every day of the year. The Okmulgee 1089 plant was the one where fluctuation occurred. There was a certain amount of investment in that plant, a certain number of employees there, and it was a proposition to close it down altogether. Even the other 2 refineries were not run at full capacity. We are getting into that question of a skimming plant operation, or cracking plant operation. From the standpoint of skimming we did not run 1 at full capacity. From the standpoint of cracking what we do skim, we do part of the time.

By the Court

If we had run 2 of our refineries during 1935 and 1936 at full capacity, I am sure we would not have been able to produce enough gasoline to supply our needs. I am at a loss to explain exactly the difficult situation we are in. At some plants we do not have enough cracking capacity to handle all the residue we could skim. If a plant was so set up that we could run as much as possible to the skimming operation and have the capacity to further break that down by cracking, it would be an ideal operation, and on a reasonable amount every day it would be profitable at reasonable prices. But our situation is that we do not have cracking capacity at either of these plants sufficient to take care of all we could skim in the skimming operation. The skimming operation is not a profitable one, but the profitable operation would come as the result of the cracking plant operation.

1090 During the period we are discussing our plants were run down. We had made some improvements and betterments where we could put on a better operation. As they were set up at that time I do not believe it was possible to have operated them profitably or we would not have gotten the maximum amount of gasoline through them.

The Barnsdall plant is our oldest plant and most complete. There we make some 150 products. We may make them in one month, and part of them the next month, and all of that has to be taken into account in the daily operation, whether it is lubricating oil and all that sort of thing, or gas oil and residual fuel to put through the high pressure still. I am unable to answer by gallons by plants how much gasoline would be produced a day with every machine operating and every man working full time. I do not believe if our refinery man was here himself, he could do that.

We could run through the Barnsdall plant in one month, operating under such conditions, 3,000 or 3,500 barrels of crude oil a day. Two of those plants operating at full capacity, during this period we have in mind, would not have supplied our demands for gasoline that we were to furnish our trade. But if we had operated a third plant, it would have been too much.

Q. So it is your idea that it was cheaper for you to go out into the market and buy the gasoline
1091 that you needed, over and above the amount produced by the two plants.

A. We didn't buy that much, your Honor, but we did buy a part of it. We could produce gasoline at a cheaper figure in two plants, operating at something near capacity, than we could in two plants at capacity and the third at half capacity.

We were operating all 3 plants during all of 1935. During the first 4 months of 1936 only the 2 plants were operating; Okmulgee was closed. After that the 3 plants operated.

I don't recall Mr. McDowell ever suggesting a definite amount to be purchased.

Q. Do you remember him saying, when he did make a suggestion as to amounts, "Do you think this is more than your share?"

A. No, I do not.

Q. Do you remember telling him that you had no way of knowing what your share was?

A. I may have. I didn't consider that we had any share.

Q. Well, do you think you told him that you didn't have any way of knowing that your share was?

A. I have said I may have, because I didn't
1092 know that we had any share.

Q. Did you tell him, "I have never known what percentage of the total ours was?"

A. I might have. I don't recall.

Q. Let's see if we may refresh your recollection. Do you remember him saying during that conversation, "Well, this amount I am recommending is not too much for you to take?"

A. Well, I must confess I don't remember that particular conversation.

Q. All right, let's see if we can refresh your recollection.

(Document purporting to be transcript of testimony before grand jury handed to Court by Mr. Lewin, and examined by the Court.)

The Court: I don't think there is anything inconsistent at all there.

Mr. Chaffetz: If your Honor please, it does seem to me that that testimony is directly inconsistent with his entire—

Mr. Donovan: I object to that statement before the jury.

The Court: I must disagree with you. I have made my ruling, and I don't want any more discussion from anybody.

Mr. Chaffetz: I beg your pardon.

1093 Mr. Lewin: Q. Did Mr. McDowell usually say to you, using the word "dancing partner," that your dancing partner is such and such a company for such and such a month, and for such and such an amount?

A. No, I don't remember it in so many words. I remember the expression, "the dancing partner".

Q. Do you remember his telling you who your dancing partner was, and using those words?

A. I do not.

Q. Do you remember him using the words that your dancing partners were such and such companies?

(Mr. Lewin presents document purporting to be transcript of testimony before grand jury to the Court.)

The Court: Now, try and recollect what it was, without having to go through all this.

A. I don't recall any time when he said, "You are supposed to take such and such a company for a dancing partner," or a certain quantity to be purchased.

By Mr. Lewin:

I said before that I used the term "dancing partners" in my office, and heard it used outside. We used it to apply to any such gasoline we bought, regardless of

1094 the source of the information. We referred to the person we bought it from as a dancing partner, but he didn't know we referred to him as a dancing partner.

By the Court

Mr. McDowell may have mentioned the name of a company in connection with the term "dancing partner." He probably did use the term. He never told me I was to buy from anyone. His were merely suggestions.

Mr. Lewin: Q. Do you remember times when you weren't desirous of buying more than this 30 cars average?

A. Why, no, I can't remember that.

Mr. McDowell may have suggested that we take some more, after we had all we could take, or all we wanted. I don't remember that he urged it. A suggestion from him wasn't an urge. We had many chances to purchase gasoline which we did not do, when we had already covered our requirements. I know only by report that other major companies were buying gasoline on suggestions from this committee.

I do not know what, if any, effect the amount of distress gasoline we were buying ~~was~~ having on the quoted prices.

I knew A. V. Bourque, a defendant in this case, through 1935 and 1936. During those years he was secretary
1095 of the Western Petroleum Refiners Association. I sent him written reports each week for a few weeks of 1935, but I don't remember how many, of the amount of distress gasoline we were buying. I don't remember now when I started to send him those reports. I am sure we did not start sending reports when the buying activities started in March. April or May would be my best recollection. I don't remember how long I continued to send these reports, but I should say about 2 months, maybe 3. I don't remember sending them beyond the end of June 1935. He requested such reports and I sent them without any instructions. I sent them only on his request, and on my own initiative. Mr. Reeser did not tell me to make those reports to Mr. Bourque.

Mr. Lewin: Give me 7112.

(Document purporting to be transcript of grand jury testimony handed to Court by Mr. Lewin.)

The Court: Listen to this—

Mr. Thomas: If the Court please, on behalf of the defendants I object to the method being pursued here, for the purpose, as I understand it, of refreshing the recollection of the witness. I object to the reading of questions and answers from this grand

jury testimony, to which we are denied all access, in the presence of the jury. It appeared here yes-
1096 terday afternoon that considerable of the questions and answers were read. The proper method of refreshing the recollection of the witness is to show him the document.

The Court: Let me say to you right now, Mr. Thomas, you know and I know it is the law if I submit this testimony to this witness then it is available to all the defendants and to you.

Mr. Thomas: Yes, and that is my contention. Now I want—

The Court: That is a little suggestion on your part that you, by a round-about way, get testimony that you are not entitled to.

Mr. Thomas: Well, I am entitled to the testimony, and I am making the objection for the purpose of this record, and I ask that hereafter that method be followed of refreshing the witness' recollection instead of reading the questions and answers in the presence of the jury.

The Court: Your objection is overruled, and I will say to you again, for your information, that if this testimony is submitted to this witness then it becomes available to you and the others, which the law does not contemplate. Exception allowed.

Mr. Thomas: I have asserted, your Honor, in good
1097 faith that I think this testimony should be available to us, and I assert that is our position.

The Court: I have said before, testimony taken before the grand jury is confidential.

Mr. Thomas: I would like the record to show that I except to the statement of the Court in the presence of the jury—

The Court: It may show that.

Mr. Thomas: (Continuing)—with reference to our right to have testimony.

The Court: Q. On July 23, 1936, you appeared before the grand jury, and were these questions asked you, and did you make these answers:

> "Question: Both. Was that pretty regular, every month?
>
> "Answer: Yes, it was—not so much from the standpoint of calling, but we sent him a memorandum. We sent him just a memorandum of our purchases.

“Question: What was the purpose of that?

“Answer: Well, I don't know.

“Question: Did he ask for it originally?

“Answer: As I recall it, Mr. Reeser instructed that we report once a week.

“Question: Once a week?

1098 “Answer: To Mr. Bourque.

“Question: From the very start?

“Answer: No, we didn't—by the start, you mean February, 1936?

“Question: Yes.

“Answer: No, I don't think so.”

Now, you have heard the reading of those questions and answers: Does that refresh your memory any as to whether or not Mr. Reeser instructed you to send these reports to Mr. Bourque?

A. Since I appeared before the grand jury, I have always thought that Mr. Bourque requested those reports; and I know that his office called us from week to week, and I furnished them. I don't remember now that Mr. Reeser even knew that the reports were being sent. It is quite possible that might have been my impression at that time.

Mr. Lewin: Your Honor, would you look at page 7115 on that same point.

The Witness: I believe, your Honor, if you will permit me this explanation.

The Court: All right.

The Witness: Our company has, ever since I can
remember, been members of the Western Petroleum
Refiners Association; and any information pertain-
1099 ing to our activities that they wanted, we never hesitated to give it to them.

The Court: Q. Well, you hadn't been sending Mr. Bourque reports on gasoline you were buying prior to February 1, 1935, were you?

A. No, your Honor, we had not.

Mr. Lewin: Q. Well, was that a full report that you sent Mr. Bourque, showing the companies from whom you purchased, the price and the amounts?

A. That is what the reports contained, yes.

By Mr. Lewin

I don't recall that the report was written on the letter head of Barnsdall Company. It may have been. It was merely a memorandum signed by me and addressed to Mr.

Bourque. In practically every instance it was sent him by mail. It may have been delivered by messenger. We kept the copies of that memoranda for about a month at a time, and discarded them because they were not a part of our permanent file. Our purchase order record stood for this. Our company usually keeps carbon copies of letters that we send, matters of importance.

Q. Why did you depart from that practice in this instance?

A. It was a duplication of other records we had in the office.

1100 (Exhibit 113, being a letter dated May 6, 1935, from Skelly Oil Company to Mr. A. V. Bourque, was handed to the witness.)

The report that I sent to Mr. Bourque did not look like that. It was listed like this: since the date of the last report we have purchased the following: and the name of the company, the amount and the price.

It was very much like Exhibit 111, letter from Skelly Oil Co. to Mr. Bourque, June 5, 1935, which reads: "Confirming telephone conversation with your office today, you were advised that we have purchased gasoline as follows:" then comes the dates; purchased from; then comes the independent refiners listed; then quantity and grade in the next column; and then the price in the next column. It may or may not have been in response to a conversation.

As I remember it, Mr. Bourque called us from week to week, if we overlooked sending those reports. When they quit calling for them, we quit sending them. I do not know why they quit calling us. I sent them because they asked for them. It is my memory now that we sent them at intervals of every week or 10 days.

I have no records at all of my conversations with McDowell, Jacobi, Tuttle or Fitzgerald, or of my conferences with Bourque, on this subject. I did not have any 1101 records at all that showed our participation in this committee's efforts. I don't remember that my contacts with this committee on this subject ceased at any time during this period.

I am not still getting calls from McDowell, Tuttle, Jacobi and Fitzgerald on this subject. I believe it stopped in the spring of 1936.

Since May, 1936 we have continued purchasing of gasoline, including distress gasoline, clear on down to date.

We have continued to purchase gasoline from some of the independent refiners I have named or all of them even down to date. We bought more gasoline the first part of 1937 than we did the whole year of 1936. During May, June, July, August, September, October, November and the first 22 days of December, 1936, we bought from them as we needed gasoline. As to the regularity of the buying, I am not prepared to say. My recollection is that our total purchases increased during that period.

I never did call A. V. Bourque to find out about any distress gasoline at any time. In 1936 we received information from his office regarding distress gasoline, but I don't recall talking to Mr. Bourque direct. I just talked to his office. His office called me on that same subject during this period. I don't recall any regularity in connection with those calls. I can't say that my talks with Bourque 1102 on the subject of where distress gasoline was, were a substitute for my talks with the committee prior to 1936.

When we bought from these independent refiners during this period of 1935 and 1936 on a spot transaction for immediate shipment, in some cases we just paid the low of the Journal of Commerce, and some times we paid a flat price, usually the same as the low of the Journal of Commerce.

Mr. Thomas: If the Court please, before the cross examination of the witness commences, I have some motions that I would like to make with respect to this witness the same as was made with respect to Mr. Jacobi's cross examination.

Counsel for the defense respectfully move this Court to direct counsel for the Government to make available for the purpose of the cross examination of the witness, Julius C. Evans, the transcripts of the testimony of said witness before the December, 1935 Grand Jury and the December, 1936 Grand Jury, which transcripts the counsel for the Government have utilized, both by reading from said transcripts to the witness and by commmenting to the witness with regard to said transcripts in its direct examination of said witness, in order to refresh his recollection on points which are material to the is- 1103 sues in this case and material to the defense in exercising that right of full cross examination to which it is lawfully entitled. Such an examination of each of said transcripts, in so far as they concern this witness, is necessary for the cross examination of this witness, especially since, as stated by the counsel for the Government and testified to by this witness, he appeared once before the July, 1936 Grand Jury and once before the December, 1936 Grand Jury, and each time testified to substantially the same matters which were referred to by counsel for the Government in order to refresh the witness' recollection. Counsel for the defense should, therefore, be permitted to examine said transcripts in order to determine if explanations or qualifications of any of said testimony were made by said witness on any of said occasions referred to by said witness or counsel for the Government on direct examination of this witness.

The Court: I think you will agree with me, Mr. Thomas, that counsel in the examination of this witness did not read from a transcript; all the reading from that transcript was done by the Court.

Mr. Thomas: With that correction.

The Court: With that correction, your motion is overruled. Exception allowed.

1104 Mr. Thomas: I have a further motion, your Honor. Counsel for the defendants respectfully move this Court to direct counsel for the Government to make available for cross examination of the witness, Julius C. Evans, the transcripts of the testimony of said witness before the grand juries, utilized by the counsel for the Government in their direct examination, or by the Court, in refreshing the recollection of said witness on points which are material to the issues in this case and material to the defense in exercising that right of full cross examination to which it is lawfully entitled.

The Court: Motion overruled.

Mr. Thomas: I take it an exception follows to those rulings?

The Court: It does.

Cross-Examination by Mr. Donovan.

Q. Mr. Evans, you testified on your direct examination that in 1935 and in 1936 you purchased gasoline from independent refiners for your company?

A. I did.

Q. Was this a new policy on the part of your company?

1105 A. No, it was not.

Q. Is it true that for years you had been purchasing gasoline from independent refiners?

A. That is true.

Q. Isn't it a fact that for Barnsdall and its predecessor or predecessors that there had been some 33 independent refiners from which you had bought in the prior years? Is that correct?

A. That is right.

Q. And you also bought from major refiners in 1935 and in 1936 and in prior years, is that correct?

A. We did.

I have a record of the purchases of all grades gasoline from brokers, independent refiners and majors beginning with January, 1931 down to date. The total number of purchases are:

For 1931, 5,340,346 gallons.
For 1932, 5,159,838 gallons.
For 1933, 7,670,497 gallons.
For 1934, 9,700,927 gallons.
For 1935, 8,970,878 gallons.
For 1936, 10,618,547 gallons.
For 1937, 12,539,795 gallons (January to October 1, 1937).

Mr. Donovan. Q. And one reason for buying
1106 from other companies is that, I thought you said,
you sometimes effected a freight saving?

Mr. Lewin: That is objected to, leading a friendly witness, who is obviously hostile to the Government.

The Court: Objection overruled. He may answer.

A. We did buy some gasoline from other refiners for the reason that the place of delivery was closer to their refinery, and a cheaper freight rate than from ours.

Mr. Donovan: Q. And another reason is that you sometimes, you would buy gasoline cheaper than buying the crude and making it into gasoline?

Mr. Lewin: Objected to. Leading a friendly witness.

Mr. Donovan: The witness was permitted to answer.

The Court: We can take the answer. No necessity for leading the witness at all, Mr. Donovan.

Mr. Donovan: Your Honor, I understood this was cross examination.

The Court: That is proper cross examination except where you have a witness that is hostile to the other side and friendly to—

1107 Mr. Donovan: If the Court please, simply because the witness is called from the company doesn't make him hostile.

The Court: Just eliminate the leading questions.

A. Could I have the question again, please?

(Question read by reporter.)

A. Yes, practically all the time, especially during 1935 and 1936.

Mr. Donovan: Q. How did the amount of gasoline you purchased from the independent refiners named in the indictment compare with the total amount you bought from other refiners during the year 1935, from March to December?

A. Out of a total of 86 cars shipped in March, 1935, 24 were purchased from independent refiners named in the indictment.

The total bought from March to December 1935, in gallons and in tank cars, from independent refiners named in the indictment was 2,011,133 gallons, or 250 tank cars. The percentage of our total purchases in 1935 which were made from the refiners named in the indictment as selling companies was 25.7%.

In 1936 we bought a total of 10,512,920 gallons or 1,314 cars. Of that we bought from independent refiners named in this indictment 3,124,224 gallons, or 390 tank cars, or 29.7%.

1108 According to my records, the first instance during 1935 when we made 2 purchases from different refineries of the same quality of gasoline, within 2 or 3 days of each other, was: April 13 from Waggoner Refining Company 10 cars of third grade at 4⅛¢ and on the 15th from Danciger 1 car of third grade at 4⅜¢. The next instance that my records show that we made such purchases is August 27 from Western Oil & Fuel Company 1 car of third grade at 4½¢; on the 28th from L. O. Carter Company 4 cars of third grade at 4⅝¢; and on August 31st from Dale W. Moore 5 cars of third grade at 4⅝¢. The next instance is September 17th from Taxman Refining Company 10 cars of third grade at 4¾¢; on the 18th from Tansel Petroleum Company 1 car of third grade at 4½¢; on September 21st from Grogan Oil Company 2 cars of third grade at 4⅝¢; and on the 21st another purchase from Grogan of the same product at the same price.

The next instance was on December 4th from Bell Oil & Gas 15 cars of third grade at 4¾¢; on the 2nd from Falcon Refining Company 1 car of third grade at 4⅜¢; and on the 6th from Dale W. Moore Oil Company 2 cars of third grade at 4½¢.

I have only 2 instances in 1936. On January 2nd from Bell Oil & Gas Company 3 cars of third grade at 4¾¢; and on January 3rd from Russell Refining Company 3
cars of third grade at 4¼¢. The June instance:
1109 both cars on June 4th; 1 from Omar of the 66-70
water white product at 5⅜¢, and on the same date from Tansel, a car of the same product at 5⅛¢.

I testified yesterday that we made no purchases in the latter part of February, 1936, except third grade. That is correct. I have only 1 car listed here in the latter part of February.

As I remember, I also testified yesterday that I was afraid I could not locate 5 cars about which I was questioned, but that we had some hold-over from January, probably, into February. I have made an examination of my record as to purchases from Rock Island in February, 1936. That purchase was 15 cars of regular from Rock Island on February 1st for shipment over the balance of the month of February at 6⅛¢. The price, as reported in the Journal on that day, was 6⅛¢. That was the low of the Journal. The purchase was at a flat price. A flat price means that all the shipments on that purchase would be invoiced at the price specified on the purchase order. The low of the Chicago Journal of Commerce was unchanged until the 20th, and the high remained constant. It was purchased for shipment over the month. By the end of the month the low of the Chicago Journal had declined; also, the low in the other publication. The low
price in both publications had gone down. The pur-
1110 chase was made at 6⅛¢ on February 1st, and the
price was specified, and was not changed. These quotations that I am referring to here, I take from Exhibit 713, which is the chart before me. Apparently that was our only purchase of regular gasoline during February 1936.

I estimated 6,250,000 gallons as our requirements for shipment for February. I turned that in to our refinery department on the 25th of the month. There were no other written communications between the refinery department and me. After I gave that estimate to the refinery, I was told to purchase a certain quantity for the shipments we made in February by the vice-president in charge of the manufacturing and the refinery, F. E. Holsten.

The refinery just took my word for it that this estimate was a good guess of what we would ship, and out of that total we purchased so many cars. They told me the approximate quantity to purchase each month. Mr. Holsten told me that after considering the estimate. He knew his stock situation at the refineries, his operating problems and all that, and it was a matter of policy as to whether we would buy more or buy less, or any.

These estimates were made up each month for several years, and they are still being made up from month
to month. It was the usual rule that I received
1111 instructions from the refinery department as to what
quantity I should buy. I have no record of how
much it was, in quantity, that I was to buy.

I don't believe I have any information which would show me the number of flat price purchases of third grade and regular gasoline which we made in 1936. I have the figures on the percentages of the low and above the low. Compared to Platt's Oilgram, out of a total of 25 purchases 11, or approximately 44%, were at a price below the low of the Platt's Oilgram; 11, or approximately 44%, were placed at the low; there were 3 orders which were above the low of the Oilgram during 1936.

As an illustration of what we do when we make a purchase on the spot market, if we have a need for a certain kind of gasoline, or so much gasoline, we contact the seller and agree on a price, and send him a written order. We agree at that time on the time it is to be shipped, and the specifications of the material to be furnished. I have a photostated sample of one of those blanks that we used in giving orders. That is the only order blank, the only written document that is used in making our purchases. There is no down payment.

By Mr. Lawton

I have the same figures as to 1936 with reference to
the Journal of Commerce that I gave as to the Oil-
1112 gram of how many purchases we made from re-
fineries that appear in the price of the Journal.
Compared with the Journal of Commerce prices 10 of those purchases, or 38.5%, were below the low of the Journal of Commerce; 12, or 46%, were at the low; and 4 of those purchases were at a price above the low.

Our purchases have been known as purchases by majors from independent refiners. Our purchases cannot be classified as jobbers' purchases.

When we bought at or below the low of the Journal some of our purchases were at a flat price. Others were based on the Journal prices, whatever the price may have been on the date the shipment actually moved out over that month.

The figures I gave as to purchases in 1935 and 1936 at the low or below the low of the Journal amounted to about 85% or 87.5% of our purchases.

Referring to Exhibit 713, on February 1st we bought from Rock Island 15 cars of regular at 6⅛¢. That was the low of the Journal on that day. The high of the Journal at that time was 6¼¢. That high and low continued in both the journals from January 16 until February 20.

On February 29, 1936 we made a purchase from Bell of 15 cars third-grade at 5⅛¢, which was stated to be ⅛¢ over the low of the Journal of Commerce. On
1113 February 29 the low in both journals was 5¢. The high was 5¼¢. The high was at that point for 4 or 5 days prior to that date, and continued for several weeks after that time. So that when we purchased at 5⅛¢ on February 29th, while we purchased over the low of the Journal, we were purchasing at the average.

(Stipulation signed by Rayburn L. Foster, as attorney for Frank Phillips, Fred L. Koopman, A. M. Hughes, H. A. Gardner, and Phillips Petroleum Company, concerning the authenticity of names appearing on certain correspondence produced from the files of Phillips Petroleum Company pursuant to subpoena, is received in evidence as EXHIBIT 715 and read to the jury.)

Mr. Chaffetz: The following Exhibits are offered in evidence by the Government: 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 516, each of the several documents being offered at this time as being admissible in evidence only against such of the individual and corporate defendants who have been connected up with the Mid-Continent buying program, or the conspiracy to the extent that it has been established by the Government to date.

Mr. Donovan: I now offer the same objection as we made to the series of letters in relation to the

Skelly Oil Company as appears at R. pp. 504-05, and on the further grounds that there is no proof of 1114 authority in the maker of the writing so offered in evidence to make the same for or on behalf of said corporation; that as to all other defendants in the action, individual and corporate, other than the writer of the document, and the corporation represented by him, there is no proof that such writing was made by a person having knowledge of the facts purported to be stated in said writing, and the facts therein stated are not corroborated by the testimony of such person, who wrote the letter, or any other person; that the writing itself is not proof of the fact or facts which it purports to record unless supported by the testimony of the writer thereof or some other witness; that such writing is inadmissible in evidence against the individual defendants connected with the corporation which employed the writer, as officers or principals, because not shown to have been made by his agent or any person with authority to act for him, and it is likewise not shown that such writing was made with his knowledge or consent, or under his supervision and direction, and for the same reason such writing is inadmissible against any other individual or corporate defendant in this suit.

1115 The Court: Each and every such objection is overruled, and the letters may be received on the condition in which they are described by counsel for the Government. They are admissible only against those you have indicated. Exception allowed.

(Documents previously so marked for identification are received in evidence, as EXHIBITS 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 516. All these exhibits were later admitted against all the defendants generally, R. p. 907.)

(Exhibits 489, 509, 516 were read to the jury by Mr. Chaffetz.)

1116 **NEIL BUCKLEY**, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I am and have been since June 1936 field representative, with headquarters in Tulsa, Oklahoma, for the export department of Cities Service Oil Company, a Pennsylvania Corporation. I have held that position with that Company and predecessor companies since 1921. Before June, 1936, I was with the defendant Cities Service Export Oil Company in a similar position.

My duties in that office were to observe conditions in the Mid-Continent field, particularly in Texas, Louisiana, Arkansas, Oklahoma and Kansas, although in recent years not to any considerable extent in either of the last 2 states. Part of my duty was to travel over the territory I have named. I have reported gasoline prices, lubricating oil prices, crude oil prices, and any other information that I could gather that I thought might be of interest to my company. I was the exclusive representative of my company in that territory for that kind of work throughout 1935 and 1936 and to the present date.

I was a buyer of gasoline and other petroleum products for those companies during those years. I bought very
little gasoline in 1935; none after March 1935. I
1117 bought some gasoline for Cities Service Export Oil
Company in January, February and March, 1935. I
received the equivalent of a salary from Cities Service Export Oil Company as compensation for my work.

I was required to be in contact with independent refiners throughout 1935 and 1936. My contacts with them were almost exclusively with refiners in East Texas, Louisiana, Arkansas and on the Gulf Coast. I did not continue to observe to any extent marketing conditions in the so-called Mid-Continent field. What I did was more for reference purposes than anything else. We were not buyers there.

I made rather infrequent reports to my superiors in the last 2 or 3 years. During 1935, I might possibly have made monthly reports. Usually that report was in writing to H. E. Brandli, a defendant in this case, who was vice-president and general manager of Cities Service Export Oil Company. His office was in New York City. When he was present I reported directly to him throughout 1935 and 1936, otherwise I didn't report to anyone. During 1935 and 1936 when Mr. Brandli was not at his office, his work was carried on by his office force.

The Court: We can simplify matters if you will keep in mind that all questions relate to 1935 and 1936 unless otherwise indicated. My understanding
1118 is that Mr. Brandli's immediate superiors were Frank Coates and H. D. Frueauff, both defendants in this case. Mr. Frueauff was vice-president of Cities Service Export Oil Company. I believe he was a vice-president of Empire Oil & Refining Company.

I believe Cities Service Export Oil Company and Empire Oil and Refining Company were subsidiaries of Cities Service Company.

(Mr. Lewin read to the jury paragraph 2 on page 3, and paragraph 7 on page 2 of Exhibit 1.)

I was required to keep as familiar as I could with the state of the gasoline market in the fields in which I did business, and I tried to do so. I followed the tank car prices of gasoline in the East Texas field as closely as I could, but I was not particularly interested in Mid-Continent because we had not purchased there for 7 or 8 years, to my understanding. I did keep just generally informed about the prices in Mid-Continent. I was well acquainted with how the gasoline marketing business was operated in the wholesale market in the East Texas field, but less well acquainted with the Mid-Continent field.

I wasn't required to know the names, sizes and locations of the principal independent refiners in the Mid-Continent field. I did know the location of many of them from past experience. I did know them in the East Texas field. In the East Texas field, I knew companies that were
1119 buying gasoline during that period, that is, I was told that certain companies were buying, and I had a general knowledge that certain companies were buying.

I was required to know and knew generally what companies were buying gasoline in the Mid-Continent field from time to time during that period only as related to the export business, and there was no export business to my knowledge out of the Mid-Continent field during that period. I didn't try to keep in touch generally with the operations of our competitor major companies in those two fields during that period as we had no competitor major companies in that field.

I wasn't interested in the Cities Service group. I was interested only in Cities Service Export Oil Company throughout 1935 and 1936, although there may have been times when I told Mr. Brandli of the existence of material which might have been used by some of the Cities Service companies on the East Coast. I recall no other particular references, except quotations or reports of what people might have bought.

Most of the time in January, 1935, I was in Tulsa.

Exhibit 11 for identification is a letter that I wrote to Mr. Brandli, dated January 12, 1935, on the letterhead of Cities Service Export Oil Company. That is not one of the reports I made to Mr. Brandli. That was a repetition of gossip that I had heard in the field some place
1120 concerning a meeting.

Mr. Lewin: I offer the letter in evidence.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Objection overruled. Exception allowed.

Mr. Chaffetz: This letter and subsequent letters to be offered through this witness are offered subject to the parties being connected up by subsequent testimony. We are now dealing more with the East Texas buying program alleged in the indictment, and of course if that is not established, the Court may later want to restrict its ruling as to the scope of the admission of these documents.

The Court: On those conditions you may introduce it.

(Letter so marked received in evidence as EXHIBIT 11, upon the conditions above stated. Exhibit 11 later, at R. p. 907, admitted in evidence against all defendants.)

(Mr. Lewin read Exhibit 11 to the jury.)

Mr. Arnott referred to in Exhibit 11 is Charles E. Arnott, a defendant in this case. I don't know whether at that time he was vice-president of Socony-Vacuum Company. At that time, I didn't realize he was an officer of
1121 Socony-Vacuum Oil Company. I mailed this letter to Mr. Brandli. I knew very little about Mr. Arnott. I knew he was connected with Socony-Vacuum Oil Company and found out later than he had been president and later vice-president.

Mr. Robert McDowell was vice-president of Mid-Continent Petroleum Corporation. Mr. Van Eeghen was connected in some capacity with Shell Petroleum Corporation. H. T. Ashton was general manager of Lubrite Division of

Socony-Vacuum Company. He and McDowell are defendants in this case. O. J. Tuttle was tank car sales manager of Empire Oil & Refining Company. He and his company are defendants in this case. Edward J. Bullock was connected in some capacity with Standard of Indiana. I knew he held a high office in that company. Mr. Edward Karstedt I knew as sales manager of Continental Oil Company. I did not know he was vice-president.

Middle grade gasoline was at that time a grade in between third grade gasoline and regular gasoline. I believe at that time it was referred to as 60 to 65 octane, maybe 60 to 67; some place in there.

Exhibit 12 for identification is a telegram I sent to Mr. Brandli, dated January 16, 1935.

Mr. Lewin: I offer this telegram in evidence with the same limitations stated at R. p. 560.

Mr. Donovan: May I have the same objection to 1122 all these as appears at R. pp. 504-05, 556-57?

The Court: Yes, same objection and same ruling. Exception allowed.

(Letter so marked received in evidence as EXHIBIT 12, with the limitations mentioned above. Exhibit 12 later at R. p. 907 was admitted as evidence against all defendants.)

Mr. Lewin: This exhibit reads:

"January 16, 1935, Tulsa, Oklahoma.
"H. E. Brandli,
"1525, 70 Pine Street,
"New York."

Q. Is that Mr. Brandli's office address?

A. It was at that time.

Mr. Lewin: (Continuing reading:)

"Uplift purchasing continues but prices continue unchanged and approximately fifty cars EaTex."—

Q. That means East Texas?

A. Yes, sir.

Mr. Lewin: (Continuing reading:)

"Eatex motor sold at three quarter on news from Supreme Court overhangs market bought five additional cars Extex kerosene three half could you absorb few cars forty forty one gravity otherwise meeting specifications basis three half Gladewater."

Q. Let me ask you, what does "uplift purchasing" mean?

1123 A. That is a term that Mr. Brandli and myself thoroughly understand from years of experience.

Q. I ask you what it means?

A. That means in our parlance purchasing by regular people that are steadily in the market for supplies for their needs.

Q. What does "uplift" mean? Does that have reference to price?

A. No, sir, it does not.

Q. Well, what are you lifting up?

A. Lifting up supplies that are on the market, sir.

Q. Lifting up supplies?

A. Lifting up gasoline that is on the market and available apparently for their needs.

Q. Are you testifying now that in this phrase "Uplift purchasing continues but prices continue unchanged," that "uplift purchases" does not mean purchases to uplift the price?

A. It does not in our parlance, no, sir. I would like to correct that to this extent: That, if I happened to be on the telephone, talking to Mr. Brandli at some time, and we know that someone that is an in and out buyer and is pretending to be an uplifter is on the market buying gasoline, it might have 1124 a different reference; but over a period of years, we have used that phrase just exactly the way it is used there.

The Court: Q. What is an uplifter in the market?

A. An uplifter in the market, in our parlance, sir, is a steady, more or less regular buyer, apparently buying for his needs or claimed needs. That has been our definition of it, between Mr. Brandli and myself, like we have various code words—

Q. Is anyone in the market buying for anything else than his needs?

A. At times, we have suspected there were buyers in the market to obtain cheap stuff, or to get material off the market for their own benefit, yes, sir.

Mr. Lewin: Q. Doesn't "uplift purchasing" in that telegram refer to the same sort of thing that you were talking about in that letter of January 12, 1935, which was read to the jury?

A. I wouldn't say that, sir, no, sir.

The Court: Q. What kind of purchasers were there in the field? There were the uplifters, and what other purchasers, and how were they designated?

A. Well, there would be so-called uplift purchasers and inter-refiner purchasers—

Q. What?

1125 A. Inter-refiner purchasers; that is, refiners that bought from each other from time to time; brokers, jobbers, marketers, exporters.

By Mr. Lewin

Exhibit 13 for identification is a letter, dated January 26, 1935, I wrote and sent to Mr. Brandli.

Mr. Lewin: I offer this letter in evidence with the same limitations as appear at R. p. 560.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57.

The Court: Overrule the objection. Exception allowed.

(Letter so marked received in evidence as EXHIBIT 13 upon the limitations mentioned. Later at R. p. 907 Exhibit 13 was admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 13 to the jury.)

John Bradshaw is a broker in Dallas, Texas, operating under the name of Hercules Oil Company. I presume he is the head of that company. Gulf Refining Company, a defendant in this case, is one of the people he buys for.

As a general rule, "Motor" is third grade gasoline. When I say price "refinery" that means f. o. b. the refinery in tank car. When I say "f. o. b. Group Three" that means sold on the basis of freight from Group 3, which is a district around Tulsa, Oklahoma. The re-
1126 finers listed in Exhibit 13 were independent refiners in East Texas.

By the Court

In Exhibit 13 I had in mind as to the operations of the uplift buyers that part of them would be buyers who were buying for their own needs at the cheapest price they could get; and part of them would be buyers who would be buying in an effort to protect their position on the market.

Mr. Lewin: Q. Are you testifying now that "uplift buyers" there doesn't mean a buyer who is buying to lift up the price?

A. He might have been, sir.

Q. He might have been?

A. I wouldn't know what every particular buyer's method or desire would be.

Q. I didn't ask you that. I asked you whether an uplift buyer, as you use it in that paragraph, doesn't mean a buyer who is down there buying gasoline to get the price up?

A. In East Texas?

Q. Yes, sir.

A. May I read the paragraph, please?

(Exhibit 13 handed to the witness by Mr. Lewin.)

The Witness: Well, this gasoline wasn't in East
1127 Texas—

Mr. Lewin: Wait a minute. His Honor is busy.

The Court: Make your objection now in the record, then.

Mr. Donovan: Put in addition to the other objections, R. pp. 504-05, 556-57, the fact that these letters were written prior to the beginning of the alleged conspiracy in the indictment.

The Court: That objection is overruled, also. Exception allowed.

The Witness: This letter, if I am correct in reading it, sir, states that that gasoline has been shipped to Kansas City and various other places.

Mr. Lewin: Well, Mr. Buckley, that may be true. I am asking you now, one simple question:

Q. When you wrote that paragraph, didn't you mean by "uplift buyers", buyers of gasoline who were buying to strengthen the price? Yes or no.

A. I don't know whether I can answer yes or no, sir, to a question of that kind.

Mr. Lewin: Your Honor, I submit that he can.

The Court: Well, it looks like plain English to me. I think the jury can understand it just as well as anyone, but if you want to put an interpretation on that you may. (Reading from Exhibit 13)

> "However, at a time when demand is at a
> 1128 very low ebb"—

How would that affect the prices?

A. It would lower prices.

Q. It would lower the prices?

A. Yes, sir, unless there was buying.

Q. (Continuing to read from Exhibit 13-B)

> "* * * the dumping of a hundred or more cars of gasoline at 3⅛¢ to 3¼¢ Group Three

> will undoubtedly make difficult the operations of the uplift buyers for the next two or three weeks."

Now, all I want you ~~to~~ answer is this: What were the operations that you had in mind?

A. People that were buying gasoline at that time, sir.

Q. "Operations of the uplift buyers." Well, what concerns did you have in mind at that time?

A. I didn't know any list of concerns, sir, outside of the fact that there were—

Q. Well, who were the uplift buyers at that particular time, in that field?

A. In East Texas?

Q. Yes, that you knew.

A. There were no uplift buyers in East Texas, sir. There were buyers of this gasoline that had been shoved into the terminals—

Q. What uplift buyers did you have in mind
1129 when you wrote this letter?

A. I believe that I had principally in mind companies like the Phillips Petroleum Company, who had bought a lot of gasoline, and who were described here in that letter, or another one he read, as one of them; and I don't believe I can recall the names of other companies who were buying at that time. You see, your Honor, these were field reports made by me, based on gossip, sir.

Q. There is much of it that isn't gossip, too.

A. But that buying—

Q. You named one, Phillips. What other buyers do you have in mind that were carrying on these operations you had in mind?

A. Well, very possibly that list that was mentioned in that other telegram. If they were buying, but I don't know who bought. If you want to know who I had in mind—

Q. Yes.

A. I would say these people that were on Mr. Arnott's Tank Car Committee.

By Mr. Lewin

The natural gasoline referred to in Exhibit 13 is that which is produced from natural gas and not from crude oil. The last paragraph in Exhibit 13 deals solely with kerosene.

1130 With reference to whether or not the independent refiners listed in paragraph 20 of the indictment

were the principal independent refiners in the East Texas field during 1935: McMurray Refining Company was. East Texas Refining Company was. Dominant Refining Company was not. For a while it operated a plant at Kilgore, Texas, I believe in 1935. In 1936 I am sure it operated for a little while. Cascade Refining Company was a small refiner in 1935 and later enlarged. Grogan Oil Company was not a refiner, but a broker who handled sales for refineries. In 1935 it had a refinery in East Texas, that is, it handled sales of two refineries. Trinity Refining Company was for a while. Tower Refining Company was for the last half of 1935, possibly more than that. La Pren Refining Company was for the early part of 1935. Southport Petroleum Company was all of 1935. I don't believe Century operated very much in 1935. Tyreco Refining Company was a predecessor company to some extent to Tower Refining Company. Wabash Refining Company started to operate, but I do not know how long they continued to operate. They operated in 1935. Texover Refining Company operated for a month or more in 1935. Ocean Refining Company operated a part of 1935. I don't think Solvex Refineries actually operated in 1935. It operated through 1936. Arrow Producing &
Refining Company operated for the first half of
1131 1935, and Chief Refining Company for a part of
1935. Gilliland Refining Company and Texas Oil Products Company operated all of 1935. Matthews Refining Company and Utah Refining Company operated part of 1935, and Premier Oil Refining Company for some part of 1935.

I have read the whole list from that paragraph of the indictment. They were all independent refiners in the East Texas field. In that list are a number of principal independent refiners in that field as of that time.

Henry B. May was president of Arrow Refining Company in the early part of 1935. I knew Mr. Marion Travis and Mr. Kroll, officers of Southport Petroleum Company, but I do not know what positions they occupied. I first met Mr. Travis in 1917 and renewed my acquaintance with him in 1921 or 1922. I have known Henry May since 1921. I received a telephone call January 29, 1935. Mr. May talked to me first and then handed the telephone to Mr. Travis. They called me from some place in East Texas; I don't know whether they were at Kilgore or Overton. They told me they were talking for a group of East Texas refiners.

As clearly as I recall the substance of the telephone

conversation, Mr. Travis or Mr. May or both of them stated that a group was gathered together to complete a central marketing agency for the East Texas re-
1132 finers; that they were going to join together to cooperate with the state and federal authorities to eliminate hot oil, and try to produce a standard product which they could go on the market with and be recognized by buyers; that they had already employed a lawyer to draw up their articles of incorporation; and that same lawyer was preparing a bill to be introduced in the Texas legislature for the outlawing of the movement of hot oil not only in interstate commerce but more particularly in trucks in the field, to try to collect the taxes for the state and put themselves in a position where they could cooperate with the law and continue in existence.

They wanted to revive a program where not only the major companies but any companies could buy their gasoline through the central purchasing agency.

Q. Did they tell you they had in mind a program for selling the gasoline to major oil companies?

A. Not altogether, no, sir; they wanted to sell to major companies if they could, yes, sir.

Prior to the receipt of the telephone call from Mr. May and Mr. Travis, I had written Mr. Brandli a letter, or rather dictated him a letter concerning a report which had been prevalent in the East Texas field for several days. Exhibit 14 for identification is the letter I wrote to
1133 Mr. Brandli before I received the telephone call, and the postscript that I wrote after I received the telephone call. I did not write the postscript to this letter, dated January 30th, after getting a second telephone call.

Mr. Lewin: This is Exhibit 14. We offer this letter in evidence, your Honor, subject to the limitations appearing at R. p. 560.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Letter so marked received in evidence as EXHIBIT 14 upon the limitations mentioned. Exhibit 14 was later at R. p. 907 admitted as evidence against all defendants.)

During my telephone conversation with Mr. Travis and Mr. May on January 29, 1935 they asked me if I would come down and look into what they proposed to do, and if I felt that they were honest and sincere in their effort, to go out and try to help them. They asked me that during the first conversation.

(Mr. Lewin read Exhibit 14 to the jury.)

Judge Starns mentioned in Exhibit 14 was the operator of Texas Oil Products Company. I believe he was the president and principal owner. It is an independent refinery in East Texas. Jules Constantin mentioned in Exhibit 14 at that time was operating Solarine Refining Company, another independent refiner in East Texas.
1134 Several included in the list of potential members in Exhibit 14 are on the list in paragraph 20 of the indictment.

The entire body of this letter, Exhibit 14, was written upon hearsay reports which I obtained from talking with various refiners or salesmen in the East Texas field. A letter was dictated on January 29th, and some place along the line the stenographer writing it, or I, said the meeting was held in Judge Starns' quarters on the evening of the 29th, so the following morning, after Mr. Brandli received the letter, it would be past tense. When I wrote the letter I only had gossip and hearsay to go upon. It was late that same afternoon, very close to the closing time of my office, that I received the telephone call from Mr. May and Mr. Travis telling me that they wanted to try and get together and form an association for the various aims that I have heretofore described, and I added that as a postscript. The stenographer probably didn't write the letter until the next day, and I either changed the tense or she changed the tense. In the telephone conversation with May and Travis on the 29th, they invited me down there to help them.

(Mr. Lewin read to the jury the postscript to the letter, Exhibit 14.)

After I had mailed the letter, Exhibit 14, not before, I placed a long distance telephone call to Mr. Brandli
1135 in New York. It was, evidently, on the same day that I mailed the letter. Following that first telephone call in which I told these East Texas people they would have to go to my superiors, I received a second telephone call from them in which they stated that they didn't know my superiors, and wouldn't I go to them myself and ask for permission to come down and talk with them. That call came from Mr. Travis, either late the night of January 29 or the following morning. I did not immediately put in the call to Mr. Brandli. The call was some time on the 30th.

I didn't tell Mr. Brandli the substance of what was in that letter or the postscript that I had already mailed him. I told him the substance of the second conversation with

Mr. Travis, that I had been asked to come down there and investigate the sincerity of this group of refiners in their proposition. I told him that Mr. Travis had told me that he didn't know my people, and wouldn't I go to them myself and ask for such permission, and if I found that they were sincere in their effort, to try to secure help for them. I told Mr. Brandli about the central marketing agency and the desire of the East Texas Refiners to get together, and end the hot oil racket in East Texas. I don't know whether I told him they wanted an experienced man to operate the association for them, but I said they had asked me to come down.

1136 I received the telegram, Exhibit 36 for identification, dated February 1, 1935 from Mr. Brandli.

(Letter so marked received in evidence as EXHIBIT 36, upon the limitations stated at R. p. 560. Exhibit 36 was later at R. p. 907 admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 36 to the jury.)

I sent the letter, Exhibit 15, dated February 2, 1935, to Mr. Brandli.

(Letter so marked received in evidence as EXHIBIT 15, upon the limitations stated at R. p. 560. Exhibit 15 was later at R. p. 907 admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 15 to the jury.)

Exhibit 16 is a letter I wrote and sent to Mr. Brandli, dated February 2, 1935.

Mr. Lewin: I offer this letter in evidence.

Mr. Thomas: If the Court please, so as to remove any uncertainty, defense counsel haven't been objecting to these exhibits that have been coming in separately, because our understanding was that they were received subject to the same objection, and with the same ruling—

The Court: Yes.

Mr. Thomas: (continuing) —that your Honor made with reference to Exhibit 494, which was this letter by the stenographer in the employ of the Phillips Company, the first exhibit that came in this morning, as appears at R. pp. 504-05. 1137

Mr. Chaffetz: I understand the objections governing these documents are the ones made by Colonel Donovan with respect to the first document that was offered, written by this witness.

Mr. Donovan: And in that was included the objection that was made this morning, to all the documents offered this morning, at R. pp. 556-57, and subject to the limitations appearing at R. p. 560.

The Court: Yes, it is understood that these are received subject to your objection, and with the limitations. Exception allowed.

Mr. Denton: If the Court please, I would like to have the same right to file such additional objections as I might care to, after these exhibits are in and I have an opportunity to examine them.

The Court: You may have that right.

> (Letter so marked received in evidence as EXHIBIT 16 upon the limitations mentioned. Exhibit 16 later at R. p. 907 was admitted as evidence against all defendants.)

> (Mr. Lewin read Exhibit 16 to the jury.)

When I got to East Texas on February 4, 1935, I went to Gladewater immediately, where I got off the train. I believe I was met there at the train by Mr. Campbell
1138 of Gilliland Refining Company.

I don't know whether I went to Kilgore that afternoon. I went to Overton that evening. I talked with Mr. Henry May of Arrow Refining Company that evening for a short time. I talked with Mr. Campbell of that same company quite a bit that afternoon. I did not talk with Mr. Grogan of Grogan Oil Company. I talked with Mr. Travis that day, but I don't remember talking with Mr. Constantin.

I did not discuss with those men I have named the formation of a corporation by them for the marketing of their products to major companies. I was in the investigative stage, as to whether I wanted to have anything to do with their association at that time.

I discussed with Campbell, and maybe with some of the others I met at Mr. May's home that evening, the organization of their corporation and the purpose of the corporation to sell their gasoline to major companies.

By the Court

The meeting was at the home of Mr. Henry May at Overton, Texas, on February 4. Those that I remember who attended that meeting were Mr. Campbell, Mr. Travis, Mr. May, Mr. Potter—maybe two Mr. Potters,—Mr. Sole or Soule, Mr. Kraker, and there were a large number of others. I did not actually attend the meeting as I will explain as I go along and tell what happened.

The meeting was called to form the East Texas
1139 Marketing Association to carry on the business of
marketing their refined products, particularly gasoline.

I went to the meeting and talked with those various individuals before they called the meeting to order. They said they were going to have the meeting later, but, knowing what they had told me during the afternoon, wouldn't I please go to these other companies and see if I couldn't get help. I left Overton on the 8:30 train. The meeting had not started when I left Mr. May's house. There was no business transacted at the meeting while I was there. It was not called to order at the time I was there.

By Mr. Lewin

I did not at that time discuss with them an idea of theirs to have the membership of this association limited, and a $1,000 assessment imposed on each member. That was not their original idea as explained to me. There were two or three ideas advanced in the group as to what kind of an association they should have. The first idea that was put forward to me was a central marketing association. The association was not at first described to me in detail. It was not one of the first ideas that they had during this formative period, to have a central sales agency, with an assessment of $1,000 on members that would enjoy it, a limited membership.

1140 I left East Texas on the night of February 4th, about 8:30 and went to Houston, Texas. I called first upon Ben Brown of Humble Oil & Refining Company, a subsidiary of Standard Oil Company of New Jersey.

I then called upon Mr. O. H. Carlisle of the Gulf Company, a defendant in this case. It was the Gulf Company of Texas, which operated in Texas at that time. I don't know what you call it. It was my understanding that O. H. Carlisle was head of the marketing department of the Gulf Company for Texas. I couldn't state for certain whether or not he was manager of that division of the company in Texas.

Mr. Gray: He was district sales manager at that time in the Houston Division.

I started to see Mr. Leach in the marketing department of The Texas Company, but he wasn't there. I saw one of his assistants whose name I do not recall. The Texas Company is a defendant in this case. I didn't know exactly what was the position of Mr. Leach at that time.

I went to the offices of each of these three men. I met

Mr. Carlisle of the Gulf Company in his office in Houston, Texas on February 5, 1935. As I recall the conversation, it was to the effect that the East Texas refiners were forming an organization, and that they wanted to cooperate with the state and federal authorities to do everything they
1141 could to end the production of hot oil and curb the stealing of oil, and that furthermore they were preparing and were introducing through their attorney and a senator in the Texas Senate a bill which would absolutely outlaw the transportation of stolen or over-produced or illegal oil on the highways of the state. I told Mr. Carlisle further that they were going to offer their surplus products through this agency and wanted to get buyers back in the field with the legitimate refiners and asked if he would consider doing his business through that association.

I had known Mr. Carlisle before, but didn't know him well. I did not introduce myself as an employee of Citie Service Export Oil Company and did not know if he knew I was connected with that company. I told Mr. Carlisle that the East Texas refiners wanted, if possible, to get the major companies to come back and buy from this group of refiners, and, if possible, to buy direct from refiners. I asked Mr. Carlisle to buy from them on behalf of the Gulf Company, the only company he would be buying for.

By the Court

Mr. Carlisle told me he had considerable experience in East Texas in the two previous years, that he had been connected with the Code, and that under no condition would he be interested in going back and helping that
1142 class of operators at all—the refiners, as then represented in East Texas. I did not have any further conversation with him that day. I left his office feeling rather depressed over my reception there. He may have told me that he was interested, but he wasn't going to fuss with the thing. That is my best recollection of what he said.

That is all I remember at this time of the conversation I had with him that day. I know I got no hope whatsoever from him in what I was trying to do. I don't recall that I got any hope from him, or any encouragement. He was one gentleman that told me I was wasting my time.

By Mr. Lewin

I had a conversation with an assistant to Mr. Leach of The Texas Company. I told him about the same story I had previously told Mr. Carlisle. He told me that he had no authority to discuss the subject with me, and I would have to come back and talk with Mr. Leach or someone else in the company. I did not go back and talk with Mr. Leach, or anyone else connected with the company.

I left Houston that night and went to Dallas, Texas.
There I talked with independent refiners of East Texas,
with Mr. May, Mr. Travis, Mr. Grogan, and I believe Mr.
Kraker. I did not offer to go to the eastern seaboard
1143 in their behalf. They asked me to go there based
on a conversation that I had had with Mr. Brown in
Texas. I went.

I left Dallas in an airplane that night, February 6, 1935. I arrived in Pittsburgh quite late the following night, February 7, 1935. In Pittsburgh I tried to see Mr. William Hartmann, at that time vice president of the two Gulf companies, or anyone else I could reach. I went to their office and was unable to see Mr. Hartmann. They told me he was out of the city. I asked for someone in the sales department or the marketing department. I saw a young man that was evidently an assistant along the line, and asked him whether there was anyone there I could see about selling East Texas gasoline. He said there wasn't anyone there, so I left my name and that was the end of my visit there. I don't recall the name of the man I saw on that occasion. He was quite a young man, I recall that.

Q. Do you recall testifying before the grand jury?

A. Yes, sir.

Q. Did you say that on that occasion in Pittsburgh, you talked with McEldowney of Gulf?

A. I don't recall. The man's name was Mc something, McElvaney or McEldowney. I don't recall what it was.

1144 Q. Did you explain this plan to him?

A. No. I don't remember whether I did or not. I judge that Mr. McElvaney or Mr. McEldowney, whatever it was, had come out in the hall as a courtesy to see me, as any company would send a man out to see a visitor that came around.

I didn't leave a card. I left my name and address or the Association address. I did not tell him I was an employee of Cities Service. I told him I was representing the East Texas refiners, because the Cities Service Company wouldn't have meant anything to him.

I believe Mr. Hartmann would have known me by name, so I left my name for Mr. Hartmann. I couldn't tell if Mr. Hartmann would have known what company I was associated with, because I didn't meet Mr. Hartmann for some time afterward. Many years ago my company was a brokerage and marketing company and bought considerable gasoline for the Gulf Company through the office we had in Pittsburgh, and I purchased that gasoline. It is possible that Mr. Hartmann may have recognized my name from hearing it in those days. That is the only reason I have for believing he might recognize the name.

I left Pittsburgh that night and went to New York City. There I saw my superior officer, Mr. Brandli, and told him why I was in the East. I left New York the following
1145 day; stopped in Washington during the late afternoon and evening, and from Washington went to Pinehurst, North Carolina, to see Mr. Charles E. Arnott, a defendant in this case.

I told Mr. Arnott in Pinehurst that I was representing a group of East Texas refiners who were endeavoring to get together to operate legally within the law, and explained to him, as clearly as I can recall, everything that I have previously testified that I explained to these other individuals. I believe I asked Mr. Arnott to see if he could get the major companies to cooperate and buy that East Texas gasoline. I have no recollection of discussing the Mid-Continent situation with him, too, as well as East Texas. We might have, but I don't recall.

Mr. Arnott told me that he wanted to investigate the East Texas Refiners Association and get some information on it, and that if he thought it was a matter of interest, I would hear from him upon his return from New York or Washington. He told me he was on his vacation in Pinehurst. He was at a hotel or club—semi-hotel.

Q. When did he say he would finish his vacation?

A. I believe it was to be in about two weeks from that time.

Q. And then he would call you from New York, in Tulsa, from New York?

1146 A. Either from New York or from his office in Washington.

Q. And you left Pinehurst and returned to East Texas?

A. Yes.

Q. First going to Tulsa?

A. No, first going to East Texas.

Mr. Donovan: It seems to me that while your Honor has given counsel a great deal of latitude, the witness should be permitted to testify.

The Court: He is. We will get along all right. I think counsel should be permitted to ask him leading questions.

Mr. Donovan: I don't object to leading questions, your Honor, if the questions are directed to the full conversation that the witness had. It seems that is the only fair thing for the jury and for these defendants.

The Court: That can be covered on cross examination.

After I left East Texas I went to Tulsa. I don't know whether I received a telephone call from Mr. Arnott in Tulsa, or whether I called him. I had a telephone communication with him. He told me that there was a meeting planned for the Blackstone Hotel in Chicago, and that 1147 if I wished to attend, either myself or with other East Texas refiners, to discuss the plan of the East Texas refiners for their marketing agency, that I could do so. I believe the meeting that I attended was on the morning of February 25, 1935.

I went to Chicago to that meeting. Henry May, head of Arrow, and Martin Grogan, head of Grogan Oil, went with me. When I got to Chicago I went to this meeting. Mr. Arnott was there. I believe Mr. Hartmann of the Gulf Company was there. I have no recollection of O. H. Carlisle being at that meeting. He may have been there, but I don't recall him at this time—not during the time that I was in the meeting, at least.

Q. Didn't you testify before the grand jury that you were reasonably certain that Mr. Carlisle was there?

A. I don't know, sir. I can't recall my grand jury testimony.

Q. Would that refresh your recollection, if that were pointed out to you?

Mr. Donovan: May we have the objection to this refreshment of recollection from the grand jury minutes that we had before, your Honor, as appears at R. pp. 373-74, 446, 518, 546-47?

The Court: You may. Objection overruled. Exception allowed.

A. Well, Mr. Carlisle may or may not have been 1148 in the meeting. I have tried to place Mr. Carlisle in the meeting, but I just simply can't do it. I have got to picture where each person would sit in a big room of that kind, and I can't place Mr. Carlisle there.

Mr. Lewin: Q. Now, you saw him in Chicago on that occasion, didn't you?

A. No, sir. I saw him on the train, going to Chicago; but I don't recall talking with him or seeing him actually in Chicago.

Q. Would your grand jury testimony, do you think, refresh your recollection on that point?

Mr. Gray: Your Honor, I object to a continuation—

The Court: Let me see that grand jury testimony that you are talking about.

Mr. Lewin: Yes, sir (presenting document purporting to be transcript of grand jury testimony to the Court).

Mr. Gray: The witness has already testified that he didn't recall the man being present there.

The Court: He has given a definite answer. There is nothing inconsistent in that.

By Mr. Lewin

I remember Mr. Legge of Magnolia Petroleum Company at the meeting, and I believe that Mr. Carnes of the
1149 Sinclair Company was there. Those are the only ones I recall. Most of the men at the meeting were men connected with either the marketing or traffic departments of Texas refineries, independent refineries, principally.

Mr. Arnott asked me to explain the plan of the East Texas refiners to that meeting and I did. I did not ask the representatives of major companies there to come in and buy East Texas gasoline. At Mr. Arnott's request, I arose and stated what the East Texas refiners had in mind with reference to the formation of their association.

The Court: Q. Was that about the same statement that you made to these other men in East Texas?

A. Well, I don't know, your Honor. It was the first time I addressed a body of men of that size, and I think it was—yes, that was what I had in mind, going into.

Q. In substance.

A. The substance of it, yes, sir.

By Mr. Lewin

The Mr. Carnes I mentioned is J. W. Carnes, vice president of Sinclair Refining Company, a defendant in this case. I am quite sure that I saw Mr. Carnes at the table.

I had known Robert N. Cline for a long number of years. At one time, some 5 or 6 years before, he was employed by what was called Tidol Refining Company, which was 1150 later taken over, I believe, by Tide Water Company. The East Texas Refiners Association employed Mr. Cline to be their first secretary. I think they put him on the pay roll some time between February 1 and 15, 1935. Prior to that time he had been working for the Marine Export Company for a while. I am not sure but what he had been employed part time, at least, by Arrow Refining & Producing Company, Mr. May's company.

Mr. May discussed with me the employment of Mr. Cline for the East Texas Refiners Association. When he asked me about the employment of Cline, I had no power of approval. I was glad to see him. He was a wounded war veteran who needed the job, and I was tickled to death to see him get it. After the Chicago meeting I returned to East Texas on the morning of February 27th. I believe Mr. Cline met me at Gladewater, Texas. From there I went to Tyler, Texas.

On the train going to Chicago I discussed with Mr. May and Mr. Grogan the formation of a simple association. When I got back to East Texas I talked about their association with Judge Fisher.

By the Court

My discussion with Judge Fisher was this: The refiners were divided, when they started their association, into two groups; one of them had money, the other didn't. The group with money wished to try to tie a terminal as- 1151 sociation into the marketing association, and each person joining that association was to be assessed $5,000. Those that didn't have the money felt that they were being frozen out of participating in the association, and any benefits that might accrue to a person that was operating legally.

On the train, going to Chicago, Mr. May and Mr. Grogan told me that under no conditions were they going to tie in the terminal association with the marketing association. That worried me, because I had been talking to people about this terminal association idea, which I got from Mr. Campbell, and later from Mr. Travis. So I talked with Mr. May on the way back to Texas, and asked him what they were going to do; whether it was going to be a terminal association or a marketing association. He said, "It is going to be a marketing association or nothing, as far as I am concerned, and you heard what Martin Grogan said."

So I then went to see Judge Fisher, and told him I had been running around the country representing these refiners and I thought I ought to know where I stood. He told me I didn't have to worry about where I stood, that he was running the affairs of that association for those refiners, and that he was going to attend their dinner that night and straighten them out on what they wanted to do. That is the conversation.

1152 *By Mr. Lewin*

The East Texas Marketing Association, as it began operations in March, was formed with my assistance, but I can't say that it was formed at my suggestion, because it was already discussed back in January by Mr. May and his associates.

Q. Well, hadn't that been a discussion of a different type of association; and didn't you, now, in the first part of March, suggest this simple type of association, where you didn't have this $5,000 assessment?

A. No, sir. I have tried to explain to his Honor that this conversation concerning this simple type of marketing association occurred with Judge Fisher on the 27th of February. I wasn't in East Texas early in March.

Mr. Lewin: Your Honor, I don't want to consume a lot of time over it, but I wish your Honor would look at that (presenting transcript of testimony before the grand jury to the Court).

The Court: Q. Do you remember when the East Texas Marketing Association was formed?

A. I believe they held the meeting to form the association on February 13th, sir.

Q. 1935?

A. When the actual articles of incorporation were
1153 put out, I don't know, your Honor.

Q. Just try and recall now. Was it formed at your suggestion?

A. I may have said heretofore that it was, your Honor, but I have studied every item and every move that I have made, and I am certain now that what I have related to you is the absolute truth.

By Mr. Lewin

I made an arrangement with the Association for the payment of my travelling expenses in Dallas, Texas, on February 5, 1935. I never received any salary from the

Association, only my travelling expenses and expenses for telephone calls I made in their behalf. I continued to draw my salary or my compensation from Cities Service Export Oil Company during this time.

Early in March I got either a call or a telegram from Mr. Arnott inviting me to come to New York for a meeting at the Waldorf Hotel. I attended. I believe the meeting was on either March 5 or 6. It was a Wednesday morning. Mr. Arnott, William B. Hartmann of Gulf, and J. W. Carnes of Sinclair were there. I am not sure about Noel Robinson of Tide Water. The only picture I have of Mr. Noel Robinson in any meeting was at Washington. I won't say that Noel Robinson was not there, but I cannot recall at this moment. Mr. Dodge of The Texas Company was not at that meeting. He
1154 was not at any later meeting in New York in March.
I saw Mr. Dodge in Washington in March. I believe I met Mr. Dodge in May, 1935, at a meeting in New York, but I don't recall meeting him in March in New York. Mr. Ewing of the sales department of Socony-Vacuum was there. At one meeting—I don't know which one—I saw a representative from the Shell, but I cannot tell you his name, Von-something or other. At one meeting there was Mr. Gould of Shell, but I do not recall whether he was at the same meeting as these other gentlemen.

Mr. Arnott asked me to discuss the East Texas situation before those gentlemen at that time. I explained to them the plan of the East Texas refiners, except that I said nothing about a terminal association. I told them about the marketing association. I don't know who at that meeting asked me how much these independents down there would have to sell. Someone asked me. I couldn't honestly answer whether Mr. Hartmann or Mr. Carnes asked me that.

I called Robert N. Cline to find out how much gasoline would be available of surplus from the refiners in the field after they handled their regular commitments. I don't know if I called Cline on my own account or whether some one asked me to do so. I was advertising, trying to sell that association to these people, and I wanted to answer the question.

1155 Mr. Donovan: Your Honor, I should like to put in here my objection to this whole form of examination.

By Mr. Lewin

Mr. Cline reported to me that, as closely as they could estimate, the amount that was there was some place between 240,000 and 250,000 barrels of gasoline unsold the beginning of each month, based on the allocation that the refiners had received from the Federal Allocating Board. I did not stay through the whole meeting. After I finished my address to the meeting, I asked Mr. Arnott if he wanted anything further from me, and he said, "Not before the afternoon." I left that meeting, and came back into it some time during the afternoon. When I left the meeting, I was told I would hear from them at a later date. I believe it was Mr. Arnott who told me that I would hear from him further if anything could be done toward handling the surplus gasoline.

Q. Do you recall anything being said at that meeting at the Waldorf by any of those men which indicated that they had an interest in how much gasoline there was to be purchased in Texas?

The Court: The March 5th meeting.

A. I can't quite answer that question. I presume that there were some people there that had an interest in it, but I can't recall specifically 1156 anyone asking me that question.

I had little or no conversation with any individuals. My remarks were addressed to the meeting as a whole. There was no particular response at that time from any of those in attendance at that meeting to my suggestions. There were other plans or other matters discussed later, and when I found they didn't involve me I left the meeting. I don't know whether it was a Code meeting or what it was.

I don't know whether or not they asked me what gasoline was available. I do not recall anything else that they asked me about. These gentlemen that I met, with the exception of Mr. Carnes, whom I had known for a long number of years, and Mr. Arnott, through my short association with him, and one or two others, were strangers to me, and it was unlikely that they would be addressing any particular questions to me. But they were interested in this matter. Their principal interest was what the association was going to do about hot oil. Everyone was scared to death of handling East Texas gasoline and of going back to East Texas to buy; and they wanted to know from me whether I thought these refiners were sincere. Some of them wanted to know whether they were supporting passage of the Connally Act and were going to cooperate with Connally. I told them, yes.

There are several definitions of hot oil, but my 1157 own definition is crude oil that is stolen from pipe lines of one man or stolen from his leased tanks or taken out of the ground in an amount greater than he was entitled to under the state and federal regulations, —oil that was obtained in such a way that it could be sold under the market prices by the people who had obtained it illegally. Hot oil is not primarily oil that is produced in excess of allocations under state laws. Hot oil is primarily, in my definition, stolen oil. It may be actually stolen from the property, or it may be taken out from someone else's property without their knowledge. That is released from their leases.

I don't recall any other inquiries made of me at that meeting.

Mr. May and Mr. Grogan did not go into the February 25 meeting in Chicago with me. They stayed at their hotel.

I attended a meeting at the Waldorf Hotel on March 15, 1935. I do not remember two men from The Pure Oil Company at that meeting. I remember seeing Mr. McElroy of The Pure Oil Company at a meeting on March 6th, but I don't remember meeting any one from The Pure Oil Company after that.

Mr. Arnott was present at that second New York meeting on March 15th. I met Harry D. Frueauff at one meeting. I cannot identify him as either in the March 6th or the March 15th meeting. I met him at either one 1158 or the other. The March 15th meeting was at the Waldorf Hotel in New York. I don't remember meeting Mr. Dodge at any of the March meetings except in Washington. I cannot place Mr. Dodge in either of the meetings that I attended in New York.

At the March 15th meeting at the Waldorf there were present about the same people that were at the meeting on March 6th. There was Mr. Carnes, Mr. Hartmann, through part of the meeting Mr. O. D. Robinson of the Republic Oil Company, an independent refiner of Pittsburgh, Mr. Gould of the Shell Company. No other representative of Shell was at that meeting. I think Mr. Gould was the man that attended that meeting, and the other man at the first meeting, as I recall it. Mr. Frueauff of Cities Service was either at that meeting or the March 6th meeting, either one of the two. I do not recall whether Mr. Noel Robinson was present on March 15th. As I have said, the only picture I have of Mr. Noel Robinson is at that meeting in Washington. Mr. Arnott was there on the 15th. I cannot place Mr. Dodge in either of the meetings of March 6th or 15th. I won't say that he was not there, but I just can't picture him in that room.

Q. Would your testimony before the grand jury refresh your recollection, do you think, as to those men that were at the meeting?

A. No, sir, because I have tried to refresh my memory since I testified before the grand jury and 1159 picture everything as I saw it, and I just can't put Mr. Dodge in that room.

I believe there was a man from Continental Oil Company on March 6th, but I do not recall him on March 15th. I believe it was Batson, some one in the New York office by that name.

Mr. Lewin: Your Honor, I have Exhibits 17 and 481 for identification. I would like to offer them in evidence at this time. The authenticity of them has been admitted. (Showing exhibits to the Court.)

Mr. Donovan: The same objections as appear at R. pp. 504-05, 556-57.

The Court: The same ruling. Exception allowed.

(Documents so marked received in evidence as EXHIBITS 17 and 481, respectively upon the limitations stated at R. p. 560. Exhibits 17 and 481 were later admitted at R. p. 907 as evidence against all defendants.)

(Mr. Lewin read Exhibits 17 and 481 to the jury.)

By the Court

As clearly as I recall the March 15 meeting in New York, Mr. Arnott called it to order and stated that I was there and the East Texas refiners were pressing me for some answer to their problem, and he wanted suggestions from various people or from any one as to how the situation could be handled. Some one arose with a slip 1160 of paper in his hand and stated that it had been suggested that if a group of companies, some 12 to 15 companies, all of them larger companies, would consent to absorbing a certain percentage of the surplus gasoline in East Texas, that it had been suggested that each company take so much gasoline, the amounts being read off as to what each company would take. After the reading of those amounts, there was a discussion as to what companies were represented there in the meeting, and whether there was anyone there who had talked with the companies who were not represented, and knew their attitudes toward buying such gasoline. There were several companies who were not represented in the meeting. Someone had talked with one or two of those companies, and stated that they knew that they would not buy any East Texas gasoline, or participate in any program for the buying of East Texas gasoline.

There was then a poll made of the companies who were present to ascertain whether those represented would buy the gasoline. Most of the representatives present stated they had no authority to discuss the subject of taking gasoline without going back to the officers or higher officers of their company, discussing it with them and with their manufacturing departments. There followed a discussion which lasted an hour. At the end of that hour nothing had been decided as to who would buy gasoline, or
how much they would buy, or whether they would
1161 buy at all. I sat in the room for some time after
that, visiting with individuals and trying to press them to give me some answer; and finally, discouraged, left the meeting, telling Mr. Arnott that I would be back.

I went back just before the close of the meeting, and Mr. Arnott was busy talking with some of the gentlemen that were dispersing. I followed him down to the first floor of the hotel and walked to the entrance with him, and asked him if he couldn't give me any hope at all; that I had been there for about two weeks, had accomplished nothing, and was thoroughly discouraged, and that I personally felt I had better go home and let them talk to me later, or talk to the East Texas refiners in the event they wished to do anything at all for them. That was the general discussion of the meeting.

> Mr. Lewin: Q. Now, Mr. Buckley, in that discussion that you say took place, didn't someone present a plan for dividing the gasoline up among the major companies in certain definite proportions?
>
> A. Yes, on this slip that was read there was a certain amount set opposite the names of companies.

By Mr. Lewin

I don't remember the names of all the companies listed as being potential buyers, but on the list was practically

every company represented in marketing in Texas and along the East Coast. They were large compa-
1162 nies on the East Coast—majors and some that couldn't be considered exactly majors. I mean their names were on that list. I believe the man that read the list was Mr. Carnes.

The list of people that I remember, as being present, is the same list that I previously repeated. Mr. Carnes was, I believe, vice president in charge of wholesale sales with the Sinclair Company. Mr. Hartmann was with the Gulf Company. I have learned since then that he was vice president of that company. O. D. Robinson was president of the Republic Company. Mr. Gould was with Shell Eastern. Frueauff was with Cities Service. Mr. Arnott was with Socony. I don't remember the name of the Continental representative, but I think it was a man by the name of Batson, but I am not sure whether he was in that meeting or at the March 6th meeting. I can't recall Noel Robinson at that second meeting. I saw Mr. Robinson in one meeting in New York, some time during the spring of 1935, but whether it was in either of these March meetings or whether it was in the May meeting, I can't tell you. It was at one of the three meetings I attended in New York.

After the meeting in New York on March 15th, I met Mr. William V. Hartmann and had a conversation with him in Washington. I believe it would have been on March 20th.

1163 I met Mr. Hartmann in the P. and C. Building in Washington, the Planning and Coordinating Committee. I reached Mr. Hartmann late in the afternoon, 4:30 to 5 o'clock, after waiting all day to see him and other people who were in Washington.

I told Mr. Hartmann that I was going to have to return to Texas, and I felt rather badly over not having accomplished any results; that he was buying gasoline in East Texas, and couldn't he do something to recognize the Association and furnish them with some encouragement for the work that they were trying to do down there.

To the best of my recollection, his reply was, "Buckley, you have known about our buying for a long time, and you probably know that we do our buying through a broker, Bradshaw. We are not unsympathetic with these refiners, but, frankly, we prefer to continue to do business with Bradshaw."

And I said, "Well, Mr. Hartmann, would there be any objection to Bradshaw getting in touch with the Marketing Association?"

He said "Not if Bradshaw wants to get in touch with the Association; I haven't any objection to him buying in any way that he wishes to, but as far as I am concerned, I will be glad to have him do it if it will furnish any encouragement to the refiners down there."

I believe I asked Mr. Hartmann to ask Bradshaw
1164 to do that. Mr. Hartmann did not say he would. I think he said there wouldn't be any objection on their part to Bradshaw doing it. He did not tell me that he would communicate with Bradshaw and tell him to buy through our Association. If he had he wouldn't have told me to communicate with Bradshaw because he wasn't in touch with Bradshaw.

Mr. Bradshaw was a general broker buying for several companies, and he had bought gasoline for Gulf for about 15 years to my knowledge. I never heard of the Gulf Company buying down there except through Mr. Bradshaw.

On the same date, March 20th, I had a conversation with Mr. Dodge in Washington. I asked him whether The Texas Company was going to buy gasoline. He said he was quite sure that they were going to have to buy gasoline.

I said, "Well, will they buy gasoline in East Texas, do you know?"

He said, "Buckley, I can't tell you anything about that; that is something that comes under another department, and you will have to find out from them."

I pressed Mr. Dodge for further information, and asked him if their buying would be handled by his Houston office or his New York office. He said that he didn't know that, but if I was going back to New York, I could drop in and see his New York people and ascertain whether they would buy gasoline in East Texas or not; that
1165 he couldn't tell me. All he could tell me was that he was sure they were going to buy gasoline, but he didn't know where.

On that same occasion or around that same time, I had a conversation with Mr. Carnes. I asked Mr. Carnes if he would be willing to buy his gasoline through the Marketing Association, and endeavor to lend some encouragement to the members of the association. He told me that they were continuously buying gasoline, were probably going to buy more gasoline, and as far as he was concerned, he saw no reason why they shouldn't deal through the Association, but that it was up to Mr. Tracey and he would talk to him about it. Mr. Tracey is an employee of the Sinclair Company in Fort Worth, Texas.

Q. Did Mr. Carnes tell you to go on back to Texas, and that his company would buy through your Association?

A. Providing Mr. Tracey was willing. I will relate the exact conversation as I remember it, if you wish.

Q. Did he tell you that Sinclair was going to buy?

A. Yes, sir.

Q. Did he say that Sinclair would cooperate with the refiners to the extent of having Tracey buy through the Association?

1166 A. His words were to that effect.

I went back to New York from Washington and interviewed Mr. Cottingham of The Texas Company in New York. I tried to explain our plan fully to him. Mr. Cottingham was in the purchasing department, and the man that Mr. Dodge said I might see, if I was going back to New York.

I also saw Mr. Brandli in New York on this occasion. I believe I did see Noel Robinson of Tide Water Company on that visit to New York. I talked with him on this occasion about the possibility of having Tide Water Company buy through our association.

I went from New York to Tulsa. I had a conversation with independent refiners in East Texas as to what I had accomplished in New York. I met them at a dinner attended by the members of the East Texas Marketing Association at the home of Judge Starns in Gladewater, Texas. Those present at this meeting were Judge Starns, Mr. Henry May, Mr. Martin Grogan, his assistant, Mr. Kostalka, Mr. Kraker, Mr. Campbell, Mr. Travis, I believe Mr. Robertson, Mr. Haberle and Mr. Anderson. Either Judge Starns, Mr. Cline or Mr. May assembled these men. I learned of this meeting through either Mr. May or Mr. Cline, and I was asked to come and report. I made a verbal report to them that I was disappointed in the results that I had accomplished in their behalf; that no definite plan for purchasing could be established in East
1167 Texas, because of the refusal of a large number of companies to recognize the association or do any buying through the association or even in East Texas; that I

had been forced to contact individual companies in an effort to try and get them to deal through this association, some of them that were already in there buying; that I felt sure that as the work of the association progressed and as buyers became convinced that the refiners were sincere in their effort to eliminate the hot oil situation, and as they became convinced that the Tender Board was going to control the movement of oil in interstate commerce, buyers would return to the field to obtain their supplies as they had in the past; that I felt certain that Sinclair would buy and I felt sure that the Gulf Company would buy; that I had been told that The Texas Company might buy, and there were two or three other prospects that I thought were potential buyers among the larger companies. I don't know whether I told them I would continue to work with various major companies to get them to buy, but I did.

By the Court

I met Mr. Cottingham in New York and told him, first of all, that I had had a conversation with Mr. Dodge in Washington and that I understood from him that The Texas Company was going to buy some gasoline during 1935. 1168 I tried to explain to Mr. Cottingham what the East Texas Association was. He said that was the first time he personally had heard about it, and stated that they had their own method of buying, they wouldn't be interested. I pressed him further, and told him that regardless of what method he had of buying, the East Texas Marketing Association was a service organization, that it could absolutely protect, it felt, the buyer against getting illegally produced products and without any cost whatsoever to the buyer. Mr. Cottingham said that he wasn't interested in talking about the East Texas Association; and, well—he dismissed me from his office, is the truth of the matter.

I reported to them at this meeting in the Judge's home that The Texas Company, I felt, was going to buy gasoline, but I couldn't find out whether it was going to buy in East Texas or not, and urged Mr. Cline to see if he couldn't get any information as to whether or not it was going to buy in East Texas.

Q. You certainly did not reach that conclusion from your conversation with Mr. Cottingham?

A. No, but The Texas Company were buying some gasoline in East Texas, I heard when I got down in East Texas; and my hope was to try to get them to buy through the association.

Q. And was it on that that you based your belief?

1169 A. That I hoped that I could work them around to buy through the association.

I called Mr. Robinson in New York, asking him for an appointment. Over the luncheon table we discussed the possibility of purchasing gasoline in East Texas. He told me that they had a terminal arrangement or transit arrangement—I don't recall which—with a refiner in a terminal on the Gulf Coast; that while they would not be in the market directly for gasoline, they thought that this other refiner or terminal operator would buy some gasoline in East Texas which, in turn, might go for their account.

Mr. Lewin: Q. And did he say anything that they would buy through your Association?

A. He wasn't buying the gasoline. These other people were buying it for them.

The Court: Q. Have you stated all of your conversation with Mr. Robinson?

A. All of it except that Mr. Robinson apparently was enthusiastic over what I was trying to do to help the refiners down there.

Q. Did he say, too, their representative down there that was operating this terminal would buy through the refiners organization, or not?

A. I don't recall that, your Honor, but I do know, from checking up later, that terminal 1170 organization did buy some gasoline through the association.

By Mr. Lewin

Looking at paragraph 20 of the indictment containing a list of names of independent refiners, from reports that I have seen from time to time, all were members of the East Texas Association, except I am not sure of Dominant Refining Company, Wabash Refining Company and Matthews Refining Company. They may have been members, but I don't recall them. To the best of my belief, all the others named in the indictment were members at the time of the indictment. Some of them may have dropped out; but sometime or other during the period of 1935 they were members of the association. Now, whether the Solvex Company was a member in 1935, I can't say because I don't think that they operated until 1936. I believe this list substantially represents the principal members.

I worked for the East Texas Refiners Association in the way I have described from the last of March 1935 until May 1935. I continued to communicate with various prospective buyers over the telephone until October 1935. Thereafter, except in one month, I believe it was January 1936, I was quite active on the telephone. I made a trip to New York in May and October 1935, and at the request of the refiners I went to the American Petroleum Institute meeting in Los Angeles in November 1935. 1171

The last active participation I had in so far as traveling or personal soliciting was really in October 1935. Although I did communicate on the telephone, at their request, with buyers until April 1936. In April 1936, they asked me to make a general approach to major companies. They had been after me to make a trip for the first 3 or 4 months of 1936 to make a plea to buyers that were not buying through the Association to try to come in and buy. I attended a dinner in East Texas in April 1936. I saw two or three people in Houston at that time for them at their request.

My main activities for the Association were in trying to get buyers to go back into the East Texas field and buy products from the East Texas refiners. Other activities consisted in interceding with buyers for favors for the refiners, as, for example, many purchasers wanted to buy in their own tank cars, and refiners would have material on track and be unable to ship it except in their own cars. They had contracts with tank car companies, and the buyers used to come in and insist on buying in their cars, which didn't furnish relief to the refiner that had gasoline already loaded to sell. They would call me and ask for permission to ship in their cars instead of the buyers' cars. On frequent occasions the specifications of buyers were very rigid, and they asked me personally to call different buyers and ask if they wouldn't relent a little on their specifications. 1172 At times buyers turned down gasoline on account of quality, and they would call me and ask if I wouldn't intercede with the purchaser of that gasoline and ascertain whether he wouldn't reduce the penalty for it. I have continually tried to advertise their refineries, their service, and their aims.

The buyers I speak of were major companies principally. I believe they would all be classed as major companies or large independent companies. Some place along the line I was asked what the refiners felt they were going to get for their material, what their object was, their attitude was, on a price. I told them what the refiners told me, they wanted a fair, going market price. I asked the major companies to buy from the refiners on a fair going market price.

Q. Did you ask them to support the market?

A. I asked them to support the refiners, if that means supporting the market.

(Mr. Lewin passes documents to the Court.)

Mr. Dougherty: If the Court please, whenever there comes a slight conflict between the conception of counsel for the Government as to what the witness should testify to and what the witness testifies to, I object to counsel running up to the bench 1173 with this transcript of the Grand Jury testimony, and I object to it particularly for this reason, that it leaves a bad impression in the mind of the jury. I think it creates a bad atmosphere. I don't know that it is intentionally done.

Mr. Chaffetz: I think the history speaks for itself, what the history was with respect to the two preceding witnesses who were on the stand. The jury and all present know without counsel trying to characterize it. Everybody knows that your Honor said the other day that these witnesses whom the Government is compelled to call to obtain the facts are employees of the defendant companies. They are under pressure—

Mr. Donovan: I object to such a statement, if the Court please, as highly improper.

Mr. Chaffetz: This is from—

Mr. Donovan: And an intent to be inflammatory.

Mr. Chaffetz: It is not intended to be at all.

Mr. Donovan: It is a fact that it is a fact.

The Court: The jury will disregard that statement, "the witnesses are under pressure."

Mr. Chaffetz: I don't mean that in that way—

The Court: It is a fact that they were employees—

Mr. Chaffetz: I don't mean in my—

1174 Mr. Denton: I object to it, and I want to say in answer to that, that the pressure is from the Government side on these witnesses.

The Court: (Addressing the jury:) These witnesses have testified before the Grand Jury the witnesses that have been on the stand. I have examined some of this testimony before the Grand Jury, and I refused to question witnesses on some of the questions before the Grand Jury; most of them were very, very leading, and I haven't done so. And I have used some of the testimony and read some of it for the purpose only of refreshing the witnesses' memories, and many times I have indicated that there was no conflict or nothing inconsistent between the testimony of the witness and the transcript of testimony. The only reason we use this transcript of testimony of each witness before the Grand Jury is to, if we can, refresh their memories so as to enable them to recall correctly what the fact is.

Mr. Lewin: Your Honor, would you tell the jury that in your opinion, my coming to you with the transcript is not improper conduct?

The Court: No, there is nothing improper about that at all. You would have no other way of conveying the transcript to the Court. That is perfectly proper. Exception allowed. (The Court reads document silently). 1175

The Court: Will you ask your question again, please?

Mr. Lewin: Q. Didn't you tell these buyers, the major company buyers, when you solicited them, that you wanted them to support the market?

The Court: The going market price?

Mr. Lewin: The going market price.

A. I wanted them to buy gasoline from the refiners at the going market price, if they would.

By Mr. Lewin

I asked Sinclair Refining Company to direct its purchases through the marketing association, if it would, that is, the East Texas Association. I asked Mr. Hartmann of the Gulf to allow his buyer to approach the Association, if he would. I talked to Mr. Cottingham of The Texas Company. I talked to Mr. Dodge of The Texas Company. I talked to Scullin of The Texas Company of Houston, Texas.

The Court: Q. As you talked with them is that the same conversation you had with the Sinclair, about the same?

A. No, I was done with the East Texas work, and I merely dropped in to say the association was still functioning.

1176 Q. I tell you what you do. Take a list of those defendants and tell us briefly the nature of the conversation with them or some representative.

By the Court

Concerning the Sinclair buying, I talked to Mr. Carnes and with Mr. Tracey. Concerning the purchasing of gasoline by The Gulf I originally talked with Mr. Hartmann and later with the Gulf buyer, Mr. Bradshaw. Concerning The Texas Company, I talked with Mr. Will Dodge of The Texas Company and Mr. Cottingham of The Texas Company. I talked with Mr. McElroy and Mr. Chamberlain of The Pure Oil Company.

I talked in the Continental Oil Company with a Mr. Batson in New York and with Mr. Karstedt and with Mr. Kennedy, and I believe once with a man, Morgan. Concerning Tidewater Company I talked with Noel Robinson, J. W. Warner and Mr. Audrain. Cities Services Company I talked with Mr. Frueauff. Cities Service Export Company, Mr. Brandli. Louisiana Oil & Refining Company, Mr. Welch and Mr. Brakefield. The subject matter of the conversation with each of these people would be different.

As relates to Mr. Chamberlain of The Pure Oil Company and Mr. Audrain of the Tidewater Company, I merely passed on to them information concerning the availability of material, at the request of Mr. Cline. He was at
1177 Tyler and gave me information over the telephone.
I gave them information that there were certain refiners and that they had certain gasoline to meet their specifications. I didn't discuss buying for the companies with either one of those gentlemen.

Concerning the Sinclair Company, I talked with Mr. Carnes and asked him to buy, and with Mr. Tracey about shipments, about the amount he purchased, or that he could purchase, or whether he would purchase any more.

With the Gulf Company I talked with Mr. Hartmann and the Gulf Company's buying representative, Mr. Bradshaw, about how much they had bought. First of all, I talked with Mr. Hartmann concerning the amount of gasoline that they would buy or whether they would buy. Then with Mr. Bradshaw about how much they have bought, or whether they would buy any more. In some particular week, how much he had bought that week. I had frequent telephone calls with Mr. Bradshaw; some times two or three times a week, during 1935 after March 1st, not so much in 1936.

With The Texas Company, I asked Mr. Dodge if his company was going to buy gasoline. I asked Mr. Cottingham of The Texas Company if they would buy it through the Association. I asked Mr. Scullin of The Texas Company if they would direct their purchases to the Association. I talked with Mr. Scullin on telephone calls in
1178 the fall of 1935, and met him for the first time some time in April, 1936. I had heard they were going to buy a considerable quantity of gasoline in East Texas, and called Mr. Scullin and asked him if he wouldn't let the Association help him assemble the gasoline, and he told me no.

With The Pure Oil Company I talked with Mr. McElroy concerning purchases of East Texas gasoline. My first conversation with Mr. McElroy was in New York, I believe it was on March 6, 1935. I have known Mr. McElroy a long number of years, and I told him that I was off on another tour to try and get help for the East Texas refiners, and did he think his company was going to buy in that market. He told me they badly needed gasoline but they were afraid to buy it in East Texas, and would not buy it in East Texas unless they could be assured that the Tender Board was going to function properly, but if they did not function, they were going to have to buy on the Gulf Coast or some place else, and it would depend on his manufacturing department what they bought and where they bought. Subsequently, I talked with Mr. McElroy once on the telephone some time along during the summer, pleading for a let-down in their very rigid specifications. My conversations after that were principally with Mr. Chamberlain. In that territory, Mr. Chamberlain did the buying.

My first conversation with Mr. Chamberlain was over the telephone. He called me and told me that he had
1179 been referred to the Association by Mr. McElroy, and he called Mr. Cline and asked him about the availability of gasoline that would meet their specifications. Mr. Cline had given him assurance that there were two or three refineries in the field who could meet their

specifications. He called me and asked me if I thought that Cline knew what he was talking about and if they could get the material there, because if they couldn't it would very seriously interfere with their operations. I told him I knew at least two of the plants that Cline had named could if they would produce that kind of gasoline, and referred him back to Mr. Cline for a further checkup on his specifications.

Concerning Continental Oil Company, in New York in late March I talked with Mr. Batson about the possibility of his company buying gasoline in East Texas. He told me that that was a matter which would have to be referred to Ponca City.

In April 1935, at the meeting of the Western Petroleum Refiners Association, I secured an introduction to Mr. Karstedt of Continental. He told me that he would not buy any gasoline in East Texas under any conditions; that the reputation that had been given him of the Association and the refiners there was such that he didn't wish to have anything to do with them. Later, I asked Mr. Cline to keep in touch with the Continental Company at Fort
1180 Worth, and see if he could interest them in dealing through the Association.

I am not sure when my next contact with Continental was; I believe it was in the summer. I tried to reach Mr. Cramer, and couldn't get him, and talked with someone else, whose name I don't recall. My next approach was either to Mr. Morgan or to Mr. Kennedy in the fall of 1935. I met Mr. Kennedy in Los Angeles, and particularly pressed him to try to have his Fort Worth office deal through the Marketing Association.

As to Tide Water Company, I talked first with Noel Robinson, who explained to me that they were dealing through a refiner and terminal organization at Houston, and that in all probability that refiner might buy part of their material from the East Texas refiners, and possibly through the Association. I later learned that that company, the Republic Company, was buying some gasoline through the Marketing Association.

As to Cities Service Company, I talked with Mr. Frueauff in February 1935 and told him what I was doing in New York, and asked him if the company would support the East Texas refiners. He told me that Cities Service Company itself did not buy gasoline, but that if Mr. Brandli or Louisiana Oil Company were interested in buy-

ing gasoline, I could go and see them; that whatever they needed, or whatever they wanted, or whatever they
1181 wanted to do, was what would be done.

In Cities Service Export Oil Company, I talked with my superior, Mr. Brandli, who was not interested in buying anything except for our own needs.

As to Louisiana Oil Company, I talked with Mr. Welch, I believe, in April 1935. He told me that they had an arrangement of some sort with an East Texas refiner to supply them with gasoline; that that arrangement would run for several months, and until it expired, they would not be interested in discussing purchasing through the Association. I later talked with Mr. Brakefield, and asked him if, on the small spot purchases he was making from East Texas he wouldn't consult the Association. He told me he felt he could do better, dealing right in Shreveport, where the Grogan Oil Company was, and continuing his arrangement with the company that he was already dealing with.

By Mr. Lewin

I talked with Mr. Brakefield several times, to try and get him to buy over there; but I couldn't secure any encouragement from him on buying directly through the Association. Mr. Brakefield's company did not buy through the Association to my knowledge. The Association may have charged refiners for gasoline that he bought from some of the refiners, but I don't know that he bought through the Association.

1182 I used every argument I possibly could when I approached these various major companies to get them to buy through the Association. I told them that I thought that the refiners ought to be allowed to live, and that is what I wanted to see them do. On one or two instances I may have told them that I felt that if the East Texas refiners survived, the whole industry would benefit; that is, if they survived on an orderly basis, the whole petroleum industry would benefit.

Q. Did you point out to them that buying through that Association at going market prices, would have a good effect on raising the market price?

A. Well, Mr. Lewin, I don't want to get into an argument with you on these prices, but I have tried to make it plain, and I will make it plain now, that I felt and always have felt that market prices were regulated by the law of supply and demand. I have never fixed a price, never suggested a price to any refiner; I never have, and I never will.

Q. Weren't you trying to stimulate demand?

A. I certainly was, for the East Texas refiners.

Q. And in that way, you were trying to affect prices, is that right?

1183 A. If prices would be affected by the demand, yes, sir.

Q. Well, didn't you say that it would be?

A. I said if demand affects price, yes, the price would be stimulated.

Q. Well, didn't you say that demand did affect price?

A. It would affect price, naturally.

Q. All right. Now, did you use that argument with any of these major companies?

A. No, sir. It was up to the refiners themselves to get prices up; I was not regulating prices.

During this time, I was keeping in close contact with Robert N. Cline, the secretary of the Association. His duties, according to the best of my understanding, were to keep in touch with all of the independent refiners in the East Texas field who were operating on federally tendered oil, and to see that they listed with him from time to time, once each week, I believe, the amount of gasoline that they expected to produce the following week, over and above their then commitments. He obtained the specifications on that gasoline, checked with the various state and federal tender boards to see that the refiners had sufficient crude to produce that gasoline legally; and 1184 when any buyers called him, that is, brokers, marketers, jobbers or major companies, he would put them in touch with refiners who had gasoline to meet their specifications.

I do not know how many independents bought gasoline through that Association. Mr. Cline told me that he had frequent calls from brokers and marketers, inquiring where gasoline was available. I would have no idea what the independents bought through the Association. Mr. Cline may have definitely arranged for the purchase of 50 cars by brokers; but, once a broker established himself with a refiner, he would go directly to the refiner, and not to Mr. Cline, so there would be no way of knowing what he did.

I can give you no record on the amount of buying through the Association by independents. I have never had a record on it. It might have been 50, 100 or 500 cars, I don't know.

Q. Didn't you testify that you thought 50 was the proper estimate?

Mr. Donovan: When?

Mr. Lewin: Q. Before the grand jury?

A. I may have, but I don't know what an estimate—what it would be.

My understanding is that the Sinclair Company bought
regularly through the Association; that the Gulf Company,
through Mr. Bradshaw, bought regularly;
1185 that, The Pure Oil Company bought regularly; that
from some time in the spring or early summer of 1935,
Tide Water Oil Company bought regularly; that, beginning
either late in 1935 or in early 1936, the Continental
bought gasoline. Whether they bought all their gasoline
there or not, I don't know, but I understand they bought
some. I was pretty much out of touch with the thing by
that time. They were not buying during the time that I
was getting reports from Mr. Cline on the buying by various
companies. I knew that they were buying some gasoline,
but whether they were every week or not, I don't
know. But my understanding was they bought through
the association sometime, beginning late in 1935. Cities
Service Export Oil Company bought gasoline, beginning
in January, and in February and March, 1935. We bought
nothing after March 1935. I bought some of it through the
Association. I bought it all myself, but I learned the
whereabouts of it through the Association. I don't know
that Louisiana Oil bought directly through the Association.
I know Mr. Cline told me that the Association was
taking credit for some sales to the Louisiana Oil Company.

The Association charged an assessment to the independent
refiners for gasoline sold through it. They supported
their Association by an assessment. I believe they charged
$2.50 a tank car at first, and lowered the charge to
$2.00 a tank car, and then for a while, when
1186 their finances were in fairly good shape, they discontinued
the charge altogether, and later replaced the
$2.00 charge. These assessments were levied on cars that
were sold to a certain list of large companies wherein
purchases were made at what were considered the going

market prices. It is my understanding that assessments were made only on such purchases.

My understanding is that on the purchases by Sinclair at the going market price, the Association charged the refiner a commission; that on the purchases of Mr. Bradshaw for the Gulf at the going market price, the Association charged the refiners a commission. On the purchases by The Texas Company, reported to the Association by refiners, the Association charged a commission whenever they could find out what the price was. The records on the Texas Company were obtained from the refiners themselves.

> The Court: Q. The major companies that bought had nothing to do with this assessment, had they?
>
> A. I don't think they knew anything about it, no, sir.

By the Court

As to what The Pure Oil Company bought at the going market price, I understand the Association charged an assessment. As to Continental Oil Company, on 1187 anything that was bought directly through the Association at the going market prices, an assessment was charged. Tide Water Oil Company: on anything that was bought directly through the Association, an assessment was charged. Cities Service Company made no purchases. As to Cities Service Export Oil Company, I understand the Association charged an assessment on part of their purchases. As to Louisiana Oil Company, I don't know what percentage of the purchases which they made the Association charged a commission for.

By Mr. Lewin

As I haven't a list, I don't know whether there were any others on whose purchases commissions were charged to the independent refiners. I don't know whether commissions were charged on purchases by brokers or small companies.

> Q. Now, what was this "going market price" that you talk about? Did it have reference to the trade journals?
>
> A. To some extent, yes, sir, and whatever the buyer and the seller could get together on as the going market price.

I believe Platt's Oilgram reports an East Texas market price which has recently been rather consistently ⅛¢ below the Mid-Continent price. At one time, it was above.

1188 (Exhibit 676 is shown to witness and the jury.)

Mr. Lewin: This chart is supposed to be a representation of the trend of quotations for third grade gasoline published every Monday in Platt's Oilgram for the East Texas market. It represents a graph of the low quotations of that publication. It begins January, 1935, runs through the rest of the year 1935 into the beginning of 1936, and runs through the rest of the year 1936, in that fashion.

The East Texas refiners who were members of this Association produced from their skimming plants principally a straight run gasoline of from 58 to 60 gravity and under 437 endpoint motor, and a 60-62 gravity 400 endpoint gasoline, and a 63-66, 375 endpoint gasoline. The third grade gasoline is generally regarded as U. S. Motor. The largest percentage, I believe, of gasoline made by the skimming plants was 400 endpoint gasoline and 375 endpoint gasoline which, while it may be third grade in octane, is not commonly regarded as third grade gasoline.

I believe Platt's Oilgram carried a separate price for U. S. Motor and a separate price for 400 endpoint gasoline. All the straight run gasoline that I refer to moved in about the same general trend, although there were fluctuations in the 400 endpoint and in the 375.

Generally I remember the price was low in 1935. I think it was down around 3¼¢. I recall that 1189 beginning about March—it shows on this graph, Exhibit 676, about March 5th, I think—that the price began to come up in stair steps. That was during the month in which I was in New York working on behalf of the East Texas refiners trying to get them buyers. I was active in that work on the telephone or trying to make personal calls until about October. I spent quite a bit of my time in February away from home on that work. From March 4 or 6 up until about the 25th or thereabouts, I was away from home, so I guess my work in that period was more intensive than it was at any other time. On the telephone I worked about the same rate all the way down to October.

Sometimes along in May prices came up to about this level of 4⅝¢. (Indicating on chart). The published East Texas market prices generally remain on that level throughout the rest of the year. There is a break in there, according to my recollection there was a break right in here in the end of May, when the Supreme Court knocked out

the Code. The chart does not show any break, but my recollection is that there was a break. It recovered and then went back to the level again, until along some time I believe in September there was another slight break for a few days. Then it came back up to level again when crude was advanced. But generally I would say prices re-
mained pretty close on that level right straight
1190 through. During all that time I was working for
the Association trying to get buyers. That represents a fair picture of the prices paid by the major companies that were buying through the Association.

Q. Is it true that when the major companies buying through your Association paid prices along this level they were regarded by the Association as paying that market price, and the purchases were those in which a commission was charged to the independent refiners in your Association?

A. I believe I previously stated I regarded the going market price as the price on which the buyer and seller could agree as a fair going market price. Now, not being acquainted with what major companies paid except along general lines, I cannot answer the question without knowing what each company paid, but I regard personally any deal that was acceptable to both buyer and seller as a going market price, was the price on which the Association charged its commission. Now, whether that was in all cases strictly that price, or whether it was an eighth lower on part of their purchases, or above that is something on which I cannot inform the Court because I did not keep the records.

I remember that refiners down there in East Texas
advanced their quotations following the crude oil
1191 price in January 1936, but what anybody paid after
I got through in October, I had no information except general hearsay information, but I know that the quotations in the publications were up after the rise in the price of crude oil.

Q. Didn't you continue to observe prices so that you could report them to your superior, Mr. Brandli, throughout this period?

A. Oh, I reported the prices I heard to Mr. Brandli, yes.

Q. Now, I am asking about the reported prices that you were observing. They were the prices that the major companies were paying at the Association, weren't they?

A. I believe some of them paid those prices, and I recall distinctly that some others told me they were not paying those prices.

Q. I asked you, whether the prices you were reporting to Mr. Brandli, to keep in touch with the market, weren't those prices the major companies were paying through the association,—regular purchases?

A. The prices I reported to Mr. Brandli were the prices that were quoted to me and prices they wanted us to pay if we bought material.

Q. Weren't they the prices which the major

1192 companies were paying in this association?

A. Mr. Lewin, I am trying my best to explain that to you and to his Honor, and I think I have explained it.

Q. It wasn't satisfactory to me.

The Court: Q. What prices did you report to your superior officer?

A. I reported to my superior officer at that time that the price quoted to me, and I thought they were generally being quoted by refiners, were five and one-eighth cents in East Texas.

Q. How did that price compare with the price in the Journal for the same days?

A. In the Oilgram, you mean?

Q. Or, the Oilgram, yes.

A. Well, I don't know. I think the refiners raised their prices before the Oilgram went up. Just what the dates were, I don't know.

By Mr. Lewin

Looking at this chart, Exhibit 676, I see that the quotations on Monday of the low of the Oilgram after that rise, throughout the rest of January and half of February, were exactly at 5⅛¢. My recollection is that the price went up to 5⅛¢, and was supported at that figure for a while, and then gradually dropped off; and that the drop off came some time early in February,

1193 and I think it came sooner than the journals. I think it came before shown on that chart, which is based on quotations.

I didn't study the trend of prices for 1936 so I can't say that chart, Exhibit 676, represents the picture of the trend of price through the rest of 1936. I was still trying to get orders for the Association down to April, 1936. Beginning with 1936 down until April 1936, I don't know how far the price dropped, but I do know that the price held at 5⅛¢ for 2 or 3 weeks, maybe longer than that, but not much over 2 or 3 weeks, and then it went down. What level it dropped to, I don't know, but it may have reached 4⅞¢.

I believe the prices came up again in March. Prices might have been on a level from April into May, but I can't testify without comparing them with the Oilgram or copies of it.

Q. Is it your testimony that the going market price at what you suggested to these major oil companies, didn't have any reference to the trade journals in their quotations?

A. It would have a reference, yes, sir.

Q. Is that what you meant when you said "going market prices?"

A. I meant the closest to these trade journals that the buyer and the seller could get together on.

1194 By trade journals I meant the Oilgram with which I was familiar. I knew nothing about the Journal of Commerce and never read it.

Prices had gotten to 4⅛¢ on April 8, 1935. At that time I had been working for the Association about two months.

Exhibit 18 for identification is a letter I wrote to Mr. Brandli, dated April 8, 1935.

Mr. Lewin: I offer it in evidence, your Honor, as Exhibit 18 upon the same limitations as stated at R. p. 560.

Mr. Donovan: Same objection your Honor, as before at R. pp. 504-05, 556-57.

Mr. Lewin: That is offered subject to the same limitations as the other letters.

The Court: It may be received with the limitation expressed by counsel. Exception allowed.

(Letter referred to received in evidence as EXHIBIT 18 upon the conditions mentioned and read to the jury. Exhibit 18 later at R. p. 907 was admitted as evidence against all defendants.)

There was a meeting of the Western Petroleum Refiners Association at Excelsior Springs, April 5, 1935. Referring to the last sentence of Exhibit 18, I did not suggest a successor, in the work, to Mr. Arnott. I had in mind John Bradshaw as my successor.

Exhibit 39 for identification is a letter from
1195 LaPren Refining Company to me, signed by A. S. Robertson, dated April 16, 1935.

Exhibit 40 for identification is a letter I wrote to Mr. Robertson, dated April 18, 1935.

Mr. Lewin: I offer these letters in evidence, Exhibits 39 and 40.

Mr. Donovan: Same objection, your Honor, as appears at R. pp. 504-05, 556-57.

The Court: Yes, offered with the same limitations?

Mr. Lewin: Yes, sir.

The Court: Received, with the same limitations as appear at R. p. 560. Exception allowed.

(Letters so marked respectively received in evidence as EXHIBITS 39 and 40 upon the limitations mentioned. Exhibits 39 and 40 later at R. p. 907 were admitted as evidence against all defendants.)

I don't know whether LaPren Refining Company was a member of the East Texas Marketing Association in April, 1935. It was sometime during 1935. During the early part of this period Mr. Robertson used to come to some of their dinners but I don't know whether he had actually paid for his membership or not. I bought some gasoline from LaPren Refining Company for Cities Service Export Oil Company after February 13th, 4, 5 or 6 orders in February and March. I don't know whether the Association took credit for the early February purchases or not.
1196 I presume they did for the later February purchases and part of the March purchases.

Mr. Robertson was not president of LaPren; he was general all-around man, assistant manager of the refining operations and everything else of LaPren.

The price on Monday, April 8, 1935 was 4⅛¢ and on April 22, 1935 was 4⅜¢ according to the chart, Exhibit 676.

(Mr. Lewin read Exhibits 39 and 40 to the jury.)

The circumstances of that letter, Exhibit 40, were these: This man in his letter to me had promised several times to ship this gasoline and proposed to ship the higher priced gasoline and cancel out the low priced gasoline. I made repeated requests of him to ship the gasoline, and he submitted this proposal of his. So I sat down and wrote what is known as a "high-toned" letter. We were so short of gasoline we couldn't get enough for our cargoes, and the reason we wanted that gasoline was because we had to put it in cargoes. I told a fib to put back his lie when he told me he was going to ship that gasoline.

Q. Can you explain to the jury this sentence in your letter: "Through my persuasion Cities Service Export Oil Company was induced to buy from
1197 East Texas Refiners during the latter part of February and March, more than 600 cars of gasoline, very little of which, at the time of purchase, we had reason to believe we would need."

A. That is what I have tried to explain, that we badly needed the gasoline, and I didn't want to tell him so, and I wrote a "high-toned" letter, and told about the same lie that he told.

Q. This, you say, was a lie?

A. Yes, I was matching mine with his.

Q. Will you explain this: "The results of such purchasing is plainly apparent?" The next sentence in your letter. Is that a lie?

A. No, that is not a lie.

Q. Were you referring to the results of purchases as reflected on the graph?

A. The results of not only my purchases, but their effort was plainly apparent.

Q. Were you referring to the advance in prices?

A. Possibly so, yes.

Exhibit 19 for identification is a letter I wrote and sent to Mr. Brandli, dated April 20, 1935.

Mr. Lewin: Your Honor, I offer it in evidence under the same limitations as appear at R. p. 560.

1198 Mr. Donovan: Same objection, your Honor, as appears at R. pp. 504-05, 556-57.

The Court: Received with the same limitations (passing document to Mr. Lewin). Exception allowed.

(Letter so marked received in evidence as EXHIBIT 19 upon the limitations mentioned. Exhibit 19 later at R. p. 907 was admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 19 to the jury.)

When I say in my letter, Exhibit 19:

"Therefore, a return which will show any considerable amount of profit to a refiner will increase crude runs to the extent where the handling of surplus gasoline will be difficult," I was referring to the independent refiners in the East Texas field. That would increase crude runs because, if they got to the stage where they could make money, they would go out and offer additional premiums for crude to increase their runs. That would increase surplus gasoline if there wasn't a market for it and make the handling of surplus gasoline difficult by their Association. The Association was trying to find a market for their surplus gasoline.

Exhibit 20 for identification is a letter I wrote and mailed Mr. Brandli, dated April 27, 1935.

Throughout this period shown on this graph, Ex-
1199 hibit 676, I was working for Cities Service Export Oil Company and receiving my salary from that company. I was working for the East Texas Refiners Association strictly on my own, after May, 1935, with the permission of my company to continue trying to help the East Texas refiners if I wished, and entirely on my own responsibility.

Mr. Lewin: Here is the letter of April 27, 1935, again to Mr. Brandli—

Mr. Donovan: May I have the same objection to this letter, Exhibit 20, your Honor, as appears at R. pp. 504-05, 556-57?

The Court: Objection overruled. It may be received with the same limitations as heretofore at R. p. 560.

(Letter so marked received in evidence as EXHIBIT 20 upon the limitations stated. Exhibit 20 later at R. p. 907 admitted as evidence against all defendants.)

Mr. Lewin: Q. Mr. Buckley, can you point approximately to the place on that price graph, April 27th?

The Witness: It would be right about in here some place, on this graph (indicating).

Q. Yes. Now that is very close to the last step that that graph takes up, there, isn't it, in that time?

1200 A. Yes, sir, it is getting up there pretty close.

(Mr. Lewin read Exhibit 20 to the jury.)

I cannot tell you exactly how much of this surplus gasoline the regular major company buyers took through the Association each month, but I can tell you from my recollection of figures given to me from time to time by Mr. Cline how much the Association took credit for. I believe that that ranged from around 100 and some odd cars in the first month, February, to 500 and some odd in March. I think it reached a peak of 900 and some odd cars in August or September, and then gradually went back down again. I do not recall what it was in October or November, which was about the last time I had any figures. I cannot give you any figures after October or November or early December, whenever it was I had the last information. It would be difficult to strike an average, but from 600 to 700 cars a month were taken by the major company buyers on the spot market from March, 1935, to December, 1935. That would be about as close as I could come to it.

Q. And could you tell us roughly the amounts of that gasoline that each one of those regular buyers took?

A. That is pretty far back to remember, sir. I don't know. I can give—I might—

1201 Q. Did you give that sort of testimony before the grand jury?

A. I think I made a guess. That was about all it was, an estimate or a guess.

I wouldn't know which company took the most because I couldn't give the details. Probably either Sinclair or Gulf took the most. I believe possibly The Pure Oil Company might have been next. Possibly Cities Service Export Oil Company might have been next on the list, on the total purchases they made in the first three months of the year. I have a hard time recalling them. Probably either Pure or Tide Water, whatever Tide Water Company was doing the purchasing, occupied about third and fourth positions. Texas was next and Continental last. I could not tell you whether Louisiana Oil ever bought anything through the Association, or what the details were for that year.

Mr. Cline used to give me information on the figures at that time, but not about Louisiana Oil's purchases. I obtained information once in a while from Louisiana Oil as to what they were buying in East Texas, but not as to whether it was through the Association. I think, if I recall, it was probably buying from 5 to 10 cars a week; might have been 12 some weeks, and 2 others.

Part of the orders from those major company regular buyers would come to Mr. Cline. My understanding is that Sinclair would approach Mr. Cline, or he would ap-
1202 proach it for the amount of gasoline that it would use or need in the next week. When he secured the offer-

ings from the refiners, he would give Sinclair a list of refiners who would have material available to match its specifications. When he was on the job, I presume Mr. William Tracey would approach Mr. Cline in that way for Sinclair. I believe the way Mr. Cline operated was to take that order and divide it up among the independent refiners, the members of his Association.

As to Gulf, Mr. Cline would receive information from Mr. Bradshaw, and tell Mr. Bradshaw where he could get suitable material. I believe Mr. Cline would divide the amount that the Gulf Company was inquiring about as far as he could among the independent refiners who were members of his Association. However, I believe what Mr. Cline actually did was give the purchaser the names of refiners and how much gasoline they had available and the purchaser then could buy from those refiners, if he wished, or if he did not want to buy from them he would give some material to some other refiner.

Q. Did Mr. Cline communicate with the independent refiners and tell them how much of that order was allotted to them?

A. Well, I can only presume on that. I presume he did.

Q. Don't you understand that was the practice?

1203 A. In some cases it was the practice, and in other cases otherwise.

With respect to Pure, the only knowledge I have was that Mr. Cline frequently on the telephone would call me, and, to save telephone expense, ask me if I would call The Pure Oil Company and tell it that certain refiners that week had so much gasoline which would meet its specifications. What Pure did after that, I don't know. I would call either Mr. Chamberlain or his office when I was asked to by Mr. Cline. Mr. Chamberlain was not always there. Mr. Chamberlain's office did the buying for Pure.

As to Tide Water Oil Company, Mr. Cline quite frequently asked me to communicate with the Tide Water and tell them, if they were going to buy gasoline, that week, that such and such refiners had their gasoline. Tide Water had an arrangement with one or two refiners to use their tank cars, and it tried to favor those refiners with its orders. I cannot say whether Mr. Cline divided some of the Tide Water orders among the independent refiners. He would tell me the names of the refiners who had material to meet Tide Water's specifications. I communicated either with Mr. Audrain on that subject or with somebody else in his office and told him what Mr. Cline had told me. I do not believe I ever handled that with Mr. Warner. Mr. Andrains was more or less in the shipping department. When 1204 Mr. Cline divided these orders among the various independent refiners in this Association he would have to consider first of all specifications, and then the amount of gasoline the refiners offered, and then the allocation by the Federal Allocation Board. I guess that is the only rule he had. I don't think he would generally divide it up among these companies in accordance with their capacities because some refiners had sales departments that handled a large per cent of their material, and there might be small refiners who had no sales department, and who offered Mr. Cline all their material.

Orders from Cities Service Export Oil Company during March and April, 1935, were not divided by Mr. Cline among the independent refiners in the Association. I approved all the purchases that were made. I was given the names of some refiners whose material I did not care to accept, and I went to other refiners to get it. I bought from a number of independent refiners who were members of the Association and from some that weren't members of the Association.

Mr. Lewin: Your Honor, I have at this time Exhibit 454 for identification, Exhibit 456 for identification, and Exhibit 478 for identification. I understand that the authenticity of these letters is conceded, and I offer them in evidence (handing exhibits to the 1205 Court).

Mr. Donovan: May I have the same objection, your Honor, as appears at R. pp. 504-05, 556-57?

The Court: You may, the same objection. Are you offering these with the same limitations?

Mr. Lewin: Yes, sir, as appear at R. p. 560.

The Court: Those may be received. Exception allowed.

(Documents so marked are received, respectively, in evidence as EXHIBITS 454, 456 and 478, upon the limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

On this purchasing you asked me about, there was one time in February, 1935, when Mr. Cline and Mr. Travis tried to locate material for me, when I was not in the field; and it happened in two or three instances in March, when I was not in the field, that Mr. Cline did handle work for me. But outside of that, I tried to do my own communicating.

I didn't personally assist Mr. O. D. Robinson of Republic Company in making purchases for Tide Water in the East Texas field. Mr. O. D. Robinson, and I believe Mr. Noel Robinson, told me that they were working with Tide Water Oil Company in its terminal and handling of its gasoline, but I don't think that I could be called an assistant in that.

My understanding is that on several occasions during
1206 the early part of 1935 Tide Water assembled at the
Gulf partial cargoes, making its purchases in East Texas. I did not make those purchases for them in East Texas, nor did I assist them, as I recall. I may have, but I don't recall it.

(Mr. Lewin read Exhibits 454 and 456 to the jury.)

The initials on Exhibit 456 are "H D" something, but I can't read the third initial as "f." I don't know that signature. F. R. Coates was vice president of Cities Service Export, and I had the idea he was president of some other Cities Service company.

(Mr. Lewin read Exhibit 478 to the jury.)

I wouldn't know, without totalling my figures, whether this 3,202,000 gallons of gasoline purchased in East Texas, according to this memorandum, was purchased by me. I wouldn't want to guess at whether 3,202,000 gallons was approximately the amount.

Cities Service Company didn't buy through me. Cities Service Export Oil Company did. During that time no other Cities Service company purchased in East Texas unless Louisiana Oil Refining Company could be called a Cities Service company, and I don't know the extent of its buying. I would rather imagine that that 2,000,000 gallons he mentioned as for export was either all or in part Cities
Service Export Oil Company, but without checking
1207 the figures, I couldn't tell.

Exhibits 21 and 22 for identification are letters I wrote and sent to Mr. Brandli, each dated May 17, 1935.

Mr. Lewin: I offer it in evidence, with the same limitations as appear at R. p. 560.

Mr. Donovan: The same objection, your Honor, as appears at R. pp. 504-05, 556-57.

The Court: The same ruling. Exception allowed.

(Letters so marked received in evidence as, respectively, EXHIBITS 21 and 22 upon the limitations mentioned. Exhibits 21 and 22 later at

R. p. 907 were admitted as evidence against all defendants.)

(Mr. Lewin read Exhibits 21 and 22 to the jury.)

In one of my letters to Mr. Brandli, I believe there was a remark to the effect that reports coming from the East were to the effect that the major companies were satisfied with their purchasing ventures. I was referring to companies that had bought gasoline in East Texas.

Exhibit 23 for identification is a letter I wrote and sent to Mr. Brandli, dated May 25, 1935. Exhibit 25 for identification is a telegram I sent to Mr. Brandli, dated July 8, 1935.

Mr. Lewin: I offer this letter and telegram in evidence under the same limitations as appear at R. p. 560.

Mr. Donovan: Same objection as appears at R. 1208 pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Documents so marked are received in evidence as EXHIBITS 23 and 25 upon the limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 25 to the jury.)

Integrated company purchasing means large companies that have their own crude oil production and their own pipe lines. Generally speaking it is the same as these major companies we have been speaking of.

Exhibit 26 for identification is a telegram I sent to Mr. Brandli, dated July 10, 1935.

Mr. Lewin: I offer Exhibit 26 in evidence under the same limitations as appear at R. p. 560.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Telegram so marked is received in evidence as EXHIBIT 26 upon the limitations mentioned. Exhibit 26 later at R. p. 907 was admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 26 to the jury.)

Referring to Exhibit 26, "any under market material" means material that would be available at bargain prices. "Material that appears quickly absorbed by inter-refiner buying" refers to this buying by major companies or 1209 by independent companies.

Exhibit 29 for identification is a letter I wrote and sent to Mr. Brandli, dated September 14, 1935. Exhibit 30 for identification is a letter I wrote and sent to Mr. Brandli of September 28, 1935. Exhibit 31 for identification is a letter I wrote Mr. Brandli dated October 12, 1935.

Mr. Lewin: I offer these three letters in evidence under the same limitations as appear at R. p. 560.

Mr. Donovan: Same objection, your Honor, as appears at R. pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Letters so marked are received in evidence as EXHIBITS 29, 30 and 31, respectively, upon the limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

(Mr. Lewin read Exhibits 29 and 31 to the jury.)

Sinsheimer is connected with the crude oil and pipe line department of Cities Service Oil Company of Pennsylvania. The writing "Sinsheimer, note and return. B" is that of Mr. Brandli on Exhibit 31. I don't think the writing on Exhibit 31, "See second page," is that of Mr. Brandli. The initial on the second page after "get your export price where it should be" is not Mr. Brandli's. It looks like an "S" and it may be Sinsheimer. Exhibit 32 for identification is a letter which I sent to Mr. 1210 Brandli, dated October 19, 1935. I believe Exhibit 42 for identification is a copy of a telegram I sent Mr. Brandli, dated December 2, 1935.

Mr. Lewin: I offer this letter and telegram in evidence, your Honor, under the same limitations as appear at R. p. 560.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Letter and telegram referred to received in evidence as EXHIBITS 32 and 42, respectively, upon the limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

(Mr. Lewin read Exhibits 32 and 42 to the jury.)

By Mr. Lewin

Referring to Exhibit 42, East Texas aviation is a gasoline or naphtha of 375 endpoint. "For movement Gulf" means for some terminal in the Gulf.

When gasoline moves from Texas to the Gulf of Mexico, it is not intended to be loaded in tank cars. There are different uses for the gasoline. What happens to the gasoline depends on the operations of the refiners at the coast. Some refiners use a heavy Gulf coast crude, and require a heavy inland gasoline to balance with their material to bring out a well balanced product.

All the gasoline purchased by Cities Service Export 1211 Company from the Association during this period was moved down to the Gulf of Mexico.

I believe Sinclair moved quite a bit of gasoline to the Gulf also. That would not be loaded on tank cars there. I believe that gasoline would go in their refinery tanks. I believe the Gulf Company bought some for the Gulf and some for distribution in the eastern half of Texas. I heard the Pure Oil Company sent some to the Gulf for reprocessing. Their refineries are at the Gulf.

Tide Water Oil Company, as I understand it, moved their material to the Republic Refining terminal in Texas City. I don't know whether that was reloaded for eastern shipment. Maybe they blended it with other grades for eastern shipment.

I don't know whether any appreciable amount of this gasoline purchased through the association in East Texas moved up there into the Standard of Indiana territory. Some of it probably did, because they had built up trade in that grade, and would have to move it there. I have no record of whether any substantial amount went to Oklahoma.

Exhibit 47 for identification is a telegram I sent to Mr. Brandli, dated January 6, 1936.

Mr. Lewin: I offer this telegram in evidence, your 1212 Honor, subject to the same limitations as appear at R. p. 560.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Same ruling. Exception allowed.

(Telegram referred to received in evidence as EXHIBIT 47 upon the limitations mentioned. Exhibit 47 later at R. p. 907 was admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 47 to the jury.)

Q. Will you straighten me out on this? What is "Douba"?

A. It is an old-time expression for a certain grade of natural gasoline, double A.

(Referring to Exhibit 47.)

Q. Now, Mr. Buckley, did those prices go lower in January 1936, as you suggested they might?

A. Than what?

Q. (Passing document to witness) Well, take a look at this chart.

Mr. Donovan: That is different. Natural gasoline, aviation.

A. This is natural gasoline.

Mr. Lewin: Q. Double A is natural gasoline?

A. Yes, sir.

I don't remember whether natural gasoline got lower or not in January, 1936. I don't remember whether "early support developed".

1213 Q. Did you mean early market support?

A. In buying—the buyers coming in that needed supplies in the natural gasoline market.

Q. Are you talking about early support to the price?

A. No, buying of it; needing supplies by buyers, so they had to come in and buy; otherwise, if buyers didn't come, that was a prediction of a price drop.

Q. So when you talked about early support, you talked about early support of that price to prevent it from dropping, didn't you?

A. If there wasn't buying, the price would drop. People would sell at the best price they could get.

I attended a meeting in East Texas about the end of the first week in February, or the 6th or 7th, or thereabouts some place. I made some remarks at that dinner.

The Court: Q. Did you say anything that evening about curtailment by the independent refiners?

A. I spoke to them about their operating conditions, yes, sir.

The refiners were having the celebration of the first 1214 anniversary of the formation of their Association, and they asked me to come down and be a guest and talk to them about their markets. During the course of the evening, Mr. May, who was the presiding officer at the dinner, asked me if I would talk to them.

I reviewed the activities of the Association during the past year, as I had recalled them, from the time I had been associated with them. I told them that they were then in a very trying period of their existence; that the Bureau of Mines and various other agencies were calling attention to the fact that stocks of gasoline were very high, that the market at that time couldn't absorb them, and various trade journals were preaching curtailment, and that everyone interested in the industry was asking for stabilization of operations.

I told them that I never had and never would tell any man how to run his business, but that, as I viewed the situation, there were three or four courses open to them.

They could shut down, and sell the crude oil; or they could continue to run on part time, and store the balance of their crude oil for better markets; or they could curtail their operations and sell part of their gasoline and store the rest of it; or they could run their heads off and dump the gasoline for the best price they could get; that it was their choice and I had no recommendations; every
1215 man had to make the choice for himself. That is the substance of what I had to say.

During February, 1936, the month in which I made that speech, I believe these major companies were still buying through the Association.

Exhibits 54 to 68 for identification, I believe, are my telephone expense accounts for telephone expense incurred for the account of the East Texas Marketing Association, although my name is not signed to all of them. They start March 1935 and run through each month, through April, 1936. "L D" signifies long distance.

Mr. Lewin: Your Honor, I would like to offer them in evidence upon the limitations stated at R. p. 560.

Mr. Donovan: The same objection as appears at R. pp. 504-05, 556-57.

Mr. Denton: If the Court please, I would like to make an objection to these as incompetent, irrelevant and immaterial. I can't see, in the interests of economy of this record, any necessity of putting all that detail in here, after he has proved the fact.

The Court: Objection overruled. Exception allowed.

(Documents so marked are received in evidence, respectively, as EXHIBITS 54 to 68, both inclusive, upon the limitations mentioned. Said
1216 exhibits later at R. p. 907 were admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 65 to the jury.)

Referring to Exhibit 65, Mr. Robinson of Pittsburgh is O. D. Robinson; Mr. Tracey at Fort Worth, Texas, is William Tracey of Sinclair.

Mr. Lewin: Your Honor, I now offer in evidence Exhibit 35 for identification, which purports to be a telegram from Mr. C. E. Arnott to Mr. Harry Frueauff, Cities Service Company, and I would like to offer it in evidence. The authenticity of it has been admitted.

Mr. Donovan: The same objection, your Honor, as appears at R. pp. 504-05, 556-57.

The Court: The same ruling. Exception allowed.

(Telegram so marked received in evidence as EXHIBIT 35 upon the limitations mentioned at R. p. 560. Exhibit 35 later at R. p. 907 was admitted as evidence against all defendants.)

(Mr. Lewin read Exhibit 35 to the jury.)

Cross-Examination by Mr. Donovan.

About July, 1916 I went into the oil business, working for the Oil Marketing Company in Detroit. After the war I went to Wyoming, and prospected for oil, gas and coal until about April, 1921. I then returned East, and 1217 went to work for Carson Petroleum Company, a predecessor of the company I am now working for. I have been working in the same position since then.

I believe the first time I went to East Texas was in 1931. I was there on trips involving the purchase of crude oil in 1931 and in 1932, and I started to do business with the refiners there on gasoline and other products in 1933, and worked with them continuously since then, that is, whenever we were in the market and could use their material.

The East Texas field was first discovered, I believe, in 1930. I am not absolutely sure of the exact date.

I made certain purchases in 1935 in East Texas for Cities Service Export Oil Company. I have a record of the purchases I made between January and March, 1935.

(Chart representing purchases made by Mr. Buckley for Cities Service Export Oil Company in 1935, marked for identification, defendant's Exhibit 716, and was checked by witness.)

There is one place here (indicating) where I think one of the dots is misplaced, but the price seems to be the same. I think it is this one right here (indicating); this looks like the 21st. It is not quite right. I made a purchase on the 17th and none on the 21st. However, my purchase orders may show those dates.

With that exception, I believe the chart is correct.

1218 The purchases recorded on that chart, Exhibit 716, of refinery gasoline were the only ones that I made in East Texas in 1935 and 1936. I made a purchase in what might be called the Mid-Continent field from Olney Refining Company in February, 1935. That is the only one I made in the Mid-Continent field.

The chart, Exhibit 716, shows the purchases by Cities Service Export Oil Company from independent refiners compared with Platt's Oilgram, F.O.B. East Texas refineries. The legend shows that this dotted square represents the market price as reported by Platt's Oilgram for U. S. Motor 62 octane and below. The green square represents the market price as quoted by Platt's Oilgram, U. S. Motor 60 to 62, 400 end point. I don't recall this 60 to 62, 400 end point, but that is the grade.

These black marks, here, represent the purchase or purchases on the days recorded on the chart of 400 end point. The red dots represent the purchase or purchases of 420 to 425 end point. That was U. S. Motor. The brown dots represent the purchases made of 375 end point.

I made 35 purchases during January, February and March 1935. There was one purchase here shown at the low, but that is for the low of U. S. Motor, and the purchase was 375 end point gasoline. 34 purchases were below the low, if that low (referring to chart) is correctly drawn.

1219 I did not make my purchases on Journal or Oilgram quotations. I made my purchases on prices that were given me to buy at by my superior, Mr. Brandli.

(Chart referred to is received in evidence as EXHIBIT 716.)

None of those purchases were above the low on this chart.

I didn't actually attend the meeting on February 4, 1935, in Overton, Texas, with the East Texas refiners. I was in East Texas on February 4, and at the place of the meeting, but I left there before they started the meeting. I had several talks with several individuals and groups of individuals that were there. I presume they held the meeting afterwards. Those individuals and groups included Mr. Henry May, at whose home the meeting was held, Mr. Travis, Mr. Sowell, Mr. Campbell, Mr. Kraker, and either one or both of the two Potter brothers. There were others there, but I can't remember their names at the present moment.

I had spent a considerable part of the afternoon in the field visiting several independent refiners, particularly in the Gladewater area. I went to the place of the meeting, and was greeted by Mr. May. Individual refiners and groups of refiners repeated considerable of what had been told during the afternoon, that they were very definitely going to try to get together and remove the stigma
1220 of hot oil from themselves, and from as much of the
field as they could, and that they were going to cooperate with the state authorities on the question of the collection of taxes on material that was moved on trucks, the taxes for which were being evaded, that they were cooperating with the Federal Allocation Board, and were going to cooperate with the Government to the extent of trying to see what they could do to bring about the passage of the Connally Act, and the reestablishment of the Tender Board. That was the substance of what various of them said, except—whether the remark is permissible—they said, "For God's sakes, get out and get us some help!"

The Federal Allocation Board was a sub-division of the Petroleum Code under N.R.A., under which the various refining districts of the country were divided into groups. The Federal Allocation Board secured from the various federal agencies, Bureau of Mines, and Petroleum Administrative Board, and others, recommendations for the manufacture of gasoline for the next following month. Then each of the allocators for the district sat together and discussed the allocations for the various districts, and they then went back to their respective districts and assigned the quantity of gasoline which would be manufactured by each refiner for the next succeeding month.

I left Overton and went to Houston, Texas that night, February 4. I visited three representatives of three
1221 large companies there: Mr. Brown of Humble Com-
pany, Mr. Carlisle of the Gulf Company, and a man in the marketing or sales department of The Texas Company whose name I don't recall. I also talked with one independent refiner in Houston, Mr. Irvin of American Petroleum Company.

I next went to Dallas, Texas.

I had made arrangements with Mr. May to meet him and other refiners at Dallas where they were attending a meeting of East Texas producers, who were sending a delegation to Washington to ask Congress to pass the Connally Act and return the Federal Tender Board to Texas.

I met with Mr. Grogan, Mr. May, Mr. Travis, and I believe Mr. Kraker was over there, and there was some refiner from the Shreveport district that was using East Texas crude. I related my experience in Houston with the people that I visited, and related the telephone conversation with Mr. Legge of Magnolia Petroleum Company, and told them that in a conversation with one man I had been told that his superior, the man that would have to do the buying of gasoline in East Texas, if they did buy it, was in New York, and that I would have to communicate with him there.

I applied to the refiners and told them as far as I was concerned I would like to go home and let them get some one else to try, that evidently I wasn't making much
headway. But they persuaded me then to go on East
1222 and see other people if I could, particularly these
men that I had been referred to. One of them said
he would like to put me in touch if he could with Dr. Lederer.

Dr. Lederer was the allocation representative for the Federal Allocating Board for East Texas which was District 5-C, and he was also employed in what I believe was called the Petroleum Labor Section of the Planning and Coordination Committee.

I am not sure of Jim Collett's exact title, but I think he was called Chairman of the Planning and Coordination Committee. I don't know the name of his company, but he was and is an independent producer in Texas of crude oil.

I did not know Mr. Arnott before I saw him at Pinehurst. Dr. Lederer introduced me over the telephone to Mr. Arnott from Pittsburgh. I talked with Mr. Arnott on the telephone after Dr. Lederer introduced me, and I saw Mr. Arnott in Pinehurst.

I went to see Mr. Arnott in Pinehurst because of what Dr. Lederer told me. I told him of my talk with Dr. Lederer. I told him of my experience along the line, and that Dr. Lederer had told me that he felt he was the only man he could reach from whom he could get help. I told Mr. Arnott I was representing a group of East Texas refiners who were forming a marketing association. I

told him why they were forming an association,—
1223 first of all to curb in such manner as they could the production of hot oil, to cooperate with the state and Federal authorities under the Code in obedience to the law. I told them of the plan they had to put a so-called truck bill in the legislature of Texas so they could eliminate what they called the stealing of taxes. I told him that the refiners had asked me to make this trip, and that I was there if possible to seek help or suggestions from him if he could give them to me.

By the Court

I went to Mr. Arnott as the stabilization agent for refining and marketing under Secretary Ickes of the Planning and Coordinating Committee. I did not go to Mr. Arnott because he was president or an officer of Socony-Vacuum Company. I went to him because Dr. Lederer told me that he was the only man that could give me help, and why, because of his position, he could give me help. Dr. Lederer said he was Chief Stabilizer under the Planning and Coordinating Committee for refining and marketing. That is what I understood him to say the position was.

By Mr. Donovan

I explained the situation of the East Texas refiners to Mr. Arnott, and as clearly as I can recall it, he said that he wanted to do some investigating, and that I would hear from him later if he could give me any information of interest, or if he was interested in taking up the
1224 position of the East Texas refiners.

By Mr. Morgan

I had a telephone conversation with Mr. Scullin at Houston, but I don't remember whether I talked with him once or twice. I was of the opinion that I talked with him twice, but the number of charges on my bills would indicate the number of calls.

(Witness excused.)

Mr. Chaffetz: This document, Exhibit 510, is a document from the files of the Phillips Company, and one, the authenticity of which has been admitted. It is dated February 8th, 1935, and is another one of the reports of F. L. Koopman to the Budget and Operating Committee. This document we offer only as against the Phillips Company and the Phillips defendants, and no other defendant. (Showing exhibit to the Court.)

Mr. Donovan: May we have the same objection as appears at R. pp. 504-05, 556-57?

Mr. Thomas: If the Court please, before you
rule, in order to identify the objection, instead of
repeating over and over the same objection, I would
like to have the record show that the objections
1225 which we make to the reception of this document
now offered in evidence, Exhibit 510, are the same
objections that we offered to Exhibit 494 (R. pp.
556-57) which was the letter from the stenographer
to the Phillips Company. It is just a means of
identifying the objection. I also object to the reception of Exhibit 510 on the ground it is immaterial, as I understand it relates solely to natural gasoline.

The Court: Objection overruled. Exception allowed.

(Document referred to received in evidence as EXHIBIT 510 against Phillips Petroleum Company, Frank Phillips, Fred L. Koopman, A. M. Hughes, and H. A. Gardner only.)

(Mr. Chaffetz read Exhibit 510 to the jury.)

(Stipulation signed by Charles I. Francis, pertaining to authenticity of documents taken from the files of The Pure Oil Company received in evidence as Exhibit 717.)

Mr. Chaffetz: The government offers in evidence Exhibits 488, 482, 483 for identification.

Mr. Thomas: The same objection as appears at R. pp. 504-05, 556-57, 620.

The Court: It may be received as against such defendants as the record shows so far, the testimony shows have participated in the buying program. Exception allowed.

(Documents referred to received in evidence
as EXHIBITS 488, 482 and 483, respectively,
upon the limitations stated. Said exhibits later
1226 at R. p. 907 were admitted as evidence against
all defendants.)

(Mr. Chaffetz read Exhibits 488, 482 and 483 to the jury.)

Mr. Chaffetz: "Mac". I understand, is Mr. Mc-

Elroy, a defendant in this case, the "Mac" referred to in the telegram I just read.

Mr. Chaffetz: I offer in evidence Exhibits 485 and 487 for identification.

The Court: They may be received upon the same limitations.

> (Documents referred to are received in evidence, respectively, as EXHIBITS 485 and 487, upon the same limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

> (Mr. Chaffetz read Exhibits 487 and 485 to the jury.)

The Court: Let the record show the same objection and the same ruling to those last exhibits as appears at R. pp. 504-05, 556-57, 620. Exception allowed.

Mr. Chaffetz: Now, your Honor, I have a series of reports written by J. W. Warner, a defendant in this case, and associated with the Tide Water Oil Company, to J. D. Collins of that company, they are all very much alike, if your Honor would like to look at samples of them, it would save my handing them up one at a time (handing exhibits to
1227 the Court).

I shan't offer them all, only some of them, the exhibit numbers beginning at No. 251.

I propose to offer them separately, your Honor, I just wanted your Honor to see them before I started offering them one at a time, but I will make a separate offer of each one.

> (Stipulation signed by Bethuel M. Webster, dated October 3, 1937, was received in evidence as EXHIBIT 718.)

Mr. Chaffetz: The following Exhibits are offered in evidence by the Government: 251, 252, 253, 254, 256, 257, 258, 259, 260, 262, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 284, 285, 286.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57, 620.

The Court: Each and every such objection is overruled, and each and every such request for instruction is denied, and the letters may be received against the defendant Warner only for the present. Exception allowed.

(Documents previously so marked for identification are received in evidence as EXHIBITS 251, 252, 253, 254, 256, 257, 258, 259, 260, 262, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 284, 285, and 286, respectively. Said Exhibits later at R. p. 907 were admitted as evidence against all defendants generally.)

(Each of these Exhibits was read to the jury.)

TRANSCRIPT OF RECORD

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1939

No. 346

THE UNITED STATES OF AMERICA, PETITIONER
vs.
SOCONY-VACUUM OIL COMPANY, INC., ET AL.

No. 347

SOCONY-VACUUM OIL COMPANY, INC., ET AL.,
PETITIONERS
vs.
THE UNITED STATES OF AMERICA

ON WRITS OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT
OF APPEALS FOR THE SEVENTH CIRCUIT

PETITIONS FOR CERTIORARI FILED AUGUST 31, 1939
CERTIORARI GRANTED OCTOBER 16, 1939

IN THE

United States Circuit Court of Appeals
For the Seventh Circuit

No. 6721

THE UNITED STATES OF AMERICA,
Plaintiff-Appellee,

vs.

SOCONY-VACUUM OIL COMPANY, INC., ET AL.,
Defendants-Appellants.

Counsel for all
Defendants-Appellants:

MR. WILLIAM J. DONOVAN,
MR. HERBERT H. THOMAS,
MR. RALSTONE R. IRVINE,
MR. CARBERY O'SHEA.

Counsel for Certain
Defendants-Appellants:

MR. LOUIS MEAD TREADWELL,
Socony-Vacuum Oil Company, Inc.,
Wadhams Oil Company,
Charles E. Arnott, and
H. T. Ashton.

MR. GOLDTHWAITE H. DORR,
Charles E. Arnott.

MR. JOSEPH H. MARSHUTZ,
Wadhams Oil Company.

MR. CHARLES A. FRUEAUFF,
MR. CHARLES E. GATELY,
MR. THEODORE W. BRAZEAU,
MR. EMMERT L. WINGERT,
Empire Oil & Refining Company
(now Cities Service Oil Company).

MR. DAN MOODY,
MR. W. H. ZWICK,
MR. JAMES J. COSGROVE,
Continental Oil Company.

Counsel for Certain
Defendants-Appellants:

MR. CHARLES I. FRANCIS,
The Pure Oil Company and
R. H. McElroy, Jr.

MR. SAMUEL A. MITCHELL,
MR. TRUMAN POST YOUNG,
Shell Petroleum Corporation and
P. E. Lakin.

MR. G. T. STANFORD,
MR. ROY T. OSBORN,
MR. FREDERICK H. WOOD,
MR. THOMAS T. COOKE,
Sinclair Refining Company.

MR. J. C. DENTON,
Mid-Continent Petroleum Corporation and Robert W. McDowell.

MR. DON EMERY,
MR. R. H. HUDSON,
MR. RAYBURN L. FOSTER,
MR. WALTER L. BARNES,
Phillips Petroleum Company.

MR. W. P. Z. GERMAN,
MR. A. F. MOLONY,
MR. CLIFF V. PEERY,
Skelly Oil Company.

MR. RALPH HORWEEN,
MR. SAMUEL TOPLIFF,
The Globe Oil & Refining Company
(Illinois) (Oklahoma).

Counsel for Plaintiff-Appellee:

MR. THURMAN ARNOLD,
MR. JOHN HENRY LEWIN,
MR. W. P. CRAWFORD,
MR. GRANT KELLEHER,
MR. W. B. WATSON SNYDER,
MR. JOHN J. BOYLE.

Appeal from the District Court of the United States for the Western District of Wisconsin.

INDEX.

Placita 1
Indictment, filed Dec. 22, 1936 2
Summons for Mid-Continent Petroleum Corporation 18
    Marshal's return 19
Warrant for Robert W. McDowell 19
    Marshal's return 20

D 680	(For identification.) Chart of composite price quotations for regular and third grade gasolines, Platt's Oilgram, Oklahoma refinery market, and Chicago Journal of Commerce, f. o. b. Group 3, for 1936...	353	3109
G 681	Weekly Letter, March 8, 1935, W. P. Jacobi to A. G. Maguire	469 907	3111
G 682	Weekly Letter, March 15, 1935, W. P. Jacobi to A. G. Maguire	469 907	3112
G 683	Weekly Letter, March 22, 1935, W. P. Jacobi to A. G. Maguire	469 907	3112
G 684	Weekly Letter, March 29, 1935, W. P. Jacobi to A. G. Maguire	469 907	3114

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 685	Weekly Letter, April 12, 1935, W. P. Jacobi to A. G. Maguire	469 907	3115
G 686	Weekly Letter, April 26, 1935, W. P. Jacobi to A. G. Maguire	469 907	3116
G 687	Weekly Letter, May 3, 1935, W. P. Jacobi to A. G. Maguire	469 907	3117
G 688	Weekly Letter, May 10, 1935, W. P. Jacobi to A. G. Maguire	469 907	3118
G 689	Weekly Letter, May 18, 1935, W. P. Jacobi to A. G. Maguire	469 907	3119
G 690	Weekly Letter, May 24, 1935, W. P. Jacobi to A. G. Maguire	469 907	3720
G 691	Weekly Letter, May 31, 1935, W. P. Jacobi to A. G. Maguire	469 907	3121
G 692	Weekly Letter, June 22, 1935, W. P. Jacobi to A. G. Maguire	469 907	3122
G 693	Weekly Letter, June 28, 1935, W. P. Jacobi to A. G. Maguire	469 907	3123
G 694	Weekly Letter, Oct. 4, 1935, W. P. Jacobi to A. G. Maguire	469 907	3124
G 695	Weekly Letter, Oct. 18, 1935, W. P. Jacobi to A. G. Maguire	469 907	3125
G 696	Weekly Letter, Nov. 2, 1935, W. P. Jacobi to A. G. Maguire	469 907	3126
G 697	Weekly Letter, Nov. 15, 1935, W. P. Jacobi to A. G. Maguire	469 907	3127
G 698	Weekly Letter, Nov. 22, 1935, W. P. Jacobi to A. G. Maguire	469 907	3128
G 699	Weekly Letter, Nov. 29, 1935, W. P. Jacobi to A. G. Maguire	469 907	3129
G 700	Weekly Letter, Dec. 13, 1935, W. P. Jacobi to A. G. Maguire	469 907	3200
G 701	Weekly Letter, Jan. 3, 1936, W. P. Jacobi to A. G. Maguire	469 907	3131

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 702	Weekly Letter, Jan. 11, 1936, W. P. Jacobi to A. G. Maguire	469 907	3132
G 703	Weekly Letter, Jan. 24, 1936, W. P. Jacobi to A. G. Maguire	469 907	3133
G 703-A	Weekly Letter, Feb. 7, 1936, W. P. Jacobi to A. G. Maguire	469 907	3134
G 704	Weekly Letter, Feb. 15, 1936, W. P. Jacobi to A. G. Maguire	469 907	3135
G 705	Weekly Letter, Feb. 21, 1936, W. P. Jacobi to A. G. Maguire	469 907	3136
G 706	Weekly Letter, March 13, 1936, W. P. Jacobi to A. G. Maguire	469 907	3137
G 707	Weekly Letter, April 24, 1936, W. P. Jacobi to A. G. Maguire	469 907	3138
D 708	Check, June 18, 1935, Planning and Coordination Committee to W. P. Jacobi, for $366.25	473	3138
D 708-A	Endorsements on back of check, Def. Ex. 708	473	3139
D 708-B and C	Voucher, Planning and Coordination Committee, to W. P. Jacobi, for check, Def. Ex. 708	473	3140
D 709	(For identification.) Executive Order dated Aug. 19, 1933	473	
D 710	(For identification.) Code of Fair Competition for the Petroleum Industry, approved Aug. 19, 1933	473	3141
D 711	(For identification.) Code of Fair Competition for Petroleum Industry and Administrative Orders	475	
D 712	Chart of tank car purchase prices paid by Socony-Vacuum Oil Company, Inc. to independent refiners in 1935, compared with Oklahoma market quotations of journals	477	3173

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 713	Chart of tank car purchase prices paid by Socony-Vacuum Oil Company, Inc. to independent refiners in 1936, compared with Oklahoma market quotations of journals ..	487	3177
G 714	Stipulation relative to Skelly Oil Company documents	504	3179
G 715	Stipulation relative to Phillips Petroleum Company documents	56	3180
D 716	Chart of purchases by Cities Service Export Oil Company from independent refiners in 1935, compared with Oilgram East Texas quotations	616	3183
G 717	Stipulation relative to Pure Oil Company documents	620	3185
G 718	Stipulation relative to Tide Water Oil Company documents	621	3185
G 719	Statement relative to East Texas Marketing Association bills for commissions, and tabulation showing tank car shipments by months, Feb. 1935 to April 1936	658	3186
D 726	Gasoline consumption figures for states by months and for Mid-Western area for years 1934, 1935 and 1936	711	3189
G 727	Stipulation relative to Socony-Vacuum Oil Company, Inc. documents	720	3197
G 728	Stipulation relative to Shell Petroleum Corporation documents	724	3197

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3092; Vol. VI, pp. 3093-3304; Vol. VII, pp. 3305-3904.

G 729	Stipulation relative to Cities Service Oil Company and Cities Service Export Oil Company documents	725	3199
G 730	Platt's Oilgram, Tulsa Edition, May 1, 1936	734	3200
G 731	Stipulation relative to Sinclair Refining Company documents	787	3209
D 733	Statement and tables concerning positions of individuals associated with Tide Water Oil Companies	814	3212
D 735	Tabulation of East Texas spot market purchases by Tide Water Oil Company, Jan. 1, 1931 to Dec. 31, 1936, and summary	822	3218
D 739	Tabulation of Pure Oil Company's source of supply and disposition of gasoline by months from Jan. 1931 to June 1937	856	3226
D-739-A	Chart illustrating Def. Ex. 739 (The Pure Oil Company's source of supply and disposition of gasoline)	1132	3231
D 740	Tabulation of Pure Oil Company's gasoline inventories and sales monthly from Jan. 1931 to June 1937	858	3223
D 740-A	Chart of tabulation of Def. Ex. 740 (gasoline inventories and sales by Pure Oil Company, 1931-1937)	1138	3235
D 741	Tabulation of chronological list of purchase orders by Pure Oil Company from independent refiners in East Texas, North Texas, Oklahoma, Kansas and Louisiana, 1935-1936	859	3237

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3092; Vol. VI, pp. 3093-3504; Vol. VII, pp. 3505-3904.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D-741-A	Chart of Pure Oil Company's purchases from independent refiners in the Mid-Continent area compared with Oklahoma price quotations of journals	1139	3263
G 742	Stipulation relative to documents received by A. V. Bourque	865	3265
G 743	Stipulation of testimony of George A. Booth	865	3265
G 744	Stipulation of testimony of E. M. Crone	865	3267
G 745	Stipulation relative to Continental Oil Co. documents	866	3268
G 746	Stipulation relative to facts concerning Gulf Oil Companies	866	3268
G 747	Tabulation of tank cars purchased by defendant companies from independent refiners, March 1, 1935 to April 30, 1936	896	3270
G 748	Tabulation of tank car prices paid by defendant companies for third grade gasoline purchased from East Texas refiners, compared with low quotations of Oilgram, March 1, 1935 to April 30, 1936	896	3272
G 749	Tabulation of tank car prices paid by defendant companies for third grade gasoline to East Texas independent refiners, compared with low quotations, Chicago Journal of Commerce, March 1, 1935 to April 30, 1936	896	3274

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 750	Tabulation of tank car prices paid by defendant companies for house-brand and third grade gasoline to Mid-Continent independent refiners, compared with low quotations, Platt's Oilgram, March 1, 1935 to April 30, 1936	896	3276
G 751	Tabulation of tank car prices paid by defendant companies for house-brand and third grade gasoline to Mid-Continent independent refiners, compared with low quotations, Chicago Journal of Commerce, March 1, 1935 to April 30, 1936	896	3278
G 753	Stipulation relative to documents of Clyde M. Boggs	900	3281
G 755	Letter, Sept. 4, 1935, C. M. Boggs to George B. Dickey	901	3283
G 756	Letter, Jan. 1, 1936, Clyde M. Boggs, to independent refiners	901	3284
G 757–765	Forms of gasoline questionnaire sent by Clyde M. Boggs to independent refiners	901	3285
G 766	Letter Feb. 7, 1936, Derby Oil Company to C. M. Boggs	901	3286
G 767	Letter, Sept. 26, 1935, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3286
G 768	Letter, Sept. 26, 1935, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3287
G 769	Letter, Oct. 25, 1935, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3287

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 770	Letter, Oct. 25, 1935, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3287
G 771	Letter, Oct. 25, 1935, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3288
G 772	Letter, Nov. 29, 1935, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3288
G 773	Letter, Nov. 29, 1935, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3288
G 774	Letter, Nov. 29, 1935, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3289
G 775	Letter, Dec. 20, 1935, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3289
G 776	Letter, Dec. 20, 1935, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3289
G 777	Letter, Dec. 20, 1935, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3290
G 778	Letter, Jan. 25, 1936, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3290
G 779	Letter, Jan. 25, 1936, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3291
G 780	Letter, Jan. 25, 1936, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3291

G 783	Letter, March 4, 1936, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3292
G 784	Letter, March 4, 1936, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3292
G 785	Letter, March 28, 1936, prepared by Clyde M. Boggs and sent to Dickey Oil Company	901	3293
G 786	Letter, March 28, 1936, prepared by Clyde M. Boggs and sent to Omar Refining Company	901	3293
G 787	Letter, March 28, 1936, prepared by Clyde M. Boggs and sent to Derby Oil Company	901	3293
G 788	Schedule, Sept. 24, 1935, of Omar Refining Company stocks, production and shipments..............	901	3294
G 789	Form of gasoline statistical information questionnaire sent to members of Western Petroleum Refiners' Association	901	3295
G 790–791	Form of gasoline statistical information questionnaire sent to members of Western Petroleum Refiners' Association	901	3296
G 792–794	Form of gasoline statistical information questionnaire sent to members of Western Petroleum Refiners' Association	901	3297
G 795	Identical with Gov. Ex. 756..........	901	

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 796–801	Form of gasoline statistical information questionnaire sent to members of Western Petroleum Refiners' Association	901	3297
G 802	Form of special fuel oil statistical information questionnaire sent to members of Western Petroleum Refiners' Association	901	3298
G 803–804	Form of statistical questionnaire on kerosene, gas and fuel oils, sent to members of Western Petroleum Refiners' Association	901	3299
G 805	Instructions for filling out questionnaire (Gov. Exs. 792-794, 796-801)	901	3300
G 806–808	Identical with Government Exhibit 805	901	3300
G 809	Identical with Government Exhibit 231-C, tabulation of tank cars purchased in May 1935, prepared by A. V. Bourque (Referred to)	901	3301
G 810	Identical with Government Exhibit 231-B, tabulation of tank cars purchased in April 1935, prepared by A. V. Bourque (Referred to)	901	3301
G 811	Tabulation of total cars purchased during May 1935, prepared by A. V. Bourque	901	3302
G 812-A and B	Tabulation of total cars purchased during May 1935, prepared by A. V. Bourque	901	3303
G 813-A and B	Tabulation of total cars gasoline purchased during June 1935, prepared by A. V. Bourque	901	3305

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 814-A and B	Tabulation of total cars gasoline purchased during July 1935, prepared by A. V. Bourque	901	3308
G 815	Letter, Feb. 7, 1936, Derby Oil Company to Western Petroleum Refiners' Association	901	3310
G 816	Questionnaire on minimum stocks prepared by Western Petroleum Refiners' Association and sent to its members, 1936	901	3311
G 817	Letter, Feb. 5, 1936, Derby Oil Company to J. C. Day	901	3312
G 818	Letter, Dec. 26, 1935, Derby Oil Company to J. C. Day	901	3313
G 819	Letter, March 30, 1936, Dickey Refining Company to A. V. Bourque	901	3314
G 820	Stipulation relative to documents of A. V. Bourque	901	3315
G 821	Stipulation of testimony of A. P. Ruether	901	3318
D 825	Executive Order, Aug. 28, 1933, appointing the Secretary of the Interior as Administrator of the Code of Fair Competition for the Petroleum Industry	945	3319
D 826	Order, Sept. 11, 1933, by Harold L. Ickes, appointing members of Petroleum Administrative Board	946	3320
D 827	Chart showing organization of petroleum industry under Code of Fair Competition	1166	3321
D 828	Letter, May 24, 1934, Amos L. Beaty, Chairman, Planning and Coordination Committee, to C. M. Boggs	949	3323

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 829	(For identification.) Order, Oct. 16, 1933, by Harold L. Ickes, with document attached as Appendix A, fixing minimum prices for petroleum and its products	954 1838	3324
D 830	(For identification.) Order, Jan. 31, 1934, by Harold L. Ickes, revoking minimum price order of Oct. 16, 1933	955 1838	3329
D 831	(For identification.) Order, Jan. 19, 1934, by Harold L. Ickes, approving National Petroleum Agency Agreement	955	3330
D 832	(For identification.) Letter, Dec. 8, 1933, Wirt Franklin to Harold L. Ickes, attaching copies of National Agency Agreement and National Marketing Agreement	955	3332
D 833	(For identification.) Press release by Department of Interior setting forth letter, March 29, 1933, from Committee of Fifteen to the Secretary of the Interior	969	970
D 834	(For identification.) Letter, Dec. 11, 1934, Harold L. Ickes to R. G. Cocanower	990	3345
D 835	Order, April 24, 1934, by Harold L. Ickes, amending Articles IV and VII of Petroleum Code	1008	3347
D 836	Letter, Jan. 2, 1935, Harold L. Ickes to J. D. Collett	1013	3353
D 838	Letter, March 1, 1935, John E. Shatford to F. E. Holsten	1026	3355

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3092; Vol. VI, pp. 3093-3504; Vol. VII, pp. 3505-3994.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 839	Tabulation comparing estimated and actual gasoline stocks as of Feb. 28, 1935	1026	3356
D 840	Telegram, March 9, 1935, Howard Bennette to E. B. Reeser	1028	3356
D 841	Tabulation showing voluntary refinery curtailment in March 1935 by defendant companies in Districts 3 and 4	1034	3358
D 842	Tabulation showing voluntary refinery curtailment in March 1935 by companies in districts of each company	1035	3360
D 843	Chart of stocks of finished and unfinished gasoline in March 1935	1036	3365
D 844	(For identification.) Order, Nov. 2, 1934, by Harold L. Ickes, approving Program Committee plan of purchasing distress gasoline; form of contract attached	1055	3367
D 845	(For identification.) Order, June 23, 1934, by Harold L. Ickes, approving three-party plan of purchasing distress gasoline, with form of contract attached	1055	3372
D 846	(For identification.) Order, Sept. 8, 1934, by Harold L. Ickes, approving Program Committee plan of purchasing distress gasoline, with forms of purchase agreement attached	1055	3376

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 847	(For identification.) Order Aug. 13, 1934, by Harold L. Ickes, approving two-party plan of purchasing excess gasoline, with form of contract attached	1055	3386
D 848	(For identification.) Press release, April 6, 1934, issued by Department of Interior, setting forth proposed amendment to Article IV (refinery section) of Code	1056	3389
D 849	(For identification.) Composite price chart for October, November and December, 1934, of third grade gasoline	1059	3397
D 850	Letter, Aug. 23, 1935, Harold L. Ickes to John E. Shatford	1073	3399
D 852	Tabulation of crude oil required by Pure Oil Company to supply gasoline sales, Nov. 1934 to Dec. 1936	1133	3400
D 853	Tabulation of gasoline acquired by Pure Oil Company, by months, Jan. 1934 to Dec. 1936	1136	3401
D 853-A	Chart of Defendants' Exhibit 853 (gasoline obtained by Pure Oil Company from sources other than its own refineries)	1136	3403
D 854	Tabulation of source of gasoline supply of Pure Oil Company, 1933-1937	1137	3405
D-854-A	Chart of figures in Defendants' Exhibit 854 (source of gasoline supply of Pure Oil Company)	1137	3407
D 855	Tabulation comparing Pure Oil Company's gasoline days' supply by months with total for United States, Nov. 1934 to Dec. 1936	1138	3409

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 856	Chart of tank car prices paid in 1936 by Pure Oil Company to independent refiners in Mid-Continent area, compared with Oklahoma quotations of journals..................	1140	3413
D 857	Chart of tank car prices paid in 1935 by Pure Oil Company to independent refiners in East Texas, compared with Oilgram quotations....	1140	3417
D 858	Chart of tank car prices paid in 1936 by Pure Oil Company to independent refiners in East Texas, compared with Oilgram quotations....	1140	3421
G 859	Chart of Pure Oil Company's gasoline sales, manufacture, purchases, inventories, contract processing, Jan. 1935 to March 1936..........	1145	3425
D 864	Stipulation of testimony of Mason Lyons concerning Vickers Petroleum Company gasoline production and sales, 1934-1936, with figures attached	1146	3427
D 865	Tabulation of Roct Petroleum Company gasoline production and sales, 1934-1936	1147	3429
D 866	Tabulation of Anderson-Prichard Refining Corporation gasoline production and sales, 1934-1936......	1147	3430
D 867	Tabulation of Col-Tex Refining Company gasoline production and sales, 1934-1936	1147	3430

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2584; Vol. V, pp. 2585-3062; Vol. VI, pp. 3063-3504; Vol. VII, pp. [illegible].

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 868	Chart of Danciger Oil & Refineries, Inc. flat price sales in 1935 to jobbers, consumers and major companies, compared with Oklahoma quotations of journals	1549	3433
D 869	Chart of tank car purchases by Mid-Continent Petroleum Corporation from independent refiners in 1935, compared with Oklahoma quotations of journals	1553	3437
D 870	Block chart showing percentage of purchases by Mid-Continent Petroleum Corporation from independent refiners at and below low Oilgram quotations, Mar. 1 to May 31, 1935	1553	3443
D 871	Block chart showing percentage of purchases by Mid-Continent Petroleum Corporation from independent refiners at and below low quotations, Chicago Journal of Commerce Group 3, Mar. 1 to May 31, 1935	1555	3447
D 872	Block chart showing percentage of cars purchased by Mid-Continent Petroleum Corporation from independent refiners above, at and below low quotations, Chicago Journal of Commerce Group 3, for 1935	1555	3451
D 873	Block chart showing percentage of cars purchased by Mid-Continent Petroleum Corporation from independent refiners above, at and below low Oilgram Oklahoma quotations for 1935	1555	3455

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 874	Tabulation of number of flat price purchases by major oil companies from independent refiners, compared with price ranges for third grade gasoline, Oklahoma market, for March 1935	1558	3457
D 875	Tabulation of number of flat price purchases by major oil companies from independent refiners, compared with price ranges for third grade gasoline, Oklahoma market, for April 1935	1560	3458
D 876	Tabulation of number of flat price purchases by major oil companies from independent refiners, compared with price ranges for third grade gasoline, Oklahoma market, for May 1935	1563	3459
D 877	Tabulation of number of flat price purchases by major oil companies from independent refiners, compared with price ranges for third grade gasoline, Oklahoma market, for June 1935	1566	3460
D 878	Chart indicating comparison of inventories, production, purchases and requirements of finished gasoline of Sinclair Refining Company, 1931 to 1936	1157	3463
D 879	Tabulation of finished gasoline transactions, Sinclair Refining Company, 1931-1936	1160	3465
D 880	Tabulation of gasoline production, Johnson Oil Refining Company, 1934-1936	1161	3466

Vol. I, pp. 1-682; Vol. II, pp. 683-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3082; Vol. VI, pp. 3083-3504; Vol. VII, pp. 3505-3964.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 881	Tabulation of gasoline shipments, Johnson Oil Refining Company, 1934-1936	1161	3467
D 882	Tabulation of gasoline production and sales, Waggoner Refining Company, 1934-1936	1162	3468
D 883	Tabulation of flat price sales in 1935 and 1936 by Mid-Continent Petroleum Corporation to its consumers	1163	3470
D 887	Tabulation of gasoline production and sales, Cushing Refining & Gasoline Company, 1934-1936	1538	3473
D 888	Tabulation of gasoline sales to major oil companies by Cushing Refining & Gasoline Company, Jan. 1934 to June 1936	1539	3476
D 889	Chart of tank car prices paid in 1935 by Shell Petroleum Corporation to independent refiners, compared with Oklahoma quotations of journals	1590	3481
D 890	Chart of flat price sales by Deep Rock Oil Corporation in 1935 to jobbers and consumers, compared with Oklahoma quotations of journals	1590	3485
D 891	Identical with Government Exhibit 891	1788	
G 891	Letter, July 20, 1934, Harold L. Ickes to C. E. Arnott	1174	3487
D 892	(For identification.) Memorandum, July 31, 1934, Louis Titus to C. E. Arnott	1173	3489
D 893	Telegram, Jan. 28, 1935, I. A. O'Shaughnessy to Charles Fahy	1182	3491

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3092; Vol. VI, pp. 3093-3504; Vol. VII, pp. 3505-3904.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 894	Letter, Feb. 1, 1935, Charles Fahy to I. A. O'Shaughnessy	1182	3492
D 895	Stipulation of testimony of L. B. Simmons concerning Rock Island Refining Company gasoline production sales, 1934-1936, with monthly figures attached	1228	3493
D 896	Tabulation of Sunray Oil Company gasoline production and sales, 1934-1936	1229	3495
D 898	Tabulation of El Dorado Refining Company gasoline production and sales, 1934-1936	1230	3496
D 899	Article from Tulsa Daily World, May 28, 1935, quoting statement by Donald Richberg	1210	3497
D 900	Article from Tulsa Daily World, May 29, 1935, quoting statement by Charles Fahy	1210	3499
D 901	Article from Tulsa Tribune, May 31, 1935, quoting speech by President Roosevelt	1210	3503
D 903	Check and voucher, June 18, 1935, for $322.10, Planning and Coordination Committee to R. W. McDowell	1213	3505
G 904	Article from Chicago Journal of Commerce, June 8, 1935, concerning press conference of President Roosevelt	1217	3507
D 910	Tabulation of number and amount of subnormal tank wagon and service station housebrand gasoline prices, 1934-1936	1243	3509

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3062; Vol. VI, pp. 3063-3504; Vol. VII, pp. 3505-3904.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 911	Tabulation of number and amount of subnormal tank wagon and service station third grade gasoline prices, 1934-1936	1243	3510
D 912	Tabulation of number and amount of subnormal prices to dealers for housebrand gasoline, 1935-1936	1243	3511
D 913	Tabulation of number and amount of subnormal prices to dealers for third grade gasoline, 1935-1936	1243	3511
D 914	(for identification) Excerpts from Final Report of Marketing Division, Petroleum Administrative Board, issued June 1936, concerning stabilization	1281	3512
D 915	(for identification) Letter, May 18, 1935, E. B. Swanson to W. J. Brundred	1287 1735 1841	3519
D 916	(for identification) Telegram, May 14, 1935, Charles Fahy to C. E. Arnott; and telegram, May 17, 1935, C. E. Arnott to Charles Fahy	1287 1735 1841	3520
D 917	(for identification) Excerpts from Annual Report of the Secretary of the Interior, June 30, 1935 (Reference to)	1290	3522
D 917-A	Letter of transmittal, Nov. 30, 1935, of Annual Report, Harold L. Ickes to President, and excerpts from Annual Report of Secretary of Interior, June 30, 1935	1679	3522

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 918	(for identification) Identical with Defendants' Exhibit 924 for identification (Report of Petroleum Code Survey Committee on Small Enterprises) (Reference to)	1320	3526
D 919	(for identification) Five identical letters, March 26, 1935, Harold L. Ickes to members of Petroleum Code Survey Committee on Small Enterprises	1321	3527
D 921	(for identification) Telegram, April 23, 1935, Charles Fahy to Paul C. Blazer	1321	3528
D 922	(for identification) Telegram, April 23, 1935, Paul G. Blazer to Charles Fahy	1322	3528
D 923	Press release, May 7, 1935, by Department of the Interior	1324	3529
D 924	(for identification) Press release, March 28, 1935, by Department of the Interior, concerning and attaching Report of Petroleum Code Survey Committee on Small Enterprises	1324	3530
D 925	Letter, May 9, 1935, W. J. Brundred to Charles Fahy	1355	3581
D 926	Tabulation of spot sales by Continental Oil Company to jobbers in Mid-Western area, 1935 and 1936	1369	3582
D 927	Stipulation of testimony of George Collins concerning Omar Refining Company gasoline production and sales, Feb. 1, 1935 to Dec. 31, 1936, with tabulation of figures attached	1370	3587

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 928	Stipulation of testimony of M. L. Smith concerning Kanotex Refining Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1370	3588
D 929	Stipulation of testimony of L. D. Hinman concerning Eason Oil Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1370	3590
D 930	Stipulation of testimony of James D. Miller concerning Black Gold Refining Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1370	3592
D 931	Tabulation of Cosden Petroleum Corporation gasoline production and sales, 1934-1936	1371	3594
D 932	Tabulation of Sun Company gasoline production and sales, 1934-1936	1373	3595
D 933	Tabulation of Rodessa Oil and Refining Corporation gasoline production and sales, Oct. 1935 to Dec. 1936	1374	3596
D 934-935	Tabulation of Deep Rock Oil Corporation gasoline production and shipments, 1934-1936	1375	3597
D 936	Map showing freight rates from various refining areas compared with rates from Group 3	1367 1396	3601
D 937	Map showing freight rates from various refining areas to Madison, Wisconsin, compared with freight rates from Group 3	1415	3605

D 977	Letter, June 12, 1935, C. E. Arnott to Charles Fahy	1736	3717
D 978	Press release, Sept. 18, 1933, by Department of the Interior, setting forth speech of Harold L. Ickes before Planning and Coordination Committee	1739	3718
D 979	Letter, July 25, 1935, Harold L. Ickes to C. E. Arnott	1739	3721
G 980	Letter, April 2, 1935, Harold L. Ickes to C. E. Arnott	1739	3722
D 984	Stipulation of tank car purchases by Standard Oil Company (Indiana) from independent refiners in East Texas and Mid-Continent fields, 1931-1936	1808	3723
G 985	Telegram, July 10, 1935, Waggoner Refining Company, Inc. to A. V. Bourque	1818	3734
G 986	Letter, Oct. 2, 1935, Dale W. Moore Oil Company to Waggoner Refining Company, Inc., attention Dave Gray	1819	3734
D 988	Certificate by Harold L. Ickes of appointment of Charles Fahy as chairman of Petroleum Administrative Board, together with document describing his qualifications and duties	1341	3735

Vol. I, pp. 1-622; Vol. II, pp. 623-1228; Vol. III, pp. 1229-1890; Vol. IV, pp. 1891-2594; Vol. V, pp. 2595-3062; Vol. VI, pp. 3063-3504; Vol. VII, pp. 3505-3904.

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 989	Stipulation of testimony of J. W. Steele relative to East Texas refineries operating on Federal tenders between March 1, 1935 and Dec. 31, 1936, as shown on Exhibit A attached thereto	1830	3737
D 990	Stipulation of testimony of James D. Miller concerning Dickey Oil and Refining Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1830	3740
D 991	Stipulation of testimony of M. A. Chambers concerning Panhandle Producing and Refining Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1679 1830	3742
D 992	Stipulation of testimony of M. P. Appleby concerning Wilcox Oil and Gas Company gasoline production and sales, 1934-1936, with tabulation of figures attached	1830	3744
D 993	(for identification) Letter, April 30, 1935, Paul G. Blazer to Charles Fahy	1830	3746
D 994	(for identification) Letter, May 7, 1935, Chairman of Petroleum Administrative Board to Paul G. Blazer	1830	3748
D 995	Letter, March 30, 1935, Harold L. Ickes to B. P. Lientz	1831	3749
D 996	Telegram, Jan. 6, 1938, Harold L. Ickes to R. A. Irvine	1342	3750

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 997	Stipulation of testimony of Harold F. Parsons concerning attached data pertaining to Tide Water Oil Company of New Jersey gasoline production and sales, 1932-1936, and other information	1599 1844	3751
D 998	Stipulation of testimony of R. E. Everitt as to minimum stocks and market facilities of Globe Oil & Refining Companies	1609	3756
D 999	Tabulation of gasoline production, purchases, shipments, and inventories, Globe Oil & Refining Company (Oklahoma) and (Illinois), Jan. 1, 1933 to Aug. 31, 1937	1609	3757
D 1000	Tabulation of tank cars of gasoline purchased by Globe Oil & Refining Company (Oklahoma), Jan. 1, 1930 to Aug. 31, 1937, and by Globe Oil & Refining Company (Illinois), Jan. 1, 1933 to Aug. 31, 1937	1609	3762
D 1002	Summary of purchases by three Globe Companies, Jan. 1933 to Aug. 1937, from independent refiners and from other refiners and brokers	1609	3767
D 1003	Tabulation of crude oil runs to stills by Globe Oil & Refining Company plants, Jan. 1, 1931 to Aug. 31, 1937	1609	3768
D 1004	Tabulation of flat price purchases from independent refiners, Group 3, 1935-1936, by Globe Oil & Refining Company (Oklahoma) and (Illinois)	1610	3770

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 1008	Chart of gasoline shipments, manufacture, and casinghead and refined gasoline purchases by Globe Oil & Refining Companies, 1933-1937	1612	3775
D 1009	Tabulations showing comparison of Pure Oil Company's gasoline purchases from Eason Oil Company with Eason Oil Company sales, 1935-1936	1614	3777
D 1010	Tabulation showing comparison of Pure Oil Company's gasoline purchases from Omar Refining Company with Omar Refining Company sales, 1935-1936	1614	3779
D 1011	Chart of purchases by defendant Companies from East Texas refiners, compared with Oilgram East Texas quotations for 1935	1617	3783
D 1012	Stipulation of testimony of Roy W. Dalby concerning gasoline shipped from Texas to Acme Petroleum Company in 1934, with Exhibit A attached	1619	3785
D 1013	Chart showing gasoline service station prices in Mid-Western area compared with the rest of the United States	1628 1679	3791
D 1014	Chart showing daily variations from average normal posted service station price in 28 representative Mid-Western cities, 1934-1936	1633	3795

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 1015	Tabulation—Sinclair Refining Company purchases in Mid-Continent field, Jan. 1, 1935 to April 30, 1936.	1636	3797
D 1016	Tabulation—operating refinery capacity of defendant companies compared with total United States operating capacity, as of Jan. 1, 1935 and Jan. 1, 1936	1535	3798
D 1023 (1017–1022)	Chart showing volume of East Texas and Mid-Continent gasoline sales and purchases by all East Texas independent refiners, 29 Mid-Continent independent and semi-major refiners, East Texas independent refiners named in the indictment, and Mid-Continent independent refiners named in the indictment, in 1935 and 1936........	1644 1646 1679	3803
D 1024	Chart of flat price purchases of regular and third grade gasoline, Group 3, Oklahoma refiners, by defendant major oil companies and by jobbers and consumers, compared with 1935 journal quotations	1679	3807
D 1025	Tabulation—summary f.o.b. Group 3 Oklahoma refinery flat price purchases by defendant companies from independent refiners and brokers of regular and third grade gasoline, compared with Chicago Journal of Commerce quotations, Jan. 1, 1935 to April 30, 1936......	1663	3809

Exhibit No.		Rec'd in evidence at page	Reproduced at page
D 1026	Tabulation—summary f.o.b. Group 3 Oklahoma refinery flat price purchases by defendant companies from independent refiners and brokers of third grade and regular gasoline, compared with Platt's Oilgram quotations for Oklahoma refinery market, Jan. 1, 1935 to April 30, 1936	1663	3810
D 1027	Tabulation—operating refinery capacity, Tide Water Associated Oil Company, Gulf Refining Company, The Texas Company and Deep Rock Oil Company, as of Jan. 1, 1935 to Jan. 1, 1936	1536	3811
D 1028	Stipulation concerning gasoline sales by defendant companies in Mid-Western area, 1935 and first seven months of 1936	1536	3812
D 1029	(for identification) Certified copy, Order, June 23, 1934, by Harold L. Ickes, approving Pacific Coast Agency Agreement and Refiners' Agreement and supplemental agreements thereto	1680	3817
D 1030	(for identification) Certified copy, memorandum, March 22, 1935, Charles Fahy to Administrator of Petroleum Code	1678	3869
G 1031	Letter, Sept. 8, 1936, M. G. Peeters to Clayton W. Haswell, together with enclosure of letter, July 24, 1934, A. G. Maguire to Chairmen of State Petroleum Committees	1683	3874

Exhibit No.		Rec'd in evidence at page	Reproduced at page
G 1032	Tabulation—tank car shipments of refined gasoline from 34 independent refiners in East Texas, March 1, 1935 to March 3, 1936	1850	3878
G 1033	Tabulation—purchases of third grade gasoline by Sinclair Refining Company from independent refiners in East Texas, March 1, 1933 to April 30, 1936	1850	3882
G 1034	Purchase order, Sept. 18, 1935, from Globe Oil & Refining Company (Illinois) to T. R. Vaughn	1864	3883
G 1035	Sales acknowledgment, Sept. 18, 1935, from T. R. Vaughn Oils to Globe Oil & Refining Company (Illinois).	1864	3885
D 1036	Letter, Sept. 26, 1935, Globe Oil & Refining Company to T. R. Vaughn Oils	1864	3886
D 1038	Letter, Sept. 20, 1935, J. M. Alexander to T. R. Vaughn Oils	1864	3888
D 1040	Identical with Gov. Ex. 1035, except handwritten notations (sales acknowledgment, Sept. 18, 1935, T. R. Vaughn Oils to Globe Oil & Refining Company (Illinois)) (Reference to)	1864	3890

1228 ROBERT N. CLINE, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I am secretary of the East Texas Marketing Association with headquarters at Tyler, Texas, where I reside.

I have been in the oil business since 1919. I was with Illinois Oil Company in Rock Island, Illinois, for one year; then with Western Oil Corporation at Tulsa for about 9 months; then with Tidal Refining Company in the Mid-Continent district, first in a clerical capacity and finally as sales manager at Tulsa. In 1929 I left the Tidal Company, and went with Cosden Oil Corporation for about a year. Then I was not engaged in any business for a little over a year, then I entered the oil business myself in St. Louis for about two years.

In 1934 I went to Overton, Texas, and have been in East Texas ever since. In East Texas I was first employed by Arrow Producing & Refining Company, an independent refiner, at Overton. It was a charter member of our Association. The Arrow was sold in June 1935 to Gilliland Refining Company, also a charter member of our Association, which, in turn, was sold in June, 1936, to General American Oil Company.

Henry B. May was president of the Arrow Company. He went to Gilliland when it acquired Arrow. He was the first and only president of the Association. I became 1229 secretary of the East Texas Refiners Association on February 5 or 6, 1935. At least, that is when my salary started.

(Copy of the indictment handed to witness.)

The original or charter members of that Association were: Arrow Producing & Refining Company; Grogan Oil Company, which was not a refiner itself, but handled the output of two refiners in East Texas; Southport Petroleum Company; La Pren Refining Company; Lake Refining Company; Texas Oil Products Company; Chief Refining Company; Gilliland Refining Company, and Utah Refining Company. All of these companies are listed on page 18 of the indictment, except Lake Refining Company. Lake stayed in existence for several months after the Association was formed, but its business consisted largely of intra-state Texas business. I don't believe it is in the refining business today.

The following companies, from the list of independent refiners on page 18 of the indictment, became members of the Association at some time during 1935: McMurray Refining Company, East Texas Refining Company, Cascade Refining Company, Grogan Oil Company, Trinity Refining Company, La Pren Refining Company, Southport Petroleum Company, Wabash Refining Company, Texover Refining Company, Ocean Refining Company, Solvex Refineries, Inc., Arrow Producing & Refining Company, Chief Refining Company, Gilliland Refining Company, Tex-
1230 as Oil Products Company, Utah Refining Company, and Premier Oil Refining Company.

Dominant Refining Company, Tower Refining Company, Century Refining Company, Tyreco Refining Company, and Matthews Refining Company operated for a short time on federally tendered gasoline when they could ship in tank cars interstate. While they didn't become full-fledged members, they enjoyed the full privileges of the Association, and the cooperation of the Association office for the time that they were in business, so to my mind they would be considered members just the same as any of the others.

The 22 named independent refiners were the principal members of our Association.

In addition to Henry B. May, the president, Tom Potter was treasurer, J. H. Campbell was secretary, and I was known as assistant secretary of the Association when the organization was first formed. The officers have never been changed. There has never been an election since the first.

I conduct the business of the Association from my home in Tyler, Texas. I am now secretary. We didn't hold an election. They just told me one day that from then on I was secretary. That was about 6 or 8 months ago. I had been performing the duties of secretary throughout the entire period. I didn't get any increase in salary when they made me secretary.

1231 Sinclair Refining Company has a refinery at Gladewater which is small in comparison to other refineries in the country. There are no other major companies that have refineries in East Texas. All the refineries there are owned and operated by so-called independents.

Through the period 1935 and 1936, the independent refiners in East Texas marketed their gasoline practically altogether on the spot market. By "spot market" I mean day to day transactions.

Platt's Oilgram, Tulsa Edition, carries the East Texas spot market quotations in their daily publication. It is possible that all of the editions carry the East Texas market. Platt's Oilgram publishes a high and a low spot market quotation for East Texas gasoline in that market when there is a range. As I didn't take the Oilgram and didn't keep in close contact, I can't say how the East Texas spot market quotations through this period compared with the Mid-Continent spot market quotations. I didn't read Platt's Oilgram from day to day. At times I would check either with ~~the~~ Oilgram or with some of our members who took it to find out what they were quoting. I did that with no particular degree of regularity, only probably 3 or 4 or 5 times a month to keep in touch with the published market.

As secretary for the Association I keep just as closely
in contact as I can with the independent refiners in
1232 the East Texas field and with the prices at which they
sell their gasoline on the spot market. That is part
of my duty. I make a check with all of them at least once a week, sometimes oftener. I keep quite familiar with their sales prices and the amounts they sell.

Everyone in the East Texas field sells on the spot market. If I knew how much gasoline was sold in the field, I could tell about how much was sold on the spot market. About 30,000 tank cars were sold in the year 1935, as a very broad estimate. That would be 6,000,000 barrels, if my arithmetic is right. The amount for 1936 would be approximately the same. I am assuming that practically all of the gasoline made in East Texas is sold on the spot market so that is my estimate of all the sales of East Texas gasoline during those years. I base that estimate on what I can remember the refiners made down there per month.

As a very broad estimate, I assume that two-thirds of the 30,000 tank cars in 1935, about the same in 1936, moved in interstate commerce or coastwise commerce. By "coastwise" I mean the gasoline which is delivered to the Gulf Coast for trans-shipment by boat, either to other parts of the United States or in foreign commerce.

The independent refiners in East Texas manufacture a
58-60 gravity, 437 endpoint gasoline with an octane
1233 rating that is below 62. That is classed as third grade.
A 60-62 gravity, 400 endpoint is a slightly better grade of gasoline. That wouldn't be classed as regular gasoline as it is known in the trade unless the octane rating met house brand specifications. Straight run gasoline would not have that high an octane rating. It would have to be cracked or treated in some way. They also make a 64-66 gravity, 375 endpoint, or, really, it is a 375 endpoint with a gravity ranging anywhere from 59 up. That cov-

ers practically all of the grades made. Of course, there are some plants that make naphthas of various kinds. There isn't any gasoline made there now that wouldn't be as good as or better than the 437 endpoint. In 1935 and 1936, I did not know of any quantity of gasoline made down there that didn't fall into these classes.

These three gasolines, if they are made in a skimming plant as straight run gasolines, are low octane. But in the cracking plants, they make a similar grade of gasoline which may be 63 plus or 65 plus or 68 plus octane, depending upon the equipment the refiner happens to have. There were not many of these independent refiners that could make a 68 plus octane gasoline in 1935, but there were quite a few who could make 65 plus.

Giving very rough figures, about two-thirds of the gasoline produced in 1935 was straight run gasoline, which
1234 would have an octane under 62. The other third would have octanes varying from 63 to 65 or 66. There were one or two plants that were coming pretty close to a 68 octane in 1936. Approximately two-thirds was third grade in 1936, and one-third was in this middle bracket. In those years, most of the gasoline that was shipped in tank cars was either 60-62 gravity, 400 endpoint, or was the 375 endpoint. The 437 endpoint went largely to trucks.

Our Association concerned itself with the gasoline that our refiners had on hand to move, regardless of which specification it was; although one of the reasons for the formation of our Association was to teach our members how to make specification gasoline. To a very great extent we succeeded in doing that. So for the most part, during 1935 and 1936, our Association handled only this specification material. Our Association when it started was concerned with all of the products that the refiners made, but it developed that most of our time was spent on gasoline.

The amount of gasoline in 1935 that was purchased by major oil companies in East Texas is, of course, another estimate as far as I am concerned, but I would say, 7,000 or 8,000 cars, as nearly as I can remember back over a year and a half. I thought our Association sales were around 700 cars a month which, for the 11 months we
1235 operated, would be a little over 7,000 cars.

I am not familiar with how much gasoline the majors may have bought outside of the Association. If they did buy, I have not the slightest idea of how much they may have bought.

I was in very close touch with all these independent refiners all through this period. I knew almost exactly what they were selling through the Association. I knew nothing about our Association members' business outside the Association other than what they wished to tell me, and the only thing I asked them was what gasoline they wished the Association to try to help them move from week to week. What they did with the balance of their gasoline, I have no knowledge of except in a very, very general way.

Q. Did you testify on that subject before the grand jury when you appeared before them?

A. I possibly may have. I testified to so much before the Grand Jury that it is all a jumble.

Q. Is it just because your mind is hazy on those figures or that you don't know it now?

A. I don't remember testifying before the Grand Jury to any figures. I may have.

Q. Don't you remember testifying that your Association didn't handle all the gasoline that the major companies bought, but handled the greater part 1236 of it, and you estimated that the major companies bought several hundred cars a month in addition to that handled through your Association? Do you remember that?

A. No, I feel very sure that I told you that the major companies bought gasoline outside of the Association, because I knew they did. But if I estimated 10 cars a month or several hundred cars a month, it was just a wild guess.

There were several companies that bought with a varying degree of regularity through our Association in varying amounts. During 1935, Sinclair Refining Company, The Pure Oil Company and Gulf Oil Corporation were fairly regular buyers. Tide Water Oil Company bought over 4 or 5 months. Cities Service Export Oil Company bought considerable material from us in February and March, 1935. Louisiana Oil bought some material in the field on occasions. It was buying single car lots for its stations off and on through the year, but not through the Association. It was buying that mostly direct. It didn't buy regularly through this Association, although on one or two occasions I was called to help it place some fairly sizeable orders. I wouldn't call it a regular buyer through the Association.

Our Association levied an assessment on its members. We charged our members a commission on all of the busi-
1237 ness the Association was able to assist them in obtaining from buyers in our primary trade territory,

that is, the territory where we had a freight advantage over all other refining groups as compared with other territories where we were at a disadvantage on freight rates as compared with other groups. In levying assessment, we were governed by sales made at the going spot market price. The going spot market price was the price at which we were able consistently to sell our gasoline. There was such a price throughout that period. It varied from day to day.

The gasoline market is just like the spot market or the stock market; it is based on the law of supply and demand. A refiner is naturally interested in getting as good a price as he can. And the buyer is interested in getting as low a price as he can. The point where the two of them get together is the going spot market. As an example of a price that wouldn't be the going market price under that definition, supposing a refiner had 50 cars of gasoline that he had to sell before night, and he had to take the best price he could get for it. We would not charge a commission on that sale. That would be a distress price. The proper price would be whatever the normal trade was going at, whatever we were able to sell for regularly, day to day.

I presume the published quoted prices were more
1238 or less in line with our going market price, more or
less the same figure, because they were a reflection of our prices. Our market price was a result of arm length trading between the buyer and the seller from day to day. As I didn't take any publications, I wasn't thoroughly familiar with the prices that were published in these publications, so I cannot say at this time exactly whether our prices were the same as the published prices or not.

The going market price which governed our assessing commissions was never figured by me or our members in terms of the low of Platt's Oilgram for the East Texas market or ⅛¢ below the Chicago Journal of Commerce quotations. I made out the commission statements myself.

Q. Well, didn't the major companies usually offer you the published market prices during that period of time?

A. I tried to explain, Mr. Lewin, I don't know what the published market prices were.

Q. Did you testify that most of the times they did offer you the published market prices, when you appeared before the grand jury?

A. As I said before, I don't remember that testimony.

(Mr. Lewin passes document purporting to be transcript of the grand jury testimony to the Court.)

1239 (Court reads silently.)

The Court: Q. You were here before the grand jury on Saturday, May 16, 1936?

Mr. Donovan: May it please the Court, just before that question might I interpose? I don't know for what purpose counsel has submitted the grand jury minutes to you now.

The Court: They are received by me simply for the purpose of refreshing the witness' memory.

Mr. Donovan: I want to object then, your Honor, that the witness has already said that he has no uncertainty as to the facts. He stated what he believed the facts to be. Now, he did say that he might have an uncertainty as to what he testified to, but that is entirely a different thing. If it is used for the purpose of refreshing his recollection, there is no recollection to refresh, because he states now what the fact is.

The Court: Well, we will see how much of it will refresh his memory. Objection overruled. Exception allowed.

Q. When you appeared before the Grand Jury, were these questions asked you and did you make these answers:

"Question: Whether or not you recall the prices paid by the major companies to you continued at the same uniform level throughout that period? 1240

"Answer: Most of them did. As I said before, we attempted to get published market prices.

"Question: When they used to call you, they used to offer you the published market prices, did they not?

"Answer: Most of the time.

"Question: On the purchases they volunteered—when they called you and told you what those prices were, did they not say, 'We will pay 4⅛¢ or 4½¢,' whatever the published price was?

"Answer: Sometimes they would offer us the published price."

Does that refresh your memory?

Mr. Thomas: Now, if the Court please, before the witness answers, the defendants object because the transcript of testimony of the witness before the Grand Jury referred to by the Court has not been properly authenticated, and there is no showing that such testimony was reduced to writing in the presence of the witness or read over or examined by him at the time; and, furthermore, the record of such testimony, if properly authenticated, is not
1241 contemporaneous with the facts or occurrences as to which he is now asked to testify, and because such testimony was given at a time too remote from the date of the occurrence or fact inquired about, and likewise too remote from the date of the trial. And if the transcript is being used for the purpose of refreshing the recollection of the witness, then we wish to ask that the transcript be identified so we may have it available for use by counsel on cross-examination.

The Court: Again, as I said before, the transcript of the testimony of the Grand Jury is confidential, to be used by the prosecution and by the Court. Your motion is overruled. Exception allowed. Now, you may ask your question, Mr. Lewin.

Mr. Lewin: Q. Mr. Cline, is your mind refreshed now on whether or not the major companies who bought through your association bought at the —in terms of the published prices?

A. I have testified that I thought the published prices and our going spot price were approximately in line. And the testimony that is read before the—from the Grand Jury testimony there, refers to the period when the published prices stayed on a level for several months, and I did know what
1242 that level was, and during that period I would say we got right at the published price, and I believe that testimony refers to that particular period.

We charged commissions on sales made in our trade territory that were made at what we considered the going market price. The going market price was one of the things we took into consideration in determining that a commission should be charged. Regularity of buying was not a thing that we took into consideration. If I had obtained a single order from some company down in that territory, I might have charged a commission on it, and he might never have bought from us again.

Louisiana Oil might be in that category. It bought a few times. I cannot remember how many. As well as I can remember we charged it on a couple of pretty good sized purchases.

I don't remember whether Socony-Vacuum Oil Company ever bought anything through the Association, or whether it bought through Bradshaw. I think it bought occasionally. I believe Jacobi called me once. If he asked for assistance in getting some material from members in our Association, I certainly gave him my assistance. I don't believe we charged commission on that material. It was not moving in our trade territory.

Humble never bought anything through the Asso-
1243 ciation. It bought once or twice that I know in the
East Texas field. I didn't handle it at all, and, of course, did not charge any commissions on it.

We charged commissions on Sinclair Refining Company, Gulf, Pure, Tide Water and Cities Service Export purchases, and on some of Continental's and Louisiana Oil's purchases.

For several months we charged commissions on Texas Company's shipments even though it was not buying through the Association. In my mind there was some period there where we did not charge it. We stopped doing that in April or May, 1937. I do not have commission accounts here.

We charged commissions on those sales to The Texas Company because when we first started the Association we were rather poor, and the commissions on the sales that were actually being handled through the Association were not sufficient to defray our expenses. So at one of our dinners, in discussing the matter, some one suggested that inasmuch as The Texas Company was buying gasoline from certain of our members, those members should be willing to pay commissions on those purchases in order to build up the financial structure of our Association. Those refiners agreed to do that, and I started putting The Texas Company on the list. We were supposed to
charge commissions only on sales that were handled
1244 through the Association, and the only reason we ever
started to charge The Texas Company was because we wanted a little bit more money in the treasury, and that was a good way to get it. Texas was the only company, other than those I have named, located in our trade territory, to which we were selling. In our own trade territory we were able to get a fair market price on sales,

whereas if we had to ship out into some other trade territory we had to pay a freight differential, and couldn't get a fair price.

Sales of our members to the Humble Company were in our trade territory, but they were never reported to me, and by the time Humble bought, our finances were in good shape, and we did not need the commission. The Texas purchases were reported to me by the members of our Association. The Humble purchases were not reported to me. I heard about them but they were not reported to me. The only difference between the Humble purchases and the Texas purchases was that when the Humble Company bought from us there was no need for additional financing, and the question was never brought up as to whether commissions should have been charged. I presume that if we had been in bad financial shape when the Humble Company bought, we would have charged commissions on them as well.

The first company that we put on the list for the
charging of commissions on its purchases was Cities
1245 Service Export Oil Company, because it was the
first purchaser through the Association. I don't
know the order that the other companies went in, but I would say the next company we put on the list was either Gulf or Sinclair. We added them to the list, because they were buying through the Association.

I think Pure was about the next that we put on the list, because it gave us an order through the Association. I think the first contract I had with Pure was when Mr. Chamberlain called me and gave me an order for 10 cars. He did not say anything about when he might want any more. Mr. Chamberlain might have told me that he would probably be buying gasoline down there right along if we could furnish the specifications he desired, but I don't remember. That wasn't the reason we put them on the list. In the early days of the Association we put everybody on the list that bought through the Association.

Tide Water and Continental were also on that list. I believe that is all on that list for commissions. That is all of the large companies that bought from us the first couple of months that I can remember. We didn't have any independents buying from us in the first couple of months that I can remember.

The government has the record of our commissions. At first I sent a weekly, and then later a monthly statement to each one of our members as a bill for commissions

and kept copies of it. Those copies are the records
1246 I brought up to the Government.

(Documents handed to witness.)

These are my files. I believe Mr. Buckley told me at one time that he understood The Texas Company was going to need gasoline and would buy in the East Texas field. I can't remember at the present time whether he told me how much it would buy each month or each week, or whether he gave me a figure.

I knew a man named Whitey May in 1935 and 1936. He was a field man for The Texas Company. As I understand Whitey May's position at that time, he was a scout, and spent most of his time going around the field picking up bits of information about drilling wells and all of the gossip that he could to turn in to his home office. About once a week or so I got information from him as to what The Texas Company had bought in the field. I used that information when I found it was true, and I can't remember when it wasn't true. I didn't use his information in charging commissions. The actual information I used to base my commission charges on came directly from the members of our Association. Sometimes he might tell me before, and sometimes after, my check with our members. This information I got from him checked against the other information I got, as far as I can remember. There wasn't any holding out.

I gave Mr. May information as to where he could
1247 buy gasoline every time he came and asked for it
and he came to me pretty regularly throughout this period, 1935 and 1936. We charged the commissions for the reason I explained previously,—that we needed the money to operate our association.

Q. Wasn't it because of your relationship with Whitey May, and of the knowledge that you got from him, that you put The Texas Company on that list, for the charging of commissions on purchases to The Texas Company?

A. I don't know how to answer that, Mr. Lewin. I have explained why we put The Texas Company on the list; and I have explained that Whitey May came to visit me and I gave him information—

(Mr. Lewin presents document purporting to be transcript of testimony before grand jury to the Court.)

The Court: All right, finish your answer.

A. (Continuing)—but I can't remember at this time that his visits had anything to do with commission charges that were made.

Mr. Lewin: Q. Well, didn't you give that as your reason before the grand jury?

A. If I did, I don't remember it. And if I gave that as a reason, it was because you pressed me for some reason, and I had to give something—

Mr. Lewin: No.—

1248 The Court: Well, you were giving truthful answers, weren't you, the same as we expect from you now?

A. I was giving just the best I could, yes, sir.

Q. We are pressing you for information now, too; and you are giving truthful answers, aren't you?

A. Yes, sir, I am trying to.

By Mr. Lewin

My best remembrance at this time is that at one of our dinners I brought up the subject of additional finances, and the members of the Association who were receiving orders from The Texas Company were agreeable that they should be added to the commission list, and I was instructed to put them on. Whether I brought up at that meeting, the fact that Whitey May had been visiting me, and that I was giving him any information or he was giving me any, I cannot remember at this time.

I don't remember Mr. May discussing with me how many cars The Texas Company was buying a week. I think I discussed The Texas Company with Mr. Buckley, but I can't remember now discussing it with Mr. May.

(Mr. Lewin presents document purporting to be transcript of testimony before the grand jury to the Court.)

I never gave out any reports to the Longview or Tyler newspapers on gasoline purchases. I heard that some reports, that came originally from me, were published 1249 in those papers. I remember seeing only one, which was a somewhat distorted report. Those papers could have obtained the information through several sources. I believe they got it through Whitey May. That was information that I had given Whitey May. I saw a report at one time that held substantially the same information I had given Mr. May. That report was in a little daily oil field paper, published in Longview, Texas. I don't remember the name of it nor who published it.

I believe the information I gave Mr. May was made a part of his weekly report to The Texas Company. I was perfectly willing that The Texas Company should have it. That is why I gave it to Mr. May. I don't know at this time whether Mr. May gave the information to the Longview Reporter, or whether someone else in the organization, or someone that he may have told it to, did so.

Q. Well, did you know whether it got to the papers through the Houston office of The Texas Company?

Mr. Donovan: If it please the Court, I must object to this, hearsay upon hearsay.

The Court: He can answer that question, does he know? You may answer that. Exception allowed.

A. Well, I am just trying to study that answer, your Honor. I have a hazy recollection on that thing, 1250 but I can't bring it to mind, right at the moment.

Mr. Lewin: Well, would this refresh your recollection?

(Presenting document purporting to be transcript of testimony before the grand jury to the Court.)

By the Court

This publication published just general oil news of some value to the oil men. I think it was pretty well limited to the East Texas field.

Q. Did you ever learn through the Houston office that any information you gave to Mr. Whitey May went out of that office for publication in the field, in the Longview Reporter?

A. It has been so long ago, I can't get that clear in my mind at the present time, your Honor.

Mr. Lewin: Q. Isn't that your best recollection?

A. Well, I am afraid my best recollection is that I don't know whether it came from the Houston office or from Whitey May in Tyler.

Q. Was it clear in your mind when you testified before the grand jury?

A. If I testified to a certain thing, I imagine it must have been clearer than it is now.

By Mr. Lewin

In the exact sense that I use the term surplus gasoline, I would say that The Texas Company was buying surplus gasoline during 1935 and 1936 from members 1251
of the Association. I do not know definitely why they didn't buy through our Association.

The fact that Whitey May was in the business of collecting general information for his Houston office naturally led me to believe that the information he obtained from me would also go to the Houston office of The Texas Company. I assume that the Houston office knew that I was in communication with Whitey May because I was sure he was obtaining this information from me to make a part of his weekly report to the Houston office. Whether or not he mentioned me by name I don't know. The information Whitey May was giving me about The Texas Company purchases turned out to be correct.

I knew that The Texas Company was buying on the basis of the low East Texas quotations in Platt's Oilgram. I may have got that information from Whitey May, but I knew it from my contracts with our own members.

For a while I had a practice with Louisiana Oil Refining Corporation that they would give me reports from time to time as to purchases in the East Texas field, with the idea of trying to charge commissions on them. I used to get in touch with Mr. Brakefield quite often on the phone, and I believe on a few occasions he would drop me a short letter to tell me that he had purchased some material.
1252 Mr. Brakefield was a buyer for Louisiana Oil Refining Corporation, and I believe also handled sales. I don't know anyone in the corporation except Mr. Brakefield, and I only know him through telephone contacts. His office was in Shreveport. I got letters from him, but I don't believe I ever wrote to him.

I did not get pretty regular reports of Louisiana Oil Refining Corporation purchases during 1935 and 1936. I did for 3 or 4 or 5 months in 1935. I don't remember any after that time. I handled two fairly good-sized orders of 65 cars each for that company, both of which I believe were in 1935, one in December, 1935, and another either just prior to that or just after that. According to my definition it was surplus gasoline. It was covered by these independent refiners' reports to the Association. We considered in the Association that "surplus gasoline" was the amount of gasoline a refiner manufactured over and above his fairly steady outlet to jobbers and brokers.

I knew what Mr. Buckley was doing for our Association during 1935 and 1936. I didn't know it was his chief duty to contact only major oil companies. I know it was his duty to contact large buyers of gasoline, and major oil companies are among the large buyers. I couldn't say for sure whether he was contacting others than major oil companies. I didn't know of any except major oil com-
1253 panies that he was contacting. I don't know how many he did contact.

There were very few cars actually purchased through our Association by others than major oil companies in 1935 and 1936. There might have been more than 25 cars purchased during that whole time, but the amount was not very great. It might have been fifty or more.

Q. Didn't you give an estimate of about 50 cars before the grand jury?

A. I may have.

Q. And didn't you say that of those 50 cars, you didn't know but what most of those transactions had never been consummated. Do you remember that?

Mr. Donovan: Your Honor, I think that is an improper way to refer to the grand jury minutes.

A. I may have said that.

Q. And didn't you say in that estimate you had included some purchases made by the Republic Company?

A. I don't remember that. I may have said it.

Q. Wouldn't that be true today, that in that general estimate of 50 cars you are giving now, you are including purchases made by the Republic Company?

1254 A. I don't remember the Republic making any purchases through the Association office, that is, purchases we actually handled through the office. Although the Republic purchased considerable through the field.

Q. You didn't handle all these 50 cars in the field?

A. I didn't know there were 50. You asked me for a guess.

Q. No, I didn't ask you for a guess. I asked you for your best judgment as to the amount. Now, in this best judgment of 50 cars, don't you think that there were included purchases by the Republic Company?

A. I don't believe there were.

Q. Didn't you testify to that?

A. I don't remember what I testified to, but at this time I don't believe it.

50 cars is a very small percentage of the amount of gasoline that was sold through our Association during that whole year. It would be less than 1%.

I contacted buyers from time to time following up Mr. Buckley's contacts. The principal ones I contacted were major oil companies and their representatives.

I contacted William A. Tracey, a representative from

Sinclair Refining Company, during 1935 and 1936
1255 at least once a week; possibly oftener. I was urging
him to buy gasoline from our Association. He was paying this going price on all the purchases that Sinclair made through our Association. I did not take Platt's Oilgram, but I presume it was around the low. I didn't understand that it was to be at the low. Every purchase he made was at a flat price. I think it was around the low of Platt's Oilgram at that time. I never saw the petroleum quotations in the Chicago Journal of Commerce while I was in East Texas.

I know that over a period of years the differential between the North Texas market as reported in the Oilgram and the Oklahoma or Chicago market as reported in the Chicago Journal of Commerce, varied by about ⅛¢ to make up for a freight differential into northern territory, but during the period that I was in East Texas, I don't know that the East Texas market exactly followed the North Texas market or the Oklahoma market or Oilgram, so therefore I would not know that it exactly stayed ⅛¢ below the Chicago Journal of Commerce.

I did not have contact with the Gulf Company direct. I had contact with J. M. Bradshaw, a Dallas broker, who did all the buying for Gulf in East Texas that I knew about. All that I knew about was bought through the Association. During this period I contacted Bradshaw
1256 more often than Tracey. Some weeks I might talk
to him 4 or 5 times. I was urging him to find gasoline buyers for us, and to buy from us for the Gulf or for any one else that he bought for.

I know that he bought material for William H. Barber Company occasionally. He did not buy for Barber Company through our Association. He did not buy for anybody except the Gulf Company through our Association, that I remember.

I was in contact with Dewey Chamberlain of Tulsa, a representative of The Pure Oil Company, 4 or 5 times a month throughout this period, 1935 and 1936. He was buying some gasoline through the Association. I did not treat him any differently than I did Tracey and Bradshaw. I was acting as sales manager down there, and I tried to get business. I was urging him to buy through our Association and he bought through it for The Pure Oil Company. He was buying at the going market price that I had in mind.

I was the sales agent for this organization. If we sold the same kind of gasoline to two concerns in one day, we

tried to get the same price. Ordinarily we would get the same price. I do not know any instance when I did not get the same price, because I was in this position: I would have as many as 14 refiners to whom I would have to
1257 allocate this business, or divide up these orders I got in. I had to, on a single day's transaction, stick to the same price, because if I did not the fellow who got the lower price would be all over me for not trading with him.

There were many times, however, when a buyer would come in and try to buy at a lower price. I would not handle that order through the Association, but I might put that buyer in contact with some member of our Association who had intimated to me that he was anxious to move gasoline and was willing to sell it at a lower price.

In the transactions that went through my office, the buyer and seller were treated alike.

It happened a great many times that companies on whose purchases we charged commission came in and tried to buy at a lower price than the others were buying for on that same day.

All the material we handled was specification material, but there are different specifications.

The first thing every Monday morning I contact all of the members in our Association. I find out two things from them; first, how much gasoline they will make during the week over and above their regular commitments and which they desire the Association to attempt to help them move. At the same time I get from that refiner an idea of what he wants for the product.

1258 The first man I talk to may tell me he has 10 cars of gasoline to move, and he is not going to sell a car of it under 4¾¢ a gallon. Then I go to the next man. He has 5 cars he wants to move, and he wants to get 4¾¢, but he will take 4⅝¢. And I go on down the line. Maybe I will come to one man that has 40 cars of gasoline on hand and wants 4⅝¢, which he considers the market, but he has to move that gasoline within the next 24 or 48 hours to prevent a shut-down, and he might tell me, "If you cannot get that, and you hear of anything else, let me know." That might be the same specification of gasoline as this first fellow that wanted 4¾¢.

I get all that information on my desk. I find that most of the refiners want 4⅝¢ for their gasoline that week; that is the consensus. Then when the buyers call me or I contact the buyers I use that 4⅝¢ price as a basis to try and sell them. If we get together with the buyers on that basis, I take the orders and distribute them around to our members. But if I contact one buyer, or some buyer contacts me, and he says, "Now I have got an order for 25 cars of gasoline, but I will only pay 4½¢ for it, that is all my people will let me pay", I tell him that I cannot handle that, but I tell him he might call this other refiner who has already told me that he wished to move some material at a lower price if he could not move it all at the market, 1259 and I say, "If you ask that man I believe you will get your 25 cars." I might tell him, "I know one refiner down here that will probably take that, and I will have him call you right away," and I have him do it.

Now, those 25 cars I would not consider as handled through the Association. The other orders that I got at 4⅝¢ which was what the majority of our people wanted that day, I consider as fair spot market price sales, and charge commission on them.

I don't know whether the major companies usually told me the prices that they would pay. There were a great many instances when they did, and a great many instances when they called me and told me they would need some material, and asked what they could buy it for.

These buyers that I dealt with would quite often call me on Mondays, because most of them bought gasoline the first part of the week for their week's requirements. They would ascertain from me what they could buy gasoline for in the field, and maybe 2 or 4 hours later, or the next morning, they would call me and place an order at a specified price. So they would specify the price which they would pay for the gasoline. In a lot of cases it was based on information that they had previously obtained from our office.

1260 I exchanged market information with these major companies who would buy through our Association just the same as any other sales manager. I don't remember giving them the amount of gasoline produced in the field. I don't see how I could hardly have given them the amount of gasoline that was being produced by our Association members. I might have at times told them the amount of surplus gasoline that was available in the field.

By the Court

I made no written reports of any kind. Suppose Mr. Bradshaw called me and wanted to know what the conditions were in the field. I would tell him the condition of the various refiners, whether they were sold up on gasoline or whether they had a certain amount to sell, what they considered the market was, and any other information I had regarding that. I would not say to Mr. Bradshaw, "Now, we have 1,000 cars to dispose of this week. Will you take 100 of those cars?" I never made a statement like that.

I have advised Bradshaw from time to time as to how much gasoline was down there, because he was continually buying, every day, not only for the Gulf Companies, but for buyers scattered through the whole Mid-Continent section; and he was very much interested in that infor-
1261 mation. I would tell him how much gasoline each refiner had, if I knew; and the grade they had.

We had no understanding as to what any major company was going to buy for the following week. Each order they gave us was a spot order, and we hoped they would continue buying every week, but we had no intimation from them that they would.

By Mr. Lewin

I just explained that by 11 o'clock every Monday morning I know the amount of surplus gasoline that is in the field for that week. I have that information available for every buyer that calls me, and I would give it to them if they ask me for it. I would not say they usually ask me for it. Sometimes they ask for it.

I can't ever remember, for instance, Dewey Chamberlain of Pure or Williamson of Continental ever asking me how much surplus gasoline there was in the field. I remember Bradshaw asking me quite often, because he was a broker, and I was glad to give him that information. I don't remember Tracey asking for it very often; I think he has, occasionally. I don't remember anyone else asking me, but if they wanted to know, I was glad to give them the information.

These major company buyers depend on me to find out whether there is any surplus gasoline that they can pur-
chase down there. They ask me quite often who
1262 else is buying down there, and how much they are
buying, and I tell them that.

Bradshaw might call me on a Monday morning and tell me he has an order for 50 cars of gasoline. He would either tell me, "I can pay 4½¢ for this gasoline," or he will say, "What can I buy it for?" If he tells me he can pay 4½¢, I try to get it for him, if that is what we consider a fair market price. And if he asks me what it is going to cost him, I give him the prices that the members of our Association have given to me.

On quite a few orders I have handled, a buyer like Mr. Bradshaw has called me and given me an order for 50 cars of gasoline, we will say, and has told me that he will pay such and such a price for it; and then I have called up the members of our Association and have said, "I have an order here for 50 cars of gasoline; you can have 10 of it, or 15 of it, and the price is so and so," but the member of our Association had already told me that he was willing to sell gasoline at that price.

On gasoline that they own, the members of our Association certainly can make the price, where they are selling surplus gasoline. The major company buyers have a right to offer a price, and our members have a right to ask
1263 a price; and if they can get together, we make a deal.

The way we considered it, it was surplus gasoline that we were selling to these major companies through the Association, but I don't believe I have made clear what we consider to be a surplus gasoline. Here is a refiner that makes 5 cars of gasoline a day; that is 35 cars a week. He is selling a certain number to jobbers, possibly brokers, week after week, and has been for an extended period of time. He knows just about how much business he will get from them each week. Suppose that totals 25 cars. Then there are 10 cars left over that he has no immediate home for. He could sell it in half a dozen places at a bargain price, at whatever he could get for it, or whatever the buyer he approached would pay. All that we try to do is find a market for the 10 cars he hasn't a sale for. That is what we consider, for the purposes of our Association, surplus gasoline. The Association was formed to try to find a market for that in an orderly fashion and that was what we were selling to the major companies.

If the refiner ships that 10 cars north, he has to absorb a freight rate differential; and if he sells it to a broker, he has to allow the broker slightly under the market, so the broker can resell it at the market. Here are 10 cars that the refiner has no contract for, and no definite
1264 purchaser in mind. There may be a good many men in that field, buying on that particular morning, and I can do some dickering about the price. I don't have to take the first price that is offered to me.

I don't believe it is true that if the refiner started out to sell that gasoline to jobbers, and not through our Association, he usually would have to take a lower price for it. I believe he might have to take a little lower price if he sold to a broker.

This surplus gasoline did actually move at a lower figure before we had our Association; but that was before the Connally Act or any Federal regulation down there, and we had all kinds of prices.

Surplus gasoline is more gasoline than the refiners have a regular market for. That is the way I have explained that we used it in our Association.

> Q. All right. Now, when you have more gasoline than you have a regular market for, can you dictate the price to a person that is taking surplus gasoline?
>
> A. You certainly don't have to take any price that is offered to you.
>
> Q. You can store it if you want to; is that right?
>
> A. No. You can go out and build new markets, just exactly what we did.
>
> 1265 Q. You built new markets among the jobbers and brokers, did you?
>
> A. There are other people that buy gasoline.

After the Connally Act was put into effect and our new Tender Board was set up, the refiners in the East Texas field were selling to practically every independent jobber and filling station owner in the eastern part of Texas. We wanted to find further markets in that territory; that is, the eastern part of Texas and the Texas Gulf Coast. We had no one to turn to, inasmuch as we were already supplying the independent trade, except the major companies or the large companies who were operating distribution plants and filling stations in the eastern part of Texas, and the people who were operating terminals on the Texas Gulf Coast. That is what we did.

We didn't attempt to build up a market among the brokers and jobbers outside of Texas because we were up against a 1/6¢ a gallon freight equalization any place we went; and it would have meant that we would have had to take approximately $13 a car less for our gasoline. We could get more money from anyone we sell to in Texas, or in the eastern part of Texas, or on the Texas Gulf Coast. We were diverting that $13 a car from the railroads' pockets into our own.

1266 *By the Court*

If we would ship a car up into the north, for instance, here to Madison, we would have to sell on the basis of Group 3, which is the refining center in Oklahoma. And I don't know what the freight rate to Madison is from Oklahoma, but say it is 30¢ or 40¢. If we shipped a car from East Texas, the railroads would charge us 42½¢ and we would only be able to get the same price that the refiners in Oklahoma could get, into this territory. So, by reason of paying that extra 2½¢ a hundredweight freight, we would have to absorb the differential, or repay the customer for the extra freight he paid on our shipments. The customer pays the freight. The freight charge is $13 a car more from East Texas than it is from Oklahoma to Madison. The jobber up here in Madison pays that freight bill, but he charges that $13 back to the refiner; or, the way it actually operates, the refiner deducts $13 from his invoice in order to repay this Madison jobber for the extra freight he has had to pay from East Texas. When the major company buys the gasoline in Texas from our companies, there isn't that $13 to take care of. That is why I say that that is our primary territory, because we have a better freight rate into East Texas and to the Texas Gulf Coast than any other refining center in the country.

1267 Practically all the gasoline our refiners sold to the majors was kept right here in Texas, or it went to the Texas Gulf Coast and then possibly was put in tankers and shipped in foreign commerce, or around to the East Coast. If there was any of it that went up into the 10 states that are known as the Standard of Indiana territory, it was so small that I can't even remember it.

By Mr. Lewin

I was talking about all the sales we make in Texas, whether to major companies or to jobbers for use in Texas.

Q. Where does that Texas oil or gasoline we buy up here come from?

A. I don't know where they refine that. I think they have refineries pretty well scattered all over the country.

Jobbers and brokers up here in the Standard of Indiana territory went to East Texas and bought gasoline and had it shipped up here and sold in the Standard of Indiana territory before our Association started. They still do it today. Before the Connally Act, they did an awful lot of it. Certainly there is less of it now than there was before our Association started. We had 80 odd refineries running before the Connally Act, and we have a dozen or less now.

1268 Jobbers and brokers from the Standard of Indiana territory can still buy our gasoline, and at a price that competes with those major oil companies prices. I never saw a day when any northern jobber couldn't buy gasoline in East Texas. They can't buy this gasoline that the major oil companies are taking after the major oil companies get it.

After the Association was operating, we did not attempt to sell the jobbing trade because the members were paying the Association only $2.50 a car, and in order to circularize the small jobber trade, it costs almost $10 a car to make a sale. That is why we would rather sell to brokers and give them ⅛¢ reduction in price, which is equivalent to $10 a car, and allow them to resell to the jobber. It is impossible for any small refinery, without a good-sized sales organization, to do much business directly with the jobbing trade. They have to do it through a third party.

(Mr. Lewin read 3rd paragraph from Exhibit 273, memorandum dated October 19, 1935, from J. W. Warner to Mr. Collins, both of Tide Water Oil Company.)

Q. Now, isn't that what usually happens to jobbers and brokers when major oil companies take up the gasoline in East Texas?

A. I still say there wasn't a day when a jobber or a broker from the north couldn't buy gasoline 1269 in East Texas. The major companies may have bought up this 10 cars I had over here (indicating) listed under "surplus", but those small refiners down there are still protecting their regular trade.

Q. At a price above what the majors are paying, is that right?

A. I don't know what price they were getting from their trade.

I do not believe the major companies were buying any substantial amount of gasoline in East Texas in January, 1935. Right at that time I think the most of them had pulled out of that market. I don't remember that Pure or Tide Water Oil Company were buying anything in January. Louisiana Oil Company may have been buying a few cars for their stations. I believe Cities Service Export Oil Company bought some material in January, but I am not familiar enough with it to say definitely. I would be afraid to try to estimate the amount, but I don't remember that the company I was with sold them any.

I understand what that chart, Exhibit 716, is supposed

to represent. It shows that Cities Service Export Oil Company only made 3 purchases in January, 1935. The Texas Company and Continental Oil Company were not to my knowledge buying any substantial amount in the
East Texas field in January, 1935. Continental Oil
1270 Company may have bought for their stations in
Texas. As far as I know, all these companies named, with the exception of Cities Service Export, were buying very little in the East Texas field during February 1935.

I have stated that I had certain conversations with Dewey C. Chamberlain of Pure Oil Company during 1935 and 1936 with regard to that company buying gasoline through our Association. I believe the first order I received from The Pure Oil Company was in the latter part of March, and was the result either of a call from me to Mr. Chamberlain, or a call from him. A small order of 10 cars was placed and commissions were charged on it.

At some subsequent time Mr. Chamberlain told me that over the next month his people would require a certain number of cars of gasoline,—I don't remember the exact figure,—and that he expected to place it with us in weekly quantities. If it was 100 cars he would possibly give us an order for 25 cars a week over the month. I don't remember that he told me early in the Association's history that Pure Oil Company felt that they were going to be steady buyers down there in East Texas from then on, but in conversation with Mr. Chamberlain I was given to understand that they would need gasoline for their refinery on the Coast. I
think he did tell me that he thought they would need
1271 gasoline pretty consistently over the summer. It is
quite possible that he did say that he would probably be buying gasoline down there right along if we could furnish him the gasoline of his required specifications. I cannot remember any such conversation. That wasn't the reason that we started charging commissions on sales to Pure Oil Company; we started charging commissions on the very first order that was received.

We charged commissions on orders to the large buyers located in Texas or the Texas Gulf Coast, and of course when they started to buy from us we did not know definitely whether they were going to continue to buy or be steady customers from month to month. We hoped that they would be. When the Association was new, when it was first formed, I believe we charged commissions on every order from major companies we got for that territory. We didn't charge small buyers, because we did not sell any jobbers in the state since they were already buying from our members.

Our sellers did not add on any additional charge to the buyer over and above the published prices, for example, in the Journal to take care of this very small commission. They couldn't very well do that, and our commission was very small. The graduations in price on tank car
1272 sales of gasoline were on the basis of ⅛¢ per gallon. When we were quoting prices we would quote 4½¢, or 4⅝¢, or 4¾¢, or 4⅞¢. ⅛¢ is the smallest graduation we make on our quotations, while the commission we charged of $2.50 a car was only ¼ of ⅛¢, or 1/32¢ a gallon. There was no attempt made to put that very small amount on to the price charged our customers.

I believe, now, that we started charging commissions on that very first 10 car order we received from The Pure Oil Company, and that at some later date I may have had an intimation from Mr. Chamberlain that if we could furnish the proper grade of gasoline at the proper price, they might be pretty steady customers for it. That was not the reason we charged commissions on The Pure Oil Company purchases. That was not the reason we started to charge them. We charged that with everybody when the Association first started.

Q. How did you testify on that point before the grand jury, do you remember?

(Mr. Lewin shows to the Court a document purporting to be the transcript of the testimony before the grand jury.)

A. No, sir, I do not.

The Court: Q. Do you recall testifying before the grand jury at Madison, on Tuesday, May 19, 1936?

1273 A. Yes, sir.

Q. Do you remember if this question was asked you, and did you make this answer:

"Q. Whether you did or not, did you commence to charge commissions on Pure transactions because Pure called you and gave you an order at a price which was the market price?

"A. We started to charge commissions on Pure because we felt they were going to be steady buyers down there.

"Q. And you thought they were going to be steady buyers because when they purchased from you, they purchased in the same way that your other steady buyers did; is that right?

"A. That is right.

"Q. That is, they called you and gave you an order, and fixed a price which was the market price, and told you they would pay that price; is that right?

"A. On most occasions, they told me the price they would pay."

Now, after hearing that, does that refresh your memory?

Mr. Thomas: May I have the same objection, 1274 your Honor, as appears at R. pp. 373-74, 446, 546-47, 630, 637, that I made yesterday to this line of examination?

The Court: Yes, the record may show the same objection, and the same ruling. Exception allowed.

Mr. Francis: If it please the Court, is there any inconsistency in that?

The Court: Not so far, no.

Mr. Francis: I can't see any, and it is a play on words, to ask somebody what he said a year ago.

By the Court

The commission statement on the first order for Pure, which I think was taken in the last week in March, was made out at the end of that week; and it may be that before I made out that commission statement I had had a conversation with Mr. Chamberlain, wherein he told me that if we could furnish the proper grade of gasoline at the proper price, he might be a steady customer of ours. Or it may have been after I made out the first commission statement. It is so far away that I just can't remember now.

Mr. Lewin: Q. Now, Mr. Cline, is your mind refreshed from that portion of your grand jury testimony, on whether or not the market price that Pure 1275 would pay had anything to do with the charging of commissions?

Mr. Thomas: I renew the objection that appears at R. pp. 373-74, 446, 546-47, 630, 637.

The Court: Overruled; exception allowed.

A. I don't believe I quite understand that, Mr. Lewin.

Mr. Lewin. Would your Honor be willing to read that part of the grand jury testimony to him again?

Q. Let me put this question to you, Mr. Cline——

The Court: All he says here is that on most occasions they told him the price they would pay.

Mr. Lewin: Q. On most occasions, did The Pure Oil Company tell you the price they would pay?

A. I think they did on quite a great many occasions, yes, sir.

That was usually the market price, and it was usually based on information that I had given Mr. Chamberlain as to the state of the market in East Texas. The fact that we did charge commissions on The Pure Oil purchases indicates that the purchases on which we did charge commis-
1276 sions were placed at what we considered a fair market price, because if they had bought under a fair market price we would not have charged commissions. Ordinarily, the East Texas quotation in the Oilgram would very closely reflect our fair market price.

I don't know that The Pure Oil Company had any specific amount of gasoline that they intended to buy from month to month in the East Texas field.

I have looked at Exhibit 488. I do not know anything about that allocation of 5 cars per day mentioned there. Mr. Chamberlain never told me that he had an allocation of any sort. He told me varying amounts that he might take a week. I would like to make myself plain on this point: The Pure Oil Company's specifications were very difficult to meet, and we had only one or two refiners in East Texas who could supply their material with any degree of certainty; and for that reason, after Mr. Chamberlain had been advised by his manufacturing department, how much gasoline they would need for the ensuing month, he would quite often call me and tell me that during that month he would require 100 or 50 cars, or some certain amount, from East Texas. He would tell me that he wouldn't buy it all in a lump, but would buy it from week to week, if it was 100 cars, probably split it up on the basis of 25 cars a week. But he told me about the whole
1277 month, so I could make arrangements with these refiners to keep a supply on hand for him.

There were some months when his purchases were 100 cars. I believe they varied from possibly as low as 40 cars in some months to possibly over 100 in some months.

Mr. Chamberlain did not always take, each month, the amount that he told me in the first part of the month that he expected to take. There were 2 or 3 months when apparently his picture had changed, and he found he could take less than he might have told me at the first. And then there were several months when we were unable to find enough material to suit his specifications.

I have the figures here of what Mr. Chamberlain actually took; March, 1935, 10 cars; April, 67 cars; May, 90 cars; June, 163 cars; July, 135 cars; August, 151 cars; September, 117 cars; October, 88 cars; November, 60 cars; December, 95 cars; January, 1936, 90 cars; February, 125 cars; March, 94 cars; April, 158 cars; making a total for 14 months of 1443 cars. By dividing 14 into 1443 cars you get 103 cars a month as the average purchase.

In making up these figures last night, I took the total amount that we had charged commissions on; and there were certain cancellations of some of these cars after
1278 the orders had actually been placed, because the refiner with whom they were placed found that he couldn't meet the specifications. And I didn't have time, between last night and now, to make those deductions.

Mr. Chamberlain never gave me any information beyond the current month. At times, I believe, through the summer of 1935, he tried to get 150 or 175 cars in certain months; and then, at other seasons of the year, he would drop down to 40 or 50. I can remember that at one time he dropped to 10 cars a week.

Originally, I tried out 4 or 5 different refineries for Mr. Chamberlain's orders, but the bulk of his business was shipped by one of the Grogan Oil Company plants, and by Chief Refining Company in Gladewater, when they were operating. Gilliland shipped some, but I believe it had considerable difficulty in meeting specifications. Mr. Chamberlain used to complain quite a bit about the specifications of this gasoline that he was purchasing. He made some complaints about the gasoline of Grogan. There may have been some complaints about the gasoline of Chief and Gilliland, too.

I recall receiving the letter which is marked Exhibit 327 for identification.

Mr. Lewin: I offer it in evidence, may it please
1279 the Court (handing Exhibit 327 for identification to the Court).

Mr. Donovan: May we have the same objection, your Honor as appears at R. pp. 504-05, 556-57?

The Court: You may. Objection overruled. It may be received. Exception allowed.

(Letter referred to received in evidence as EXHIBIT 327.)

(Mr. Lewin read Exhibit 327 to the jury.)

The "apple cart" referred to in that letter means that I had known Mr. Chamberlain for several years before I became secretary of our Association, and Mr. Chamberlain was given the idea that I personally received a commission on every carload of gasoline the Association handled. I didn't disabuse his mind as to that; but he, through friendship, was very glad to do his East Texas buying through me. I believe he was warning me that if I couldn't do a better job for him, he would quit buying from me.

By the Court

I had no position other than secretary to this refiners organization during 1935. My sole compensation for services rendered it during 1935 was $250 per month. My salary didn't vary regardless of how much gasoline we handled. I was not employed by anybody else. I
1280 devoted all of my time to that.

I wouldn't think that the phrase "apple cart" in that letter would refer to any buying except The Pure Oil Company buying. I didn't give Mr. Chamberlain the impression that I was getting a commission individually on all purchases made. I say now that I think he had that impression because he told me that, possibly a year ago. After that letter was written he told me in 1936 or 1937 that he thought I was getting a commission.

Mr. Lewin: Q. Now, weren't you asked about that letter before the grand jury?

The Court: Just wait a minute. See if we can't stimulate his memory.

Q. When you got that letter what did you understand he meant by "apple cart"—upsetting the apple cart?

A. Well, I didn't give the matter any thought at that time, your Honor.

Q. Didn't you think that he had in mind, under the terms of this program, that you were handling —selling gasoline to the majors, through your organization?

A. I can't see how it could affect any one except The Pure Oil Company, because—

Q. Well, if they would make purchases else-
1281 where, it might affect somebody other than The Pure Oil, wouldn't it?

A. I don't feel that the other companies would necessarily quit buying from us because we had a squabble with The Pure Oil Company, no, sir.

Q. They were buying on the average of 103 cars a month?

A. Yes, sir; and we were very anxious to keep that business.

Q. Do you recall testifying before the grand jury, on Tuesday, May 19, 1936, at Madison?

A. Yes, sir.

Q. Was any question asked you with reference to the letter that has just been read?

A. I don't remember, at this time.

Q. Was this question asked you, and did you make this answer:

> "Question: I see. Now, the last sentence of that letter which immediately follows the one I have just read is: 'However, before taking this action, would appreciate an expression from you.' Well, that bears you out, doesn't it? The
> 1282 last sentence is. 'We don't want to do anything to upset the apple cart or work an undue hardship on you, but are getting damned tired of the neglect and indifference exhibited by these refiners. Yours very truly, D. K. Chamberlain.' Now, what apple cart is he referring to in that sentence?
>
> "Answer: I presume he is referring to the buying of his company and several other companies, if they have an agreement.
>
> "Question: That rather indicated to you, doesn't it"—

Wait a minute.

The Court: The next questions, I don't think I will ask him.

Q. Just jog your memory and see if you can't truthfully tell us what you had in mind when you received that letter, when he was referring to about upsetting the apple cart.

A. Well, I believe my grand jury testimony explains it pretty well.

Q. What was your grand jury testimony?

A. Just what you have read there.

Q. Will you tell us now what you had in mind?

A. When I said that it might affect The Pure
1283 Oil Company buying and the buying of the other companies if they had an agreement,—but if my whole grand jury testimony was read it would be found that I knew nothing of any agreement there.

Q. You knew nothing of any agreement with the majors?

A. That the major companies had.

Mr. Lewin: Q. It would show that you suspected an agreement?

Mr. Donovan: I object to that question.

The Court: We don't care about that.

Mr. Donovan: That is just what he has been driving at throughout.

The Court: Objection sustained.

Mr. Francis: That is unfair in this whole proceeding of the prosecution, and I ask the Court to instruct the jury not to consider this because, regardless, your Honor, of what the prosecution says is their purpose here of refreshing the witness' recollection, it is clear in a lot of instances that they are trying to give the impression to the jury that they are impeaching the testimony of their own witness, and I object to it.

The Court: I think the Government counsel is trying
1284 to do what I am trying to do and what everybody is trying to do, to find out what the truth is and what the facts actually are. Exception allowed. Proceed.

By Mr. Lewin

I believe Mr. Tracey, the buyer for Sinclair Company, did tell me on several occasions, making the statement that they were very short of gasoline and they would probably be buying considerable quantities from us from month to month.

The only representative of Continental Oil Company that I talked with about buying was Ray Williamson of Fort Worth. He told me, as well as I can remember, that if he could get the specification gasoline he required, they would be buying for their East Texas stations and would call on the Association whenever they had any difficulty in making the purchases. He may have used the term that they would by buying a few cars each week in East Texas; at least, he inferred it. The first gasoline that went through the Association for Continental was some time in the month of April, 1935. I would place my first conversation with Mr. Williamson in that month.

Mr. Bradshaw told me in 1935 that he would be buying right along through our Association. Mr. Bradshaw was a very good friend of most of the refiners in our
1285 group; and he told both Mr. May and me that he
would be glad to use the Association as much as he could. I don't know that he said that he would be buying right along, regularly, but that was the impression, because

he was buying gasoline down there every week, sometimes several times a week.

We put Tide Water Oil Company purchases on the commission basis that we charged our members because their shipments were moving to Texas City, a point on the Texas Gulf Coast. My only contact with the Tide Water was with Mr. R. O. Audrain, of the Oklahoma Company. He is a defendant in this case. I believe I talked to him at least once a week. I cannot give any definite conversation because I cannot recall any.

Tide Water had been buying from the field for some time before I ever contacted Mr. Audrain or he contacted me. We had already been charging commissions on Tide Water shipments. He told me in one of our early contacts over the phone that they were assembling a cargo or part of a cargo of material at the Republic plant in Texas City, and they expected to buy at least a portion of that material from East Texas, and would probably be buying for several weeks. I believe that at a later time he told me that they had shipped one cargo to the Republic plant and were going to assemble some more gasoline there and 1286 would probably continue to be in the market for some more weeks. Those purchases were made through our Association.

I believe Mr. Buckley and I talked about The Texas Company on several occasions during 1935 and 1936, but I can't remember the substance of our conversation. I believe when Mr. Buckley and I would meet we would discuss our general picture down there, which would probably include The Texas Company. I know that Mr. Buckley made certain statements to me about The Texas Company buying. I presume he made them from time to time to me during this program.

Mr. Buckley told me that he understood The Texas Company would be needing gasoline in the East Texas field, and thought it would buy down there. He told me further that he did not think it would buy through the Association, and he saw no reason for me to get in touch with its office. I don't remember at this time any quantity that he mentioned.

Mr. Lewin: All right. I wonder if your mind could be refreshed by looking at or hearing the grand jury testimony (presenting document purporting to be the transcript of testimony before grand jury to the Court.)

The Court: Referring to that same testimony you

gave before the grand jury at Madison, in answer to
1287 a question, did you make this answer:

> "He told me The Texas Company were going to buy down there at the rate of 100 to 150 cars a month for Texas consumption, but they would not buy through me."

A. If I made that answer, that was my best recollection then, yes, sir.

Q. And it is your best recollection now?

A. I don't remember the figure, but it is entirely possible that he did give me some figure to indicate how much he thought they might buy.

Q. Was this question asked you:

> "Question: Did he tell you they would buy at the market price?
>
> "Answer: No, I do not believe he actually told me that, but I know for a fact that The Texas Company buys only at the market price."

A. That is right, because The Texas Company were buying down there for some time before I came before the grand jury, at the Oilgram price.

Q. And was this question asked you, and did you make this answer:

> "And that is the reason why you charge a commission on their transactions, even though
> 1288 they are not through your Association?
>
> "Answer: That is right. They are reported through the Association to a representative in Tyler, but I know they buy everything at the low of Platt's Oilgram quotations on third grade gasoline; that is, this particular grade."

Is that correct?

A. That is correct.

By Mr. Lewin

By their representative in Tyler, I meant Whitey May. I gave Mr. May information with regard to prices that other companies were paying in the East Texas field. I gave Mr. May my best idea of prices, not only on gasoline, but on every product we made down there. I told Mr. May the amount of business that was being done through our Association in gasoline, what major companies were buying, and, I believe, how much each one was buying. I may have made guesses or estimates of what I thought we might be able to sell in the future, based on our past experience, and I presume I would give those estimates to Mr. May from time to time if he asked for them.

100% of my sales business is through personal contacts and over the telephone, and not in writing. There are not
many records of my communications and conversa-
1289 tions with major company buyers that I know of, nor
are there many records of my communications and correspondence and conversations with members of our Association. I had no correspondence with members of the Association. My contacts were either personal or over the telephone.

When our Association was formed, we discussed at one time what records we should keep. I was informed, after we had discussed the matter thoroughly, that they saw no particular reason for any records, other than what I would need for tax purposes. The statement was made in a joking way that I should keep my records in my head. It came up this way: I was told to find office space in Tyler, and it was the original idea to hire a stenographer to stay in that office. I was unable to find any desirable space that would fit our limited pocketbook, so we finally decided that I would open an office in my own home, and would dispense with the services of a stenographer, because I could operate a typewriter to some extent. During that discussion, we discussed the amount of records that it would be necessary for me to keep; and I said I would have to keep a simple set of books, and a record of gasoline available from various refiners in the organization, and the specifications of
their gasoline, and such other information as I would
1290 need to assist me in the sales work. I was told that,
outside of my actual book work, I ought to be able to keep my records in my head.

I had to keep a simple set of books for income tax purposes; the ledger and the cash sheet, and things like that. That showed the amount of commissions I took in and the amount of expenditures I made. I did not keep a running record of the amount of purchases made, and the prices at which they were made. My copies of bills for commissions to our members gave the total amount of gasoline that the Association handled, and indicated the company that purchased it, and the refiner that supplied it. I never saw copies of the invoices of shipments from the members of our Association to the major companies. I mean the invoices that you refer to as my commission statements—these bills for commissions.

I started out originally to render those bills for commissions after each order was received. Then I changed to a weekly basis, and finally to a monthly basis. That is the only record I have of the amount of purchases made and prices paid by the major companies through our Association.

Q. And did Mr. Buckley ever tell you that he didn't want you to keep any records?

A. I don't remember Mr. Buckley telling me that, no, sir.

1291 I can't remember him saying that he didn't want any records from me or from the Association, in writing.

Q. Didn't you testify to that before the grand jury?

A. I don't recollect it.

(Document purporting to be transcript of testimony before grand jury handed to the Court by Mr. Lewin.)

The Court: Q. Did Mr. Buckley ever tell you that he didn't want to receive any records from you, of your transactions in this Association?

A. I don't remember it at this time, your Honor.

Q. Well, what did Mr. Buckley say to you about keeping books or records?

A. I can't remember discussing that with Mr. Buckley.

Q. Was this question asked you when you testified before the grand jury, and did you make these answers:

"Question: Well, who said it at anytime—" I don't think I will ask that question.

Mr. Lewin: Dropping down a little bit further, your Honor.

The Court: What is that?

Mr. Lewin: Dropping down a little bit further in that column.

1292 The Court: "Question: Can you repeat what he said on that subject?"

And you were talking about Mr. Buckley, before this.

"Answer: As to our records, and so on, down there?

"Question: Yes.

"Answer: I can only repeat that, what I know definitely?

"Question: Yes.

"Answer: That he told me he didn't want any records from me.

"Question: Yes, why?

"Answer: Or from the Association, and in writing."

Now, does that refresh your memory?

A. Your Honor, if I testified to that, it is—

By the Court

Before this testimony was read I couldn't remember any conversation I had with Mr. Buckley with reference to keeping books or records for the Association, or supplying him with information in writing about the Association, but it is entirely possible that Mr. Buckley told me that he wouldn't want any regular reports on the progress of the Association in writing, because we were in
1293 contact over the telephone, for a while almost daily, and after that several times a week, wherein I gave him as complete information as I could as to what we were doing, who was buying material from us, and so on.

I do not have the copies of the bills that I sent out to our independent refiners for these commissions. I have the statement that I made up from the bills. There are a great many of these bills.

(Papers handed to witness by Mr. Lewin)

This sheaf of bills here are some of those bills. I sent bills like these to all of our independent refiners who sold through the Association. All the bills are typed up like that on that kind of paper.

Mr. Lewin: Your Honor, I would like to offer all these bills in evidence as one exhibit, but there are a great many pages. I don't know how your Honor would suggest they be marked (showing papers to the Court).

(Document referred to received in evidence as EXHIBIT 719.)

By Mr. Lewin

We charge commissions on sales at the going market price, and I believe I have already testified that our going market price was about the same as the Texas quotations as listed in Platt's Oilgram. I never made it a habit to check the published market price in determining on
1294 what sales commission should be charged.

Q. When you made that determination to charge commissions did you understand that the sales on which you charged commissions were at the published market price, and was that a rule of your Association?

A. No, sir.

Mr. Lewin: Your Honor, will you look at page 1884 of that record? (Handing document purporting to be transcript of grand jury testimony to the Court.)

The Court: Q. Referring again to your testimony before the grand jury on May 19, 1936, were these questions asked you, and did you make these answers:

> "Question: Transactions on which you collected a commission.
>
> "Answer: No, sir, I collect commissions only on the gasoline sales at the published market price, and that is the rule of our Association, and that is the only way we charge them; but I handled, at times, several cars each week at lower prices."

Now, with that in mind, will you answer the question?

A. If that is in there, I may have said that be-
1295 fore the grand jury, but I have actually checked sales considerably since I was before the grand jury, and I find that they were not all at the published price.

By the Court

I looked over probably several hundred sales during the last four months. I used the records, invoices of the refiners, of the members of our Association. I went to the refiners' offices and made these checks to satisfy myself as to what prices we were obtaining. I estimate that there may have been 30% or 40% of the sales that were not made at the published market price. Those sales were scattered through the period of 1935 and 1936. They were made to some of these major companies. Some were made to Sinclair.

Q. What percentage of your sales were made at the published market price, on which you charged a commission?

A. During those periods—

Q. I am talking about the entire period, now. You have heard my question; now don't hesitate on that and try to evade it. Just answer it.

A. Well, from the number I looked over, I believe over half of them were probably made on the
1296 market price.

During the 14 months that I have a record of, we sold something over 9,000 cars. That would probably represent 600 or 700 sales. I checked several hundred cars, not that many sales, to determine at what price the sales were made. I believe 30% or 40% of those several hundred cars were sold at a price other than the published market price. I didn't make any memorandum of any kind. I went there for the purpose of checking those to ascertain that information.

Q. Your testimony before the grand jury is:

"I collect commissions only on the gasoline sales at the published market price, and that is the rule of our Association, and that is the only way we charge them; but I handled at times several cars each week at lower prices."

Now, what is the fact? Did you charge any commissions on any of the sales that you made, except the sales made at the published market price?

A. I say now, your Honor, that I did.

Mr. Francis: May I make an inquiry of the Court at that point? That testimony was, there, that several cars each week were sold at lower than the published prices? 1297

The Court: (reading from document purporting to be the transcript of the testimony before grand jury).

"But I handled, at times, several cars each week at lower prices."

But the question is, whether he has charged commissions on those or not; that is the question.

Q. Did you charge commissions on those cars that you sold at prices lower than the published price? Now, answer that, yes or no.

A. Yes, I did.

Mr. Lewin: Q. On all of them?

A. Oh, no.

(Chart, Exhibit 676, is exhibited before the jury.)

By Mr. Lewin

As nearly as I can remember, the market was quite slow the first part of January, 1936, and then there was a crude advance on about January 8 or 9, which temporarily stiffened the market quite a little bit. After a few days, it gradually weakened. There were instances in January and

February, 1936 when the market was weak. By that I mean the actual market down there in Texas, the prices that were actually being paid through our Association.

1298 I didn't take the publications. I checked them at least once a week. When the market was changing from day to day I probably checked it nearly every day. When the market was pretty stable, I probably wouldn't check it, except when the Oilgram representative would call me for information.

In February and March, 1936 I was putting major company buyers in touch with independent refiners all the time.

Q. Wasn't it true that when you did so a great many of the sales that were made, were as much as ⅜¢ under the published market price in Platt's Oilgram for the same kind of gasoline?

A. That is entirely possible at a time when the market is weak, but it is too long for me now to remember any exact transaction during the period.

Q. I wonder if your mind could be refreshed on that point?

The Court: I think—let that go.

By the Court

The market was actually weak during that period, January and February, 1936, and ordinarily when the market is weak, it is possible to buy under the published price, but it is so long ago now that I can't remember any 1299 single transactions. We were selling every week, and were probably selling under the published price, if the market was weak, probably through January and February, at least.

During this period I didn't know of every sale made by these independent refiners to the small jobbers and to the brokers, but I kept in fairly close touch with our membership, and they would tell me about various sales that they made. That was the only knowledge I had of sales made to jobbers and brokers at that time.

By Mr. Lewin

I may have known of sales during January and February, 1936, in which jobbers, brokers and major companies in East Texas were buying gasoline as much as ⅜¢ under the published market price in Platt's Oilgram, but I cannot remember them at this time. I don't remember whether a price as much as ⅜¢ under the published market in Platt's Oilgram during those months was the going market. If we were selling to major companies at a higher price, which constituted the going market, and also sold to them for ¼¢ or ⅜¢ less, we didn't charge commissions on the lower priced sales.

The Court: Q. You do know on what sales you charged a commission?

A. Yes, sir.

Q. Now, you just tell us now on what sales
1300 you made, with reference to the market price, those sales which were made at the published prices.

A. I don't know exactly how to make myself clear on that. We charged commissions on the sales at the going market price, which, as I have said, I thought reflected closely the published market price.

Q. Did you charge any commissions on prices that you were—you knew to be lower than the published prices?

A. Well, yes, as a matter of fact, we did, your Honor.

Q. All right.

By the Court

I do not have records with which I could check back any particular transaction because the refiners didn't give me copies of their invoices, and, while I have a record of the orders that were placed with the refiners, I have no way of going back and telling from my records at exactly what price that order was placed. When I took an order I wrote it down on a piece of paper, just "Gulf Oil Corporation, 50 cars," and then I showed underneath to whom I distributed or allocated that order, and then from that I made up my commission slips. Those commission slips
1301 were just offered in evidence. I cannot tell from any of those commission slips what the price of the oil was on that day. I didn't carry the prices on the slips.

By Mr. Lewin

When I kept these records of bills for commissions I thought that was a record of sales at the going market price, and I thought that conformed in a general way to the published prices when I made the charge.

Q. All right. Weren't you also putting sellers and buyers in contact with each other in February and January of 1936, where you knew they were

making sales at the time at a number of prices below that low, sometimes as low as ⅜¢?

Mr. Hanning: Sales to whom?

Mr. Lewin: Sales to major companies.

A. I may have, but, as I say, I cannot remember the details of that at this time.

There might have been one or two sales a week where our organization or I put the buyer and seller in contact with each other and on which we did not charge a commission. We didn't charge commission on those sales because they were under the going market price and were considered distress sales, and they weren't orders that were divided up among several members of the Association.

I cannot check back to that particular period of January and February 1936 in my mind and say whether
1302 the going market price and the published price were the same.

Looking at my records, we charged commission on 717 cars in January, 1936, and on 611 in February, 1936. At the time those sales were made and at the time we charged commissions on them, I thought that they were at the going market price. But I can't tell whether they were at the low of Platt's Oilgram, or whether they were substantially under.

The fact that I now remember that the market was weak in January and February, 1936 refreshes my recollection as to what those published prices were only insofar as I told you previously, that when the market is weak the going market price or the actual trading price is usually slightly under the published price.

I previously gave all the purchases of The Pure Oil Company on which commissions were charged. That information for each of the other companies is:

Sinclair Refining Company: March, 1935, 110 cars; April, 251 cars; May, 321 cars; June, 279 cars; July, 340 cars; August, 465 cars; September, 342 cars; October, 454 cars; November, 337 cars; December, 182 cars; January, 1936, 232 cars; February, 136 cars; March, 124 cars; April, 209 cars; a total of 3,782 cars for the 14 months. These purchases average approximately 270 cars a month.

Gulf: March, 1935, 75 cars; April, 160 cars; May,
1303 161 cars; June, 120 cars; July, 140 cars; August, 165 cars; September, 135 cars; October, 150 cars; November, 150 cars; December, 185 cars; January, 1936, 215

cars; February, 205 cars; March 200 cars; April, 230 cars. A total for 14 months of 2,291 cars. The monthly purchases during that period averaged about 160 cars.

The Texas Company: May, 1935, 15 cars; August, 30 cars; December, 135 cars; January, 1936, 180 cars; February, 125 cars; March, 140 cars, April, 175 cars; total, 800 cars. The monthly purchases averaged during this period 57 cars. The average of the period December, 1935, through April, 1936, inclusive, is 151 cars. The average from April to November, 1935 inclusive, is 5 cars.

Continental Oil Company: April, 1935, 15 cars; December, 20 cars; March, 1936, 5 cars; April, 10 cars; a total of 50 cars. The average on that during the months in which Continental was buying would be 12½ cars a month for 4 months. The average over the entire period of 14 months for the Continental is 3 6/10 cars per month.

Tide Water Oil Company: April, 1935, 54 cars; May, 50 cars; June, 125 cars; July, 145 cars; August, 150 cars; September, 125 cars; October, 120 cars; November, 33 cars; February, 1936, 20 cars; March, 20 cars; April, 25 cars; total of 867 cars. The average of Tide Water Oil Company's purchases for the period beginning April,
1304 1935, and ending December 1, 1935, is 100 cars per month. Then that company did not buy from us at all during December, 1935, and January, 1936, and then started out again in February, 1936 and took an average of around 20 cars a month.

Cities Service Export Oil Company: February, 1935, 127 cars; March, 407 cars, which was all that I have a record of. Total of 534 cars. That company did not buy anything any more through the Association through the rest of 1935 and 1936.

I just have one figure for Louisiana Oil Company, which is December, 1935, 65 cars. That is the only purchase on which I charged a commission to Louisiana Oil, or rather it is the only one on which I collected a commission.

The total of all purchases by major companies through our Association for the 16 months ending April, 1936, was 9832 cars. The total for 1935 was 7114 cars.

Those companies continued to purchase through our Association after April, 1936. I do not have a record of those purchases. The approximate number of cars which each company took per month for the balance of 1936 after April, are as follows: Sinclair, 150 cars; Gulf Company, 175 to 200 cars, and Pure Oil Company, 75 to 100 cars. That is just an estimate.

The Texas Company purchases were not through
1305 the Association. I estimate it bought about 150 cars each month during that period of 1936 in the East Texas field. I believe we continued to charge commissions on them all through 1936.

After April, 1936, until December 22nd, we charged commissions on some of Continental purchases; I estimate that it bought 10 or 15 cars a month. We possibly charged a commission on a third or half of those.

Tide Water Oil Company, after April, 1936, may have taken gasoline in the East Texas field for a month or two more. My best recollection is that they bought a little gasoline from us up until June, 1936, and none after that. They took approximately 20 or 25 cars in May, 1936, and if they bought in June, they probably took about the same. There were no purchases by that company, that I know of, in that field, on which we didn't charge commissions during those months. I don't know what Tide Water Company was actually buying the gasoline, because I didn't see the purchase orders. My dealings were all with Mr. Audrain of the Oklahoma Company. I don't think Tide Water Associated Oil Company made any purchases of gasoline in East Texas in 1936, or on the spot market in December, 1936. Mr. Warner and Mr. Audrain did not make any purchases during that month that I know of.

1306 There were no purchases by Louisiana Oil & Refining Company after April, 1936, through our Association. I think Louisiana Oil bought occasional spot cars of gasoline from members of our Association, but they were not reported to me, and I didn't have anything to do with them.

I know John Steiger. He was employed by Platt's Oilgram in Tulsa during 1935 and 1936. I know he collected market information for the paper. I did not know whether or not he was editing the petroleum quotations for Platt's Oilgram in Tulsa.

Mr. Steiger got in communication with me over the telephone through 1935 and 1936, probably on an average of once a week after our Association was formed. I may have seen Mr. Steiger once in either 1936 or 1937. I was in Tulsa at one time, and saw him. He asked me for prices of gasoline, and I gave him the prices at which our members were selling to major companies.

Cross-Examination by Mr. Donovan.

The total number of cars purchased by major companies through the Association in 1935 was 7,114. In making my examination of those purchases I found that sometimes cars were ordered and later cancelled. I did not take these cancellations into account in the figures I have given. The 1307 figures here are the total orders placed. I would think there would be at least 100 cars that were cancelled in 1935. The net amount bought through the Association, at any rate, would be about 7,000 cars in 1935. That would be the number on which I charged commissions.

I don't have the records of the Federal Tender Board showing the number of cars which were shipped from East Texas in 1935, but I believe I estimated approximately 30,000 cars. That would mean that the sales through the Association in 1935 on which commissions were charged were just about one-quarter of the total interstate shipments. If those other cars which were sold through the Association but on which the Association did not charge a commission were in there, it would probably raise the total from 7,000 to around 8,000 cars. So it would be a little over 25%.

(Witness refers to memorandum.)

In the first four months of 1936 the majors bought through the Association 2,718 cars. I did not take into account cancellations in determining those figures. I do not have the figures from the Federal Tender Board records showing over 12,000 cars shipped out of East Texas in that period. That would be a third of the year; and I believe I testified that there were 30,000 cars over the entire year, so that 12,000 would be pretty close to a third.

1308 30,000 cars was my estimate of interstate shipment of gasoline from East Texas for each year, 1935 and 1936. That wasn't the total amount of gasoline made down there. In addition to the 30,000 cars that were shipped each year, there was approximately 10,000,000 gallons a month of gasoline made in East Texas, which was shipped out in tank trucks. That would amount to the equivalent of 1,200 cars a month, or about 14,000 more tank cars per year. Our office had nothing to do with those shipments, but the members of our Association actually shipped some of that material.

I first contacted Ray Williamson at the Fort Worth office, and asked him to purchase Continental's requirements through our Association. That was in March or April, 1935. Some time after that Mr. Williamson communicated with me and told me that the refiner from whom he had been buying gasoline was temporarily shut down, and asked me what other refiners were operating in the north and south ends of the field that he could buy some gasoline from for shipment to his bulk plants. I gave him the names of the refiners that were operating in Gladewater, which is in the north end of the field, and one or two refiners that were operating in Overton, at the south end of the field.

Mr. Williamson then told me that he would call one of
the refiners I named, and place an order with him if
1309 he could get together with him. He told me who he
intended to call. I called the one that he told me he
intended to call. The company he called was Gilliland Refining Company, at Gladewater. The same day, or the next day, I checked with Gilliland Company to find out whether it had obtained the order, and how large an order it was. When I found that it had obtained an order at the market price, I placed that sale on my commission list, and charged that commission against the company that sold to Continental.

Independently of what Mr. Williamson said, I had a very good idea of where the gasoline purchased for Continental went. I knew where it was intended to go, because he wanted to know refiners operating in the north and south ends of the field because he intended to ship this gasoline to points in East Texas where they had bulk plants, and the bulk plants took a cheaper freight rate from the north end of the field than the bulk plants from the south end of the field.

I know, or believe I do, why the major companies discontinued buying in January, 1935. The Federal Tender Board, which had been set up in October, 1934, was discontinued right after January 1, 1935. At the discontinuation of the Federal supervision, a great many plants again
started to operate on illegal or hot oil, and the com-
1310 panies who had theretofore been buying in the field
were unable to ascertain who was running on legal
oil and who was running on illegal oil; and, therefore, they were afraid to buy it from anyone in the field.

When the Federal Board was in existence, excess or illegal oil could not be shipped in interstate commerce. I think the Federal Tender Board went out in the first week in January, 1935. What caused it to go out was a decision of the United States Supreme Court which affected section 9-C of the N. R. A. statute, under which the Federal Tender Board had been set up.

Our Association was formed because a group of the larger, more substantial East Texas refiners met sometime in January to talk over the future of the refining business in East Texas. They were of the opinion that the days of hot or illegal oil were over, and that in order to survive, the refiners would have to find a way to operate at a profit on legal crude oil, which at that time would cost them $1 per barrel.

The upshot of this, or subsequent meetings, led to the formation of our Association with the principles in mind that the members thereof would operate only on legal crude oil, and that they would support legislation for the outlawing of illegal or hot oil. Then it was decided to establish a central marketing agency, and get in touch with the 1311 buyers who had formerly purchased gasoline in the East Texas field, and inform them that an Association had banded together which could guarantee delivery of legal crude and legal products from crude, and could guarantee the specifications of their products, and try to get these buyers back into the East Texas field as purchasers.

The Connally Act went into effect the latter part of February, 1935.

The East Texas Refiners' Marketing Association is still operating as a selling agency for its members, these independent refiners. It is still negotiating sales to major companies.

I appeared before the Grand Jury once in May, 1936, and once in December, 1936. At that time our marketing Association was in operation. I told counsel for the Government so in May. I don't remember whether I was asked about it in December.

No member of this Association has been indicted in this proceeding here. No officer of the East Texas Marketing Association was indicted in this case. We are still continuing to operate as I have described here to this jury.

By Mr. Francis

I stated I was familiar with what I called the going market price there in the East Texas field. I believe all of the sales which were made through our organization 1312 to The Pure Oil Company were made at that going market price, not higher, but at substantially that price.

By Mr. Walker

Mr. Brakefield of Louisiana Oil Refining Corporation and I had several telephone conversations on general market topics. At my request Mr. Brakefield occasionally dropped me a letter or usually a note on scratch paper, advising that he had bought a car or more from some members of our Association. He had not bought those cars through the Association. I made no charge to the seller on those small sales.

I believe the East Texas Refining Company became a member of our Association about June, 1935. From January, 1935 to June, 1935, East Texas Refining Company was the only company in the East Texas field that made ethyl or Q-gasoline. It was the only company there at that time having a permit from the Ethyl Corporation. I knew Louisiana Oil bought from East Texas Refining Company, and I knew also that they bought spot cars from Grogan Oil Company, but the East Texas Company had not become a member of our Association.

I said something about the Louisiana Company having purchased a few cars early in January or February, 1935. I don't know that it purchased 58 cars in January, 1935. I do not know what amount they purchased in February, 1935. I don't believe I was in touch with Mr. Brake-
1313 field until March or April of 1935.

The Pullman Oil Company is not a member of our Association. I do not know whether in February, 1935, Louisiana Oil Refining Corporation bought 97 cars from East Texas Refining Company and 81 from Pullman Oil.

The purchase by Louisiana in December, 1935, on which a commission was paid, was from East Texas Refining Company. Louisiana made a purchase from East Texas Refining Company also in November 1935. Each purchase was 65 cars. Mr. Brakefield bought directly from Mr. Bishop. I didn't handle the actual negotiations of that purchase. I happened to talk to Mr. Brakefield before he made the purchase, and when he advised me that he wanted to buy that number of cars, I informed him that East Texas Refining Company could take care of him; but I did not negotiate the purchase or the price. I did not take it and allocate it in any way. That was my usual practice.

I charged Mr. Ralph Bishop of East Texas Refining Company on both of the purchases. He didn't think he should pay it, so we finally compromised, and I canceled one, and he paid the other. His original contention was that he did not owe a commission on either purchase.

1314 *Redirect Examination by Mr. Lewin.*

During 1935 and 1936, the buying of gasoline for The Texas Company was done under the direction of Mr. P. C. Scullin, a defendant in this case.

1315 JOHN M. BRADSHAW, a witness for the Government, testified as follows:

Direct Examination by Mr. Crawford.

I have lived in Dallas, Texas, for 6 years. I am, and for 6 years have been, a commission buying agent of petroleum products. I am not an independent buyer; I am a commission buying agent. Before that I was in the brokerage business for 11 years in Wichita Falls buying and reselling petroleum products.

I was buying gasoline during 1935 and 1936 for a considerable number of people.

Q. Was there any one for whom you bought a greater amount than others?

A. Well, I would buy for Sinclair and Gulf.

Q. That is not the question. Was there any one for whom you bought a greater amount than for others?

A. Well, I haven't got the figures. I bought considerable for quite a few people, and I don't know —I imagine I bought a lot for the American Petroleum Company.

The Court: Now, just stop and think. Who was your best customer, who were you buying the most for during that period? Now, you know that. Don't be so hesitant about giving the facts in the case.

1316 A. I was buying considerable for Gulf and Sinclair.

Q. Who was your best customer?

A. Well, Judge, I haven't got the exact figures because I was buying considerable for quite a few different customers there.

By Mr. Crawford

About 15% of all the gasoline I bought during 1935 and 1936 was bought for the Gulf Company.

I am familiar with the East Texas Field and with the Gulf Coast and so-called Mid-Continent fields to a certain extent. I know where the Standard of Indiana territory is, and what states it comprises.

In carrying on my work it is necessary for me to keep familiar with market conditions, and with what the refiners are selling for. I am not familiar with service station prices.

My work includes the buying for brokers and jobbers. I buy more for brokers than for jobbers. I buy for very few jobbers.

I buy for W. H. Barber Company, Henry H. Cross & Company, Acme Petroleum Company, and Gustafson Brothers, all in Chicago.

I know Mr. Lanzer of the Barber Company pretty well. I know Carl O. Beroth and Mr. Kruger, who are with Acme Petroleum Company. I have had business transactions with all these people.

1317 I was acquainted with Neil Buckley, Robert N. Cline and Paul Jacobi during 1935 and 1936. I have known of Robert N. Cline for about 10 years, but not as well as I have for the last few years. Before 1935 and 1936, Mr. Cline was in the oil business. The last time I knew him, he was sales manager for Cosden at Fort Worth.

In 1935, I knew of the formation of the East Texas Refiners' Marketing Association. I think it was formed in February, 1935. I heard in Dallas that it was organized, and I called up Mr. Cline and Mr. Henry B. May and asked about it. They told me they had organized it. Mr. May told me for what purpose it was organized. He is a refiner located at Tyler, Texas. I bought from him. I also learned from Cline what the purpose of the Association was several days after it was formed.

I am familiar with most of these terms that are used in the oil industry, such as "spot market" and "tank car price" and "trade journals".

My understanding was that excess or surplus gasoline meant a surplus amount of gasoline for which it was hard to find a market, because there wasn't a demand for it. I presume the price had something to do with the difficulty in finding a market for it. I did not understand it to mean that it was more gasoline than they could find a market for at any price. 1318

My understanding of the term "tank car spot market price" is the price for which gasoline can be sold on a spot market. When I use the term "spot market" the way

I just did, I mean the price at which I can buy gasoline from anybody. That is my definition of it.

I am familiar with the difference between a major oil company and an independent. I do not know whether the majors were selling gasoline on the spot market in 1935 and 1936. I wasn't buying any from them.

I was buying for some of the majors in 1935 and 1936 from independent refiners, whose refineries were located mostly in East Texas. I didn't buy much out of the Mid-Continent. I have forgotten whether I bought any in the Mid-Continent field.

In carrying on the kind of business I do, it is necessary for me to keep in mind from day to day the different movements of prices of the kind of gasoline that I am buying. To do that, I must have a pretty good memory. I think I have a fairly good memory.

I testified for the Government before the grand jury investigations held here in Madison in May and December, 1936. I had never been before a grand jury before.

1319 Q. All right. So you remember pretty well what occurred on that occasion, do you not, or do you?

A. Well, yes, sir, I remember certain parts of it.

Q. And do you remember pretty well what you testified to there?

Mr. Donovan: I object to that question, your Honor, as to what he testified to before the grand jury. There is no occasion for such an examination as this.

The Court: Overruled. Exception allowed.

A. I have got a certain recollection, yes, sir, of what I testified to.

Mr. Crawford: Q. Uh-huh. And you said a little while ago that your purchases for the Gulf during '35 and '36 were about 15% of your total purchases of gasoline in those years?

A. I estimated that, because I haven't checked those figures.

Q. Yes. You also made an estimate on that when you testified before the grand jury here, didn't you?

A. I don't recall whether I did or not.

Q. And didn't you estimate that at 1/3 or 33 1/3%?

1320 A. I don't remember.

Q. Your memory isn't good when it comes to that, is it?

Mr. Donovan: Now, I object.

Mr. Dougherty: I object to badgering the witness, and getting into an argument with him.

Mr. Gray: Your Honor, if Mr. Crawford intends to attempt at this point of the proceedings to impeach the witness on something by the use of his grand jury testimony, I think a proper predicate should be laid for it. If he is trying to refresh his recollection, that is a different matter; but the manner in which he has referred to his grand jury testimony, I submit, is improper.

The Court: What was that last question?

(Question read by reporter, as follows:

"Q. Your memory isn't good when it comes to that, is it?")

Mr. Crawford: I will withdraw the question.

Q. What do you say now as to the percentage of gasoline that you bought for the Gulf, out of the total that you bought in 1935?

A. Well, I would have to work those figures up, because I just don't recall. I was doing business for quite a few people down there, and I have no way of estimating that without my figures, which the Government has now.

1321 Q. Do you recall the estimate of that which you gave when you testified before the grand jury?

Mr. Donovan: If it please the Court—

A. No, sir, I do not.

Mr. Donovan: I think that this form of examination is improper. The Government certainly has the data and the records and the figures; they can produce those records and those figures.

The Court: Objection overruled. Exception allowed.

You sell gasoline on endpoint; 64-66, 375 endpoint, or 400 endpoint, or 437 endpoint. "Endpoint" indicates something about the quality of the gasoline. It depends entirely on the intended use of the gasoline whether 400 endpoint gasoline is better than 375 endpoint. That is my definition of "endpoint"; I am no expert on endpoint.

I submit the following as an example of the mechanics of my making a purchase of gasoline for a major company from an independent: An independent refiner will call and tell me he wants to sell some gasoline. I then tell some of the companies that I know are buying gasoline all the time that I have 50 cars of a certain grade of gasoline to sell, and the price, and see if they are interested in it. If they are, they call me back and tell me that they are

interested, and I in turn call the refiner and
1322 buy it from him. After I tell the refiner that I will
buy, I give him shipping instructions, or tell him who
I am buying it for. I have an order form that I confirm
the deal with, which states who I bought it from, who it is
going to, and what the shipping date on it is, the price, the
terms, and if in buyer's or seller's cars, all the details of
the transaction. I send the refiner and buyer each a copy
and retain a copy myself. That order form indicates
where the gasoline purchased is located, from what plant
it is bought, the location of the plant, and what the terms
are; the price, f. o. b. refinery or Group 3, or whatever
basis I should happen to buy it on.

The Gulf Company office with which I did business was located in Houston, Texas. I did most of my business with H. S. Gwyn, assistant district sales manager of that division. I did some business with Mr. Carlisle, but only when Mr. Gwyn was out of town. Mr. Carlisle was district sales manager, above Mr. Gwyn. My business with him was mostly over the telephone.

After the East Texas Refiners' Market Association was
formed, I frequently communicated with Mr. Cline. In a
general way, the communications I had with him were
about buying gasoline. When I heard that that Refiners'
Association was organized, I had been buying consid-
1323 erable cars of various products in the East Texas
area, and I understood that he was to be sales man-
ager for a group of those refiners there.

I was vitally interested as to whether it would affect my business and whether I was going to be able to continue buying gasoline there as I had in the past. At that particular time, I had an inquiry for a cargo of export gasoline. I drove to Tyler and asked Bob Cline how this thing was going to work, or how it was going to affect my business. He explained the set-up there, saying that the Connally bill had become effective, and a few refiners there were going to start running on strictly legally produced crude, and they were going to try to find a market for East Texas gasoline. He said that it wouldn't affect me at all, that I could still buy gasoline down there as I always had.

I bought some gasoline through his Association. The mechanics of that operation were: Mr. Cline would have gasoline to sell. He would call me at various times and ask me if I couldn't find a market for some of it. I would call different people and try to sell some of it. I wanted to work with him, because he was the sales representative of quite a group of refiners.

1324 I bought some gasoline for the Gulf through his Association in 1935 and 1936, which was handled as follows: In order for me to save telephone, I would call Bob Cline sometimes when I was in the market to find out where gasoline was, or he would call me and say he wanted to sell gasoline. If I got an order, I would call him back and he would place the gasoline with various members of the Association who needed business, and then notify me how he placed them. I would issue my order in accordance with the way he told me he placed the business, sending a copy of the order to the buyer and to the seller. I wouldn't send a copy to Cline. I kept the triplicate myself, sent the original to the seller, and the duplicate to the buyer. I indicated whether or not the gasoline was bought through the Association.

I bought about 15 to 20% of the gasoline that I bought for the Gulf Company during 1935 and 1936 through the East Texas Marketing Association. I am just guessing at that; I have no figures with which to work that out right at present. That is my best judgment without reference to the record.

I was getting the usual commission of $2.50 a car for gasoline I purchased. That commission was paid by the buyer, principally, but in some cases by the seller.

I did not make any reports to Cline of gasoline
1325 which I did not buy through his Association. I did not give him any regular information as to that. Sometimes I told Cline where I placed the gasoline that I bought outside his Association, but not usually. We discussed the market conditions, and I would give him some information as to where I bought some gasoline. I never made any habit of it.

I talked with Neil Buckley about markets once or twice during 1935 and 1936. He told me he was contacting some major companies to try to develop business for those refiners in East Texas that were operating on legally produced crude down there, to find a market for their products.

Q. Did you know during that period that the major companies were buying gasoline through Jacobi and Cline?

A. Yes, sir. I didn't know anything about Jacobi except what I heard. I knew they were buying through Cline. I knew they were buying in the Mid-Continent field, that is, in the Oklahoma territory.

Q. Did the buying for the major companies by

Cline begin shortly after the formation of the Association?

A. Yes, sir.

1326 Mr. Donovan: It doesn't appear that Cline did any buying for the major companies, your Honor. I think possibly Mr. Crawford mis-spoke.

Mr. Crawford: Q. Was Cline selling gasoline to the majors?

A. He was a clearing house there.

Q. He was acting as a go-between between the refiners and independents and major, is that right?

Mr. Donovan: If the Court please, the evidence shows he is not acting as a go-between. He is acting as a selling agent—

A. A selling agent for those independent refiners.

Cline was secretary of the East Texas Refiners' Marketing Association. As such, its members would call him and tell him they had so many cars of gasoline to sell, and he would contact buyers as their sales representative, and try to make deals for them. That is what he did to me, and I presume that is what he did to other buyers of gasoline. It is my understanding that most of the buyers of gasoline through Cline's Association were major companies.

I kept in contact with the business, what the market was doing down there, and the amount of gasoline being sold. That was my business.

I wasn't familiar with which of the major companies Cline was negotiating for the sale of the gasoline of the independent refiners. I had an idea, but my vital interest was in what the market was doing. I didn't know what Cline's business was all of the time, or who he was contacting. 1327

My recollection is that the market began to rise shortly after the Cline Association got to functioning. That was April 1935. After that, I think that we gradually got a stronger market, and it continued to rise for some considerable period of time, until June or August, somewhere along in there. I, of course, kept in touch with that situation. It was absolutely necessary for me.

It was my recollection that the rise ceased along in July. I can't remember all those things, the way prices went along in there, except that the market got better. I subscribed for both the Chicago Journal of Commerce and Platt's Oilgram during 1935 and 1936 and observed their publications of market prices of gasoline in the East Texas field during that period. I had to do that to keep those prices in mind from day to day as I was buying gasoline.

When I bought gasoline for the Gulf in 1935 and 1936, I bought at the best price I could. That was usually about the market price.

1328 I am familiar with the two trade publications. The quotations in the Chicago Journal of Commerce are somewhere along the same line as those in Platt's Oilgram for East Texas for the same grade of gasoline.

Q. Is there a freight differential taken into consideration.

A. You always—I always figure—my way of figuring is the Journal price on Group 3 basis and Platt's publication price in Texas.

Q. Was this difference on account of freight, what is the difference?

A. 2½¢ a hundredweight on—

Q. No. Is there about ⅛¢ a gallon difference?

A. $13 on a thousand gallon car—

Q. Doesn't the Chicago Journal of Commerce price take into consideration ⅛¢ a gallon between East Texas and the Mid-Continent?

A. Yes, your freight differential.

I bought below the low of Platt's Oilgram practically all of the time for Gulf, anywhere from ⅛¢ to ¼¢ below. I always bought at a flat price. When the flat price was not the market price, it was usually fixed by the seller. He gave me a price and I tried to sell it at his price, and if I couldn't I would go back and trade with him. Sometimes the buyer gave me a price, and I tried to buy it 1329 at his price, and if I did, that would be a flat price.

There were several independent refiners that were not members of this Refiners' Association that I bought gasoline from after March, 1935. I think Wabash Refining Company was one. It afterwards became a member. East Texas Refining was another. It became a member, too, along in May or June, 1935. Practically all those plants that I did business with eventually became members of that Association or sold their gasoline through that Association. I bought quite a lot of gasoline from Danciger direct. I understand that it eventually joined up, but I never had any authentic information on that.

I bought gasoline in the Panhandle and some in North Texas, but I don't recall buying any in Oklahoma during that period.

During the winter of 1935 and 1936 the major companies continued to buy through the Cline Association.

Some of the gasoline that I bought for Gulf moved to Port Arthur, Texas, on the Gulf Coast; some of it moved to the local stations right around in the immediate area of East Texas, where they had a freight differential and would save freight.

The winter season of 1935 and 1936 I think was a pretty good consuming season throughout the country. The demand was a little better than normal.

1330 *I can find out whether or not there* was a poor demand and a bad consuming season in the winter of 1935 and 1936 by just making a comparison of the amount of gasoline that was consumed over that particular period with 1934. The sales to jobbers and brokers during the winter season, January, February and March, 1936, dropped away down from normal, fell off some. I can't answer whether sales fell off to such an extent that it was generally called in the trade a very bad consuming season. Prices nevertheless did remain fairly firm during that period. This is not an unusual condition.

The demand was fairly normal, according to my recollection, in 1935 and 1936. I mean it was normal for that time of the year, because the demand at that time of the year was about the same as it was every other winter.

I haven't all the figures on gasoline consumption for January, February and March, 1936. I just don't know whether it dropped off. My recollection was that my business was just about as good as it ever was. That was all I was interested in. I don't remember whether or not I looked for weakness in the tank car market then.

I think that during that winter season we had difficulty
on account of the weather conditions in getting burn-
1331 ing oils and materials of that kind shipped into Minne-
apolis. I was selling to the Barber Company in Minneapolis. I sell several brokers in Minneapolis, Western Oil and Fuel, H. K. Stahl. I don't remember whether or not there was any lowering of the tank car market price during that period.

A representative of Platt's Oilgram called me from time to time during the period of 1935 and 1936. He was in contact with me from time to time during January, February and March, 1936, to find out the condition of the market.

Q. In response to those calls were you sometimes telling him during that period of about 45 days that there wasn't any gasoline moving?

A. I don't recall. I can't remember those conversations. I want to answer your questions, but I can't remember those things.

Q. Do you remember that in the beginning of this examination this morning you told me what a good memory you had. Do you want to change that now?

Mr. Thomas: That is objected to as argumentative.

Mr. Crawford: Q. You still say you have a good memory?

1332 A. I can't remember conversations, when all my business is over the telephone, and I talk on the telephone from eight o'clock in the morning until six o'clock at night; and I can't recall every telephone conversation. I don't have that kind of memory, no, sir.

Q. Do you have a memory of having testified on the subject I have just asked you about, when you were before the grand jury, as to whether Platt's Oilgram was calling you and you were telling them that there wasn't any gasoline moving during the 45 day period; do you remember that or not?

A. I don't remember that, no, sir.

Q. Was there a period of about 45 days, from January, February and March of 1936, when the consuming season was bad; gasoline was scarce; Platt's Oilgram was calling you for information as to markets; when you were telling them that there wasn't any gasoline moving?

A. I just answered that—I don't remember what I told them.

Q. Do you remember testifying to that before the grand jury?

A. No, sir, I do not.

Q. Did Mr. Gwyn or Mr. Carlisle tell you at any
1333 time to buy gasoline through the Association?

A. No, sir.

Q. Sure about that, are you?

A. Yes, sir.

Q. Very positive, are you?

A. I am.

Q. And you don't think you testified any differently before the grand jury, do you?

A. No, sir.

Q. Well, was your buying for the Gulf through the Association just a matter of judgment on your own part, without any suggestion from anybody?

A. Yes, sir.

Q. If you find that you testified before the grand jury that you got instructions from either Cline or Carlisle—Gwyn or Carlisle, to buy through Cline's Association, would you now say that that was the fact?

Mr. Donovan: Well, I object to that question as highly improper.

Mr. Crawford: All right, I will withdraw the question. And I ask the Court to consider the testimony before the grand jury on that point.

(Two volumes of documents purporting to be transcript of testimony before grand jury are presented to the Court by Mr. Crawford, and examined by the Court.)

1334 The Court: Now, will you ask the question you want answered, Mr. Crawford?

Mr. Crawford: Q. Did Mr. Gwyn or Mr. Carlisle or anybody else from the Gulf Company give you any instructions to buy through Cline, or Cline's Association?

A. No, sir.

The Court: Q. Do you recall testifying before the grand jury on Saturday, December 19, 1936, at Madison?

A. Yes, sir.

Q. Now, was this question asked you, and did you make this answer—

Mr. Thomas: May we have this objection before it is read, your Honor?

The Court: You may have the same objection that you made before.

Mr. Thomas: Well, I think we had better get this record cleared up. We have gone so long, day after day—

The Court: Well, it is the same objection that you made before, I suppose, is it, to the reading of the transcript of the grand jury?

Mr. Thomas: Well, the objection is to the use of the grand jury testimony, within the rule of Putnam versus United States, and I would like to read it into the record, if I may. 1335

We object to the use of the grand jury testimony of this witness because the transcript of testimony of the witness before the grand jury has not been shown to be properly authenticated, and there is now showing that such testimony was reduced to writing in the presence of the witness or read or examined by him at the time; and, furthermore, the record of such testimony, even if properly authenticated, is not contemporaneous with the facts or occurrences as to which he is now asked to testify, and because such testimony was given at a time too remote from the occurrence or fact inquired about; and, likewise, too remote from the date of trial to render said grand jury testimony competent for the purpose of refreshing the witnesses' recollection within the rule of Putnam versus United States, 162 U. S. 687; and further, if the testimony is so used for the purpose of refreshing recollection or for the purpose of impeaching the witness, we ask that the transcript be marked as an exhibit and made a part of the record, and be made available to defense counsel for the purpose of cross-examination.

The Court: Objection overruled. Exception allowed.

1336 "Question: You will have to listen sharp to these questions, because we have got to make time. The point is, who told you in the Gulf organization to place most of your orders through Cline during this period from February 1935 on?

"Answer: Well, I can't answer that question.

"Question: Well, now, do you think it might have been Gwyn, Carlisle, or Meyer, or all three of them?

"Answer: It wasn't Meyers, and it wasn't 'dash, dash, dash' it was either Mr. Carlisle or Mr. Gwyn when they started there."

Now, do you remember those questions being asked you?

A. I remember the question, and I told him if anybody would have told me it would have been Mr. Gwyn or Mr. Carlisle, that nobody had told me.

The Court: I will ask you this question: Recalling that you did testify before the Grand Jury, did you—were those questions asked you and did you make those answers?

A. Yes, sir, I—

1337 Mr. Thomas: I renew the objection as appears at R. pp. 373-74, 446, 630, 680-81.

The Court: That is all.

Mr. Gray: Now, your Honor, if it is offered for the purpose of impeachment, now that they are asked, the question is, "Does that refresh his recollection?"

The Court: I asked him, now, were those questions asked and did he make those answers. Now, we can go on from there.

Mr. Gray: No, your Honor. In other words, it is in the record now as though his grand jury testimony were a part of his testimony, and a part of this record now; and the point I make is that the witness answered your question a while ago, and may I have that read again?

The Court: Yes, you may.

> (Former answer of witness read, as follows:
> "Answer: I remember the question, and I told him if anybody would have told me, it would have been Mr. Gwyn or Mr. Carlisle; that nobody had told me.")

Mr. Chaffetz: That was just the witness' interpretation of that grand jury testimony.

Mr. Gray: That is what the witness testified to, just a moment ago, as I understood it, as to the facts, Mr. Chaffetz. Your Honor, may I move at this time 1338 to strike from the record that portion of the witness' grand jury testimony referred to by your Honor a while ago, when you asked that question?

Mr. Chaffetz: We object to that. The witness testified that he gave those answers.

The Court: Yes. Exception allowed. Just let me read a little further here. I want to see—

> (Further inspection of documents purporting to be transcript of testimony before grand jury by the Court.)

Mr. Crawford: Your Honor, there is a little more reference here (presenting another volume of documents purporting to be transcript of testimony before grand jury to the Court).

Mr. Dougherty: If your Honor please, it is perfectly apparent that this witness doesn't need his recollection refreshed as to the fact.

Now, if they are seeking to impeach this witness by his testimony before the grand jury, I submit that it is not proper to impeach him by asking a vagrant question here and there. We object to it, because it does not take into consideration all of his grand jury testimony. That is demonstrated by the fact that we have now held an inquest here for fifteen minutes upon this proposition, and we haven't 1339 got any headway with it. This witness doesn't need his recollection refreshed. He has testified positively upon the subject.

Mr. Crawford: Enough has already been read by the Court, and enough questions have been asked the witness to indicate that he should have his recollection refreshed, or something else.

Mr. Dougherty: If the Court please, I object to that as an improper statement and characterization of the witness' testimony.

Mr. Crawford: I think it is a proper reply to what you said.

The Court: There has been a reference here, prior to this, as to his testimony before the grand jury as to the percentages of gasoline he was buying through, buying for the Gulf Company through the Association. I think, in connection with that, I ought to read this:

> "Question: Now, I understand that your order blanks show on their face how the order is placed. For instance, all the orders that you placed for the Gulf through the East Texas Refiners Association would show on its face that way.
>
> "Answer: Yes, sir.
>
> "Question: And that you send to Dallas.
>
> 1340 "Answer: To the Houston office.
>
> "Question: The Houston office of the Gulf Company.
>
> "Answer: Yes, sir.
>
> "Question: You do that regularly, and have throughout the period?
>
> "Answer: Yes, sir.
>
> "Question: Now, isn't it true that, starting in February or March of 1935 and continuing on through the rest of the year 1935, that you did place most of your orders for the Gulf through Cline's Association?
>
> "Answer: No, sir.
>
> "Question: You didn't?
>
> "Answer: A very small percentage of them —a very small per cent of them.
>
> "Question: A very small per cent of them. Now, how did you decide which ones you would and which ones you wouldn't?
>
> "Answer: Well, I would call Cline, and if he had the gasoline available, why, if he knew

somebody that needed it, belonging to his organization that needed business, why, I would place the business through them.

"Question: You would call him first, and if 1341 he could take it, you would give it to him; but if he couldn't take it, you would take it elsewhere?

"Answer: If he couldn't do it, the Gulf would tell me to buy the gasoline, or Sinclair, whoever happened to need it; and I would get busy and find it myself. I am in very close contact with those refiners every day down there.

"Question: Yes."

Were those questions asked you, and did you make those answers before the grand jury?

Mr. Thomas: The same objection as heretofore made at R. pp. 373-74, 446, 630, 680-83.

A. I recollect that—

Mr. Donovan: I submit there is certainly nothing inconsistent—

The Court: That isn't on this particular point now. Just that there was some reference here to the witness' testimony.

Mr. Gray: It is my understanding, your Honor, that is substantially the way the witness testified on the witness stand.

The Court: Yes, I think it is.

Mr. Crawford: Now, on the next page is a question— 1342

The Court: What did you say?

Mr. Crawford: Page 1415.

The Court: 1415?

Mr. Lewin: Yes, sir.

(Further inspection by Court of document purporting to be transcript of testimony before the grand jury.)

The Court: Q. Was this question asked you on Thursday, May 14, 1936, when you appeared before the grand jury, and did you make this answer—

The Witness: A. What day was that, Judge?

The Court: Q. May 14, 1936—I think you had better go to a different line of questions, until I go over this a little more thoroughly.

By Mr. Crawford

During January, February and March 1936, I was buying some gasoline below the low of Platt's Oilgram. I think I bought some off-specification gasoline for as much as ¾¢ a gallon below the low of Platt's Oilgram during that period. Most of the orders which I gave will show whether it was off-specification or not. All of them should show it.

In carrying on my business I communicate by telegraph with a good many of my customers. One of my customers during 1935 and 1936 was Mr. Boswell of Cincinnati, Ohio.

I was doing business under the name of Hercules
1343 Oil Company, by J. M. Bradshaw.

(Telegram market Exhibit 720 for identification.)

I have no recollection of any communication made to Mr. Boswell on April 10, 1935, unless I could see the telegram and refresh my memory.

Q. And if you did that you would be able to tell us at least just what you said to him by wire on that occasion, would you?

A. I think so, yes, sir.

Mr. Donovan: I object to any such testimony because what we have here is the communication of a stranger to this alleged conspiracy, by a stranger to this conspiracy to another stranger. I think it has no bearing on this case at all.

Mr. Gray: Your Honor, I have not read this telegram. I think the record is absolutely plain that Mr. Bradshaw is an independent broker, or, as he said, an independent commission agent in East Texas; and we are going to object to the introduction of any telegram he may have sent to somebody in Cincinnati, Ohio, or anyone else, on the ground that he did not represent us as an agent, he is not a
1344 salaried employee of our company; he did not represent us in any way; he is an independent jobber, independent commission agent, and what he might have said in that telegram—for I don't know what its contents are—certainly could not be binding on us, and we therefore certainly object to its admission in evidence as against these Gulf Companies.

Mr. Crawford: Q. About April 10, 1935, were conditions in the oil business changing hourly, practically that way?

A. I cannot remember conditions unless I have some way of refreshing my memory. I don't know how to answer all these questions that you ask me like that unless I have some way to check up on it.

Q. Was the situation such on April 10 that there was no chance to make any deal at the present moment?

A. Are you talking about 1935 or 1936?

Q. Talking about 1935.

A. I remember, and so testified, that I thought the market was on an upward turn over that period.

The Boswell Oil Company were brokers buying from independent refiners.

1345 Q. About that time, April 10, 1935, were the independent refiners refusing to sell to independent brokers and jobbers—

A. They never refused—

Q. —at 4¢ for the reason that they could get 4¼¢ from the majors?

A. They refused—

Q. Answer the question.

A. I don't know.

Q. Did you so state in your wire to the Boswell Oil Company on April 10th?

Mr. Donovan: I object to that on the same ground I have already stated.

Mr. Gray: And my objection to that on the same ground I have already stated.

Mr. Thomas: The wire is the best evidence.

Mr. Crawford: I will put the wire in evidence.

The Court: Objections overruled. Exception allowed.

Mr. Denton: I object to it on the ground it is hearsay, and an attempt to get before the jury hearsay evidence.

(Question read by the Reporter.)

A. I could not answer that if I did not see the wire. I don't remember.

1346 Q. If you did see the wire, you would be likely to recall it, wouldn't you?

A. Yes, sir.

Q. At that time, Aprl 10, 1935, was the picture of the oil industry entirely different than what it was a year ago, a year before that time, due to the tight situation in Texas?

A. Yes, sir.

Q. I now show the witness Exhibit No. 720, and after looking at this I ask you to state whether or not the condition of the oil business was changing hourly on or about April 10, 1935 (showing exhibit to witness)?

A. Well, I said it was changing hourly, I meant like it was changing pretty fast right at that period. The Connally Bill and other things were making it that way.

Q. What do you say now, after looking at this exhibit, as to whether or not it was a fact on April 10, 1935, that the independent refiners would not sell to the independent jobbers at 4¢ because they could get 4¼¢ from the majors?

A. That they could get 4⅛¢ and 4¼¢.

Q. What did that mean to you? What did that mean?

1347 A. That they were able to get that, and he wanted to buy it at 4¢.

Q. Now, this telegram, Exhibit 720, is a correct word by word statement of what you said to Boswell Oil Company on April 10, is it?

A. Yes, sir.

Mr. Crawford: I offer this EXHIBIT 720 for identification in evidence (handing exhibit to the Court.)

Mr. Donovan: Your Honor, may I have the same objection as appears at R. pp. 504-05, 685?

The Court: I will reserve my ruling.

By Mr. Crawford

Along about April 9, 1935, the major oil companies were buying gasoline through the Cline Association from independents. It was generally known. I communicated that information to my customers, particularly brokers. That major company buying was influencing the price of gasoline upward.

Mr. Donovan: May I have the objection to all this line as appears at R. pp. 685-86? I don't want to interrupt.

The Court: Yes, same ruling. Exception allowed.

This telegram, Exhibit 721 for identification, is a copy of a day letter that I sent to W. H. Barber Company, 1348 dated April 17, 1935. In that telegram I was conveying market information, especially of the East Texas market field. Without the copy of this telegram I would not have been able to have told what market information I had given to the Barber Company at that time.

Mr. Crawford: I offer this day letter in evidence, your Honor (passing document to the Court.)

Mr. Donovan: Now, if the Court please, I would like to make the same objection as I did before at R. pp. 504-05, 685, and call the Court's attention to the testimony of Mr. Lanzer at R. p. 248 from which it appears that Mr. Bradshaw was acting at that time as purchasing agent of the W. H. Barber Company, and what transpired between him and that company can certainly have no bearing on this case, both of them being strangers to this proceedings.

The Court: Well, as to this, I will also reserve my ruling, that is, as to Exhibit 721 for identification. (Exhibits 720 and 721 for identification were not later admitted in evidence.)

By Mr. Crawford

I am still engaged in the same line of business
1349 and in the same way at Dallas that I was in 1935 and
1936, doing business with the major oil companies or
some of them, particularly with Gulf. My relations with
Gulf are very friendly.

Exhibit 722 for identification is a teletype message from me to Acme Petroleum Company at Chicago, on March 4, 1936. It accurately records the conversation.

Q. Did you have a conversation with somebody in the Acme Petroleum office on or about February 4, 1936?

A. Yes, sir.

Mr. Donovan: I object to that upon the ground that it is immaterial and irrelevant, and hearsay.

The Court: Objection overruled for the present. Exception allowed.

I had the conversation with Mr. Kruger, who is Beroth's assistant.

Q. What was the general subject of the conversation?

Mr. Donovan: I object to that. Those are two strangers to this indictment.

The Court: I will take the answer. You may answer. Exception allowed.

1350 A. Gasoline and the oil business in general.

Mr. Crawford: Q. Were you or were you not communicating information to him as to market conditions in the field, and he communicating to you market conditions from his point of view in Chicago?

A. We were giving our opinions, yes, sir.

Q. Did you or did you not also discuss the question of making sales of some quantities of gasoline of certain kinds and quality?

Mr. Donovan: May I have the same objection to this whole line of questions without going over it each time as I had at R. pp. 685-86, 688?

The Court: Yes, you may. Objection overruled. Exception allowed.

A. Yes, sir, he wanted to buy some gasoline, the way I remember it.

By the Court

I have been buying and selling gasoline down there for 6 years. I handle gasoline, gas oil, fuel oil and petroleum products like that. During the peak days of East Texas, when they were running excess oil, I used to handle anywhere from 1,500 to 3,000 or 4,000 cars a month of all products. Of course, when they regulated the field
1351 down there that dropped down considerably. I would say that I was handling from the interior around 1,500 to 2,000 cars a month of various products.

Mr. Crawford: Q. Do you have any independent recollection of your conversation by way of the teletype with Mr. Kruger on the subject of whether or not major companies were buying?

A. We discussed buying, and I told him that it was my understanding that major companies were still buying gasoline.

Q. Do you have now an independent recollection of whether or not on the morning of this teletype conversation that the Journal prices went up?

A. Well, I think I told him in there they went up.

Q. Well, that was true, was it?

A. Yes, sir. If I told him so, it was.

Q. I am sure that must be. What was the fact as to whether or not—if you know, tell us—there were large quantities of gasoline in storage at that time, at or about that time?

A. Well, he told me in that teletype there that there were 75,000,000 barrels kept in storage, and
1352 wanted to know how the market could advance under that condition, and I told him that I wasn't smart

enough to tell him what the situation was, but talking over East Texas that situation looked like it was in good shape down there.

Q. Did you tell him he was correct in his estimate of 75,000,000 barrels?

A. I said he might be correct. I didn't—

Mr. Morgan: Now, if the Court please, it doesn't appear very plainly here what is being done. Under the pretext of refreshing the witness' memory, the Prosecution is here putting in a hearsay conversation between this witness, who is not a party to this suit, and the Acme Petroleum Company, which is not a party to this suit—a hearsay conversation which, if he wasn't offering it as against these defendants, he wouldn't be offering it at all—and he is refreshing his memory, trying to refresh his memory in order to get him to say something which, in itself, is not admissible. The thing which he is refreshing his memory about is no more admissible than the estimate by which he says he is refreshing his memory. It is a hearsay conversation to which none of these defendants are parties, and they couldn't 1353 be bound by anything said in that conversation, and it is therefore not admissible under the hearsay rule.

Mr. Donovan: Now, if it please the Court, in view of the objection that I made to his being asked about any such conversations, I now move that all that the witness has said in relation to the conversation with the Acme Petroleum Company be stricken, and the jury be instructed to disregard it.

Mr. Dougherty: If the Court please, we are objecting precisely, whether his memory is refreshed or whether it isn't refreshed isn't the consideration. Even with his refreshed memory, he is testifying to facts that are immaterial because they are hearsay. They are just as immaterial and irrelevant to the issue in this case with his mind unrefreshed as they are with his mind refreshed.

The Court: What the man in Chicago said, I think that is entirely incompetent and should be eliminated; but what this man said to the man in Chicago as to the market condition as he observed it, I think is competent evidence.

Mr. Donovan: May I say this: What was said in the conversation is not material. It is the fact 1354 that is material. What is the fact, and is his recollection refreshed as to the fact? Now, if his recollection is not refreshed as to the fact—

The Court: It appears to have been.

A man who is down there in the market, buying for Sinclair, Continental, Gulf and many others, whose business it was to know the market, whose business it was to know who was buying, and undoubtedly he saw Mr. Cline who operated the clearing house, every day—I say clearing house—

Mr. Morgan: He was trying to sell some gasoline, and Acme wanted to buy some. This is just trade banter.

The Court: Don't you think that this man knew every buyer down there in that field, if any were buying? Buying in lots or buying in quantities?

Mr. Morgan: These defendants ought not to be bound by having admitted against them the conversation between a man here whose business it is to buy and sell gasoline and a man with whom he is trying to make a deal.

The Court: No, I think you better try to limit
it as to just what the facts are, and bring out the
1355 facts, and not so much conversation that he had with
others. Your motion to strike out is denied. Exception allowed.

The Court: I think you better ask this witness what the facts are and then let him refresh his memory.

Mr. Crawford: Q. Now, Mr. Bradshaw, since you kept in such close contact with what was going on in the industry, especially in the East Texas field, did you on or about the 4th of March, 1936, have some knowledge as to about the quantity of gasoline that was in storage?

A. I had an idea that the Bureau of Mines, what they put out every week—

Q. What knowledge did you have?

A. (Continuing) I don't remember what the figures were. The figures he gave me. Those figures there, you see.

Q. Then you did know on the 4th of March, when you had this teletype conversation with Kruger and Beroth?

A. I knew that there was some gasoline in storage, yes, sir.

Q. You knew, too, what the figures were?

A. Well, I didn't have the actual figures, no, sir, because that is—

1356 Q. What do you mean by the actual figures?

A. I mean I had—I knew that there was an excessive amount of gasoline in storage at that particular time, because it was a time of year it is in storage. I had the figures there in my office, but I don't recall what they were.

Q. Would a reproduction of the conversation you had with the Acme Petroleum Company refresh your recollection?

A. Not what the Bureau of Mines gave, unless—

Q. Answer the question.

A. No, sir.

Q. All right. Let's see about that.

Mr. Donovan: If it please the Court, your Honor has already ruled that what the Acme Petroleum Company said to this witness is not admissible.

The Court: He is not going to testify to it, but he can at least say whether it refreshes his memory.

Mr. Crawford: Q. Calling your attention again to Exhibit 722 for identification, did you state—and if you didn't, do so now—whether or not this is a correct record of the conversation between yourself and the Acme Petroleum Company? 1357

A. I said it was a correct record, yes, sir.

Q. If it is, do you still say that an examination of it would not refresh your recollection as to the number of barrels of gasoline in storage? Answer the question, please.

A. No, sir.

Q. It would refresh your recollection, would it not?

A. It would refresh my recollection of the conversation I had with him.

Q. All right. Look at it now and tell us what you considered at that time—strike that.

Mr. Donovan: No, I object to that question. He said it refreshed his recollection as to the conversation, not as to the facts.

Mr. Crawford: (Continuing) —as to the quantity of gasoline in storage on the 4th of March, 1936.

Mr. Donovan: I object to that, for the reasons I have stated at R. pp. 685, 688, 690-91.

1358 The Court: You may answer that. Exception allowed.

A. This fellow gave me—

Mr. Crawford: Answer the question.

The Witness: I don't know how to answer that question. If the Judge will let me explain it in my own way—

Mr. Crawford: Q. You told me in the first place that if you had a record of the conversation—between your teletype conversation, between yourself and the Acme Petroleum Company, it would refresh your recollection?

Mr. Donovan: As to the conversation.

Mr. Crawford: Your recollection as to the quan[redacted]of gasoline in storage. Do you remember me asking you that?

The Witness: Yes, sir.

Mr. Crawford: You see, he is right, and you are all wrong.

The Witness: I said—

Mr. Crawford: Q. Now, let me ask you this: After having refreshed your recollection by looking at this exhibit, number 722 for identification, tell me what the fact is as to the quantity of gasoline in storage.

A. I don't know what it was. He tells me
1359 how much gasoline, and I told him he was correct as far as I knew.

Q. Do you think that is something different than your telling us what the quantity was.

A. Well, I am not qualified to testify how much gasoline was in storage. This man gives me an amount that was in storage, and he mentions it.

Q. And you said that was correct?

A. I said, "You are correct."

During the week of March 4, 1936, I sold 125 cars of gasoline to the majors at 4⅞¢ a gallon.

I cannot remember what the market price of 62 octane bronze for immediate shipment was about January 16, 1936, without referring to my records. On January 16, 1936 the major companies were still buying gasoline. I don't know whether about January 16 there was another major company that came back into the buying of gasoline through the Cline Association.

Mr. Crawford: Q. I am showing you now Exhibit 723 for identification, and ask you to tell us what it is (passing document to the witness).

Mr. Donovan: I have no desire to make these
1360 objections, and I have called—I have made my objections, your Honor, to this form of examination

at R. pp. 685, 688, 690-91. It is very clear now from the methods pursued by counsel what he intends to do. I think it is highly improper. It is certainly not a method that should be pursued in this kind of a case. I make my objection now, and hope it will be unnecessary to make any further objections during the examination of the witness.

The Court: I think it is proper. Proceed. You may have the same objection and exception.

Exhibit 723 for identification is a teletype with Mr. Kruger at Dallas, Texas, on January 16, 1936. It is a record of the conversation between Mr. Kruger and myself.

Q. And with that teletype before you, do you have an independent recollection of what the conversation was?

A. No, I don't remember those things. He was asking me for prices on gasolines, and general market conditions, and I tried to tell him to the best of my ability.

Q. And what were the prices on that date?

A. I will have to look at those, and see, Mr. Crawford. I don't know. (Reading document) I quoted him 4⅞¢ refinery on some bronze gasoline.

1361 Q. And what was the condition of the market on that day, as to being strong or weak?

A. Well, I think the market was fairly firm.

Q. Did you call it strong?

A. Yes, I told him it was strong.

Q. And that was true?

A. Yes, sir.

Q. At that time did you see any reason why the market might weaken?

A. No, sir. I don't recall any reason why it should. I just was giving him the facts like they were at the time he talked to me, the best of my ability.

Q. Did you know of a reason why it should not weaken?

A. Well, I tell him there the market is very unsettled. I don't remember the conditions or what the situation was, but I make that statement there. I must have had some reason at that time for giving him that information.

Q. By looking at this exhibit, the record of your teletype conversation with him, don't you find that you did have a reason?

A. I told him I didn't see why it should weaken.

Q. And you told him why?

1362 A. Yes.

Q. Why?

A. Major companies buying up surplus gasoline.

Q. That was your judgment at the time?

A. Yes.

Mr. Donovan: I move that that question and answer be stricken out on the ground that the statement is a mere statement of opinion, a repetition of a hearsay statement made now more than two years ago between two people who are not parties to this suit.

The Court: He can say what the fact is after his memory is refreshed after reading the teletype. Exception allowed.

Mr. Francis: This Exhibit 723 for identification, which the witness identified, was that offered in evidence, Mr. Crawford?

Mr. Crawford: No. I am very glad to let you have it for your use, or let you have it in evidence, whatever you like. I would like to do it, but I am afraid you wouldn't let me.

Mr. Francis: But you are getting it in by questioning the witness.

1363 The Court: I understand he asked him for the facts after refreshing his memory. Is that right?

A. Yes, sir, as far as my judgment goes.

The Court: That settles that.

On June 14, 1935, I was still actively engaged in the work I described down there in Texas, keeping in touch with the market and with my customers. One of my very good customers was the Barber Company of Chicago and Minneapolis. I do not know now what the market was on that day for U. S. Motor without checking my records. I do not recall whether or not at that time I expected to see a stronger market. There was some major company buying in June, 1935.

Q. I am showing you now Exhibit No. 155 for identification and ask you to state what that is.

Mr. Donovan: May I have the same line of objection as appears at R. pp. 685, 686, 688, 690-91, both as to the substance and the form of this examination?

The Court: You may have. Same ruling. Exception allowed.

A. That is a telegram that I sent to W. H. Barber Company either to Chicago or Minneapolis.

1364 Mr. Crawford: Q. By looking at that Exhibit, please refresh your recollection, if you can, as to whether or not it was your judgment at that time that the market—that you would see a stronger gasoline market, and tell us what the fact is.

A. He had wired me—

Q. Answer the question. Were you listening to it?

A. Yes, sir.

Q. Answer it.

A. I thought the market would get stronger.

Q. That was the fact?

A. Yes, that was my opinion.

Q. And, also, did this telegram refresh your recollection as to why you would see a stronger market?

A. Yes, sir.

Q. What was the reason?

A. On account of the major company buying.

I think some of the major companies were still doing considerable buying through the Cline Association in the East Texas market on or about May 37, 1935. I don't recall whether jobbers were doing much buying in May, 1935.

The telegram, Exhibit 153 for identification, is a 1365 telegram from me to W. H. Barber Company at Chicago or Minneapolis, on the subject of general market conditions in the East Texas field.

Q. You said a moment ago in answer to my question you didn't remember whether or not there was little buying by the jobbers at that time. Does this telegram refresh your recollection on that, and if it does, tell us what the fact is.

Mr. Donovan: Same objection as appears at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

A. It refers to where I tell him we will see a little stronger market. The jobbers are not doing much buying.

Mr. Crawford: Q. And that was the situation at that time?

A. That was the way he asked it, yes, sir.

On July 2, 1935, I was still doing business at the same place in the same way. I don't recall whether or not I had any information or knowledge at that time as to the quantity of gasoline that was bought on or about that date by the major oil companies in the East Texas Cline Association.

The telegram, Exhibit 724 for identification, is a copy of a telegram that I sent to W. H. Barber
1366 Company at Chicago on July 2, 1935, in regard to general market conditions.

Q. Does it refresh your recollection as to the number of cars of gasoline that were bought within the last couple of days, speaking of couple days after July 2, 1935?

Mr. Donovan: Same objection as appears at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

A. I gave the figures of what was bought.

300 cars was the information that I had. The price was 4⅝¢, f. o. b. refinery Group 3. I had orders on my desk for more cars of gasoline, 100 cars at 4½¢. At that time, on July 2nd, the market looked firm to me and it was my opinion that it would continue firm for some considerable time in the future, because we were right in the consuming season of the year, and major buying had something to do with it, and other circumstances.

Q. On July 2, 1935 was it your opinion that this firming of the market and its continuing to remain firm was due to major company buying?

A. Yes, sir, and other conditions.

Q. As long as the major company buying continued, your idea was that the market would continue firm?

1367 A. That, and other conditions.

Q. Yes. Well, on July 2, when you were giving your customer, your good customer, Barber, information about the market, you didn't talk about any other conditions except major company buying, did you, as to making the market firm?

A. That was all that I said in that wire.

Mr. Morgan: If the Court please, again I want to suggest that all he is doing is putting these telegrams in here—

The Court: I can't agree with you. I think he has refreshed the witness' memory as to those telegrams, and the witness has testified as to the facts; and here and there he adds something on to what was stated in the telegram, which I have no objection to. Exception allowed.

Mr. Morgan: If he has another reason than that stated in the telegram, your Honor, for the statement made in the telegram, why should he be taken to task for bringing it out? The point I am making is that they don't want him to say anything that isn't in this telegram. They are putting this telegram in this record, is what they are doing, and it is an improper thing to do, and has been so held a hundred times.

1368 *By Mr. Crawford*

I do not remember right off what the market conditions were in the East Texas field on or about December 12, 1935. I have no recollection at all on the subject, not without refreshing my memory. It might be a good way to refresh my memory to show me a telegram I sent on that subject at about that time.

Exhibit 725 for identification is a day letter that I sent to W. H. Barber Company in answer to an inquiry that I got from them for some gasoline, on December 12, 1935.

Mr. Donovan: May I have the same objection as made at R. pp. 685, 686, 688, 690-91?

The Court: The same objection, and the same ruling. Exception allowed.

Mr. Morgan: I take it that we all have the same objections, your Honor, without making the same objections over and over?

The Court: Yes, you may. The same ruling. Exception allowed.

Mr. Crawford: Q. Now, what is the fact—I think you just said that you have no independent recollection of market conditions or general conditions in the field at that time, unless it could be refreshed by something like this; is that right?

1369 A. That is right, yes, sir.

Q. Now, after looking at this exhibit, what do you say as to whether or not the gasoline market got a little weak "the latter part of last week," meaning the week just preceding December 12th?

A. That is right.

Q. And what do you say the fact is as to whether or not the majors, the major companies came in and bought all the surplus gasoline?

A. I said that they came in and bought all the surplus—

Q. What is the fact? Is that the fact?

A. That is what I told him there.

Q. You told him what the fact was, didn't you?

A. As far as I knew, yes, sir.

Q. And about what was the market price at that time?

A. 4½¢. He tells me about some lower prices, and you see what I answered, the way I answered him (indicating).

I don't have any independent recollection right offhand as to whether the market was strong or weak about January 22, 1936. I do not have any independent recollection, whatever its condition was, as to the cause of 1370 it, without refreshing my memory.

Exhibit 152 for identification is a day letter from me to W. H. Barber Company, dated January 22, 1936, referring to market conditions in the East Texas field, market prices, and so forth. That was in answer to a telegram from them.

Q. Does that refresh your recollection as to whether the market was firm or not, and, if, so, please state what the fact is?

Mr. Donovan: Same objection as at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

A. Well, the market was firm.

Q. And to what was it due?

A. Purchasing by major companies.

I have no independent recollection of what market conditions were in the East Texas field on February 21, 1936. I do not recall. It is my impression that major companies were still buying considerable quantities. I presume I would be able to refresh my recollection on that by examining a telegram which I sent to Barber.

Exhibit 151 for identification is a telegram that I sent to W. H. Barber Company on February 21, 1936, relating to general market conditions.

1371 Q. At that time was the market backing up some in East Texas?

Mr. Donovan: Same objection as at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

At that time the market was backing up some in East Texas.

Q. Were the major companies still buying any considerable quantity in that territory?

A. They were buying, yes, sir.

By reference to the telegram, Exhibit No. 151 for identification, my recollection is refreshed that I had some gasoline to offer at 4⅝¢. I quoted some other gasoline down there at another price.

In the conduct of my business down there as I have described it, I gave information and reports to Mr. Gwyn of the Gulf Company, and to Mr. Carlisle at times, similar to those I gave to Barber. I was not informing him from time to time as to what the situation was with respect to the operation of the Cline Association in making purchases. I was giving him information in regard to market conditions in East Texas generally as to what Cline's operations were as sales representative for the re-
1372 fineries. I was giving Mr. Carlisle and Mr. Gwyn information as to what Cline was selling. I was buying some gasoline for Gulf through the Association.

Mr. Cline would call me from time to time and tell me he was having trouble moving gasoline. He wrote me from time to time to get more orders and send them to him through the Association. Sometimes I communicated that kind of information to Mr. Carlisle and Mr. Gwyn.

Exhibit 605 for identification is a telegram that I sent to Mr. O. H. Carlisle on June 28, 1935.

Mr. Crawford: We offer this in evidence.

Mr. Francis: If it please the Court, I make the objection that as to The Pure Oil Company the statement in this telegram is hearsay.

Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57.

The Court: Objection overruled. Exception allowed.

(Telegram referred to is received in evidence as EXHIBIT 605 and read to jury by Mr. Crawford.)

1373

Cross-Examination by Mr. Gray.

I did not receive an answer to the telegram, Exhibit 605, I sent Mr. Carlisle on June 28, 1935. Mr. Carlisle did not ask me to send him the information contained therein. I meant to give Mr. Carlisle market information in that telegram. My idea in sending that telegram, Exhibit 605, was that the market was in bad shape and getting weaker, and if he wanted to buy any gasoline, it wasn't the time to buy it at that time. I kept him posted as to market conditions.

I didn't buy any gasoline on June 28, 1935, for the Gulf Company. The first time after June 28, 1935, that I made any purchase for Gulf in East Texas was on July 2, 1935, when I bought one car, consigned to Jacksonville, Texas, which is 25 miles from the East Texas oil field.

I have been buying gasoline for the Gulf Companies for 15 years and buying in the East Texas oil field for them for 6 years.

I have been in the oil business as a broker or as an independent commission agent since 1920. I bought gasoline for a good many other people besides the Gulf Companies during 1934, 1935 and 1936. Among my customers during
that period were a good many independent brokers
1374 for whom I bought gasoline.

O. H. Carlisle, H. S. Gwyn, J. F. Drake, Mr. Meyers or Mr. Hartmann never instructed me or suggested to me that I make the Gulf purchases of gasoline through this East Texas Association. No person connected with the Gulf Companies ever gave me any such instructions or suggestions.

A typical illustration of how I buy gasoline for the Gulf Companies is: If Mr. Gwyn wants to buy 50 cars of gasoline, he calls me up and tells me he wants to buy 50 cars at a certain price. I, in turn, get out and try to buy it. Then I place the orders with maybe three or four different refiners, or maybe one refinery. Then I wire J. P. Gudger, traffic manager of the Gulf Companies for routing. I tell him that I placed so many cars of gasoline with East Texas Refining Company, or Premier Refining Company, or just whatever number of refiners I buy it from; and he in turn wires me the routing. I then have the orders made out, and send them to the various refineries that I made the purchases from with the instructions. Sometimes I phone the instructions to them.

Oftentimes Mr. Gwyn will name a price he is willing to pay for particular gasoline, and I am unable to procure
the gasoline at that figure. It has happened that
1375 I have had orders on my desk for 200 cars or 300
cars at the same time I received an order from Mr. Gwyn for 50 cars. Those orders might be from various people: American Petroleum Company, Eastern States

Petroleum Company, Mid-Continent, Sinclair, Wadhams, or any of those companies that I have bought for in the past.

To get this gasoline to fill these orders I call the various refiners and buy the gasoline. I call East Texas Refining Company in Dallas where they have their sales office, and I tell them I want to buy 50 cars of gasoline. I do not tell them who I want to buy it for. If they want to take the 50 cars, I tell them to book it and I will give them shipping instructions later. I call Premier, Danciger, Grogan, or Henry May, or anybody I think has gasoline to sell, and tell them I want 25 or 40 cars, whatever number I happen to want to give to that particular refinery. In that same manner I buy up the entire 200 or 300 cars for which I might have orders on that particular day, and among them will be the 50 cars for which I have an order from the Gulf Companies. I make no distinction between that Gulf order and the other orders I may have on that same date for my other clients.

When Mr. Gwyn calls me or I call him with respect
1376 to his order for gasoline on that particular day, he
does not tell me from what refiner he wants me to buy this gasoline for him. He never has done so, nor has anyone connected with Gulf Companies. He does not tell me he would like me to place a portion of this order through the East Texas Refiners' Marketing Association. What I do after he places with me his order for 50 tank cars, or any amount of gasoline that he might desire, is independent of anybody connected with the Gulf Companies.

The first time that Gulf knows from whom this gasoline has been bought is when it receives my telegram asking for the routing. Part of the gasoline I buy for Gulf goes to Port Arthur, and some of it goes into local areas, where Gulf has freight savings, for their various retail stations around East Texas. I don't know where the gasoline goes that is shipped to Port Arthur.

I prepared or had prepared a statement showing the record of Gulf purchases made by me in the East Texas oil field from July, 1934 until December 31, 1936. The statement shows the prices of the gasoline that I bought, the high and low of Platt's Oilgram, and the date the purchase was made, where it was made from, and where the
shipment was shipped to, where the gasoline moved
1377 to. It shows the number of cars that I bought during
any one month.

In December, 1934, I bought 277 tank cars of gasoline for Gulf in the East Texas oil field. Gulf bought 50 additional cars of gasoline direct from Grogan Oil. In January, 1935, I bought 120 tank cars of gasoline for Gulf in East Texas. Gulf bought direct 30 additional cars of gasoline.

In 1935, in February, I bought 140 cars for Gulf; March, 230 cars; April, 165 cars; May, 161; June, 152; July, 215; August, 184; September, 207; October, 167; November, 201; December, 256; January, 1936, 283; February, 667; March, 376; April, 271; May, 380; June, 472; July, 552; August, 478; September, 491; October, 384; November, 387; December, 329.

I have examined Platt's Oilgram, showing third grade
quotations on East Texas gasoline for December, 1934. I
made a similar examination for each of the succeeding
months thereafter, through December 1936. In December,
1934, of the 277 cars I bought for Gulf, 37 were bought
⅛¢ below the low of Platt's Oilgram. In January, 1935,
of the 120 cars I purchased for Gulf, 120 were bought below
the low of Platt's Oilgram; 115 cars were bought at ⅛¢
below, and 5 cars were bought at ¼¢ below. In February,
1935, of the 140 cars I purchased for Gulf, 100 were
1378 bought at ⅛¢ below the low of Platt's Oilgram. In
March, 1935, of the 230 tank cars I purchased for
Gulf, 50 cars were bought at ¼¢ below the low of Platt's
Oilgram and 180 cars at ⅛¢ below. In April, 1935, 85 out
of 165 were purchased at ⅛¢ below the low of Platt's Oil-
gram. I bought 161 cars in May, 1935, and 109 of them
were at ⅛¢ under the low. In June, 1935, I bought 152
cars, and all of them were bought at the low. In July, 1935,
I bought 215 cars, and 30 of them were under the low, 18
were at 1⅛¢ under the low, and 12 cars were ⅞¢ under the
low. I couldn't say without looking at my orders whether
that was all specification gasoline or the same grade gaso-
line that I had always bought for them. In August, Sep-
tember, October, November and December, 1935, I did not
buy any gasoline under the low of Platt's Oilgram; they
were all bought at the low. In January, 1936, I bought 283
cars; 40 of them were under the low; 5 cars were ⅛¢ under
the low, and 35 were ¼¢ under the low. In February, 1936,
I bought 667 cars, and 444 of them were bought under the
low; 155 of them at ⅜¢ under the low; 200 of them at
13/16¢ under the low; 38 cars at ¼¢ under the low; 1 car
at ⅛¢ under the low; and 50 cars at 11/16¢ under the low.
In March, 1936, I bought 376 cars, and of that 119
1379 were bought under the low; 112 at ¼¢ under the low;
and 7 cars at ⅛¢ under the low. In April, 1936, I
bought 271 cars; 30 of them at ¼¢ under the low. In May,

1936, I bought 380 cars; 293 cars were under the low; 50 cars at ½¢ under the low; 60 cars ⅜¢ under the low; 105 cars at ¼¢ under the low; and 78 cars at ⅛¢ under the low. In June, 1936, I bought 472 cars, and 328 of them were under the low; 115 cars at ⅜¢ under the low; 135 cars at ¼¢ under the low; and 78 cars at ⅛¢ under the low. In July, 1936, I bought 522 cars; 391 cars under the low; 165 cars at ⅜¢ under the low; 165 cars at ¼¢ under the low; 59 cars at ⅛¢ under the low; and 2 cars at 1/20¢ under the low. In August, 1936, I bought 478 cars, and 392 cars were under the low; 25 cars at ¼¢ under the low; 102 cars at ⅛¢ under the low; and 265 cars at ⅜¢ under the low. In September, 1936, I bought 491 cars; 292 cars under the low; 75 at ¼¢ under the low, and 217 at ⅛¢ under the low. In October, 1936, I bought 384 cars, and 198 cars were under the low; 130 cars at ¼¢ under the low; 43 cars at ⅛¢ under the low; and 25 cars at ⅜¢ under the low. In November, 1936, I bought 387 cars, and 155 cars were under the low; 75 cars at ¼¢ under the low; 30 cars at ⅛¢ under the low; and 50 cars at ⅜¢ under
the low. In December, 1936, I bought 329 cars; 154
1380 of them at ¼¢ under the low.

These prices that I have referred to as being under the low of Platt's Oilgram were the prices that Gulf actually paid for this gasoline in East Texas during the months I have testified about. Gulf gave me a commission of $2.50 a car for buying this gasoline for them. They have been paying me a commission for 6 years. Prior to that time, I used to buy the gasoline outright myself and resell it to them. I deal with all my other customers in the same way that I deal with Gulf.

During 1934, 1935 and 1936, I had neither a written nor an oral contract with Gulf with respect to buying gasoline for them. I am not at this time, nor during 1935 and 1936 was I employed by either one of the two Gulf companies named as defendants in this case.

I don't know which Gulf Company I made the purchases for in 1935 and 1936. These purchases that I have testified about were based on East Texas freight rate, f. o. b. refinery. No purchase ever made by me for Gulf during the period from December, 1934, and each succeeding month thereafter until December 31, 1936, was ever made at the high of Platt's Oilgram. It is my recollection that they
were all below the high of Platt's Oilgram as quoted
1381 in the East Texas oil field. None was above the low
of Platt's Oilgram for the days I made these purchases.

No officer or representative of the Gulf Oil Corporation or Gulf Refining Company ever requested me, instructed me or suggested to me, that I make a purchase of gasoline in East Texas for the purpose of supporting the market. The gasoline that I have been testifying about was all third grade gasoline.

By Mr. Donovan

I purchased most of the gasoline during 1935 and 1936 from refiners who were members of the East Texas Refiners' Marketing Association. Most of my customers' orders for gasoline called for shipment out of Texas.

After March 1, 1935, there were only a limited number of refiners who had gasoline for sale which could legally be shipped out of Texas; and there were very few, if any, refiners who could ship gasoline legally out of Texas who were not members of the East Texas Refiners' Marketing Association.

Most of my gasoline went to Port Arthur, Houston, and Texas City, on the Gulf Coast. From there it went to the Atlantic seaboard, and for export. I think I sold some gasoline to the Indiana territory. None of the gasoline that moved to the Gulf Coast would come into the Standard territory.

I do not operate the same way as other brokers.
1382 Most brokers try to buy low and sell high; but they
buy and re-sell various petroleum products. They make their profit by reselling to jobbers the gasoline that they bought at one price and sell to the jobbers at a higher price. There was a time when I operated as a broker in that manner.

My company is Hercules Oil Company, and I have been connected with that company for 6 years. We just find out where gasoline is and who wants to buy it. We do not purchase gasoline for our own account, only for the account of others. We don't resell any gasoline, and we don't buy unless we have an order. That is the way we did business in 1935 and 1936.

If I get an order for 50 cars of gasoline, I just locate where it is. I make it my business to know where the suppliers are. I check up almost every day with the ones who have the gasoline down in East Texas and I go to those particular people, or the Shreveport area, where I have been operating mostly lately, and find out if they want to sell it; if we get together on a price, we make a trade. I make $2.50 a car out of it. The refinery invoices the car direct to the buyer.

I act for large independent companies, some major companies, brokers and foreign buyers. I think I bought more
for Eastern States Petroleum Company than I have
1383 for anybody in the last 5 years. I represent a London company in the United States called Bartz-Williams; they buy quite a bit of export crude and gasoline.

Some of the brokers I bought for in this country in the last 5 years are:

Barber; Henry H. Cross and Company, Gustafson Brothers; Acme Petroleum Company; Tansel Petroleum Company; Dale Moore; Saunders Petroleum Company; Boswell Oil Company; Cooper-Keller Company; Western Oil and Fuel Company; H. K. Stahl and Company; Midwest Oil Company; Calloway Fuel Company; L. K. Coryell Company; Atlas Petroleum Company; Falley Petroleum Company; Smith Oil and Refining Company. I bought for brokers in the same manner that I bought for others.

During the last 5 years I purchased from the following independent refiners:

East Texas Refining Company; Danciger Refining Company; Atlas Petroleum Company; General American Oil Company; Hurricane Petroleum Company; Trinity Refining Company; Coltex Refining Company; Cosden Oil Company; Shamrock Oil and Gas Company; Shoreline Refining Company; Texas Oil Products Company; Cascade Refining Company; Tower Refining Company.

During the last 5 years, I purchased from independent refiners on account of orders given me by major companies
as well as by others.

1384 The Connally Act did have a big bearing on the situation in East Texas. It created the Federal Tender Board. They couldn't ship gasoline out without getting Federal Tenders. They had to go before the Federal Tender Board to get them. They had to prove that the crude was legally produced crude before they could get tenders for their refined products. The railroad companies would not accept any shipments unless they were shown the Tender numbers on the bill of lading.

Before the Connally Act went into effect there were various regulations down there, which were knocked out at various times, and there was quite a bit of hot oil that was being run down there. The Connally Act and its enforcement cut down considerably my source of supply after March 1, 1935. There were 79 so-called refineries operating down there prior to the Connally Act. After the Connally Act became law and the Federal Tender Board was created, they got down to 12 or 15 refiners that were really operating in East Texas.

The Connally Act cut out these other refiners by creating this Tender Board. They had to stay within the state proration on crude, and they couldn't go buying so-called
excess oil down there like they had been previously
1385 doing. At various times in East Texas hot oil was
purchased at from 10¢ a barrel on up to 25¢ a barrel.
At the particular time I think the price of legal crude was anywhere from 25¢ to 83¢ a barrel.

The operation of the Connally Act forced all those other refiners out of business because they didn't have their own crude production nor any source of supply of raw material. The East Texas field went on proration, and there just wasn't enough crude available for them.

Those plants that had no production were able to buy crude down there at 10¢ and 15¢ a barrel before the Connally Act went into effect. They put up these plants over night, literally speaking, and when this became law, these wells were put under proration. They could produce, according to the law, only so many barrels a day.

After the enactment of the Connally Act, the price of legal crude went to $1. I haven't any knowledge, without checking it up, of the extent to which the amount of gasoline available for shipment out of Texas was reduced right after March 1, 1935.

A refiner, in order to obtain Federal Tenders, would buy legally produced crude from General American Oil Company for instance. He would buy in 5,000 barrels a day.
He would get the proper pipe-line run tickets, to show
1386 that it was legally produced crude, and to have sup-
porting evidence so he could get his tender from the
Federal Tender Board. I am not thoroughly familiar with that end of it, as I never got any tenders, but that is my understanding about it. I buy everything on Federal Tenders.

We have a proration law in Texas. I am not familiar with it. I think it was first adopted in 1931, but they never could enforce it. It is administered by the Texas Railroad Commission, which determined the total amount of crude oil to be produced in the State during the month in accordance with its estimate of what the demand during the month would be. The amount of crude oil to be produced during the month is divided up among the oil wells in the State by the various fields. The object of the proration law, as I understand it was to curtail production and put some stability in the oil market down there, since too much crude was being produced.

I testified on direct examination that major company buying was one of the reasons the market was firm during 1935 and 1936. On other occasions in other years major companies had bought gasoline and in my letters to our customers I had commented upon that fact. There was nothing unusual about major companies buying. The 1387 buying or lack of buying by the majors was always a factor in the strength or weakness of the market, and the buying or lack of buying by brokers or by jobbers is a factor in the strength or weakness of the market.

When I was in Texas in January, 1935 I heard of the Panama case. The Panama Refining Company sued with respect to Section 9-C of the N.I.R.A., and terminated the then Federal Tender Board down there. When Section 9-C was knocked out and the Tender Boards were knocked out, it broke the market wide open again. The market weakened; it was flooded with gasoline, and the large buyers were reluctant to buy hot gasoline down there at that time. So the legitimate buyers practically got out of the market.

Q. Let me show you Exhibit 720 for identification, and let me direct your attention to the expression you used there: "We have an entirely different picture now than a year ago, due to the tight situation in East Texas."

Mr. Crawford: I object to that as incompetent, irrelevant and immaterial, and because the exhibit is not in evidence. It was objected to and it was ruled out.

Mr. Donovan: I am just following the formula that Mr. Crawford laid down yesterday.

1388 The Court: That exhibit is not in evidence.

Mr. Donovan: I am not asking it be in evidence. I am directing his attention to it and I want to ask him if that refreshes his recollection as to what caused the tight situation.

Mr. Crawford: No objection.

My recollection is refreshed and was refreshed yesterday in answering the question by Mr. Crawford as to what caused the tight situation in East Texas at that time. That tight situation was due to the Federal Tender Board under the Connally bill becoming active down there.

The document you show me is a letter that I wrote to H. E. Bangert of Roosevelt Oil Company, on April 9, 1935. Mr. Bangert was one of my customers, and I was conveying information and reporting my opinion of conditions in the East Texas field to him. In my opinion, I was telling him the truth, the facts as I found them, to the best of my ability. Without referring to that document, I would not have any present recollection of my opinion of the facts that I then stated to Mr. Bangert. My recollection is refreshed as to my opinion of conditions at that time in that field after looking at this document.

We had a firm situation in East Texas in April, 1935.
It had tightened up. The Federal Tender Boards
1389 were operating efficiently at that time. Hot oil had
practically passed out of the picture at that time in
East Texas.

This telegram you show me I sent to W. H. Barber Company, one of my customers, on March 5, 1935. In it I was conveying market information of the East Texas field and reporting my opinion of conditions as I found they existed then. I would not have any recollection of what I reported at that time unless I referred to this telegram.

The situation in East Texas in April was as I explained. The Tender Board had started operating and we had a situation that was getting tighter all the time down there due to its efficient operation. I recall that major companies were buying considerable gasoline in East Texas at the time of my letter of April 9, 1935.

This telegram you show me I sent to Boswell Oil Company under date of August 6, 1935. The Boswell Oil Company was a customer of ours and I was conveying to them information concerning my opinion of the market. I would not have any recollection of the opinion I gave him unless I referred to this telegram. With my recollection refreshed, I can say that in East Texas on August 6, 1935,
the market was firm, and the refiners were experienc-
1390 ing quite a bit of difficulty in getting federal tenders,
and there were but 6 refineries operating.

This telegram you show me I sent to Henry H. Cross & Company, one of my customers, on September 20, 1935, in the course of conveying information as to conditions. Without looking at that, I could not tell what I reported to him at that time. My recollection is refreshed after looking at that telegram. On September 20, 1935, the market in East Texas was very firm. There were only 5 plants operating down there on federal tenders.

This telegram you show me I sent to Boswell Oil Company, one of my customers, under date of October 5, 1935. I was sending market information in that telegram to the Boswell Oil Company. Without looking at that telegram my recollection would not be refreshed as to what I told him. My recollection is now refreshed from looking at that telegram. Conditions on October 5 in East Texas were tight due to the fact that refiners were having trouble getting tenders, and there were very few plants running. To my recollection, there were only 4, as I told him in that telegram.

This letter you show me I wrote to W. T. Dunbar on December 11, 1935. W. T. Dunbar was one of my prospective customers. I didn't do any business with him,
1391 but I was trying to. This letter was sent to him for the purpose of giving him information as to conditions in the market. My recollection is refreshed as to what conditions were at that time in East Texas from a refinery standpoint on this grade of gasoline after looking at this letter. The refiners were having trouble on their tenders, and a cargo of gasoline he wanted was just impossible to buy down there at that time, because we couldn't line it up with any responsible sources of supply, nor with refineries to ship, due to their unsettled condition and the way they were operating at that time, on account of this trouble they were experiencing in getting tenders.

Boswell Company, one of my customers, sometimes inquired as to whether it could buy gasoline from me and when it did I told it the fact. On October 5, 1935, I told Boswell that I could not buy one car of gasoline at 4¼¢ for it because on that particular day there were only 4 plants running down there; and due to that situation, we had a temporarily tight situation, and I just couldn't buy it at the price he wanted to pay for it.

I had a customer in London, England, to whom I sent cables. The cable address was Telbarks. I don't remember whether I received a cable on October 5, 1935, from
1392 this company asking me to quote on gasoline.

This copy of a cable you show me I sent to Bartz-Williams, on October 4, 1935, in answer to an inquiry from Telbarks. On October 4, 1935, the condition on cargoes was very tight. That was due to war conditions. There was quite a bit of crude oil moving to Italy on account of that Ethiopian situation, and the grade of stuff he wanted was pretty hard to buy at that time.

These letters and telegrams with which I have refreshed my recollection today were turned over by me to the Government in response to the subpoena at the time I was called to appear here before the grand jury some months ago. Since then I have had them back in my possession for only 10 days.

On April 9, 1935 the major companies were buying gasoline. I don't know how you use that "distress gasoline." They were buying gasoline, that is the only way I can give you that. I reported that they were buying excess gasoline, by which I meant they were buying gasoline that was on the market for sale.

I purchased 2,198 cars for the Gulf Companies in 1935 if that is what those figures total. The purchases by the Gulf Companies and other major companies I considered a factor in the market. In 1936 I purchased 5,040 cars for Gulf Companies, or more than twice as much as I 1393 purchased in 1935, that is, if those figures are correctly added.

It is my opinion that the purchases I made for the other major companies in those two years increased approximately in the same proportion as the purchases I made for the Gulf Companies in those two years, but I would want to check my figures before I made a positive statement. I think I was buying more for everybody in 1936 than I was in 1935.

I said yesterday that it was my recollection that consumption was normal or a little better during the winter of 1935-1936; that is my recollection of what I testified to. I have now checked figures to determine whether or not the consumption in the months of December, January, February, March and April of the winters of 1935 and 1936 was heavier than in the corresponding months in the preceding year. I looked at some figures of the American Petroleum Institute and the Bureau of Mines. The consumption in December, 1934 was 1,286,856,000 gallons.

I shipped some of the gasoline I dealt in in East Texas to the Standard of Indiana territory, but the biggest part of it went south. The consumption throughout the country is affected to a certain extent by what is bought or sold down there.

(Document is received in evidence as EXHIBIT 726.)

1394 I am still buying such gasoline as I desire through the East Texas Refiners' Association and in the same manner as I did in 1935 and 1936.

The Tender Boards are still in operation in East Texas and are operating in the same manner as they did in 1935 and 1936.

By Mr. Lawton

There was major buying of gasoline in the East Texas field in years other than 1935 and 1936. I am not as familiar with the Oklahoma field. There was such buying in

1937 in the East Texas field. I don't recall just how much, but there was some buying by majors in the East Texas field in 1934.

By Mr. Francis

In third grade gasoline, octane is one criterion of value; and the initial and end boiling points of the gasoline are others. When I speak of buying third grade gasoline of such and such an octane content, or below, there are other factors which enter into the price which a refiner will pay, to wit, vapor pressure, end point, initial boiling point, and the like.

They make several grades of gasoline, 400, 375, 390, 437 end point. The lower the end point, the higher the price of the gasoline. End point is just the end point they get on the gasoline.

1395 I am a marketer. I would never make a sale to a customer, for example, The Pure Oil Company or Gulf Company of a particular gasoline, as a general rule, without their giving me some specifications in addition to octane. They would generally want to know not only what the octane of the gasoline is, but also the vapor pressure, the gravity, the end point and the initial boiling point of that gasoline.

All of those things which I have mentioned are the predominant factors which make either good gasoline or rotten gasoline, a gasoline that is serviceable or not serviceable in your car. As a general rule and under certain conditions, a low vapor pressure means a better gasoline. A lower end point, as a general rule, not too far away from your initial boiling point, means a better gasoline. And a lower specific gravity, that is the weight of the gasoline makes a better gasoline. 57 to 60 gravity is usually recognized as a standard grade of gasoline.

Comparing two gasolines having the same octane, the same initial boiling point, and the same end point, if gasoline number one had a lower specific gravity, that is, it was a heavier gasoline, you would get more mileage out of that gasoline because it is of a greater specific gravity, a greater weight, there is more hydrocarbon in there that burns.

1396 Octane rating of gasoline is just the measure of the chemical composition of gasoline which relates to its anti-knock quality.

Redirect Examination by Mr. Crawford.

The average automobile driver buys what is known as regular gasoline. Most of the major companies sell that grade. What they call branded gasoline is regular.

I presume the average automobile owner who buys gasoline doesn't know anything about the octane or end point and other qualities that go into it at all, and he is getting the same grade, presumably, from any company that produces that kind of gasoline. I have no way of knowing what the average automobile owner thinks, except my own opinion.

There is a difference in the quality and value for operating purposes of regular gasoline; some of it may be better than others.

I don't know, up here, whether if you went into a Standard Oil filling station and asked for a gallon of regular you would get the same kind and quality of gasoline that you would get if you asked for the same thing in a Phillips station or a Sinclair. You get practically the same thing down in our country if you go to a Gulf station or a Sinclair station. A regular gasoline must contain the 1397 same ingredients, whether it is sold in one station or another. In other words, under the same driving conditions, with the same car, you get about the same mileage. That is my understanding about it.

Ordinarily one gets about the same quality of gasoline if it is sold as regular from the Standard Oil Company or Sinclair or Phillips, and you also pay the same price.

I said in answer to Colonel Donovan's questions that the major companies bought gasoline in other years in East Texas before and besides 1935 and 1936. The East Texas Refiners' Marketing Association was organized in 1935 for the first time, so that the majors never did buy in East Texas through an Association like Cline's until March, 1935.

I said that when the Tender Board went out the supply of gasoline increased in East Texas. An increase in the quantity of gasoline available throughout the country would naturally have an effect on the gasoline market and did have such an effect. The jobber and consumer could buy gasoline cheaper than they could after the Tender Board and the major company buying was operating. When the Tender Board was functioning that reduced the supply of gasoline for the country from the East Texas field.

1398 There still was at certain times in 1935 and 1936 an excess over demand with the Tender Board operating efficiently. I can't answer whether there was any time in 1935 when there wasn't an excess over demand; I don't know.

The Tender Board operations tended to reduce the supply of gasoline available from the East Texas field. The Tender Board is a part of the set-up under the Connally Act, which went into effect some time the first part of March, 1935. I don't know the exact date.

The major companies buying in the East Texas field also lessened the quantity of gasoline. So there were two things that contributed to the lessening of the quantity of gasoline in that field, and one was the major company buying through the Association.

In my telegram to Mr. Carlisle on June 28, 1935, Exhibit 605, I said: "Cline very anxious move some additional gasoline. He advises things getting little shaky, and he is afraid market will break if he doesn't get some business stop." I said that the first purchase made by the Gulf Company through me, through the Cline Association, after that telegram was July 2.

Q. On July 2, you sent a telegram to the Barber Company to which we referred yesterday, in which you told him what the fact was as you understood
1399 it down there, "that the major oil companies have purchased approximately 300 cars East Texas gasoline in last couple days." Do you recall that?

A. I don't know without referring to the telegram.

Q. Didn't you testify to that yesterday, that the telegram refreshed your recollection as to the fact, and that was the fact?

A. If that is what I testified to, yes, sir.

Q. Didn't you also say that you expected the market to continue firm?

A. Well, if that was the date of the telegram.

Q. You testified yesterday, as shown on page 697 of the record:

> "Q. And did you expect it to continue firm at that time for some considerable time in the future?"

and you answered,

> "Yes, sir, that was my opinion."

Do you recall that now?

A. Yes, sir, I remember testifying to that.

Q. So in the telegram to Carlisle on the 28th of June, you were telling him about the market being weak, and in the telegram to Barber on the 2nd of July, you were telling him it was firm and it would continue firm. Now, which of the two was correct? Were they both?

A. Well, both were correct.

1400 The purchase for Gulf on July 2 was just 1 car; the shipment was to Jacksonville. I bought 2 cars on July 3 for Gulf from Merrimac Oil Company of Tyler through the Association. That is the date of purchase, the date of my purchase order. I got instructions from Houston from Gulf Company for that purchase.

I placed an order for 18 cars of gasoline for Gulf Company for shipment to Port Arthur, through the Association from East Texas Refining Company on July 3. My records show that I purchased in the same way 5 cars from Texas Oil Products Company for shipment to Gladewater on the 3rd, and 1 car from the East Texas refiners for shipment to Long View on July 6.

On July 3, I bought 1 car for Gulf Company from East Texas Refining Company at Long View for shipment to Bronson. My record shows July 3. I do not know what Gulf Company's record shows on that. On July 3 I again bought 1 car from East Texas Refining Company at Long View for shipment to Marshall. I did not buy 28 cars of gasoline on July 2 for Gulf through the Association for shipment to various points instead of the 1 I referred to yesterday, which was referred to as the date of purchase.

Usually even under normal winter conditions, the demand in January, February, and March in the Standard of Indiana territory is lower than summer demand.

In December, 1935, I purchased for Gulf Company 1401 256 cars; it all went to the Gulf Coast. The gasoline in the summer went to the Gulf coast. My purchases in December, January, and February were larger than they were in April, May and June of the previous year.

Referring to Exhibit 605, my telegram to Carlisle, I told Mr. Gray what I meant by "Cline very anxious for some additional gasoline. He advises things getting little shaky and he is afraid market will break if he does not get some business stop." That was the picture. That was what I was giving him, that if Cline could get business, the market would not break. But I would not say that it was the successful operation of Cline's Association that held the market in East Texas. I gave him the picture of what I thought the situation was.

Q. You gave me the interpretation of this telegram yesterday.

A. Yes, sir.

Q. You told us yesterday that the meaning in short, the meaning of this telegram from you to Carlisle, was, it was not a good time for him to buy. Is that what you meant?

A. Yes, sir.

Q. Did you also mean in that telegram to indicate to him that it was necessary that Cline get some more business in order to prevent the market from breaking?

A. I wanted to give him the picture.

1402 Q. Didn't you intend to convey to him the information that unless Cline got busy, the market would break?

A. I wanted to paint the picture to him as it was.

Q. Did you intend that by your telegram?

A. Yes, sir.

Q. All right. Now, I presume the fact is—I will ask you to state whether it is or not—that the major companies were interested at that time in not having the market break?

A. I don't know what the major companies were interested in.

Q. Then why were you saying this to Carlisle?

A. Because I sold Gulf Refining Company gasoline for 15 years.

Q. You don't know whether the majors were interested in preventing a break in the market or not, I understand you to say?

A. I don't know, no, sir.

Q. If you did not know, then why were you saying this to Carlisle, "He is afraid market will break if he does not get some business?"

A. I was giving him the information as to market conditions which I have done for 15 years.

1403 Q. Because you knew he was interested in whether the market would break or hold, weren't you?

A. Because he was—

Q. Answer the question.

Mr. Donovan: Let him answer.

The Court: If he will answer, he will get along all right. This witness will take care of himself. I think he ought to be permitted to answer without any interruption. Now, answer that question.

A. Yes.

I thought also that he was interested in what I next said in the telegram. "Sinclair and Pure only two that have made purchases this week, and they have bought 75 cars." I thought Carlisle was interested in that because he is in the oil business, he is interested in market conditions. By "Sinclair and Pure only two that have made purchases this week," I meant the only two companies, independents or majors, that made purchases that week that I had heard about.

Q. But in your telegram of July 2 to Barber, as we saw from reading, or referring you to your testimony yesterday, you told him that the "Major companies have purchased approximately 300 cars East Texas gasoline in couple of days," did you not?

1404 A. Well, that was—

Q. Didn't you tell him that?

A. Yes, sir.

(Witness examined a calendar.)

A Sunday intervened between June 28, when I sent the telegram to Carlisle, and July 2, 1935, when I made the next purchase. June 28 was Friday, the 30th was Sunday, and Monday was July 1, and Tuesday was the 2nd. I have in the record to which I referred my purchases for Gulf during June, 1935.

(Witness examined memorandum.)

My record shows that on June 24, I bought 6 cars from Gilliland Refining Company. In the week of June 24 I bought 44 cars for Gulf. I imagine I also bought cars for other people in the same week. I have my record of that, too.

(Producing memorandum.)

I am sure I bought substantially, because I was doing business every day.

Q. Then will you tell us why it was that you said in your telegram to Carlisle, which is dated June 28th, quote: "Sinclair and Pure only two that have made purchases this week."

A. Well, I do business with a lot of people. I don't tell him every time I make a deal.

1405 Along in there, I was selling Pure Oil and Sinclair some gasoline. I don't remember the dates, whether I sold them right along in there or not, without refreshing my memory on it, because I sell gas oil and fuel oil and a lot of different products down there, and I just can't remember all these things without going to the records on them. I just have my record on gasoline.

(Referring to memorandum.)

In this telegram to Carlisle, in which I spoke of Pure and Sinclair as the only two that "made purchases this week," I meant the only two that made purchases through Cline's Association.

I remember that in answer to Colonel Donovan's question, I referred to a wire I sent to Boswell Company on October 5, 1935, telling it that the market was tight as there were no tenders. I couldn't say whether or not the market on October 10, which was 5 days later, was still tight or whether it had become loose. I haven't any recollection on that, not without getting my memory refreshed.

The document which is marked Exhibit 157 for identification is a night letter telegram from me to Barber, dated October 10, 1935. In that telegram I was giving some expression as to the facts as I had them down there as to the condition of the market.

1406 Q. Now, after having refreshed your recollection as to what the fact was down there, will you state whether or not the cause of the tight market was something more than the operation of the Connally Act and the tender board program under it?

Mr. Donovan: Same objection as at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

A. (Reading from exhibit) "Due to heavy purchasing plus export business picking up due to war conditions market"—

Q. Yes.

Mr. Lewin: "Heavy purchasing," by whom?

Mr. Crawford: Q. Oh, of course, you mean heavy purchases by major companies?

A. Yes, sir.

The "war" I referred to was the Ethiopian war. We sold a lot of oil over there.

I also referred to a cable that I sent to Telbarks, London, on October 4, 1935.

(Document handed to witness.)

I remember this document. I was not able to get them any oil on the Coast then.

1407 Q. No—you didn't say on the Coast. You said here—you didn't limit it to the Coast, did you?

A. Well, that is what I am saying, I couldn't get it on the Coast.

Q. In your telegram, you said this—

A. No, sir, I didn't limit it to the Coast in my telegram, no, sir.

I got an inquiry from them as to whether or not I could provide them with some gasoline and crude oil, too. It was an inquiry as to petroleum products.

Q. O. K. "Recable account so many inquiries in market all grades petroleum products major companies and independents reluctant give any quotations today will quote Monday." That was your wire to the Telbarks, in London?

A. Yes, sir.

I recall Colonel Donovan calling my attention, to refresh my recollection, to a letter which I wrote on April 10, 1935, to Harry Bangert of Mount Pleasant, Michigan.

Mr. Donovan: Same objection as at R. pp. 685, 686, 688, 690-91.

The Court: Overruled; exception allowed.

Q. In which you told them your views or reasons as to why the market appeared to be tight?

1408 A. My opinion of what it was.

Q. Your opinion. And did you also tell them what you believe then to be the fact, this, quote: "The major companies have been doing quite a bit of buying of gasoline and they have this situation pretty well cleaned up on excess gasoline"?

A. Yes, sir.

Q. And that was true, was it?

A. Yes, sir, that was my opinion.

Q. The major companies were cleaning up, and then had cleaned up the excess gasoline?

A. That was my opinion, yes, sir.

That was in April, 1935, and the market price of gasoline was then on the rise, and I think it kept going up until June.

I also recall Colonel Donovan calling my attention to a letter I wrote on December 11, 1935, in which I said that the refiners were having trouble with tenders as a cause of the market being strong.

Exhibit 165 for identification, which you show me, is a telegram from me to W. H. Barber Company, as to the market conditions, dated December 11, 1935, the same date as the date of the letter to which I referred in answer to Colonel Donovan's questions. But in that letter I was quoting on a certain grade of gasoline in the letter, which had no bearing on the grade I was talking about in

1409 the telegram.

Q. Yes, but whatever grade you were talking about here in this Exhibit 165, you were talking about the market having gotten a little weak, but the majors came in and bought all surplus, did you not?

Mr. Donovan: Same objection as at R. pp. 685, 686, 688, 690-91.

The Court: Objection overruled; exception allowed.

A. Yes, sir.

Q. That was the fact, wasn't it?

A. Yes, sir.

Q. So the surplus gasoline was taken off the market by the major companies' buying, wasn't it?

A. Certain grades, yes, sir.

Q. You didn't limit this information to him to any particular grade, though, did you? Look at the telegram.

A. No, not to him.

Q. No.

A. In that letter, I did.

Q. Well, which did he get first, the letter or the telegram?

1410 A. Dunbar got the letter. They are two different people. I wrote the letter to one person, and sent Barber the wire.

Q. Oh, yes, I see. But evidently you weren't giving both of them the same information, were you?

A. No, because I was talking about two different grades of gasoline.

Q. In here (indicating), you were talking about all grades, weren't you?

A. Well, Barber knows it is about third grade gasoline, that is what he was referring to.

(Witness excused.)

(Document being stipulation relative to the authenticity of Socony-Vacuum Oil Company, Inc. documents is received in evidence as EXHIBIT 727).

(The following proceedings were had out of the hearing of the jury:)

Mr. Chaffetz: The Government offers in evidence EXHIBITS 334, 335 and 336, each of said exhibits being offered at this time as admissible in evidence only against the defendants who have been shown to have participated in the alleged conspiracy, whom the Government claims have been connected up with the conspiracy.

Mr. Treadwell: Now, in addition to the general objection on behalf of all the defendants, I would 1411 like to take particularly an objection to the letters marked Exhibit 336 for identification and Exhibit 335 for identification, on the ground that they were hearsay between persons who are strangers to this case. The other, Exhibit 335, is the reply. In this first letter your Honor is looking at, Exhibit 336, Mr. Booth states what his idea of Mr. Reid's idea of the company policy is. Well, now, I will object to it as against the corporation on the ground that Mr. Booth wasn't in a position to know. Assuming that that objection is overruled, I would still say it isn't binding against Mr. Reid because it is hearsay. I merely want to save on the record the objection to it as hearsay. It seems clear it shouldn't be admitted as against Mr. Reid, because it is clearly hearsay as to him.

The Court: Objection overruled. Exception allowed. I am in doubt whether this is binding on Reid.

Mr. Chaffetz: The point is Reid has already been connected up. There has been some testimony with respect to Mr. Reid, and this is just one of those additional tid-bits which show—

Mr. Treadwell: Then it is offered subject to that other connection?

1412 The Court: He wants that all to be connected up, and if it isn't, I will keep that in mind.

Mr. Treadwell: If it isn't, it isn't material.

The Court: If it isn't, it is hearsay.

Mr. Donovan: Now, I make this objection in general terms on the same grounds as before at R. pp. 504-05, 556-57, and in addition, upon the grounds that:

The reception of these documents are objected to because it does not appear that the documents offered in evidence were made in the regular course of any business of the Socony-Vacuum Company, Inc., or any of its subsidiaries; further, because it does not appear from the evidence that it was the regular course of business of said corporation to make or cause to be made such written memorandum or record at the time of the act, transaction, occurrence, or event sought to be shown, or within a reasonable time thereafter; that there is no evidence of authority in the maker of the writings now offered in evidence to make the same for or on behalf of said corporation; that as to all other defendants in the action, individual and corporate, other than said defendant corporation and the 1413 writers of the documents, there is no evidence that such writings were so made by a person having knowledge of the facts purported to be set forth in said writings and the facts therein purported to be stated are not corroborated by the testimony on oath of such person or any other person; the writings themselves [illegible] not proof of the fact or facts which it purports to record unless testified to by the writers thereof or some other competent witness, and their admission deprive the defendants of their constitutional right to be confronted by the witnesses against them, together with the right of cross-examination; that such writings are inadmissible in evidence against the individual officers of Socony-Vacuum Company, Inc. or any of its subsidiaries now under indictment in this action because not shown to have been made by the agent of such defendants or of any person with authority to act for them, and the evidence fails to show that such writing were made with the knowledge or consent or under the direction and supervision of any of said individual defendants, and for this same reason said writings are inadmissible in evidence against any individual or corporate defendant named in the indictment; because there is no evidence that 1414 these writings, now so offered in evidence, were made in aid of or in furtherance of the conspiracy alleged in the indictment, or of any overt act in pursuance of such alleged conspiracy; and because the same are incompetent and hearsay as to all of the defendants, individual and corporate, other than the writers, and cannot be received for the purpose of showing consent or agreement on the part of any individual or corporate defendant to the alleged conspiracy.

The reception of the said documents are further objected to because:

1. The reading thereof to the jury, without identification by the writers, is a denial to this defendant and to any of its subsidiaries of the rights guaranteed by the Sixth Amendment to the Constitution of the United States; as these defendants have a right to be confronted with the witnesses against them; and these documents are offered as evidence without opportunity being afforded these defendants to cross examine the witnesses by whom same are proved.

2. They are hearsay, as to these defendants.

3. Prejudicial.

1415 The Court: The objections are overruled. They may be received with the limitations as indicated. Exception allowed..

(EXHIBITS 334, 335, and 336 are received in evidence upon the limitations mentioned. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

Mr. Donovan: I want also to make the same objection with reference to the limitations that you (addressing Mr. Chaffetz) have made to the failure of the Court to rule as requested, and object to the limitations as made.

Mr. Donovan: This deals with the Mid-Continent area, isn't that right?

Mr. Chaffetz: But if we establish a conspiracy, covering the Mid-Continent and East Texas, then this is binding on everybody—

The Court: The objections are overruled, and the exhibits will be admitted subject to the limitations as indicated by counsel for the Government.

(The open court proceedings in the hearing of the jury were then resumed.)

(Mr. Chaffetz read Exhibits 334, 335 and 336 to the jury.)

May we understand that Metro is third-grade gasoline handled by Socony-Vacuum?

Mr. Donovan: That is right.

Mr. Chaffetz: By agreement with counsel I 1416 should like the record to show that the pencilled notations at the bottom of Exhibit 336 are authentic marks and were on that letter when the letter was produced pursuant to the subpoena.

Mr. Treadwell: We will agree that those notations were on there when the letter was turned over to the Government.

Mr. Chaffetz: With the assent of counsel I ask that the record show also that the initials in handwriting, "B. S. R." on Exhibit 336 are intended to signify "Bryan S. Reid," a defendant in this case.

(Document being stipulation relative to the authenticity of Shell Petroleum Company documents is received in evidence as EXHIBIT 728.)

(Thereupon the following proceedings were had at the bar of the Court, out of the hearing of the jury:)

Mr. Chaffetz: I offer EXHIBITS 168, 171, 243, 244, and 247 only as against the Shell defendants (handing document to the Court).

Mr. Donovan: The same objection as appears at R. pp. 504-05, 556-57, 721-23, and on the same grounds, and for the same reasons that I have made to all the documents submitted and offered by the Government just preceding this offer, particularly Exhibits 334, 335 and 336, as appears at R. pp. 721-23.

1417

And the further objection in regard to the offer of the Government, on the ground that nowhere does it appear in these documents so offered, any reference to Mr. Lakin or Mr. Fraser, or anything to show that in any way they were informed or advised.

Mr. Mitchell: That they ever saw it or ever heard of them.

The Court: Let the record show that Exhibits 168, 171, 243, 244 and 247 are offered only as against Alexander Fraser, the defendant Lakin and the defendant Shell Petroleum Corporation, and are admitted over the objection and admitted as to those defendants only subject to their being connected up with Mr. Fraser and Mr. Lakin. Exception allowed.

(Documents are received in evidence as EXHIBITS 168, 171, 243, 244 and 247 upon the limitations stated.)

Mr. Chaffetz: I will now offer Exhibits for identification 222, 233, 234, 237, 238 and 239; and ask that they be received as admissible as against all of the defendants shown by the record to have participated in this buying program.

Mr. Donovan: Now, may I have the same objec-
1418 tion to the introduction of all of these documents that I have already made, on the same grounds and for the same reasons as appears at R. pp. 504-05, 556-57, 721-23.

The Court: Objection overruled. Exception allowed.

Mr. Mitchell: We want to make an additional objection on the part of Shell, Mr. Lakin and Mr. Fraser, as to Exhibits 171, 222, 233, 234, 237, 238 and 239, on the grounds that they are incompetent, irrelevant and immaterial; that they are hearsay; for the additional reason that they refer to matters in East Texas, and that Shell Petroleum Corporation, Mr. Fraser, and Mr. Lakin are not charged under the indictment with participating in any way in any East Texas transactions, or any alleged conspiracy in East Texas; and for the same reason, they would be inadmissible against all other defendants.

Mr. Chaffetz: Of course, we charge everybody with participating in the entire, over-all program.

The Court: Objection overruled. Exception allowed.

(Documents are received in evidence as EXHIBITS 222, 234, 237, 238, and 239 against the Shell defendants only. Said exhibits later at R. p. 907 were admitted as evidence against all defendants.)

1419 (Thereupon the following proceedings were had in the presence and hearing of the jury:)

(Mr. Chaffetz read Exhibits 168, 171, 222, 233, 234, 237, 238, 239, 243, 244 and 247 to the jury.)

(Document being stipulation relative to documents from Cities Service Company, its affiliated companies, and Louisiana Oil Refining Corporation is received in evidence as EXHIBIT 729.)

Mr. Chaffetz: The Government offers in evidence EXHIBITS 457, 458, 473, 474, 475 and 476. These are documents from the files of Cities Service Company or Cities Service affiliated companies; one, Louisiana Oil Refining Corporation, and an enclosure, addressed from J. A. Welch to H. D. Frueauff, dated April 6, 1935.

Mr. Donovan: I object on the same ground and for the same reasons that I have stated to the admission of the other documents at R. pp. 504-05, 556-57, 721-23.

The Court: Objection overruled. Exception allowed.

(Documents referred to are received in evidence as EXHIBITS 475, 476, 473, 474, 457 and 458, respectively.)

1420 RALPH E. EVERITT, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I reside in Wichita, Kansas, and have been secretary of The Globe Oil and Refining Company of Oklahoma for approximately 18 years. I am assistant secretary of the other two Globe companies.

Each of those companies is engaged in the manufacture and distribution of gasoline. The principal marketing territory of each of those companies is the Standard of Indiana territory. Each does business with jobbers in this territory, and markets under contract and on the spot market. Around 80% to 85% is marketed under contract.

Mr. I. A. O'Shaughnessy is, and in 1935 and 1936 was, president of the 3 Globe Oil and Refining companies. He is a defendant in this case. He is a stockholder in those companies. He personally only owns about 40% of the stock of each of the companies. It is possible that I stated at some other time that he controls as much as from 55% to 70%, but he doesn't own it personally. In speaking of control I had reference to the fact and there are other stockholders that are also officials of the company
1421 that hold stock; and they have been connected with
the company for a long period of time that would, in my opinion—some of them are relatives; others are just long-time business associates. From my knowledge of the facts, I would say that Mr. O'Shaughnessy had actual control over from 55% to 70% of the stock of each of those companies in 1935 and 1936.

I don't recall from memory that in January, February and March, 1936, the sales of gasoline by our companies diminished substantially over what they had been in preceding months. I don't recall what the weather conditions were in the marketing territory of our companies during that period.

Q. Would it refresh your memory if testimony given by you before the grand jury were shown to you, or read to you?

A. I doubt very much whether it would. I don't recall ever having testified to weather conditions.

Q. Do you remember testifying with respect to to the amount of stocks on hand that your company had during that period?

A. If I testified—

Mr. Donovan: I object to this form of questioning on the grounds that appear at R. pp. 373-74, 446, 630, 680-81, 682.

1422 Mr. Chaffetz: I want to see whether his memory can be refreshed, your Honor.

The Court: He may answer. Exception allowed.

A. (Continuing.) If I testified in regard to stocks, it was from memory only.

Mr. Chaffetz: Q. Yes. And do you remember what the fact was as to the stocks that your company had on hand at that time?

A. No, sir, I do not.

Q. You did know those facts when you testified before the grand jury?

A. I did not. If I did, it was an estimate pure and simple.

Q. If in your testimony before the grand jury you said, "I know," wouldn't that indicate to you that you did know?

A. No, it would not.

I do not recall that our storage at our plant at Blackwell, Oklahoma, was full in February 1936. I think our Blackwell plant was closed down in February 1936.

Q. And don't you recall that it was closed down after the storage capacity had become filled?

A. Not necessarily.

1423 Q. No, not necessarily. I am asking you what the fact was.

A. No. I don't think that was the fundamental factor in closing down the plant.

I do not remember that due to severe weather in that period our inventory ran up pretty high. What the storage capacity of the Blackwell plant is would have to be purely and simply an estimate. That storage capacity has changed pretty frequently in the past years. It has increased from time to time throughout the years from 1918 on up to date, but it is pretty hard to keep track of it. The storage capacity of that plant in February, 1936, was somewhere around 60,000 to 100,000 barrels, but that is a pretty wide spread. I don't know exactly. I don't think it might have been as much as 300,000 to 325,000 barrels.

Q. Do you remember testifying to that before the grand jury?

A. Not for one plant, only, no. I don't think we ever had 300,000 storage. You are referring to gasoline?

Q. Referring to gasoline.

A. We never had that much, I don't think.

1424 *By the Court*

My duties as secretary are principally accounting, insurance, and taxes. I am an accountant, and have charge of the accounts of the company. As accountant, I have knowledge of what gasoline there is in storage, and what business the company does, but I don't try to carry those figures in my mind. We have here with us now records of purchases and sales of gasoline. I don't have the amount of gasoline in storage at the time Government counsel asked, January, February, and March, 1936.

(Witness excused at request of Government counsel subject to recall. The witness was not later recalled to testify.)

1425 JOHN STEIGER, a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

I reside in Tulsa. My age is 25. My present occupation is market checker for Platt's Oilgram and National Petroleum News. I have been market checker for Platt's Oilgram in Tulsa since July, 1934. I am, and for the last few years have been, the only market checker for Platt's Oilgram in that territory.

When I check the market I make up quotations for Platt's Oilgram of prices of gasoline for the spot, open market. Those quotations that I make up are the ones published every day in Platt's Oilgram for the Mid-Continent markets. Really I am the reporter or checker of the spot market quotations for the Tulsa edition of Platt's Oilgram.

Warren C. Platt, president of W. C. Platt Company, is my superior in that company. He is a defendant in this case.

W. C. Platt Company owns the publication, Platt's Oilgram. Cleveland is the main office. Mr. Platt has his office there.

J. P. Mosher, Jr. is another superior officer in this company to whom I report. He has charge of circulation and similar matters of the Oilgram. I don't know
1426 that general manager is his official title. We haven't many official titles in the company. I imagine he does perform some of the duties of general manager. I report to him on the work I do in Tulsa.

The Oilgram has an office in Tulsa, with two employees and a stenographer.

I know a little about The National Petroleum News. It is published by the National Petroleum Publishing Company and comes out each Wednesday. In it the Monday prices for the different petroleum products appear. The National Petroleum Publishing Company, a defendant in this case, publishes The National Petroleum News.

Warren C. Platt is president of The National Petroleum News. I don't know whether or not he is the principal owner of The National Petroleum News and the W. C. Platt Company. It seems to me as though I did read some sort of a report in the magazine that he and Mrs. Platt were the principal owners. I wouldn't say for sure.

I might say these two companies are under the same management, as they are both under Mr. Platt. They have the same staff. Mr. Mosher takes charge of the price section of The National Petroleum News, but I wouldn't say that he was general manager of The National Petroleum News. These two companies are in the same building in Cleveland, with offices on the same floor. I write market stories for The National Petroleum News every week
1427 and articles occasionally. I understand that Mr. Mosher has charge of the market section of The N. P. N., so I imagine from that angle it would be right that I am working directly under him. When I write stories, however, I address the envelope, "National Petroleum News, Editorial Department".

The National Petroleum Publishing Company has an office in Tulsa, too, in the same office with us. In 1935 and 1936 it had a staff of 3, comprised of two editorial men, an advertising man, and a stenographer.

W. C. Platt Company publishes 4 editions of Platt's Oilgram: Tulsa, Chicago, New York, and Cleveland editions. They come out simultaneously every day. Each one carries substantially all gasoline markets that are reported by all others, but there are a few of the purely local markets that aren't carried in each edition.

There is a market reporter or checker like myself in Chicago. He is responsible for the Chicago quotations of the Chicago edition. During 1935 and 1936, Lawrence D. McGuan was the reporter or checker. Mr. Barringer was Mr. McGuan's superior in Chicago.

There is also a market checker in Cleveland, New York and Los Angeles. The market checker in Los Angeles checks the market on the Los Angeles basin market.

In a sense I have full responsibility for these quotations in the Tulsa edition of Platt's Oilgram. We
1428 consult with Mr. Mosher, or some of our superiors in
W. C. Platt Company, if something turns up that we think it is necessary to. Except for that, we act under his general instructions.

The policies are outlined to us from time to time, and we try to follow them. You see, we are more or less broken in. I started out in the Tulsa office as an office boy. They train us up to do the work, as is the case with most of the Oilgram checkers; they have been trained into the job. When I first went into that work, Allen S. James was the market checker. He is now editorial writer for The National Petroleum News.

It would be hard to say how often I am in communication with Mr. Mosher. Indirectly we are in contact with Mr. Mosher daily through our teletype hook-up, since we teletype information from Tulsa to Chicago, and Chicago in turn teletypes it on to Cleveland. In that way we are more or less indirectly contacting the Cleveland office almost daily or more than that. I am pretty sure that those communications go through Mr. Mosher's hands. I was in communication with Mr. Mosher during 1935 and 1936 over the telephone once or twice a month as a rough estimate. Mr. Mosher occasionally came down to Tulsa to inspect our work. Once in 1935 and once in 1936 is my best recollection. He didn't give us general instructions, because we already had general instructions,
1429 but we did talk markets on the occasion of those
visits.

Mr. Platt was out of the office and out of town quite a bit during 1935 and 1936. I imagine we were in communication with him over the telephone during 1935 and 1936, but I can't say definitely how often. Mr. Platt came down to our Tulsa office to inspect our work once or twice in 1935, and about twice in 1936. I saw him on those occasions.

In 1935, I don't believe I went to Cleveland at all, but during 1936 I did possibly twice. When I went there, I talked with just about everyone in the concern, including Mr. Platt and Mr. Mosher. I went there on business to talk about my work.

My work requires me to be in pretty close contact with major and independent companies selling gasoline on the spot market in the Mid-Continent and East Texas fields. We check with major companies not only on gasoline but on other products, because they are also active in the open market.

My work requires me to be familiar with the prices at which gasoline is sold on the spot market, and I am familiar with these prices and with the number of persons and different companies selling on the spot market in those fields. In 1935 and 1936 I was familiar with the
1430 number selling and with the volume of gasoline that was sold on the spot market in those fields. We do our best to check as much of that volume as we can.

When we check, we call those various sellers on the telephone and have a conversation with them about marketing conditions. I have visited several of the local companies in Tulsa, but I am pretty well tied down to my desk and do not have much time to get out. Mostly I collect this market information over the telephone. That was true in 1935 and 1936. I make a great many calls a day and am almost constantly on the telephone. I call East Texas, the Panhandle in Texas, and throughout Oklahoma, Kansas, Arkansas, and Louisiana.

We attempt to get all the actual sales made in the spot open market, and failing to do that we attempt to get, or we do get, the prices at which the refiners will sell to jobbers in that spot open market. It is our regular procedure to collect as nearly as we can the actual selling prices they give us and their mere quotations that have been made. If they have made no sales, then we have to check the next best thing.

There is a little bit of disagreement between what the spot market has been called here in this court room and our understanding. Our understanding is to describe what

the Oilgram reflects. We should say "spot open
1431 market sales". In other words, the word "spot"
refers to the period of shipment, and in the Oilgram we consider spot shipment as shipment within 10 or 15 days after the order is placed. "Open market" refers to sales that are not made on contract nor based on future publications. It refers to sales which reflect the price at which a buyer and seller contact each other and arrive at a flat price. The buyer says he will buy at a certain price, and the seller agrees to sell at that flat price.

Thus, if a sale were made based on a future publication, there would not be any way in which the buyer or the seller would know what price they were going to pay for it until such time as that publication came out. It would not be a sale on the open market, in our classification, because we have no price. The price is very indefinite until the day comes, so we don't consider that type of sale.

We report quotations for gasoline on the Oklahoma, North Texas, West Texas, East Texas, and the Panhandle Texas refinery markets. The Panhandle is a little local market all its own. We also quote the North Louisiana, Arkansas, and Kansas refinery markets. The Louisiana and Arkansas markets were quoted in 1935 and 1936 as two separate markets.

The two largest markets in volume of sales on the
1432 spot market that we report are possibly the Oklahoma
and the East Texas markets. For the Oklahoma refinery market for the years 1935 and 1936 we published quotations for U. S. Motor gasoline 62 octane and below. That is generally what we call third grade. The next bracket was 63 to 70 octane. We had that bracket up to April 22, 1935. At that time we inserted the word "regular" after it, and that was reflecting the general trade's understandng of what regular gasoline was. That understanding was 68-70, and it was a qualification of 63-70 bracket.

On April 15, 1936, the brackets were changed to 62 and below, and 63-67, and 68-70 regular. For U. S. Motor up to April 15, 1936, for the Oklahoma refinery market, we published quotations of third grade, and also for regular which was known as 63 to 70. After April 15, 1936, we published quotations for that market in three different octane brackets: for U. S. Motor, called third grade; for the middle bracket, 63 to 67 octane; and for the regular bracket, which then became 68 to 70 octane. In addition to that, we published quotations for other gasoline of different specifications, based usually on their gravity and end point. That was true for the North Texas, West Texas, and Louisiana-Arkansas markets.

For the East Texas market, during the first part of 1935 we quoted prices for 62 and below, that would be 1433 third grade, and for 63-70. Then on April 23, we discontinued that 63-70 octane bracket because there just weren't enough transactions on that product. So that through most of 1935, and through all of 1936, we published quotations on only one bracket, U. S. Motor, in East Texas, and that was third grade. In addition to that we carried quotations on 60-62, 400 end point in 1936.

We did not make any differences in the Kansas market so that we would be safe in saying that all of those markets, except East Texas, were treated alike.

I understand that most of the major oil companies use the average of the average of the high and low quotations in our Oilgram, taken sometimes in combination with the average of the high and low quotations of the Chicago Journal of Commerce, as their basic price in writing contracts with jobbers in the Standard of Indiana territory. My understanding is that they use the average of our quotations of regular 68-70 when they are finding their basic price for the contracts for regular gasoline they sell the jobbers, and the average of our high and low quotations on third grade when they are determining their basic price on third grade in some of their contracts.

Through 1935 and 1936 I understand that our Okla- 1434 homa refinery market quotations were generally used in the way I have described in the Standard of Indiana territory. I don't believe those contracts made use of our East Texas, Kansas, Louisiana-Arkansas, West Texas, or North Texas markets. During 1935 and 1936 our market quotations for each of those 5 markets may have closely paralleled each other, but I do not recall definitely. I would be glad to look it up for you. I would rather give you something definite than an idea.

There is always a freight differential of roughly 1/8¢ between our Tulsa, Oklahoma, and our East Texas quotations on third grade gasoline due to the fact that East Texas is further away from the marketing area up here. In other words, our East Texas market is figured on the basis of f.o.b. East Texas refineries, and our Oklahoma refinery market, of course, is f.o.b. Oklahoma refineries, which is Group 3. I would hate to say that through 1935 and 1936 our quotations on East Texas third grade gasoline closely paralleled our quotations on Oklahoma refinery third grade gasoline about ⅛¢ apart to account for the freight, unless I definitely looked it up. I would be glad to look it up during a recess.

There must be some inter-relation, I suppose, between these markets for the same quality of gasoline from a competitive standpoint. As a matter of fact, there 1435 is a close relationship between each of the 5 markets we quote due to this competitive situation. That was true in 1935 and 1936.

That paper which you show me is the Tulsa edition of Platt's Oilgram for May 9, 1936. This fine printing at the top is the masthead, that goes out with every edition of the Oilgram, and describes what these quotations down here are.

Mr. Lewin: I wonder if I might offer that one in evidence, your Honor, and describe it here as a typical illustration of Platt's Oilgram?

The Court: You may.

Mr. McAfee: I understand this is being offered merely to show the contents of the paper.

Mr. Lewin: That is all.

The Court: It may be received.

(Copy of Platt's Oilgram, Tulsa edition, May 9, 1936, received in evidence as EXHIBIT 730, and portions read to the jury by Mr. Lewin.)

I don't know what "C. F. R." means in Exhibit 730. "A. S. T. M." is American Society of Testing Materials, and "D. 357-33T" is just a description of a test, as I understand it. "F. O. B. refinery in the district designated" means free on board refinery and that means the price is determined where the refiner delivers it into the tank 1436 car at the railroad, right at his refinery. When we say in the trade prices, "F. O. B. Group 3", we mean that the price is figured as though it were delivered in the tank car to the purchaser in the Group 3 district, even though it may have been delivered into the purchaser's hands in his tank car at some other place. You could, if you wanted, load a tank car in East Texas for shipment to Chicago and you could be paid on the basis of f. o. b. Group 3. If you were paid on that basis, the parties would be regarding it as though you had loaded it and delivered it to the buyer up in Group 3. They would stand the freight differential between East Texas and Group 3. Group 3 is a freight rate district around Tulsa, Oklahoma. Most of the Oklahoma refineries are in that district, as I understand it. Group 3 does not go down into Texas.

In the Oilgram summary, Louisiana and Arkansas are grouped together, but in the regular markets they are not. They are the markets, the ones you have read there, the ones I have in charge and report on.

I write the Mid-Continent news comment which comes next. Then comes the actual quotations reported in detail for each one of these markets. If a jobber up here who has a contract based on the Tulsa edition of Platt's Oilgram wants to know how to figure his basic price, he will
1437 look in this first group of quotations for the Oklahoma
refinery market, and generally he will find for third grade a high and a low, although there have been flat prices. If his contract is based on the average of that high and the low, he would average that figure, and that would give him his basic price on third grade. And if the jobber up here had a contract for regular gasoline based on the Tulsa edition of Platt's Oilgram quotations for regular, average, he would average the high and low quotations for regular.

Most of the major and semi-major companies sell their gasoline to jobbers under contract. Some of the majors sell some gasoline on the spot market, but not a great quantity.

I don't know anything about Standard Oil Company of Indiana's sales. I don't know that it sells anything on the spot market in Oklahoma. I don't believe Socony-Vacuum Oil Company makes very many. The Cities Service Companies, like Empire, do make open market sales occasionally. I wouldn't limit it to one car at a time, but it isn't in large quantities. Everybody is a factor in the spot market, but I don't imagine the Cities Service Companies would be a significant factor. I understand that Cities Service Export Oil Company doesn't sell anything on the spot market. Empire Oil & Refining Company makes
1438 small and infrequent sales in the spot market.

I don't know anything about Gulf Refining Company's sales. I don't believe I have ever checked with Gulf. It hasn't a refinery in Oklahoma. I don't recall any sales by it in Oklahoma or in these other markets that I report. We are now speaking of 1935 and 1936. I don't check with The Texas Company. It would be in about the same category as Gulf. I don't recall it selling in the open market in Oklahoma.

The Pure Oil Company sells in the open market; but there, again, the volume isn't, as I recall, very large, and the sales are rather infrequent. The same thing was true of the Shell Company, Sinclair Refining Company, Pure, Empire, Phillips, and Mid-Continent Petroleum Corporation. The Tide Water Oil Company, which was doing business down there in 1935 and 1936, doesn't sell very much in the open market.

As I recall, Barnsdall Refining Corporation sells on the spot market a little bit more frequently than the other companies I mentioned, and possibly in a little bit larger volume. The maximum amount that it sells on the spot market in a year is something I couldn't estimate. It would be such a wild guess it wouldn't be worth anything.

The Globe Companies have a refinery in Oklahoma,
1439 but they don't sell much from that Oklahoma refinery
in the open market.

Deep Rock Oil Corporation does sell a little in the open market in Oklahoma, possibly the same as Barnsdall.

From Skelly Oil Company's Kansas plant they sell on a Group 3 basis, but we don't include that in our Oklahoma refinery market. In the Oklahoma refinery market Skelly doesn't sell anything on the spot market that I recall. It doesn't sell anything on the Texas markets or the Louisiana-Arkansas markets. It sells something on the spot market in Kansas, both f. o. b. Kansas refinery and on a Group 3 basis from Kansas.

Louisiana Oil Refining Corporation does not sell much on the spot market in the Louisiana-Arkansas field, nor does Wadhams Oil Company. Through 1935 and 1936, I don't recall that we got spot market quotations from Socony-Vacuum Company from time to time, nor do I recall that we got them from Wadhams. We occasionally got open market quotations from Empire and from Continental. Continental doesn't sell a great deal on the spot market in my market—I should say a little bit more like Barnsdall than like Pure and Shell. We do not get spot market seller's quotations from the Gulf Companies, Shell Company, Texas Company, nor Sinclair. Occasionally, we
1440 do from some of Tide Water Companies; we do from
Mid-Continent Petroleum Corporations; very occasionally from Phillips; and we do from Barnsdall, Globe and Louisiana Oil.

The independent refiners sell most of the gasoline that is sold on the spot market in our markets. Champlin, Eason, Bell Oil & Gas, Panhandle, Olney, Omar, Cushing, Waggoner, Taxman, Rock Island, Dickey, Danciger, Shamrock and Wilcox Oil & Gas sell quite a bit in the open market. There are others who sell. I wouldn't say that those were the principal ones that supply most of the gasoline sold on the spot market in the Mid-Continent field. We would have to add some more independents. I would add Anderson-Prichard, Black Gold, Sun Ray, and Johnson Oil & Refining. Johnson is located at Cleveland, Oklahoma, near Tulsa. I would add Vickers Petroleum, and Derby, also, in the Kansas market. Sun Oil Company, at Tulsa, would have to be included on third grade. I think that would just about cover it. With those additions, I would say that group would be the main sellers on the spot market in the Mid-Continent fields.

Looking at the Oklahoma refinery market alone, as to whether we have the principal sellers there, Champlin, Eason, Bell Oil & Gas, Omar, Cushing, Rock Island, Taxman—no, they are in North Texas. Dickey—no, they are in Kansas. Danciger does some brokering of Oklahoma material, and are a factor in that Oklahoma
1441 market. Shamrock, no; they are out in the Panhandle. Wilcox, yes. We would have to add Anderson-Prichard at Oklahoma City, Black Gold at Oklahoma City, Johnson Oil & Refining, and Sun Oil Company, with an office in Tulsa and a refinery in Oklahoma, to have in that list the principal sellers in the Oklahoma refinery market on the spot market. Sun Ray is in Tulsa; they have an Oklahoma plant.

The spot market for gasoline during 1935 and 1936 was generally considered thin. In North Texas, in 1935 and 1936 I think Panhandle and Waggoner sold 68-70 octane gasoline on the spot market. I am not sure about the Taxman Company, whether they sold 68-70 octane in 1935 and 1936 or not.

Q. Do you recall testifying before the grand jury on this subject?

A. I think I did.

Q. Do you recall saying that the only two you knew of in that field was Panhandle and Waggoner?

A. I don't recall, no.

Q. What is your judgment now? Panhandle, Waggoner and maybe Taxman?

A. Yes, sir.

1442 Q. And you can give us some idea of the volume of gasoline that those companies would sell on the spot market, in a month, of that kind of gasoline?

A. I couldn't give you that estimate.

Q. Do you remember giving your best judgment before the grand jury on that at 5 cars a months?

A. I may have, but I don't recall definitely what I said.

Q. Does that refresh your recollection now?

A. No, sir, it does not. I am sorry.

Q. What would be your best judgment of the amount that those companies sold on the spot market during 1935 and 1936?

A. I really would hate to say on that because I don't know definitely.

Q. Would you think it would be more than 5 cars a month?

Mr. Donovan: He said he didn't know, your Honor.

Mr. Lewin: I am trying to refresh his recollection, Mr. Donovan.

Mr. Donovan: He said it wasn't refreshed.

Mr. Lewin: If it eventually turns out that he doesn't know, that is all right.

1443 The Court: Q. Do you know? Do you recall?

A. No, I don't.

It is my recollection that Cosden Oil Company is the only company in West Texas that manufactures 68-70 octane gasoline and sells it on the spot market. I really have no information on which to base an estimate of its sales.

The spot market sellers of that grade of gasoline in the Oklahoma market back in 1935 and 1936 were: Eason Oil Company, Deep Rock—an occasional car, the way I have described, Johnson Oil & Refining Company, Rock Island, Barnsdall, Anderson-Prichard, and Sunray. It would be hard to make a definite estimate as to how many cars a month of that kind of gasoline they would sell in the Oklahoma refinery market, on the spot. I am sure it would exceed 10 cars a month, but as to just exactly how much—

Q. Do you remember testifying on that subject before the grand jury?

A. I probably did, but I don't recall my grand jury testimony.

Q. Do you remember testifying that you would regard the amount of gasoline sold of that character in the spot market in Oklahoma as being largely nominal?

1444 A. No, I don't recall that testimony.

Q. Is your mind refreshed at all by my suggestion?

A. Well, "nominal" could mean anything.

I would hate to estimate, and it would be an estimate, as to how much was moving in the open spot market back in 1935 and 1936 in the Oklahoma refinery market. I have forgotten.

Q. Well, now, could your mind be refreshed by reference to your grand jury testimony on that?

A. Well, I will do my best.

There isn't a great deal of leaded or tetra-ethyl gasoline sold on the spot market. There isn't much of that sold on the spot market because most of it comes under contract. Jobbers have to have a license from the Ethyl Gasoline Corporation in order to handle it. There was only, I imagine, an insignificant amount of leaded gasoline that would be sold on the spot market during these 2 years. We can get gasoline that is 68-70 octane by using tetra-ethyl lead, or by cracking. The 68-70 gasoline that was sold on the spot market in 1935 and 1936 would be cracked gasoline. I think there was some leaded gasoline sold in the open market.

1445 Q. Well, now, I am sorry. I misquoted your grand jury testimony to you when I said that I thought you testified that the amount that was sold in the Oklahoma market of this 68-70 on the spot was largely nominal. I meant to say that you testified that your quotation price you carried on that grade of gasoline in the Oilgram was largely nominal.

Do you recall giving that testimony?

A. No, I don't.

Q. Do you think the grand jury minutes would refresh your recollection?

Mr. Donovan: May we have the same objection, your Honor, as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727?

The Court: Objection overruled; exception allowed.

(Document purporting to be transcript of testimony before grand jury handed to the Court.)

The Court: Q. Speaking about 68-70 bracket. Do you recall testifying before the grand jury on Monday, June 1, 1936, at Madison?

A. I think that was the date, yes, sir.

Mr. Hanning: May I offer an objection to the use of the grand jury testimony as far as this witness is concerned, for this reason: I don't know, of course,

1446 what he testified to before the grand jury. I don't care what he testified to before the grand jury. I don't think that he has indicated by either word or action that he is not trying to tell us what the facts are, as he remembers them.

The Court: I think he is a very refreshing witness compared with what we have had.

Mr. Hanning: Thank you. I just wonder why it is necessary.

The Court: I don't either. I desire to refer to this. I think this boy is trying to be honest.

The Lewin: The Government hasn't made any suggestion at all. He doesn't seem to remember.

Mr. Hanning: Ask him what the facts are.

Mr. Lewin: He doesn't remember. You see, I asked him the facts, and he doesn't remember, and he seems to think that his testimony before the grand jury, which was given over a year ago, might refresh his recollection.

The Court: Ask him the question, and I think he will give us his best recollection on it.

Mr. Lewis: Q. Would you say now that the price you carried in your Oilgram in 1935 and 1936 for 68-70 gasoline in the Oklahoma market were largely nominal?

1447 A. Well, we had sales and quotations to back those prices up.

The Court: Just let me read what he has here. I don't know whether you understand each other. Now, (Reading) "Question: Yes. Therefore, these prices must be based upon only the cracked gasoline data. Am I right?

> "Answer: Yes.
>
> "Question: What is the source of your information for the quotation on 68-70 octane in the Oklahoma market?
>
> "Answer: That price is largely nominal.
>
> "Question: Do you mean it is just a judgment figure, not based on any data? Is that right?
>
> "Answer: That is right."

The Witness: Your Honor, right now I would say that I was just a little bit hazy when I gave that grand jury testimony, and that really from looking over the situation now—

The Court: I don't exactly know what he means, myself, reading this testimony. Do you?

Mr. Lewin: Yes, I think I do.

The Court: Just what is it you want to know?

1448 Mr. Lewin: I would like to know if this witness can tell us about how much data there was in 1935 and 1936 on spot market sales of 68-70 gasoline in the Oklahoma market on which he could base a quotation.

The Witness: Well, we got actual quotations and actual sales during that period. I can't tell you how many quotations we got or how many sales we got.

I would not say that the source of our quotations was first the major companies; they were one of the sources in addition to the independent refiners who were selling and quoting in the open market. With reference to the independents you name, our sources were: Johnson Oil & Refining Company, Eason, Sunray, Deep Rock, a semi-major, and Anderson-Prichard. Barnsdall gave us a few open market sales. I wouldn't make it as broad as a few during the year but they did report sales. I can't remember how often, as it was back in 1935 and 1936.

If sales of 68-70 octane were made in the Oklahoma market and in the spot market and were classified as U. S. Motor and reported to us, we would consider them. I really could not give you the specific information on the volume of 68-70 sold in the open market in Oklahoma 1449 in 1935 and 1936. Comparing it with third grade, it would be smaller in volume. There again you have me, when you ask how much smaller. I don't have any information as to the amount of data that there is to go on there, how much moves on the spot market at our quotations. I don't have any idea of the total amount of gasoline that is sold in the Standard of Indiana territory.

By the Court

I get to work in the morning at 8:30. Generally from 8:30 until 9:30 we handle correspondence and get routine matters laid out. Then, about 9:30, we start checking our markets, either by long-distance or local telephone.

We will call up a refiner and ask him how the market looks to him, and he will say, "Well, it is steady", or "Just a little bit wobbly". "Well, have you made any sales?" "Yes, we made two cars, a two-car sale."

"Well, what grade was that?" "62 and below", or "63-70", or whatever the octane bracket was. "Well, it was third grade." "Well, was that sold in the open market?"

“Yes, it was sold in the open market.” “To a jobber?”
“Yes”, or if he said it wasn't a jobber, we would find out
where that sale was made, whether it was made to a broker
or to another refiner. And if he hadn't made open
1450 market sales that day, we would get his quotations, in
other words, the price at which he would sell to a
jobber if the jobber came to him and wanted to buy gaso-
line, and we would ascertain if that quotation that he gave
us was to a jobber or to a broker or to another refiner. Our
Oilgram prices reflect all that, because those price sales and
quotations are made directly to jobbers in the open market.
Our subscribers are interested very much in another type
of buying, which is contract buying. In other words, ship-
ments against contracts. They are interested in broker
buying. They are interested in the volume of gasoline
that is sold to other refiners for the reason that if your
broker buying is active and the volume is large, that means
that there is just that much less gasoline that has to be—
well, let us refer back to contract buying. If contract buy-
ing is heavy, and there is quite a bit of it moving under
contract to jobbers, that means that there is just that much
gasoline that doesn't have to be sold in the open market.
It is the same way with sales made to other refiners. While
we don't take into consideration those transactions between
refiners, our subscribers are very much interested in it,
because the extent of that inter-refinery buying and the
extent of that contract buying removes just that much
1451 gasoline that has to be sold in the open market. Broker
buying is also a factor in that it removes gasoline
from the market.

I call up this man to inquire the volume of gasoline he has sold, the number of cars, the grade, and the price. On the average we call everywhere from 15 on up to as high as 30 or 35 refiners a day. In arriving at the price inserted in the Oilgram we take into consideration the volume of sales at each price, and, for instance, if we have sales reported at 5⅛¢ and 5¼¢ and 5⅜¢, our price range would be 5⅛¢ to 5⅜¢.

We have to take into consideration also the factor of volume. In other words, if there had been quite a bit of material sold at 5¼¢ and there is just one car at 5⅛¢, it could hardly be said that that 5⅛¢ sale was really representative of the market. So we do consider and give consideration to the volume or the number of cars sold.

By Mr. Lewin

In West Texas, Cosden was the only concern in 1935 and 1936 that sold 68-70 gasoline on the spot market, and was the sole source of information on 68-70 gasoline as I recall. I checked with Cosden very frequently in order to ascertain his quotations. Of course, that was just a local market. I will give my best recollection about how
1452 much gasoline was sold in that market by Cosden on spot of 68-70 during those years, but I have very little recollection to base it on.

Mr. Lewin: Your Honor, I don't mean any sinister implication at all, but I wonder if I might ask the witness to help him at all by refreshing his recollection? I don't mean to imply that I am impeaching him in the slightest degree.

The Court: No, I know.

Mr. Lewin: Q. Mr. Steiger, do you remember testifying on that subject before the grand jury about Cosden?

A. I may have. I don't recall just what I said, though.

Q. Do you think your mind is fresher about Cosden since 1935 and 1936 over a year ago before the grand jury?

A. I imagine.

Q. If I told you that in your opinion Cosden sold 1 or 2 a month in the spot market during 1935 and 1936, would that refresh your recollection at all?

A. My idea would be that there was more sold by Cosden in the open market.

Q. Than 1 or 2 cars?

1453 A. Yes, sir.

Q. Would it more likely be 2 to 4?

A. Really, it should be increased considerably more than that. I don't know what basis I said that on. I may have meant—what was that again?

Q. 1 or 2 cars a month sold by Cosden on the spot market of 68-70 gasoline.

A. I would be inclined to say I mistook your question for daily sales rather than monthly sales.

The Court: Q. Now, your best recollection now is that it would be that many cars a day?

A. That would be my best recollection, yes, sir. The Tulsa, Oklahoma market, compared with the West Texas market of 68-70 on spot market gasoline in 1935 and

1936, naturally would be more moving. My best recollection is that the amount of sales on spot would possibly be around 10 or 15 cars a day in Oklahoma. I really have nothing definite to back that up with.

I think Mr. Platt instructed me to make a survey of the extent and volume of the spot market gasoline in 1936.

1454 I made that survey, but I do not have it; the grand jury has it, I am sure. That is my impression, that they did have it. I conducted the survey of our markets, and I did the checking. The survey covered a week or 10 days, but it may have been longer than that; let us say about 2 weeks.

I recall that I had trouble in getting sales of some of the companies. I called them, but they were a little bit negligent in giving that information to me. I recall that several of them indicated it would be too much trouble getting that every day, and, "so we will lump the figure up at the end of the week." We did have a little trouble getting information for that survey. Sometimes fellows in the oil offices just forget to get it for us.

I don't know the percentage of gasoline moving from East Texas into the open market on spot. I recall that most of it moved on spot. In 1935 or 1936, quite a bit of that spot market gasoline in East Texas moved to the major companies. I can't tell you whether 70% of it did.

Q. Do you remember giving that figure before the grand jury?

A. No, I don't.

Q. That doesn't refresh your recollection at all?

The Court: He says it doesn't.

1455 In the Mid-Continent field, compared to the total volume of material sold, the percentage of gasoline that is refined in the Mid-Continent field and sold on the spot market, that is third grade and regular and any other specification gasoline, isn't so very large, but I don't know it just exactly. It would be a rough estimate.

Q. Would you say from 3% to 5%?

A. Why, I don't know.

Q. Well, was that the figure you gave before the grand jury?

A. I don't recall—it seems it was somewhere around there, but—

Q. Somewhere around there?

A. Is that what I said?

Q. Yes, sir, that is what you said.

Mr. Donovan: If the Court please—

A. 3% to 5%?

Mr. Lewin: Q. 3% to 5%.

Mr. Donovan: This is an improper way to carry on a cross-examination. I object to it; calling for a guess.

Mr. Lewin: Q. Is that your best recollection now?

The Court: The jury will give what weight they 1456 wish to it. The man says it is a rough estimate. It is his best memory on it. If he doesn't know, he doesn't know. That is all. Exception allowed.

Mr. Lewin: This is true, isn't it, Mr. Steiger: You did know in those years, didn't you?

A. Oh, no, I didn't know the percentage, no, sir.

Q. Didn't you know the approximate percentage?

A. No, I think that estimate that I gave before the grand jury was also just an estimate, and I don't believe—I am sure I didn't have any figures to back me up on it. It was just an estimate.

Our usual source of information on sales and quotations comes from the sellers; we check the buyers as well, but it would be an impossibility to check all the buyers. We check with the brokers who buy, and we also check with Purity Oil Company, a jobber, at Springfield, Missouri. Purity Oil Company is the only jobber we checked with, but you have got to consider that there are very few jobbers within our Mid-Continent refining area down there. Most of those jobbers are up here in the Standard of 1457 Indiana territory. Of course, we get a double check from our Chicago office. They quite often give us information as to what the jobbers report as their buying prices; so that would act as a sort of a double check. When we ask an independent refiner for his sales, he tells us first the amount that he has sold, but he doesn't generally tell us to whom he sold it. What I mean is that our Chicago market checks with jobbers, and they relay to us information that they are able to obtain by talking to jobbers up here in the Indiana territory. We can't definitely tell from that whether they are the jobbers that these independent refiners sold to or not.

Q. Doesn't it come down to this: You have to take the word of the independent refiner who gives you his quotation or his sale price; and you can't, except in unusual cases, find out the name of the purchaser and check with him to see whether he paid that price.

A. Well, I imagine the refiners would give me that information if I asked for it, but generally I don't.

Q. Now, through 1935 and 1936, then, you did as I say, take the word of the seller in the usual case?

A. Yes, that is right.

1458 Q. And you didn't, as a matter of fact, check with the purchasers, except with the Purity Oil Company?

A. Yes, that is right, because there are very few jobbers down in our refining area who buy in the open market.

Q. Now, then, your data for making up your quotations is confined to sales prices that the independent refiners give you, quotations that the independent refiners give you, and quotations that some of these major oil companies give you?

A. And sales that they should happen to report to us.

We don't publish or reflect brokers' prices in our Oilgram markets, but we do check, and they, in turn, act as a double check as to jobber prices. For instance, the average broker generally, in an ordinary market, can buy ⅛¢ and possibly ¼¢ below what the jobber buys at, and he keeps that ⅛¢ or ¼¢ as his commission. Therefore, if we should happen to find that a broker is able to buy at ⅜¢ or ½¢ under the jobber price, and if we are pretty sure that the material is up to specification, that might immediately put us on our guard that there was some possible weak-
1459 ness in the market. In that way, we would use brokers' sales as a double check against jobber prices. Of course, we never took into direct consideration these resale or broker transactions.

Q. Well, now, do you do this in the usual case: Call Champlin, for instance, and say, "How much gasoline have you sold today on the spot market." He says, "I have sold 10 cars."

Then do you find out from him the broker to whom he may have sold it, and go and see that broker, or call him on the phone, and say, "How much did you pay for those 10 cars?"

A. No, Champlin, if they reported a resale deal, would report to us the price at which it was sold.

We would not take that as being the price on which to base our quotations. We wouldn't use that broker deal directly, because we don't consider broker deals in our

prices. We would not make an adjustment for the jobber
sales, because we never make any adjustments. In other
words, if it isn't sold directly to a jobber, we don't con-
sider it in our prices. It has got to be made to a jobber
before we consider it. As an illustration, I call
1460 Champlin and say, "How many cars have you sold
today?" "Well," he says, "I have sold 15 cars; 5
of them to brokers, and 10 to jobbers." And I say, "At
what price did you sell to brokers?" He gives me a price,
and I probably would write that down on a slip. I then
would say, "What price did you sell the 10 cars to the
jobbers at?" He gives me another price, usually about
⅛¢ higher than he has sold the jobber; and I write that
down. It is pretty hard for me to check on Champlin to
be sure he has told me the right prices. I generally don't
do it. We don't check specific instances like that. But we
use broker purchase prices as a sort of barometer of what
might be going on in the open market. If brokers generally
can buy at, say, ⅜¢ or ½¢ under the market, that imme-
diately makes us wonder if the market isn't weak.

We call the independent refiners, and get from them the
amounts of sales, the character of sales, and the prices;
and we do that with all the independent refiners that are
selling on our spot market. Then we call these various
major companies, and get from them the same information.
Then, in addition to that, we call Purity Oil Company every
once in a while, and ask Purity Oil Company how they find
the market. Generally, Mr. McKane of Purity Oil
1461 Company says, "Well, I am able to buy at a certain
price." Then we call the brokers and ask them how
they find the market. We don't specifically try to put these
two things together, the buyers on the one side, with the
sellers on the other, to determine whether the data we have
gotten from the sellers correctly checks with the buyers,
but in a general sense we do.

It is on the basis of that data, plus the information we get from brokers as to their selling prices to jobbers, that we then apply our judgment and make up our quotations for the Oilgram. In the case of a broker's sale to a jobber, if we are talking about the Oklahoma refinery market and if that gasoline originates in Oklahoma, we would consider that broker's sale to a jobber in our Oklahoma market, providing it met all the qualifications.

Q. Then your quotations, as I understand it, in the Oilgram, are judgment figures, based on the data such as you have described here, mainly from the selling companies, as to volume and price?

A. They are the result of that check, yes, sir.

Q. Well, is it a check? I wonder if it is?

A. Why, it certainly is a check.

1462 Q. All right. Well, I just wondered if we understood each other. My idea of "check" was that you get a price here (indicating), and then you check it against some other data here (indicating), to see if it is right. You don't do that?

A. Well, I was using it in the sense that we are asking for information.

(Exhibit 716 is displayed before the jury and the witness.)

It is my recollection that the major oil companies were buying gasoline on the spot market in January and February, 1935. I don't believe there was as much bought during January and February as later on. I remember that during that time the spot market quotations, as published in the Oilgram, were fairly low and somewhat fluctuating, as compared with the rest of 1935.

I have used a term here, the term "inter-refinery buying", which signifies just what it says. "Inter" means between, and "Inter-refinery" would be transactions between refineries. As applied to 1935 and 1936, it would mean transactions between independent refiners selling on the one hand and major oil companies buying on the other.

In the strict sense of the word, that is not what we
1463 really mean by "inter-refinery buying." We would
consider a purchase made by an independent from another independent as an inter-refinery deal, of course. You would be surprised how many of those there were in 1935 and 1936. There were quite a few of them. Of course, the major company buying was heavier in volume. There was more buying by majors from independents in 1935 and 1936 than there was by one independent refiner from another independent refiner.

I believe that, beginning about March, 1935, there was an increase in that kind of inter-refinery buying between major companies and independents, over what it had been in January and February. It is my recollection that that kind of inter-refinery buying continued from March 3, 1935 on through the rest of 1935, both in the East Texas and Mid-Continent fields. We kept in contact with that situation and repeatedly pointed it out in our market leads.

We found out about the major company buying directly from the major companies. We got some of our information from the East Texas Marketing Association; we con-

tacted Mr. Bradshaw on that. We got information from him regarding the purchases that he had handled. We got information along that line from Mr. Jacobi of Wad-
1464 hams Company; he told us of the volume of purchases in the Mid-Continent field, and sometimes gave us the price at which that was purchased. Mr. Neil Buckley would give us information as to his company buying, and also quite often he would indicate to us that there had been inter-refinery major company buying down there, and sometimes gave us the volume and the prices. Generally he did not specify to me any major companies, but I understood it was the price, if he gave it to me, which they were paying.

I knew that Shell was buying fairly consistently down there in East Texas during March, 1935, down to the end of the year and into 1936. This is just my recollection, of course. I remember Pure having bought down there. I don't know about Cities Service. It is my recollection that in the first couple of months Cities Service Export Oil Company bought large quantities in East Texas. I understood Sinclair was buying.

I understood that Mr. Bradshaw was buying for Gulf; he told me of a lot of purchases that he had made for Gulf, in addition to other purchases. It seems to me as though he bought for Texas Company, but I am a little hazy on that. I understood that Texas Company was
1465 buying in that field in 1935; although I did not get the information directly from Texas Company. I do not recall from whom I got that information. I think Continental Oil Company was buying in the East Texas field. Tide Water Oil Company was buying, but I don't know where. I think Louisiana Oil & Refining Company was buying. I think it was buying in the East Texas field, but it would be a guess.

I do not recall that Standard of Indiana was buying from the independent refiners in the Mid-Continent field during this period. I know its representative in Tulsa, Mr. Ira Smith. I do not believe he ever reported that it was buying. Walter Paul Jacobi did not tell me that Standard of Indiana was buying. I understood Socony-Vacuum Oil Company was buying in the Mid-Continent. I generally class Socony-Vacuum and Wadhams as one. I would not be sure on Sinclair. I think Shell bought in Oklahoma. It is my recollection that Empire bought. I think Pure bought in East Texas, but I would not say in Oklahoma. I think Phillips bought during that period. Mid-Continent did. I think Continental did. Skelly bought in Oklahoma.

It is my impression that Barnsdall bought, too. I don't know about Globe.

1466 Mr. Lewin: Q. What did Mr. Jacobi tell you about the buying by major companies in the Mid-Continent field?

A. In our conversation, Mr. Jacobi quite often gave us the volume of gasoline that had been bought. Occasionally he gave us the price at which it had been bought. I do not recall that he ever indicated who was doing that buying; and that is about the extent of our conversations with Mr. Jacobi.

Q. Did he mention the phrase "dancing partner"?

A. I do not recall that he did.

Q. You recall hearing that phrase, don't you?

A. I have heard of that phrase, yes.

Q. Did you hear of it during this period we are speaking of?

A. I think I did.

Q. Are you sure that you did not hear it from Mr. Jacobi?

A. I am pretty sure that I did not.

Q. Well, did you testify on that subject before the grand jury?

A. I don't know. I may have.

1467 Q. Would your mind be refreshed if you were referred to your grand jury testimony on that subject?

A. I will do my best.

Q. 3646.

Mr. McAfee: May it be understood we have an objection to this entire line of testimony now being asked by counsel?

Mr. Donovan: May I have the same objection also as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727?

The Court: The record will show your objections. Exception allowed.

I was talking with Mr. Jacobi a couple or three times each week during 1935 and 1936, but I would not say that I talked to him each time on major company buying. I should say that on most of those occasions I did talk about that. I would not call him my principal source of information on the subject. He was a good source of information, I think. He did not give me any of the details about the way in which that buying was being conducted in the Mid-Continent field.

I do not recall that it was Mr. Jacobi who mentioned the word "dancing partner". I know it was men-
1468 tioned, or that I knew of it, and that it was mentioned
back during 1935 and 1936, but I don't know whether it was Mr. Jacobi who mentioned it or not. The word "dancing partner" just meant to me that one major company was buying fairly regularly from an independent company.

I didn't know who the dancing partners were, or what the line-up was, but I was pretty sure that this interrefinery buying, the buying by majors from independents, was fairly regular during that period. It was my idea that, during that period, there were dancing partner arrangements so that one major would be buying from a certain independent or certain number of independents, but I didn't know who they were buying from. I did not know the names of the dancing partners. It was my belief that throughout that period there was that arrangement. Now, if you pin me down as to just exactly what facts I did know, I do not believe I really definitely know so much about it, but it was my belief that that arrangement was throughout 1935 and 1936.

I testified that I talked with Mr. Buckley throughout 1935 and 1936, but it was not on the same subject. Of course, Mr. Buckley was, one might say, lent to the East Texas Marketing Association, and as such he tried
1469 to help them in their program of getting a wider
outlet for that East Texas gasoline. As far as Mr. Buckley was concerned, his information was mostly along the line that there has been so much gasoline bought down there, and sometimes he gave me the price, too. That was about all definitely that I knew down there. Down there it was mostly a selling program on the part of those East Texas refiners who were members of that Association.

I knew that Buckley was contacting various major companies to get them to buy there. I understand that his efforts were not confined to his own Cities Service Export Company. I would not say that he was doing that generally throughout 1935 and 1936, although he was active at times during that period. It was my understanding that the major companies were the principal purchasers through the East Texas Association.

We knew that the major companies were buying surplus gasoline in these two fields and we so stated in our market leads. Our ideas of surplus gasoline was the gasoline that was left over after the refiner's contract customers had taken out their requirements, after his regular buyers in the open market had come in and taken theirs, and it was that gasoline left after they had exerted all efforts to attempt to sell it. That gasoline 1470 left over was distress.

Q. Do you mean after they had exhausted their efforts to sell it at the going market price, or after they had exhausted their efforts to sell it at any price?

A. Well, that is rather a broad question, and it would have to be a broad answer, but there were attempts to sell it at lower prices, too, and that was a factor in there. I should say that really—you really could not pin me down to a direct answer on that, because some of those refiners did try to get rid of it at possibly lower prices.

From my knowledge of market conditions there I understood that that gasoline might have been sold at lower prices. It probably could have been if they had shaved that price quite a bit. I feel that most of it was not sold at lower prices because the major companies bought it; and we pointed that out also in our market leads.

I could not directly attribute my understanding of this to what Mr. Jacobi and Mr. Buckley said. I could not say definitely that I got that information directly from Mr. Jacobi or from Mr. Buckley, because we were checking many reports at that time, and I would hate to 1471 pin it down on any two people.

The major companies were taking a substantial part of this gasoline on the spot market during those years, although I couldn't definitely give you any idea of the amount. Quite often in East Texas there were several hundred cars bought a week, and it is my impression there was more bought in East Texas than there was up in Oklahoma and North Texas and Kansas. The major companies were buying possibly somewhere around 700 or 800 cars a month of this surplus gasoline in East Texas during this period. My guess is that up in the Mid-Continent the major companies were taking just a little bit less than in East Texas. That is my impression, looking back now. I do not understand that the amount the major companies were taking in those two markets was fairly constant throughout 1935 and 1936, because I remember that, in looking over my Oilgram leads, the amounts that we reported varied from week to week.

This buying by the major companies of surplus gaso-

line was one of the factors that lent support to that steadiness in the market. Of course, it would take an expert economist to figure out just exactly how much effect that major company buying had, and just exactly how much effect those other factors had, or the degree of their effect on that market. It was diminishing
1472 the supply of gasoline that otherwise would be sold
in the trade to the jobbers and brokers in the open market.

I do not believe that in our market leads we labeled this major company buying as a "buying program," because just the previous year, back in 1934, we had had some buying pools and buying programs. Back in those days there were pools and programs in that the resources of the companies were pooled together, and out of that central fund gasoline was supposed to be bought. Well, now, in our mind that was a pool or a program. It was a highly organized sort of thing, and in my way of thinking the line-up in 1935 was different from that. It was looser, and it was more individualized. The individual companies were buying individually, so from that angle in our mind it would not be a highly organized program or pool, and that is why we did not call it a pool or a program. We repeatedly mentioned it as inter-refinery buying and major company buying, and told just exactly what effect it was having on the market; that it was a factor, but we did not call it a program or a pool for that reason.

In Mr. Jacobi's talks he generally said, "Well, I understand there has been 200 cars bought up by majors". I do not recall him ever calling it a program or a
1473 pool. Of course down there in East Texas it was
mostly a selling program. In talks with Mr. Buckley he would give me the volume that had been bought by major companies. I do not believe he ever called it a pool or a program there, that is, I do not recall him having mentioned it.

I did not discuss this question very often with Mr. Fitzgerald. He has told me of this major company buying at times, but not as frequently as Mr. Jacobi and Mr. Buckley. I do not recall any long discussion with Mr. Fitzgerald on this subject. I recall that I was planning to write an article for the National Petroleum News at the end of the year, and that I wanted to get more detailed information with regard to the causes for the shape of the price graph during 1935. I contacted Mr. Fitzgerald and many other refiners for that story. It was a resume of

the market during 1935. I had a discussion with Mr. Fitzgerald in December, 1935; he discussed major company buying and its effect. It was a factor in the market; I think he discussed it with me and said so. He did not go into details about this major company buying in that discussion with me. We just described the effects of major company buying on the market, as I recall it. In other words, it was a market resume of 1935 and major
1474 company buying was a factor in 1935, and as such we tried to get information and did get information as to that major company buying.

Mr. Fitzgerald didn't tell me in substance in that discussion that small independent refiners had been allotted to the major companies. I don't recall whether that was a personal interview, or whether it was over the telephone.

Q. Do you remember testifying that he did in substance tell you that small independent refiners had been allotted to each one of the majors?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 727.

The Court: Objection overruled; exception allowed.

A. Well, that wasn't my understanding. I knew, and he probably discussed that refiners were buying fairly regularly from independents.

(Document purporting to be transcript of testimony before grand jury presented to the Court by Mr. Lewin, and examined by the Court.)

The Court: There is nothing inconsistent in that.

Mr. Lewin: Q. Is it your testimony now that he didn't go into the details of this major company
1475 buying with you?

A. That is my recollection now, that he didn't go into those details.

Mr. Lewin: Would your Honor look at this portion?

(Presenting document purporting to be transcript of testimony before grand jury to the Court.)

The Court: Q. When you appeared before the grand jury in Madison, on June 2, 1936, were these questions asked you, and did you make those answers?

"I probably talked to Fitzgerald.

“Question: Of whom?

“Answer: Mid-Continent.

“Question: What is his full name?

“Answer: T. E.

“Question: And his position?

“Answer: He is assistant to Mr. McDowell, who is sales manager and vice-president.

“Question: You do not say probably. You know you talked to him, don't you?

“Answer: All right, I did.

“Question: Be as positive as you can be, without telling an untruth.

“Answer: All right.

1476 “Question: You wrote this article in January, wasn't it?

“Answer: Yes, sir.

“Question: What did Fitzgerald tell you, in substance?

“Answer: He explained the buying by inter-refineries—

“Question: Not by ‘inter-refineries’. He explained the buying by major companies from smaller companies?

“Answer: Yes.

“Question: He did?

“Answer: Yes.

“Question: Won't you tell us that?

“Answer: All right.

“Question: You are not writing an article for The Petroleum News now. You are testifying under oath in a federal investigation.

“Answer: All right.

“Question: What did he tell you?

“Answer: He went into some details.

“Question: He did? Will you go into detail and tell us how that worked?

“Answer: Well, as I remember, there was merely a summing up of what had happened and the buying by these major companies.

1477 “Question: Did he tell you that started in March?

“Answer: I don't believe he told me when it started.

“Question: Did he tell you it was still going on?

“Answer: I am pretty sure he did.”

The Court: I don't see anything at all inconsistent.

Mr. Chaffetz: He did say Mr. Fitzgerald went into some details.

The Court: Well, if you are going to pick out one answer, but when you read it all and get the color and the shading and the full understanding, there is a different light on it. I think, as to this witness, there is nothing inconsistent in his testimony now with his testimony before the grand jury.

Mr. Lewin: Q. Now, did Mr. Fitzgerald tell you in substance that one major company was supposed to buy from one of the independent refiners?

A. I don't believe he did.

Q. Did you so testify before the grand jury?

1478 A. That they did?

Q. That he did tell you that?

A. In substance, I don't believe that I said that he did.

Q. All right—

Mr. Hanning: Your Honor, they just got through asking him.

Mr. Lewin: All right, give me 3644. I respectfully ask your Honor to look at that, and if you see fit to question the witness about it (presenting document purporting to be transcript of testimony before grand jury to the Court).

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

The Court: Q. Again referring to your testimony before the grand jury on that date:

> "Mr. Boyle: Can't you state what that was?
>
> "Answer: That was it.
>
> "Question: State it in your own words, into this record.
>
> "Answer: In this talk with me, he said, the substance of his talk was that the major companies were buying from certain other refiners.
>
> 1479 "Mr. Lewin: That is, that the majors had gotten together and agreed that each one that participated in the program should look after a small refiner who had excess stocks, is that right?
>
> "Answer: In his conversation, that was sub-

stantially it, that one major company was supposed to buy from one of the independent refiners."

Now, there is nothing inconsistent with his testimony here, in that testimony before the grand jury.

Mr. Chaffetz: May the witness be asked whether his testimony there is the fact, is true?

The Court: He has already answered that there was inter-refinery buying, and the majors were buying from the small refiners; and he has also said he knew something about the dancing partners. He has covered that thoroughly.

Mr. Lewin: But he hasn't testified that Mr. Fitzgerald told him that, Mr. Fitzgerald being a defendant in this case.

The Court: Q. Did Mr. Fitzgerald tell you that?

A. He told us that refiners, that major companies
1480 were buying rather regularly from independent refiners.

Mr. Lewin: Q. Now, did he tell you that they were allotted, one major company to certain independent refiners under this dancing partner arrangement, or the substance of that?

A. I don't believe he did.

Q. Does this grand jury testimony refresh your recollection, that was read to you?

Mr. Hanning: I object, your Honor, because it is very evident from what was read out of the grand jury record, that Mr. Lewin was putting words in the witness' mouth. Mr. Boyle asked a question, and the witness answered it in front of the grand jury just as he has answered it in this courtroom; and I don't believe the Prosecutor ought to be permitted to continue to put words in the witness' mouth.

The Court: It is very apparent that that was done before the grand jury.

Mr. Lewin: I submit that it was perfectly proper procedure.

The Court: It is very apparent that it was a very leading question, and suggesting the answer you wanted before the grand jury.

1481 Mr. Lewin: And I submit that this witness could take care of himself and answer it in his own way, and he answered truthfully.

The Court: I still say it was a very leading question. Now, let's have no more discussion on it.

By Mr. Lewin

Mr. Fitzgerald was Mr. McDowell's assistant. Mr. McDowell is vice president in charge of sales, as I understand it. I did not learn from Mr. Jacobi anything about Mr. McDowell. I knew that Mid-Continent was buying, but I don't recall that Mr. Jacobi indicated that Mr. McDowell was in the program. I don't believe Mr. Jacobi indicated that Mr. Tuttle was in the program, although I knew that Empire was buying. I don't recall ever having talked to Mr. Tuttle on that subject, because I didn't talk with Mr. Tuttle very often. I generally talked with Mr. Trapp, his assistant. I don't remember having any discussion with Mr. Tuttle in which he mentioned the program.

Q. Do you remember so testifying before the grand jury?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

1482 A. No, I don't.

Q. Do you remember having a discussion, one talk with Mr. Tuttle during this period, in which he mentioned the program?

A. I can't recall it, no, sir.

(Document purporting to be transcript of testimony before grand jury presented to the Court by Mr. Lewin, and examined by the Court.)

The Court: Q. Again referring to your grand jury testimony:

"Question: Now, Tuttle.

"Answer: I very seldom talked with him.

"Question: Very seldom.

"Answer: Yes, very seldom.

"Question: But how about those few times where you did?

"Answer: I venture to say I only talked with him one time during the period in question.

"Question: What?

"Answer: I only talked with Mr. Tuttle one time during the period in question.

"Question: In that conversation he told you about the program, didn't he?

"Answer: He mentioned the program, yes, sir.

"Question: What did he call it—inter-refinery buying?

1483 "Answer: I don't recall what Mr. Tuttle,—how he explained it or how he expressed it.

"Question: When you talked with Mr. Tuttle you discussed the program, and you don't know what he called it?

"Answer: I don't remember what he called it.

"Question: You called it inter-refinery buying?

"Answer: That was usually my—that was my expression of the major buying—major company buying.

"Question: But he discussed it in some detail?

"Answer: No, he never did go into detail much on that.

"Question: He said he was active in it, didn't he?

"Answer: That was the intimation, yes. He did not come out and say definitely.

"Question: And he mentioned McDowell, Bourque and Buckley?

"Answer: He did not mention them."

The Court: Any more?

(no response)

1484 Mr. Lewin: Q. I wonder, Mr. Steiger, if that refreshes your recollection as to whether or not you did have one conversation with Mr. Tuttle in 1935 or 1936, in which he mentioned the program?

A. I am sorry, but it doesn't refresh my memory.

Q. All right, sir.

A. I would like to be able to answer it, but I can't. It just doesn't click.

I have talked with Mr. Bacon, who is in charge of crude oil purchases for Shell Petroleum Company, quite frequently. His headquarters are in Tulsa. We discussed inter-refinery buying; and Mr. Bacon some time or other told me of purchases that his company made. My best recollection is that we were talking of just individual buying by Shell Petroleum, not about any program.

Q. Could your mind be refreshed, you think, on that subject?

A. I will do my best.

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

Mr. Lewin: Will your Honor look at page 3678 of that record.

1485 (Mr. Lewin hands document purporting to be transcript of testimony before grand jury to the Court.)

The Witness: You see, we were talking with refiners every day and it is hard to isolate what one of those refiners said at any time.

Mr. Lewin: Q. I appreciate that. And that is my only purpose in trying to refresh your recollection now.

A. Well, I am trying.

The Court: Q. The question is this, again referring to your testimony before the grand jury:

> "Mr. Lewin: Now, you told me that you talked with Mr. Bacon of Shell, about the program.
>
> "Answer: That is right."

Mr. Lewin: Q. Does that refresh your recollection?

A. No, sir, it does not, because it doesn't give me anything concrete to think back to.

I have talked with Mr. Cunningham of Continental Oil Company quite frequently and he probably told me of his company buying. I don't believe he talked to me about any major company buying program. I don't recall anyway.

I had a talk with Mr. Chamberlain of The Pure Oil Company on this subject. There a specific instance stands 1486 out in my mind. I talked with him quite frequently; and at one time he told me that he was buying fairly regularly from the East Texas refiners. At that time I am sure that he mentioned the name, but I can't recall who that East Texas refiner was. He probably did say something about other major companies buying, but I don't recall what he said about that.

I had some talk with William Tracey of the Sinclair Company on the subject. He never discussed the East Texas buying program. He discussed his company purchases; and, as I recall, he sometimes gave us information that he had picked up regarding the volume of gasoline that other refiners had bought in East Texas. Certainly, we all knew about the Texas Marketing Association.

Q. I wanted to know whether Mr. Tracey talked to you about an East Texas program of any kind.

A. Well, if you consider this East Texas Marketing Association more or less of a selling association and a selling program, consider the selling program, we did talk about that.

I don't recall any specific instance that he did actually say a certain company is buying, but it seems to me that he has passed on to me information that he has obtained in his checking of the market situation down there.
1487 He passed on to me the fact that there has been major company buying.

Q. Do you remember when I was examining you before the grand jury I tried to get you to distinguish between Mr. Tracey's own purchases and major company purchases, that is, by a number of major companies?

A. I don't recall that. That grand jury testimony is rather hazy because it has been so long ago; and I was on there for—I don't know—I think about three days, and I just can't recall.

My calls with Mr. Landsittel of the Globe Company weren't so frequent as with Mr. Chamberlain and the others that I have named; but we possibly did talk about his company buying from independents. I don't recall that a buying program was mentioned by Mr. Landsittel in that conversation.

I don't recall that I ever talked with Harry J. Kennedy of Continental Company. I can almost definitely say that when I called Continental Oil Company I either talked with Mr. Cunningham, or Mr. Cunningham's assistant. I don't recall ever having talked with Mr. Kennedy.

Q. Do you recall testifying upon your appearance before the second grand jury on December 21st that
1488 you talked with Mr. Kennedy of the Continental Company consistently?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. If I did, I was wrong. If I said that, I was wrong. Because we talked with Mr. Cunningham generally when we called Continental, we talked with Mr. Cunningham or Mr. Norris, his assistant.

Q. Did you talk with Mr. Kennedy on several occasions after March 1, 1935, on this subject?

A. I don't recall any time that we called Mr. Kennedy.

Mr. Lewin: All right. I respectfully ask the

Court to look at this testimony before the second grand jury.

(Mr. Lewin hands document purporting to be transcript of testimony before grand jury to the Court.)

The Court: Q. Again referring to your testimony before the grand jury on Monday, December 21, 1936:

"Mr. Lewin: Mr. Steiger, I neglected to ask you this morning whether you knew Harry J. Kennedy of the Continental Company?

1489 "Answer: I talked with him consistently, yes.

"Question: He, I understand, is vice-president in charge of marketing for that company?

"Answer: I think that is his position.

"Question: Was his office at Ponca City, Oklahoma?

"Answer: Right.

"Question: And he succeeded Mr. Edward Karstedt in that position?

"Answer: Yes.

"Question: You talked with him on several occasions since March 1, 1935?—

"Answer: Right.

"Question: And in the course of those discussions you and he have discussed the major company buying program and the way in which it was stabilizing the markets, in general terms?

"Answer: Yes, I am very sure that that is the truth.

"Question: So that from things he said to you, you felt confident that he knew all about the situation?

"Answer: Yes.

"Question: Do you know Mr. William H. Tracey of Sinclair?"

1490 The Court: Now, what do you want to know?

Mr. Lewin: Q. Did you hear his Honor read that testimony?

A. Yes, sir.

Q. Would you say that at the time you gave that testimony that your recollection on that subject was better than it is now?

A. No, sir, because I tell you,—I must have misunderstood your question. I must have misunderstood you as having said "Cunningham" because really I don't recall ever having talked with Mr. Kennedy.

Q. Did Mr. Cunningham succeed Mr. Edward Karstedt in his position with the Continental Oil Company?

A. I don't believe so.

Q. Who did?

A. Mr. Kennedy, is my best recollection,—that it was Mr. Kennedy.

Q. Do you recall upon that testimony that you were asked whether this man you talked with wasn't the man who succeeded Mr. Karstedt?

A. Well, in the testimony I did say, if that is the testimony I did say that Mr. Kennedy succeeded Mr. Karstedt; but I must have been laboring under the 1491 impression that you were talking of Mr. Cunningham all the time; because I don't recall ever having talked with Mr. Kennedy of Continental Oil. I must have just had the wrong impression of who you were talking about.

Q. Mr. Steiger, would you say that that testimony which you gave in regard to Mr. Kennedy was true as regards Mr. Cunningham?

A. Well, now, I can tell you—

The Court: Just wait a minute. You asked a question about Mr. Cunningham. Now, if you want to know about Mr. Cunningham, ask the question directly.

Mr. Lewin: I did do so.

Mr. Lewin: Q. When you got prices from Mr. Jacobi as to what major companies were paying in this inter-refinery buying, how did those prices that he gave you compare with the prices you were getting at the same time from independent refiners as to their selling prices?

A. Well, of course, we checked with the refiners for their sales and quotations directly to jobbers in the open market; and after finding that information out, it is my recollection—now, this is just a recol-1492 lection, too—that after finding out those jobber prices, the prices at which independents or others who were selling in the open market to jobbers,—after finding that price, it seems to me as though those prices, which the major companies purchased it, was lower than that,—lower than the jobber prices in the open market.

I don't recall that the major company buying prices reported to me by Jacobi were at times higher than the prices I was getting from the independent refineries at the same time. It seems to me that there were times when the major company buying prices were the same as what we found were the prices on sales which refiners had made to jobbers.

The Court: Restate your question. You want to know whether from June 7th on, Jacobi's prices were identical with the prices that you got from refiners?

Mr. Lewin: Precisely it.

The Court: Q. Then, answer it.

A. Sometimes they were.

Mr. Lewin: Q. Were they generally so during that period.

A. It is a pretty broad statement.

Q. Can you answer it?

1493 A. I don't believe they were generally at the low or the same as our low.

Q. Were they generally the same during that period?

A. I don't believe they were the same. There were times when they were the same, but I don't believe you could say they generally were.

Q. Were there times during the period, March 1, 1935, throughout the rest of that year, in which they were higher than—Jacobi's prices given you were higher than the prices you were getting from independent refiners?

A. I don't recall that they were.

Q. If we read the testimony to you on that subject before the grand jury, would it refresh your recollection?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. I will do my best.

(Document purporting to be transcript of testimony before grand jury passed to the Court by Mr. Lewin.)

(The Court reads silently.)

1494 The Court: Q. Were you before the grand jury on Wednesday, June 3, 1936—I will read the questions you were asked and the answers you made, and then you may, if it refreshes your memory, you may answer the question asked you by Government counsel.

(Reading:)

"Mr. Lewin: Now don't you know that the major buying under the programs was buying at or a little better than the price quotations made in the price-quoting service, the journals?

"Answer: There were times when their buying prices were higher, but there was also times when it was identical.

"Question: When it was identical?

"Answer: When those prices were identical.

"Question: Now, I suggest to you that the times in which they were generally higher were between March, 1935, and the first week in June, 1935. Is that right.

"Answer: Yes.

"Question: That is right, and the times in which they were right at the quotation was from the first week of June, 1935, to the first week in January, 1936?

"Answer: Yes.

1495 "Question: That is right?

"Answer: As far as I can recall.

"Question: At another time, when they were a little bit higher than the quotation, was the first week in January, 1936?

"Answer: Was that when there was that little—

"Question: Rise.

"Answer: That little rise. Yes, I am sure that was true.

"Question: And the time when they were just at the quotation was in the first week of March, 1936, when there was a little dip in the curve; is that right?

"Answer: As I remember there was major company buying at those prices.

"Question: I am now addressing your mind to March, 1936.

"Answer: As I remember—

"Question: Do you recall the graph?"

The Court: Q. Was there a graph there?

A. Yes, sir.

The Court: Q. (Reading:)

"Answer: Yes, I recall it.

"Question: Do you remember a little dip?

"Answer: Yes.

1496 "Question: That little dip indicates major buying at the quotation of a little bit less, doesn't it?

"Answer: That is my impression, yes.

"Question: And that little dip was restored immediately, wasn't it?

"Answer: Yes, there was only—I don't know—

"Question: A week?

"Answer: Well, that is about right; about a week.

"Question: A week of slackening off on the major buying at the price, wasn't it?

"Answer: Yes.

"Question: And then the little restoration?

"Answer: Yes, it immediately went up.

"Question: Now, when it went up, that indicates the majors buying a little bit heavier than the quotation, doesn't it?

"Answer: Yes.

"Question: And to date your quotations and the price curve to illustrate them, show that the majors since the first week in March, 1936, to date, have been buying at the quotation exactly?

"Answer: That is my impression, yes.

1497 "Question: Then a graph of your quotations is a representation of prices paid by majors under these concerted pools, isn't it?

"Answer: Yes.

"Question: And nothing more than that?

"Answer: It follows that graph, yes.

"Question: Exactly?

"Answer: Yes.

"Question: And the major company buying is so important, and has been given so much importance by you, that it is almost the sole reason for the shape of that graph?

"Answer: It is an important factor, yes.

"Question: Well, the one is identical with the other?

"Answer: Yes.

"Question: All you have done then since March of 1935 is report to the trade, without stating so, the major company program prices; is that right?

"Answer: In so far as it is reflected in quotations and sales reported to us by refiners, yes.

"Question: And 'in so far' means altogether, doesn't it, because that is just where you got it?

1498 "Answer: We got it from the independent refiners in their reports to us, and quotations.

"Question: And the data that brought about that series of quotations in your paper, the effective data, were the sales to majors under the concerted pools?

"Answer: Those sales were included, were probably included in the refiners—jobbers' sales, to us.

"Question: And the sales to jobbers, pure jobbers at lower prices, were usually outweighed by the concerted buying pool prices that they never did pull that quotation of yours down throughout that period?

"Answer: They outweighed the jobbers' sales that were reported to us, yes.

"Question: The major company buying?

"Answer: Yes.

"Question: And since they outweighed them, they alone were given effect by you?

"Answer: Well, now, let's not make that quite so strong.

"Question: All right.

"Answer: The independent refiners reported to us their district sales.

"Question: That is right.

1499 "Answer: Now, we indicated that many, probably most of those district sales that they reported to us as jobber sales were major company purchases.

"Question: You could have done this, and arrived at the same result: You could have gone to the major companies and learned from them exactly what they would pay under these programs, or what they thought it was necessary to pay, to keep the prices where they wanted them and reported it, and you would have got exactly the same result that you did get, from March, 1935, to date; is that right?

"Answer: That is right, but it is not true.

"Question: You did not go to them and ask them for that?

"Answer: We went to the refiners, yes, and asked for jobbers' sales.

"Question: That is the practice you followed?

"Answer: Yes.

"Question: But you knew when you did that, that in substance, in actuality, in truth, and in fact, what you really were reporting to the trade were major company concerted buying program prices?

1500 "Answer: In substance, yes.

"Question: And that followed throughout the entire Mid-Continent field that you were reporting?

"Answer: Yes.

"Question: The Oklahoma market, the three Texas markets, the Kansas market, and the Louisiana-Arkansas market?

"Answer: If you look at it that way, yes."

Mr. Lewin: That is as far as I—

The Witness: May I explain myself on that?

The Court: Well, the question—does the reading of this refresh your memory?

Mr. Lewin: Q. Just let me ask you: Did you give the testimony that his Honor read, before the grand jury?

A. I imagine I did, but I was certainly mixed up when I did.

Mr. Lawton: What is the question now?

Mr. Chaffetz: There is a question pending.

The Court: What is that question?

(Question read as follows:

"Q. Were there times during the period, March 1, 1935, and throughout the rest of that year in which they were higher than—Jacobi's prices given you were higher than the prices you were getting from the independent refiners?")

1501 Mr. Donovan: If we are going to refer to any graph, it ought to be the graph that was used before the grand jury.

Mr. Lewin: My recollection, your Honor, was that before the grand jury, I, with the witness, marked the graph in the air in the way in which that graph looks there (indicating). And I think there was a blackboard there, and I believe as he told me how to do it, we made these steps up here and here, with respect to that line (indicating), and that was the way the graph looked.

The Court: Q. Does this reading of the testimony before the grand jury refresh you recollection, so that you can answer it now?

A. It doesn't because I have gone back and checked the prices that we indicated in our market leads, with what we quoted, and I don't believe there was a time when those prices were higher.

Q. When what prices were higher?

A. When the major company buying prices were higher than our, than the Oilgram prices, and I would like to have a chance to explain that—

Q. You may. Go ahead.

A. Well, in the first place, that grand jury tes-
1502 timony is all wrong. It just—it is built on a pyramid of hypothetical questions or answers, and it was a build-up and, really, I must not have known what I was saying when I said some of those things there, because I know they weren't true.

The Court: Now, you have heard the reading of your testimony, and you say it doesn't refresh your recollection?

A. Along that line, no, sir, it does not. I must have—

The Court: All right, go ahead. Proceed with your questions.

Mr. Lewin: Q. Now, wasn't it true, Mr. Steiger, that when you asked the independent refiners for their selling prices and quotations, you did not instruct them to break those prices and quotations down as between their sales to pure jobbers and their sales to major oil companies?

A. We asked for jobber sales, sales directly to jobbers.

Q. Well, did you—hadn't you given them general instructions to that effect sometime before, but —is that right?

A. That we wanted only jobber prices?

Q. Yes.

1503 A. Yes, we wanted only jobber prices.

Q. Now, did you instruct them during this period, when you asked them for their prices, to make a distinction between their sales to major companies and their sales to jobbers, or were they lumped together?

A. Well, I must have gotten their major company, their major company sales, because I remember distinctly of having checked back on some of these—in other words, I remember distinctly sometimes of having gotten the fact from a major that there had been so many cars purchased; and I remember distinctly that we have checked back with independent refiners against the information that we got from majors, and we had found out that these independents had actually sold to major companies certain quantities. Now—and we did get reports of their sales to majors.

During this period March 1, 1935, and through 1935 and 1936, there were times when I went to the extent of asking the refiners to divide the number of cars or the prices between the major purchases and the regular jobber purchases. I do not recall testifying on that subject before the grand jury. I have been reading back through my market leads and trying to refresh my memory
1504 about this whole thing, and it is my recollection that I did check up and try to distinguish between the refinery and jobber purchases.

Q. Well, did you ask the independent refiners to break that down and give you first the sales to the major companies and the prices, and second the sales to jobbers and the prices?

A. It is my understanding that that is what most of them did, that they gave us their jobber prices when we asked for it, and if they had made sales to jobbers that they would—they have told us about these sales to majors, and given us the prices and the volume.

Q. Well, weren't you convinced during that time that there were some inter-refinery sales in prices included in those reports of sales to jobbers?

A. There may have been, but not to my knowledge. I was asking for jobber, for sales directly to jobbers.

Q. Now, be sure we understand each other. I am asking you whether you were not convinced during that time that there were some inter-refinery sales in prices included in those reports of jobber sales that you were getting from independents?

1505 Mr. Hanning: I object to that. The answer was, there may have been some, but not to my knowledge, and, I asked the price to jobbers. Now, that was the answer.

Mr. Lewin: If that is what his testimony is, I am refreshing him by calling his attention—(showing document purporting to be transcript of testimony before grand jury to the Court.)

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

The Court: Q. Referring to your testimony before the grand jury, June 2, 1936:

"Question: As a matter of fact, your jobber prices were asking prices that the majors would pay for gasoline, and not the jobbers' prices?

"Answer: To the extent that we checked with the refiners and the refiners reported jobber prices, and there was a possibility that they reported to us the inter-refinery purchases at those prices, yes.

"Question: Did you ever go to the extent of asking the majors to divide the number of 1506 cars, the prices between the major purchases and the regular jobber purchases?

"Answer: I don't remember having asked them to do that.

"Question: You are fairly well convinced that you were obtaining from them prices which the major companies were buying at rather than jobber prices?

"Answer: I was convinced that there were some inter-refinery sales included in those jobber reports. Does that answer your question?

"Question: I think so."

Mr. Lewin: Q. Did you make any investigation to find out whether there were two prices in East Texas, one a price to the majors, and the other a price to jobbers who buy regularly on the open market?

A. Well, we continued to ask for those sales to jobbers, and I knew what the majors were buying, the volume that they were buying at the time, and sometimes the price at which they were buying; and I knew what the jobbers—what the East Texas refiners were quoting and selling to the jobbers.

Q. Did you make any investigation—

1507 A. Well, I must have to have gotten that information.

Mr. Lewin: All right. Then, your Honor, I ask you if you will refresh the recollection of the witness if possible by reference to the testimony on page 3601?

The Court: He has answered it now, he must have made the investigation.

Mr. Lewin: An investigation.

The Court: He has answered he made the investigation. Do you think he did not make that investigation?

Mr. Lewin: I do.

The Court: Q. You are stating a positive fact now, that you did make that investigation?

A. Well, your Honor, we knew what the majors were buying at, and we knew quite often what they were paying, and we knew what the jobbers were being quoted, so it stands to reason we must have made some sort of a check on it.

The Court: I do not see any necessity of refreshing his memory on anything in that particular score, is there?

Mr. Lewin: Well, I would like to know—

The Court: Ask your question.

1508 Mr. Lewin: Q. If your testimony before the grand jury was to the effect that you made no such investigation—would that refresh your recollection on that point?

A. I do not not recall having testified to that.

Q. Do you think your mind might be refreshened from your grand jury testimony on that point?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. Well, I will always do my best. If it will refresh my memory, I want to get the facts before this Court.

Q. All right.

A. And anything that will help me, I want to do that. But that is my best recollection now.

The Court: Q. Again referring to your testimony before the grand jury on Monday, June 1, 1936:

> "Mr. Chaffetz: Q. If that is true, will you tell us why you haven't made any investigation to determine what prices they are paying, as compared with the prices at which the jobbers, the regular jobbers are buying gasoline in East Texas?

1509 "Answer: Because our prices cover jobber sales, and we understand them as jobber sales.

"Question: If you are sincerely trying to find out what the jobbers are being required to pay, you would be curious to know what the major company purchases are made at, the lowest possible price, the arbitrary price and the high price.

"Answer: I would be interested, surely.

"Question: But you testify that you made no inquiry to find out whether there are really two prices today in East Texas: One, a price to major prices, and another a price to jobbers who buy regularly on the open market.

"Answer: We made no such investigation. We stood by our refiners, that our prices represented jobber sales.

"Question: But included in your prices were those sales made to major companies?

"Answer: It is possible that some of the refiners included those sales in their jobber reports to us.

"Question: So that, if the major companies persisted in buying at the same price over a period of time—

"Answer: Yes."

1510 Now, what does that refresh your memory on?

Mr. Lewin: Q. Is your mind refreshed as to whether you made such an investigation.

Mr. Hanning: As to what?

Mr. Chaffetz: As to whether there were different prices being paid by majors and by jobbers.

Mr. Hanning: He just said he had.

Mr. Lewin: He said he did not make such investigation.

The Court: (Reading from document purporting to be transcript of testimony before grand jury:)

"We stood by our refiners, that our prices represented jobber sales."

Mr. Lewin: And we want to know whether his mind can be refreshed—

The Court: He says now that he made investigations in order to obtain that information.

Mr. Lewin: No, your Honor. He has just now said on this stand that he did not make such investigation.

The Court: Why what are you talking about?

Mr. Lewin: Oh, yes, he said he did; and this testimony is that he did not.

The Court: Well, I think this last explanation has
1511 a little more force to it than this answer to these questions. Go ahead.

Mr. Lewin: Yes, sir.

Mr. Lewin: Q. Didn't you tell the independent refiners about that time, that you wanted them, in making their reports, to you, to include the major sales in their reports of jobber sales?

A. No, sir.

Q. You did not?

A. I did not.

Q. Did you testify that way before the grand jury?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Overruled. Exception allowed.

A. I don't recall what I testified before the grand jury.

In reporting our jobber quotations, I didn't regard major companies as jobbers. I never regarded major company purchases as jobber purchases for the purposes of our quotations. I may have testified on that subject before the grand jury, but I don't recall it.

The Court: He doesn't say he doesn't remember. He positively says, "No, sir," so what is the use of trying to refresh his memory with something that he
1512 may have said also? If you want to impeach him, that is a different question.

Mr. Lewin: No, I would like to see whether we couldn't refresh his recollection—

The Court: If you want to impeach him, this transcript of this grand jury testimony goes into this record. He has made a positive statement there, "No." You can't refresh his recollection on that.

Mr. Lewin: Q. When the major companies bought for their own service stations, didn't you regard them in that case as a jobber?

A. Well, it was impossible to differentiate their purchases, as to what purchases went where, and it would have been impossible to have done that.

I was our only market checker, covering that entire Mid-Continent field; I had one stenographer. I know that sometimes major companies bought gasoline during this period, and shipped that gasoline to their own service stations.

Q. When they did that, would you regard and did you regard them as jobbers?

A. Well, we couldn't differentiate, or couldn't find out what gasoline went to the major companies' service stations, and what did not. It was just an impossible task to find that out; it was just a real impossibility.

1513 Q. Well, do you recollect what you testified to on that point before the grand jury?

A. It seems as though we touched on that point, but I don't recall just exactly what we discussed along that line.

Q. Now, do you think your grand jury testimony on that point might refresh your recollection as to how you considered those sales?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. I will do my best, again.

Mr. Lewin: All right. Now, your Honor, I would like to refer you to 3856 and 3857 (presenting document purporting to be transcript of testimony before grand jury to the Court.)

The Court: Again referring to your testimony before the grand jury, on June 3, 1936:

"Mr. Chaffetz:—"

I am reading now the questions and answers:

> "It was a form, in so far as you call a major company a jobber, as you would an independent in Wisconsin a jobber?"
>
> "Answer: They reported to us.
>
> 1514 "Question: But you were not misled?
>
> "Answer: In some cases, those major companies bought for their own service stations. In that case, they were a jobber. They shipped it directly to their own service stations. In that case, they were considered a jobber, pure and simple."

Mr. Lewin: Q. Now, do you remember giving that testimony before the grand jury?

Mr. Hanning: I object, your Honor. I just want to interpose this: I want to know what it has got to do with the situation? In other words, the witness has testified that, in working out his price structure, he never took into consideration sales by refiners to majors, or inter-refinery sales, wherever they went, wherever the shipments went. Now, the question is, "Do you know what major company material went to jobbers?" And the boy answered, "Why no, that is impossible for me to know." But the fact is, it makes no difference because he didn't take it into consideration in arriving at his price structure. The only thing he took into consideration was refiners' sales to jobbers, direct to jobbers, and it is not material, your Honor, that a major may have shipped something to his own jobber station.

1515 Mr. Chaffetz: But it is material that, when the witness testified before the grand jury that when a major company shipped it to their own service station, then it was considered a jobber, pure and simple.

Mr. Hanning: But he didn't say, however, because he was considered a jobber pure and simple, that he took that into consideration in arriving at his price structure.

Mr. Lewin: That is the next step. As soon as we get the definition of jobber and know whether that includes major companies, we have gone a long ways.

Mr. Hanning: Then, your Honor, I ask whether that is refreshment of memory or impeachment?

The Court: Yes. Let's find that out now.

Mr. Lewin: This is refreshment. I asked this witness whether it would refresh him, and he said it would; that is all I want to do.

The Court: All right. Let's stay right by that. Otherwise, we may get into some deep water here.

Mr. Lewin: Yes, your Honor, I want to hew to that line. Then, if it doesn't refresh his recollection, he has got to give the other answer; that is all.

1516 Q. Is your mind refreshed at all on that subject, from the reading of that grand jury testimony?

A. Well, it refreshes it a little, in that—

Q. All right. Now, that your mind has been refreshed, what is the fact? Did you consider jobbers —did you consider major companies, when they sold through their own service stations during this period, as jobbers?

A. Well, in the strict sense of the word, they would be considered jobbers; but, as far as the practical sense of the word, it was impossible to check just exactly what material was going to jobbers, to their own service stations; and it was just as impractical, and impossible to make that break-down; so we just couldn't consider inter-refinery purchases as jobber prices, because it was impossible to break down those inter-refinery purchases.

Mr. Lewin: Q. Weren't you trying to draw a distinction, in making your quotations, between the jobber and the broker?

A. Well, we didn't report brokers' buying prices, no, sir.

Q. All right. I understand so. Now, I wonder if you would answer my question, Mr. Steiger? Did you make a distinction between the broker and the jobber?

1517 A. In obtaining prices, or sales?

Q. In making up your quotations?

A. Why, certainly, we made a distinction in that the brokers' sales, the brokers' purchasing prices, the brokers' purchases were disregarded.

Q. All right. Now, didn't you disregard them because the broker usually resells to the jobber, is that right?

A. That is right.

Q. All right. Now, wasn't that the criterion that you had in mind when you made up your jobber quotations? Didn't you regard everybody a jobber who sold directly to dealers; and regard everybody as a broker who sold directly to jobbers?

A. Well, I think we could go back to our standing lead in the Oilgram and get that straightened out, right there.

Mr. Lewin: I am not talking about what your Oilgram says—

The Court: Q. What is that standing lead?

A. Well, in that lead, we say that jobbers are those who sell directly to the consuming trade—

(producing copy of Oilgram, and reading)

> "They represent prices made only to domestic jobbers who resell to the consuming public."

1518 In the strict sense of the word, a major company who sells through their own service stations to the consuming public could be called a jobber; but as far as we were concerned, we couldn't make the distinction as to which of those sales that those major companies bought were going to their own service stations and could be included, could be classed as a jobber, and which were being shipped on contract, and all that.

Our quotations in the Oilgram during this period did not reflect some of the major companies' prices that they paid the independent refiners. We tried at one time to make a distinction there, but it was impossible. In other words, the major companies themselves didn't know where this gasoline that they had bought was going, and it was impossible for us to find out. They didn't know, themselves, whether that was going to their own service stations, whether it was going to apply on some contract, or just exactly where the destination of that gasoline was.

Q. Well, do you remember testifying before the grand jury—

The Court: Now, just wait a minute. Do you want to impeach him, or do you want to refresh his recollection.

Mr. Lewin: I want to refresh his recollection.

1519 The Court: Well, ask your question, and let's find out if his memory can be refreshed on the question.

Mr. Lewin: Yes, your Honor.

Q. Do you remember testifying before the grand jury—

The Court: Just a minute. Ask him a question, and see if his recollection can be refreshed.

Mr. Lewin: That is what I was going to do.

The Court: Well, don't refer to what he testified before the grand jury. Ask your question, and then if you want to refresh his memory, do so.

Mr. Lewin: All right.

Q. Do you remember that, in making up your quotations, you reflected the sales to major companies?

A. No, sir, because we couldn't make that distinction.

Mr. Lewin: Q. Yes. Now, could your mind be refreshed as to whether or not they reflected the major sales?

A. Well, I am certain they didn't, because it was impossible to make that distinction. It is just a physical impossibility to make that distinction.

1520 Q. Since you couldn't make the distinction, didn't you lump them altogether, the major prices as well as the jobber prices?

A. We did not, no, sir.

Q. Didn't you discuss with Mr. Mosher as to whether or not you should make a distinction between the jobbers'—the pure jobbers' prices and the major company prices?

Mr. Hanning: I object. He has already positively testified what he did. Therefore, you can't refresh his recollection.

Mr. Chaffetz: Now, your Honor, we are entitled to all the facts here. We have been told that two or three times. And here is an important fact as to what this man discussed with his superior, a vital issue. I think we are entitled to those facts.

The Court: Objection sustained.

The Court: I will say to the witness, just try and refresh your memory the best you can, and recall; use your best recollection so there won't be any necessity of wasting any time on your testimony before the grand jury.

A. I will, your Honor.

Mr. Lewin: Q. Mr. Steiger, did you at any time 1521 discuss with Mr. Warren C. Platt the subject of major company buying?

A. No, I never did.

Q. Did you testify before the grand jury that you did?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. My recollection is hazy along that line, but if I did so—if I did say so in front of that grand jury it was wrong, because I did not talk to him on this.

Q. What is your best recollection as to whether or not you did so testify before the grand jury?

A. Well, it is my impression that I did. I would not be sure of that, though.

Q. Did you discuss the subject of major company buying with Mr. Mosher?

A. No, sir, there again I did not.

Q. Again, did you testify before the grand jury that you did?

A. You have got me there. I don't know.

Q. What is your best recollection whether or not you so testified before the grand jury, that you discussed that subject with Mr. Mosher?

1522 A. I may have.

Q. Were you trying to tell what you knew when you so testified before the grand jury?

A. Well, I don't—that is the truth; that is the truth, that I did not talk with them, and if I said that I did, before the grand jury, I was wrong along that line, and apparently I was being pushed, because I did not talk it over with them.

Q. Might you not be wrong here and right there?

A. No, sir.

Q. Why are you so sure now?

A. Well, I have been—before that grand jury we went up there without any refreshing of recollection at all. We just were dumped in that grand jury room—

The Court: Now, don't have any discussion on that. That is all right with reference to figures and records, but your conversation with others is entirely different. You may have refreshed your memory and examined your figures before you came back here to testify.

A. Well—

The Court: Your conversation with others is not something of that nature.

1523 A. I cannot recall ever having talked that over with Mr. Platt or Mr. Mosher, and I can say definitely so.

Mr. Lewin: Q. How do you account for the fact that you testified before the grand jury that you did discuss that with both Platt and Mosher?

A. Well, I don't know. If I did, I was wrong.

Mr. Hanning: If your Honor please, I submit to you that is impeachment. That is not refreshing his recollection. If they want to refresh his recollection, all right. That is impeachment, and if they keep on I will have to ask for the whole record.

The Court: I think it is.

By Mr. Lewin

During the years 1935 and 1936, there were actual sales of gasoline on the spot market at the high quotations of Platt's Oilgram, although I don't know how many such sales there were. I know there were sales at those highs to jobbers in the open market because we checked them. I do not recall any day when there were no sales at the high. I have no records of the sales to jobbers. The only memos we used were from day to day as we were 1524 talking to our sources of information. We did jot down little bits of information as we checked with them, but we do not have those now, with the exception of the notes for a week or two that we sent up to the grand jury. Of course, on those notes you may not find notations of actual sales, because you see we were taking down in longhand what the fellow at the other end of the line was giving to us, and we may not have put down on those notes every fact that we got from them.

During that period there were sales made at the high. I don't know whether we so noted on those notation slips or not. As I said before, they were just my efforts at trying to take down in longhand conversation over the phone, and generally I would take down the quotations with the sales prices, on that pad. Now, in some instances I may have had time to note the number of cars made at those prices, or the fact that there were no sales. But at other times, in trying to keep up with the person who is talking at the other end of the line, it would be impossible to note down all the information. In that case I would just have to remember, or make a mental note as to whether there were sales or quotations at those prices. I generally had an Oilgram in front of me, and I could compare that with those Oilgram prices.

1525 During that period our high quotations did not rest mainly on quotations; I would say there were actual sales. I cannot say definitely what companies made those sales to jobbers at the high during that period, because I would have to remember just about every day's transactions.

I could not name any specific company that I knew made sales of 68-70 octane gasoline at the high during that period. I can give you a guess. I do not recall any specific company making sales regularly during that period at the high. I cannot name any jobber that during that period bought 68-70 gasoline at the high of our quotations because we only checked one jobber. I do not recall whether he did or did not. I don't know.

My testimony with respect to third grade is the same.

I discussed the subject of major company buying with Arthur V. Bourque rather frequently. Mr. Bourque kept in close contact with the independent refiners down there, and he occasionally would know how much gasoline had been bought by majors, and would pass that information along to me. I would say that he gave me prices paid by

the major companies through 1935 and 1936. Generally I contacted him about 2 or 3 times a week, and I imagine during most of those conversations he did pass on information along that line. I knew that Mr. Bourque was
1526 working with Mr. Jacobi during this period. I didn't know that Robert M. McDowell was working with Mr. Jacobi during this period, but it was my impression that he was. I very seldom talked with Mr. McDowell, so I couldn't have gotten the information directly from him. I did not know that Mr. Tuttle was working with Mr. Jacobi during this period, not definitely. There again, I will have to say that I didn't know definitely, but there were reports in the trade that both Mr. Tuttle and Mr. McDowell were active in it. That information was just passed on to us while we were just checking markets. It was not my duty to go out and get that information. My recollection is that it came from fairly reliable sources.

When Bourque told us prices that the major companies were paying during this period, generally it was the prices at which majors collectively, or a bunch of majors were paying. He didn't single out any one major and say, "Well, now, this certain major is paying a certain price." It was generally, "Well, I understand that there has been so much bought at a certain price". The same thing is true of Mr. Jacobi's and Mr. Buckley's statements to us about prices the majors were paying. Of course, they would sometimes give me their individual transactions; but, as for other individual companies or major company buying, they didn't give us that definite information.

1527 Q. Did you know that the majors were paying uniform prices when they bought on the same day?

A. I don't believe that I could say that I knew that.

Q. Did you testify on that subject before the grand jury?

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. I don't recall. I may have.

Q. When you did talk to two or three major company buyers and get prices that they were paying from them, did they always give you the same price, at the same time?

A. I don't recall such an instance.

Q. Did you so testify—did you testify on that point before the grand jury?

A. I don't know.

Q. Did you testify before the grand jury—

The Court: Q. Wait a minute. You don't recall now whether there was such an instance; do you think your memory could be refreshed by a reference to your grand jury testimony on that question?

1528 A. Well, I don't recall now, ever running across a situation like that.

Q. Well, I say, do you think your testimony before the grand jury might stimulate your recollection on that point?

A. It might.

(Document purporting to be transcript of testimony before grand jury handed to the Court by Mr. Lewin.)

The Court: Q. Again referring to your testimony before the grand jury on Wednesday, June 3, 1936, do you recall these questions being asked and your making these answers:

> "Question: When you called two or three major company buyers, did they name different prices to you, or did they always give you the same price?
>
> "Answer: They were, almost without exception, the same prices."

Now, does that refresh your memory, so that you are able to answer the question now? And if so, what is the fact?

A. Well, your Honor, it doesn't refresh my memory, and I can't see any—I can't recall instances where they were all the same. I do remember, in one of our market stories, that we did say that sev-1529 eral major companies were quoting a certain price; but I can't recall definitely, that is the only recollection I have of it. I did bring out in the market story that there were several quoting one price, a certain price.

Mr. Lewin: Q. If you consulted two or three major buyers the same day, did they all tell you they were paying the same prices, or did they all name a price which was the same price as the others named?

A. Well, I can't recollect anything on that, Mr. Lewin.

Mr. Lewin: Would your Honor be willing to attempt to refresh the witness' recollection by reference to another portion of his grand jury testimony on the same point? 3949.

The Court: (Referring to document) Listen to the reading of the transcript of your testimony before the grand jury on June 3, 1936. Was this question asked you, and did you make these answers:

"Question: If you consulted two or three major buyers on the same day, did they all tell you they were paying the same prices, or did they all name a price which was the same price?

1530 "Answer: It is my impression that they did name the same price.

"Question: So far as you can recall, whenever you called these major buyers, whether the price was going down or whether the price was going up, the price that each of them quoted you was always the same?

"Answer: As far as I can recall, they were the same."

Now, does that refresh your memory, so that you can tell us now what the fact is?

A. I am sorry, it doesn't.

The Court: All right.

Cross-Examination by Mr. Hanning.

I didn't do anything different, as a market reporter, in gathering market information for Platt's Oilgram, in 1935 and 1936 than I did in 1934. Back in 1933 I was just helping to check those markets and, as I recall, we didn't do anything different in 1933 than we did in 1935 and 1936. The procedure we followed in 1933 and in 1934 was the same as we did in 1935 and 1936, and in 1937. What we do, and what we did in 1933, 1934, 1935, 1936 and 1937, was to call the refiners, independent and otherwise, and ask them what their sales and quotations were in the open spot market to jobbers. That is what the Oilgram, in the 1531 masthead, says that we do. The prices we published or quoted were the prices that I, as a market checker, got when I called refiners that were selling on the open spot market, sales that they made to jobbers.

The news lead is a commentary of the little bits of information that we obtain in checking our markets, pertaining to the Mid-Continent markets in general. It refers to gasoline, kerosene, lubricating oils and all the other products that we check in the course of the day's work. We include in those price tables in the daily Oilgram only sales made directly to jobbers in the open spot market.

By Mr. Lawton

I can refer to the Oilgram early in 1935, and tell you on what date I first made reference to the organization of the East Texas Refiners' Association. Here it is, on February 12th, page two. As I recall, I obtained that information myself over long distance phone from Tyler. I don't recall ever having heard of that Association before that day. I will see if I had any comment about that corporation prior to that time.

(Witness examines volume of Oilgram.)

We did, on February 9. (Reading from copy of Oilgram referred to) "A meeting of members of the newly organized sales agency in East Texas has been called at
1532 Tyler, February 13th. Election of officers, discussion of new charter, which is expected to have been approved by then, and other business will be brought up. General offices of the organization will be at Tyler, according to reports." That was in the Oilgram mailed on the night of Saturday, the 9th, and was in the hands of readers on Monday, the 11th.

Here is an earlier reference on February 6th (Reading from Oilgram) "Organization of a centralized sales agency for disposal of petroleum products was being pushed forward by 12 East Texas refiners today.

> "Those interested in the organization of such an agency are:
>
> "Southport Petroleum, Kilgore; Arrow Refining Company, Overton; Texas Oil Products Company, Gladewater; Utah Refining Company, Kilgore; La Pren Refining Company, Kilgore; Gilliland Refining Company, Gladewater; Chief Refining Company, Gladewater; Oil Refineries, Incorporated, Overton; Lone Star Refining Company, Gladewater; Trio Refining Corporation, Arp; Panhandle Refining Company, Kilgore; J. D. Wrather Interests with refineries at Kilgore and Overton.
>
> "Refining capacity of the 12 refiners active in formation of the agency is approximately 49,000 barrels daily. Last report of Railroad Commission,
> 1533 dated January 1, indicated that the 73 plants in the field were capable of running 219,900 barrels of crude daily. Other refiners in East Texas were expected to join the move shortly, according to reports."

Here is one on February 5th. There seems to be a lot of this. (Reading) "East Texas Refiners to have centralized sales agency." My article of February 5th was put in the mail the night of the 5th, and was sent out to all our subscribers on that night. It was in most of their hands by the next day—surely by the 7th.

Very frequently our publications contained stories about the activities of the major companies buying in the Oklahoma field. I imagine we carried a story of that activity several times a week. I have some references here in which they mentioned them.

(Witness excused.)

Mr. Chaffetz: The Government offers in evidence EXHIBITS 287, 292, 294, 295 and 296 which are others of the series of reports from Warner to Collins of the Tide Water Oil Company, as admissible at this time only against the defendant Warner.

Mr. Thomas: May it be understood, your Honor,
that these documents that are now being offered by
counsel are subject to the same objections that we
1534 made yesterday to Exhibits 334, 335 and 336, and
we will not have to repeat the objections which appear at R. pp. 504-05, 556-57, 721-23.

The Court: The exhibits now offered will be received as against the defendant Warner for the time being. Exception allowed.

Mr. Chaffetz: I would like the record to show also at this time that where the initials "R. O. A." appear on these reports, in the lower left-hand corner of the last page, by agreement with counsel it is to be understood that those initials are the initials of R. O. Audrain, a defendant in this case. That is true, Mr. Webster, is it not?

Mr. Webster: Yes, that is true. I don't happen to know whether Mr. Audrain actually dictated the letter or whether it was done by someone else, but the initials, "R. O. A." are the initials of the defendant, Audrain.

(Documents referred to are received in evidence, respectively, as EXHIBITS 287, 292, 294, 295, and 296 against the defendant J. W. Warner only. Said exhibits were later at R. p. 907 admitted as evidence against all defendants.)

(Mr. Chaffetz read to the jury Exhibits 287, 292, 294 and 296.)

1535 Mr. Chaffetz: We understand that Tydol is regular or house brand, and Tidox is third-grade, is that true?

Mr. Webster: Yes.

(Document being a stipulation relative to the authenticity of documents from the files of Sinclair Refining Company is received in evidence as EXHIBIT 731.)

Mr. Chaffetz: The Government offers in evidence EXHIBITS 345, 346, 347, 350, 351, 352, 353, 356, 358, 359, 360, 365, 369, 370, 415, 416, 417, 421, 422, 424, 426, 430, 432, 442 and 450 from the files of Sinclair Refining Company as being admissible at this time as against the defendants whom the record thus far may show have participated in the alleged conspiracy.

Mr. Thomas: Now, as to each of the exhibits so offered, the defendants interpose the same objections as stated at R. pp. 504-05, 556-57, 721-23, as were interposed yesterday to Exhibits 334, 335, 336, and 337. This objection is made, your Honor, on behalf of all the defendants.

Mr. Wood: In addition to the objection made by Mr. Thomas on behalf of all the defendants, I desire on behalf of the defendants, Sinclair Refining Company, and the defendant J. W. Carnes, to
1536 object to the introduction of each of these documents, first on the ground that if offered as evidence of the fact purported to be stated within the documents themselves, each document is inadmissible for that purpose, but if offered for any other purpose, no foundation has been laid for their introduction, and they are immaterial. And I desire to have that motion—or, this objection, although made—stated to have been made for the Sinclair Refining Company and Mr. Carnes, understood to be made separately for each of these defendants as to each of the documents.

Mr. Thomas: Well, on behalf of all the other defendants, they are inadmissible, generally, and I move the Court to instruct the jury at this time that they are not to be considered as evidence against any of the other defendants in the case other than possibly the Sinclair Company and the writer of the document. And we join the motion made by Mr. Wood.

Mr. Wood: On behalf of the defendant Sinclair Refining Company and J. W. Carnes, I also wish to object to the introduction of Exhibit 422 on the ground and on its face—it relates to a proposal on

1537 the part of a refiner located neither in the Mid-Continent field nor in the East Texas field to sell some gasoline. And it seems to us it is wholly immaterial on any issue involved in this case.

Mr. Thomas: If the Court please, I would like to make the same objection on behalf of all the other defendants.

Mr. Gray: In the first place, this relates to a matter of the Gulf coast, neither East Texas nor the Mid-Continent field, and, of course, in addition to the objection already made, it is immaterial and irrelevant.

Mr. Morgan: We join in the objection made by Mr. Wood.

The Court: Referring to Exhibit 422, your objection is overruled. And all of your objections to these exhibits are overruled. Exception allowed.

(Documents so offered are received in evidence as EXHIBITS 345, 346, 347, 350, 351, 352, 353, 356, 358, 359, 360, 365, 369, 370, 415, 416, 417, 421, 422, 424, 426, 430, 432, 442, and 450 upon the conditions stated at R. p. 787. They were later admitted as evidence at R. p. 907 against all defendants generally, except EXHIBIT 422 which was received only against Sinclair Refining Company and the Sinclair defendants.)

1538 (Mr. Chaffetz read Exhibit 422 to the jury.)

Mr. Chaffetz: The claim is not made that this was made in the course of the conspiracy, and on that ground I offer it only against the company and the Sinclair defendants.

The Court: Exhibit 422 is received with that limitation. Exception allowed.

(Mr. Chaffetz read Exhibits 345, 350, and 347 to the jury.)

Mr. Chaffetz: May we have it understood that "HC" refers to the regular or house brand gasoline of the Sinclair Refining Company?

Mr. Wood: Yes, that is all right.

(Mr. Chaffetz read Exhibits 346, 351, 352, 353, and 356 to the jury.)

Mr. Chaffetz: Where these telegrams end with the word "joint", with series of initials, ~~I assume~~ they refer to initials of persons to whom the telegram is intended to be sent, as well as the name at the top of the telegram; is that true?

Mr. Wood: That is right.

(Mr. Chaffetz read Exhibits 358, 359, 360, 365, 369, 370, 415, 416, 417, 421, 424, 426, 430, 432, 442 and 450 to the jury.)

1539 J. P. MOSHER, JR., a witness for the Government, testified as follows:

Direct Examination by Mr. Lewin.

My present address is Cleveland, Ohio. I am in more or less of a managerial capacity on Platt's Oilgram with offices at Cleveland. I am not an officer of the company, and I have no title.

At times I report directly to Warren C. Platt, president of the company. At times he is active in the affairs of the Oilgram, but was not very active in 1935 and 1936. He was away from the office a good bit of that time on account of ill health and out-of-town trips. As I recall, he was away from his office in Cleveland on account of ill health quite a good bit within the first 2 or 3 months of 1935, but just how much of that period I couldn't say. As I recall, around March 1, 1935 Mr. Platt was out of the United States. I don't know just what time it was. I think he was on a trip to Europe for 5 or 6 weeks. I think it was in March and April. He was still in ill health when he got back from this trip. I don't remember just how regularly he was at the office after some time in April, 1935, on through 1935. I know he was away a good bit of the time.

There was a good bit of the last 9 months of 1935 that Mr. Platt was not in touch with the Oilgram. I don't 1540 remember definitely whether he was away occasionally or for an extended period after April, 1935. Many times even when he would be in the office, I wouldn't see him for a week or two. Sometimes he would be in the office just for an hour or two. I think he was in better health starting some time along in the summer. Even after that time, in the summer, down through the rest of the year, I don't think he was active in the affairs of the Oilgram. He was in and out of the office during the latter half of 1935.

I had occasional conferences with Mr. Platt about the affairs of the Oilgram in the latter half of 1935. I don't recall definitely that I kept him in touch with what the Oilgram was doing during that period. I remember seeing him in New York at one time in the fall of 1935. As for other conversations during that time, I don't recall. I occasionally saw him and had conversations with him on business matters in Cleveland through 1935 and 1936.

Mr. Platt was actively engaged in the business of the Oilgram through 1936 in a general overseeing capacity. He was away quite a bit on business in 1936. It was Oilgram and National Petroleum News business. As far as I know, those are the only businesses that Mr. Platt has. So I feel that during 1935 and 1936, except for this time 1541 when he was in ill health, when he was away from the office, he was traveling on the business of the Oilgram and the National Petroleum News. He was working more on the National Petroleum News than he was on the Oilgram.

As far as I know Mr. Platt is the principal owner of W. C. Platt Company and The National Petroleum Publishing Company, defendants in this case. When he is absent from the work for an extended period of time, the managerial work of W. C. Platt Company is distributed around among various individuals. Mr. Guthrie, managing editor of the National Petroleum News, acts in practically the same capacity on the Oilgram.

Q. Would you say that the W. C. Platt Company is largely a one-man organization?

A. In what respect do you mean, Mr. Lewin?

Q. In the sense that Mr. Platt is the principal dominating force in its management.

A. I don't know just how to answer that.

Q. Well, do you remember being asked that question before the grand jury?

A. No, I don't.

Q. Would your testimony on that point refresh your recollection?

A. It might, yes, sir.

1542 Mr. Platt was responsible for the policies and practices of these publications; first, the Oilgram; and then the National Petroleum News, during 1935 and 1936.

I try to keep familiar with the work which is done for the Oilgram of gathering price quotations for gasoline. That is only one of my duties. Mr. Steiger reports to me occasionally. I am his next superior. When he makes reports to the company, he doesn't always make them to me; some of them are direct to other members of the organization—to Mr. Platt many times on the quotations of gasoline. I couldn't say definitely whether Mr. Platt and I are the only persons in the Oilgram to whom Mr. Steiger reports on the subject of gasoline quotations. I know he has made reports on various matters to Mr. Guthrie and Mr. Chatfield. He reports to them on news articles. Any report in connection with his work for the Oilgram on gasoline quotations he is supposed to make and makes either to me or to Mr. Platt and to no one else in that organization.

I try to keep myself fairly familiar with market quotations in the markets that Mr. Steiger reports on. I try to keep familiar with all of the markets, as much as it is possible, along with my other duties.

I heard Mr. Steiger's testimony here as to the number
of markets that are covered by the various offices
1543 of the Oilgram. That testimony is substantially cor-
rect, I should say offhand. If I were asked the same
questions, I would make the same answers.

Anything I would know about the size of the various spot markets, and the volume of gasoline sold in the open spot markets would be purely a guess. I wouldn't have any knowledge at all of the volume sold on the open spot market in Oklahoma refinery market, not being in close touch with it every day. It would be purely a guess for me to say how the volume of gasoline sold on the open spot market in the Oklahoma refinery market would compare to the total amount of gasoline that is manufactured in that market and sold.

I have been engaged in the work I am doing as manager of the Oilgram since the spring of 1929; that is, handling the general managerial work of the Oilgram. It might be well for me to know the amount of gasoline that is sold on these spot markets, that our Oilgram reports, under my management, but I have no definite information on which to base an estimate of the volume. I think we have pointed out quite continuously over the past few years that the open spot market has been gradually getting thinner. I don't know how thin it was in 1935 and 1936. I don't recall having testified on that point before the grand jury.

During 1935 and 1936 Mr. Steiger had authority to con-
sider quotations given him by sellers in making up
1544 his quotations in the Oilgram. By quotations he
considered I mean quotations that he would get from
various classes of sellers. For example, quotations in
our price tables were quotations to jobbers. That was

what we were primarily interested in because that was what the prices in our price tables represented. The classes of sellers he could get quotations from and use were refiners and brokers, on broker's sales, prices to jobbers. The refiners from whom he could get quotations and use in making up his quotations were independent refiners and major companies if they sold in the open spot market to jobbers.

Q. Did you know that Mr. Steiger throughout the period of 1935 and 1936 was getting and using quotations of major companies?

A. His market leads indicated that he was in contact with major companies from the frequency that he reported major company buying.

Q. I wonder if my question is answered. Did you know that he was getting quotations on the spot market from the major companies, and using them in making up his quotations throughout this period, along with other data?

A. Not definitely, no; only in so far as he indicated in his market leads, that is, his news leads, what he was doing.

1545 Notwithstanding the fact that I was at that time the manager of the Oilgram, I did not know that the major companies during 1935 and 1936 sold very little gasoline, comparatively, on the spot market. I knew that over a period of years the major companies had been a diminishing factor in the open spot market to jobbers. In 1935 and 1936, I believe that major companies' sales on the spot market were small, but I did not know definitely. My belief was based on just general gossip, reports of the men that indicated that the major companies were not a factor in the open spot market to jobbers.

Q. Why would Mr. Steiger be given authority to use mere quotations in his work?

A. I don't know that he ever was given authority to use mere quotations in his work.

[illegible] Did I misunderstand you? Didn't you testify that Mr. Steiger had authority to use quotations given him by sellers as well as actual sales prices during 1935 and 1936?

A. I probably was a bit confused on that. What I meant was quotations in our markets based on sales prices.

Mr. Lewin: Mr. Holmes, will you read the first question I asked?

(Question read as follows:)

1546 "Mr. Mosher, during 1935 and 1936, did Mr. Steiger have authority to consider quotations given him by sellers in making up his quotations in the Oilgram?"

Mr. Lewin: And what was the answer?

(Answer read as follows:)

"Yes, he did."

Q. Do you want to change that testimony?

A. Well, by that I mean prices, whether they were quotations or sales.

Q. Well, then, did he have authority to use quotations as well as sales prices?

A. I don't know.

Q. Were you the source of Mr. Steiger's authority, or was somebody else the source of his authority?

A. If I knew that he was doing that, I suppose I would be the source for that authority.

Q. Did you know whether he was doing that or not?

A. No, I did not.

Q. Well, if he was doing it, do you now claim it was unauthorized?

A. I don't remember of it ever having been authorized, no, sir.

May I explain that this way; there have never been any general instructions to our men. As Mr. Steiger 1547 explained, he grew up with the organization from office boy, and I think that is true with all of our men. That question never came up.

Q. Did Mr. Steiger have full general authority to do anything he pleased in making up the quotations for the Mid-Continent markets?

A. Well, we had confidence in Mr. Steiger, yes, in his ability and his integrity, covering those markets.

Q. So, as a matter of fact, Mr. Steiger made use of quotations as well as actual sales. It is your testimony that he had full authority to do so; is that right?

A. Yes.

I don't know that his prices were confined to quotations, but if he used quotations and did it in the absence of actual sales, it was the next best thing. I am under the impression that in a large majority of cases his prices were based on actual sales.

Q. Do you also know that in a large number of instances during 1935 and 1936 his prices were based on quotations as well?

A. No, I do not.

Q. Did you know that in some instances his quotations in the Oilgram were based on quotations only?

1548 A. No, I don't know definitely. He may have at times quoted prices and carried a footnote "Quotations only," or something to that effect, but I cannot recall.

Q. Did you testify on that point before the grand jury?

A. I don't know. I might have.

Q. Did you testify that when the market was thin throughout the period March 1, 1935 to date, Steiger has got to consider quotations and going prices as well as actual sales in order to arrive at his quotations in the Oilgram?

A. No.

Mr. Thomas: Is this offered for the purpose of impeachment?

Mr. Lewin: This is offered for the purpose of refreshing his memory.

Mr. Thomas: I object to the form in which it is being offered. If there is any testimony it should be submitted to the witness for the purpose of refreshing his recollection.

Q. You say you have no recollection of giving that testimony?

A. No, I have not.

Q. What would you say about that fact now?

1549 Mr. Hanning: What fact?

Mr. Lewin: Q. Had the market been thin from March 1, 1935, on through 1935 and 1936, so that Steiger was required to use mere quotations as well as actual sales in making up his quotations in the Oilgram?

A. I don't know.

Q. Did you testify before the grand jury that during that period the spot market was extremely thin?

Mr. Thomas: If the Court please, without renewing this objection all the time, may we have the same objection heretofore given at R. pp. 373-74, 446, 630, 680-81, 682, 727?

The Court: Yes. Objection sustained. I think you ought to ask this witness if his memory may be refreshed by some former statement he may have made at some other time and place.

Mr. Lewin: Yes.

A. I do not recall testifying to that before the grand jury. I do remember a conversation with Mr. Chaffetz outside the grand jury on that subject.

Q. Can you recall that conversation now?

1550 A. Well, it was a discussion of the volume in the open spot market, and, as I recall, there was some discussion of the number of jobbers in the—

Mr. Hanning: Pardon me, Mr. Lewin, your Honor, the Prosecution saw fit to ask this witness if he did not testify to a certain thing in front of the grand jury. The witness has now said "I did not do it in front of the grand jury, but I did have a talk with Mr. Chaffetz outside the grand jury." I am perfectly willing to have him tell whatever that conversation is.

Mr. Lewin: That is what I have asked him here.

Mr. Hanning: What I am interested in is whether or not the record before the grand jury shows whether or not he had a conversation before the grand jury, and what that question was based on when he asked this witness.

Mr. Lewin: I do not mind showing it to his Honor.

Mr. Hanning: All right, show it to his Honor.

Mr. Lewin: All right; give me 5456 and 5481.

(Handing document purporting to be transcript of testimony before grand jury to the Court.)

1551 The Court: Q. Referring to your testimony you did testify, didn't you, on July 10, 1936, before the grand jury at Madison?

A. Yes, sir.

Q. I will read some of the questions that were asked and the answers made at that time by you, and see if that will refresh your memory on the question you have been asked:

"Mr. Lewin: Would it be practical to differentiate? After all, that spot market is just about as thin as you would want it to be, to be a basis for any quotations at all, isn't it; and has been so since March 1, 1935; isn't that right?

"Answer: Yes, it was extremely thin.

"Question: Extremely thin for all the brackets; and in the case of some of the brackets, like 68-70, for instance, it is so thin that it is almost non-existent. I mean, he goes to, for instance, one of the East Texas markets to get the quotations on 68-70 octane, he goes to Cosden alone, doesn't he, and that is the only one?

"Answer: It may be limited to Cosden, I don't know.

"Question: You wouldn't be surprised at all, would you, if he told you it is that thin?

1552 "Answer: From what areas, from West Texas?

"Question: West Texas.

"Answer: West Texas, yes—well, there aren't more than two or three companies in West Texas.

"Question: I know, and there is only one that makes 68-70 octane gas there, isn't there, by cracking, and that is Cosden?

"Answer: As far as I know, there is only one.

"Question: As far as you know; so that you have known all along, when he is quoting 68-70 octane for West Texas, he is quoting Cosden's price, that is how thin it is, isn't it?

"Answer: Well, if those are the facts, that is true, but I didn't know that Cosden was the only one making the 68-70 down there."

Now, with that in mind, does that refresh your memory as to the question you have been asked?

Mr. Thomas: May it please the Court, without interposing that objection all the time and interrupting the Court, may it be understood that the testimony that is received where the Grand Jury testi-1553 mony is read to the witness, may be received the same as if the objections heretofore made were made in each instance and overruled? The grounds of said objections appear at R. pp. 264; 373-74; 446; 518, 546-47, 590, 630, 637, 680-81, 682, 727, 750.

The Court: The record may so show. Exception allowed.

Now, ask him and see whether his memory has been refreshed.

Mr. Lewin: Q. Has your memory been refreshed on the question of the thinness of the spot markets that Mr. Steiger was reporting in 1935 and 1936?

A. Yes, it was thin, but I don't know how thin.

Q. Well, now, has it been refreshed so that you could testify now that it was extremely thin?

Mr. Hanning: If your Honor please, the question has been answered.

The Court: He says he doesn't know how thin.

Mr. Lewin: And I was trying to see if we couldn't arrive at an approximation.

Q. When you say you don't know how thin it is, you mean you don't know the exact volume in gallons, is that it?

A. No, I couldn't estimate how thin it was.

1554 I had a conversation with Mr. Chaffetz outside of the grand jury room at the time when I came up here to the grand jury to testify. I talked with him about statistics of the spot markets, and gave him certain judgment figures as to the amount of spot market gasoline that there was in 1935 and 1936 on the spot market. I think I told him that they were only a rough guess, though. I had nothing definite to base them on. I don't recall the figures I discussed with Mr. Chaffetz at the time, but I could only approximate the conversation now; I don't recall it definitely. Mr. Chaffetz made certain suggestions to me as to statistics on the size of the spot market. As I recall, I pondered over some of the figures he suggested; however, when he named other sources as having been pretty much in agreement with my estimates, or his estimates as I recall they were now, I agreed that maybe that was correct. I don't recall the estimates that I gave him on the size of the spot market. I don't recall definitely what estimates Mr. Chaffetz gave me.

The Court: Give us your best recollection.

The Witness: Of the conversation, your Honor?

Mr. Hanning: Yes.

A. I think Mr. Chaffetz was trying to find out just how thick or thin the open spot market was. I

1555 don't recall definitely the figures that he suggested, or the figures that I concurred in; but it started on this basis. That if—about how much of the crude produced in Oklahoma is refined there, and how much is sent to some other territory for refining? And I don't recall the figure, but I think it was around 50%. Well, that left 50%, say, to be refined in Oklahoma.

Well, out of that 50%, how much was refined by major companies, and how much by independent refiners? I don't recall the figures, but it seems to me they were around 30% or 35% refined by majors, and 15% to 20% by independent refiners.

Well, out of the 30% or 35% refined by the majors, how much was sold in the open market, and how much was under contract or used by their own stations or in their own outlets? And I think I concurred in the fact that it was nearly all of it; which left only 15% to 20% as being sold by the independent refiners.

Well, then, if—as I recall—the independent refiners sold half of their output under contract, that left only 7½% to 10%, or 5% to 10% available for the open spot market.

Then there was some discussion of how many jobbers there were in the Middle West.

1556 As to the amount of spot market gasoline there is in comparison to the total amount that is sold and marketed in the Mid-Western area, I think 5% would be low; 10% would be maximum; that is just a rough guess. My best judgment would be between 5% and 10%, but it is, as I say, just a rough guess. I couldn't even estimate how much of that sold on the spot market was third grade. I don't know whether the largest percentage would be third grade.

The Court: Q. Well, what business were you in? If you don't know—you were publishing facts for the public, in the oil business, weren't you?

A. Yes, your Honor, but I was in touch with that information only casually, or in a general way.

Q. Well, just what was your job? What did you do?

A. I work in the main office of the publication. I try to keep an eye on all of the markets we publish in the four editions of the Oilgram. In addition to that, I have charge of circulation of the Oilgram; I sell the Oil Price Handbook, which we publish annually. I am in charge of the physical operation of the Oilgram, keep the teletypes in running order, and see that there is no interruption in our routine 1557 at the end of the day, when we are rushing to get the publication out.

Q. I suppose one of the most important duties was to make sure that the data you gathered was correct, and the data you imported to your subscribers was correct?

A. Yes, we had confidence in all of our men, your Honor, and—

Q. But you had something to do with that, didn't you?

A. Yes.

Q. You kept in pretty close touch with that business you were in?

A. Well, most of the men had been with us for quite some time, and we believed they were doing their jobs well, yes, sir.

Mr. Lewin: Q. Wasn't the responsibility—

Mr. Hanning: If your Honor please, not even the Bureau of Mines itself knows how much gasoline moves on the spot market.

Mr. Crawford: I think that is an entirely gratuitous statement, which may not be supported by any evidence, and I think it is improper to make it.

The Court: Here is a man who had nothing else to do except to know and publish just exactly—

1558 Mr. Crawford: And, if the Court please, he had a very, very high responsibility in that respect, too, as the evidence already shows, and as he knows.

By Mr. Lewin

I didn't know it was a notorious fact throughout the industry that by far the largest amount of spot market gasoline in 1935 and 1936 was third grade gasoline. Only as the reports came in from our branch offices every day, over the teletype, and I looked them over and kept in touch with the markets in that way, did I know anything about it at all. Third grade was discussed mostly in the market leads. It was a larger factor, I would assume from that, than the regular grade, the 68-70. I don't know whether I made that assumption through the entire period, 1935 and 1936. I don't recall that I gave Mr. Chaffetz figures on that when he was discussing it with me, the percentage of third grade as compared with regular on the spot market.

I understood that there were contracts between majors and jobbers during those years, based on our quotations, as well as on quotations of other publications. They were quite extensively used throughout the Standard of Indiana

territory. I didn't know that a great many of those contracts provided that the basic price that the jobber
1559 had to pay for his gasoline was the average of our quotations, or the average of our quotations with the average of the Chicago Journal of Commerce. As I recall, I was under the impression it was the low of our quotations. I didn't believe that they used the low for third grade in the usual cases, and the average for regular; my impression at that time was that it was the low in both instances. I have since learned differently.

I had occasion to observe the trend of retail prices on gasoline in the Standard of Indiana territory during 1935 and 1936. I only knew whether or not there was any relationship between our spot market quotations published in the Oilgram and the retail prices that were charged normally in the Standard of Indiana territory in this respect: as the tank car market moved up, the general retail market moved up, and as the tank car market went down the general retail market went down. As I recall the correspondence between the two, it was quite close. I don't know what I mean, in cents, by "quite close". I had heard, but I don't know. The two moved up and down together pretty much. I don't know that the retail prices went up the day after the tank car prices went up; I don't recall that, or vice versa. The normal spread, or difference, during that period between the retail prices and the tank car prices, as published by our journals, was about 5½¢.
1560 I can't remember whether the retail prices went up when only one of our markets went up, or whether it moved up only when all of our markets were in line. I don't remember testifying to that before the grand jury.

Q. Did you know whether or not the retail price varied, as you have described, with the Oklahoma price alone; or, did it vary, as you have described, with a composite of your markets, including the Chicago market?

A. I don't remember just how it did. I was thinking of the general markets; just the general market situation; and the retail price moved up with the tank car market.

Q. If you don't remember now, do you suppose your recollection would be refreshed by any previous statement made on the subject?

A. It might be, yes.

The Standard of Indiana is generally understood to be the market leader. When the normal retail prices went up, that meant that the Standard of Indiana had posted a higher retail price.

Q. Well, now, did you observe that the Standard of Indiana would not raise that retail price during that period until all 3 markets that you reported—no, until 3 markets were—tank car markets were up, and by all 3 I mean the Platt's Oilgram quotations for Oklahoma, the Platt's Oilgram quotations for Chicago and the Chicago Journal of Commerce? 1561

A. No, I don't—

Mr. Kirkland: There is no evidence in this record to sustain that question.

Mr. Lewin: I wondered whether his recollection can be refreshed on that.

(Mr. Lewin hands document purporting to be transcript of testimony before grand jury to the Court.)

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 630, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

The Court: Again referring to your testimony before the grand jury, I will read these questions and answers:

"Mr. Chaffetz: Why were they interested in the Chicago prices so much?

"Answer: As I understand it, the Standard of Indiana will not raise its retail price, along the lines of what we were talking about, until all three markets are up to, say, a given point; that is, the Journal of Commerce market, whether it is Oklahoma or what it is, I can't say for that; but our Oklahoma market and our Chicago market.

1562 "Question: In other words, the Standard of Indiana doesn't look only at the Tulsa market, but it looks at all the markets?

"Answer: From that, it does, yes.

"Question: In other words, if the Tulsa market was a quarter above the Chicago market, would they average the two or would they look at the lowest one?

"Answer: No, I think I have known them to advance the retail price when our Chicago market was an eighth of a cent under the Oklahoma market, possibly a quarter of a cent, but not any more than that.

> "Question: Is this true, that the Chicago market is used by the Standard of Indiana in the Chicago metropolitan area?
>
> "Answer: I don't know definitely."

Do these questions that I have read refresh your memory on the question asked you?

The Witness: No, sir, your Honor, it does not.

Mr. Lewin: All right.

By Mr. Lewin

Our Chicago spot market quotation and our Tulsa spot market quotation are not always the same, but there is no set differential between them. Our Chicago quota-
1563 tions are not usually about ⅛¢ under the Tulsa quotations. They have been ⅛¢ under the Tulsa quotations, and quite often more than that.

I can't recall any specific instance in which I supervised Mr. Steiger's work in making up price quotations. I have suggested that he write stories, at times. He may sometimes have asked me for specific instructions as to how to handle an unusual case, although I don't recall that he has. I sometimes get complaints from our readers of the Oilgram as to our quotations. I take up those complaints with Mr. Steiger when they affect the market. I ask him to make a thorough check, and let me know what the results of his check are on the point involved. I have sometimes compared his quotations with quotations in other markets. I wouldn't say that is my regular procedure. There may have been times when one market was out of line with another market. Only if it was brought to my attention did I take up those discrepancies or those instances in which those markets were out of line with Mr. Steiger, and ask for an explanation of them. Sometimes I observed on my own motion those discrepancies. It is a part of my duties to watch and see whether there are any discrepancies, and see whether or not our markets are in line, but I don't watch them continually like that all the time.

I have at times discussed with Steiger the details of his activities through 1935 and 1936. If there was any-
1564 thing unusual, I think I kept Mr. Platt informed. There was a very steady market during that time, if that could be called unusual. I don't recall discussing that with Mr. Platt. I don't recall anything unusual in that period that I discussed with Mr. Platt. I don't remember any conversation with Mr. Platt on Steiger's activities during that time. It is possible that my memory could be refreshed from the former testimony.

I don't remember discussing major company buying with Mr. Platt. I don't recall that I learned from Mr. Steiger during this period that he was in contact with Walter Paul Jacobi in getting price information from him. I did know that Jacobi had been for years one of our sources of market information. I am sure I didn't know definitely that Mr. Steiger during this period, 1935 and 1936, was in contact with Jacobi. He may have been in touch with him quite frequently. I think he was.

I did not definitely know that Steiger was in contact with O. J. Tuttle. Both Tuttle and Jacobi were on his regular source of information. I suppose that at the time he was in contact with them all the time, but I don't know definitely that he was.

I did not know that Steiger was in touch with H. T. Ashton of Socony-Vacuum Oil Company during this
1565 period. Mr. Ashton, as far as I know, has never been a source of information for our market checker there.

Mr. Lewin: Q. Did you testify upon that point before the grand jury?

A. I don't think I did, no.

Q. You think your memory could be refreshed on that point if you were given the grand jury testimony?

(Mr. Lewin hands document purporting to be transcript of testimony before grand jury to the Court.)

Mr. Donovan: Same objection as appears at R. pp. 373-74, 446, 680-81, 682, 727.

The Court: Objection overruled; exception allowed.

A. Yes, it might be.

The Court: Q. Again referring to your testimony before the grand jury, were these questions asked you, and did you make these answers; and if you did, do they refresh your memory?

"Question: You knew he was in contact with Tuttle, didn't you?

"Answer: I believe that he was. I don't think he called Tuttle as frequently as some of the other companies but he was in touch with him.

1566 "Question: Maybe not, but he was in touch with Tuttle during this period and you knew that he was in touch with Ashton, didn't you?

"Answer: Yes."

Mr. Lewin: Q. Does that refresh your recollection at all on whether or not you knew that Mr. Steiger was in touch with H. T. Ashton during this period?

A. If that was my testimony I was wrong, because I didn't know it definitely, and he is not one of our sources of information down there.

Q. Did you give that testimony?

A. I don't think I did. I don't recall it.

Q. Do you mean to say that you did not give that testimony before the grand jury?

A. I don't recall that I did.

Mr. Thomas: I object to that line of examination. What he is doing is impeaching the witness.

The Court: He may have gotten off the reservation a little that time.

Mr. Thomas: I ask that the jury be instructed to disregard the answer to the question.

Mr. Crawford: We will get back on the reservation quickly.

The Court: All right. Ask your question.

1567 *By Mr. Lewin*

Only insofar as I said before regarding the others, that he was a source of information there and I assumed that he was, did I know that during this period, 1935 and 1936, Mr. Steiger was in touch with Mr. Thomas Fitzgerald and A. V. Bourque, defendants in this case. I knew that he was in touch with them for the purpose of getting price information on all products, including gasoline on the spot market, if it was sold in the spot market.

I knew that Mr. Steiger was unable to make very many checks with jobber buyers during that period, because there are very few jobbers close to Tulsa with whom he can check. I knew that his main source of information was selling refiners and brokers.

In the same manner I knew that Mr. Steiger was in touch throughout this period with Neil Buckley. I knew that the East Texas Marketing Association had been formed in February, 1935.

I knew that certain major oil companies had been buying gasoline in the East Texas field and in the Mid-Continent field all along. I didn't know it started early in 1935. We had been reporting major company buying for some time.

The Court: Was there any increase in their buying in those localities?

1568 A. Only insofar as had been mentioned in our leads. It was quite frequent, yes.

Q. More frequent than in the past?

A. Yes, I should say so; it had been quite frequent during the latter part of 1934 and early 1935.

By Mr. Lewin

I don't recall any conversation with Mr. Steiger during 1935 on the subject of major company buying and its effect on prices. I heard of major company buying from Mr. Steiger only through his market leads. I may have mentioned it in other instances. I don't recall. But his market reports every day showed the major company buying. I don't recall any references to this major company buying as a so-called pool in 1935; I think we did in 1934. I knew that the major company buying was one of the important factors in supporting the market from March, 1935, on through the year and 1936.

I don't recall any conversation with Mr. Platt during 1935 on the subject of major company buying and its effect on the market.

Q. Do you think that your mind could be refreshed on that from your grand jury testimony?

A. No, I don't think so. I don't recall any conversation with him.

1569 Q. I wonder if it might refresh your recollection?

A. It might, yes.

Q. All right.

(Mr. Lewin passes document purporting to be the transcript of testimony before the grand jury to the Court.)

(The Court reads silently.)

(Consultation between Court and Mr. Lewin off the record and out of the hearing of the jury.)

By the Court

My position in the organization was general supervisory work over all phases of the work. Mr. Guthrie was my immediate superior. Mr. Platt, Mr. Guthrie, then myself.

By Mr. Lewin

I have testified that this major company buying during 1935 and 1936 was one of the factors in the tank car prices. It influenced the tank car market. In the volume it took off the market, it did help. That had to be one of the influ-

ences in the market. It indirectly influenced the spot market price of gasoline during that time in that it relieved the market of gasoline. It did not influence the quotations that we published in the spot market, except, as I say, indirectly, in relieving the market of gasoline, taking volume out
1570 of the market. We quoted prices to jobbers. Only in reporting it as news were we interested in buying. In relieving the market volume it influenced the spot market prices up.

I am familiar with the way in which the spot market quotations as published in our Journal reacted. There was that rise in the early part of 1935. I was familiar with this rise that is shown on this graph of our quotations in East Texas beginning about the first of March and running up into the last of May. There was a similar rise for our Oklahoma refinery market. As I recall, I think all markets were on a steady upward trend during that period. It was a steady rise. Major company buying was one of the important factors influencing that rise. Quoting of prices in all products and news was the main business of Platt's Oilgrams during that time.

Q. Wasn't your main business in quoting quotations on spot market in gasoline at that time?

Mr. Hanning: In East Texas.

Mr. Lewin: In East Texas, and he has also said the graph of Oklahoma went the same way.

A. That was only one of the markets out of 10 or 12 that we covered daily.

Q. Wasn't your main business to quote spot market quotations in all those markets?

1571 A. Along with other products, yes.

Q. Do you mean to tell this jury that you did not discuss with Warren C. Platt, your chief, what was one of the main factors causing that rise?

A. I do not recall any conversation with Mr. Platt on that subject, no, sir.

The Court: What did you talk to him about in your business visits?

A. Circulation mostly, your Honor. He was pushing for increased circulation, as I recall now.

Q. Was that market in an unusual condition in 1935 and 1936, more than in previous years?

A. Early 1935 was nothing unusual. The market had gone up and down, up and down, and leveling off in summer of 1935.

Q. I mean had it made the steady advance that it made in previous years?

A. Yes, there had been steady advance like that.

Q. Had it advanced in 1935?

A. Yes, I think so, as I recall it.

Q. And levelled off and continued off in May 1935 as it did later in 1935?

A. No, that part was unusual.

Q. Did you discuss that matter with Mr. Platt?

A. No, sir, I do not recall discussing it with him.

1572 Q. There was an unusual market, but you did not discuss that with Mr. Platt or with Mr. Guthrie?

A. No, I do not recall that I did.

By Mr. Lewin

I only recall one telephone call from Arthur V. Bourque, a defendant in this case, in 1935. I do not think I had any calls from him in 1936. I don't know whether Mr. Platt was getting calls from Mr. Bourque during 1935. I do not think I was in Mr. Platt's room on any occasion in which Mr. Platt was called by Mr. Bourque during 1935. I do not recall any such. I do not think I testified on that subject before the grand jury. I was not in Mr. Platt's office nor in any room anywhere at any time in 1935 or 1936 when Mr. Bourque called Mr. Platt. It is not true that Mr. Bourque was calling me through 1935 and 1936 as often as once a month, nor is it true that during that time some times he would call 3 or 4 times in one day.

This one conversation with Mr. Bourque, as I recall now, was in the early part of March. It was a discussion of octane brackets which the Oilgram, or trade publications generally, were quoting. He did not call me to register a complaint against our spot market quotations. It was about the octane brackets that we were carrying at the time.

1573 Q. Do you think we might refresh your recollection on that subject?

The Court: I think we will take about a 15 minute recess, and in the meantime you take this witness into the library and read over some of that grand jury testimony.

Mr. Lewin: All right.

Mr. Thomas: May we have an exception to the order of the Court with reference to the submitting of the grand jury testimony to the witness outside of the court room, the order being made in the presence of the jury?

The Court: Yes.

Mr. Crawford: Let the record also show that this statement of Mr. Thomas is made after and not before the witness retired with counsel.

Mr. Thomas: That is correct. Recess was called, and immediately after recess, the statement was made, and this exception is taken after the recess.

The Court: Let the record show also that it was a practice suggested by Mr. Thomas the other day, indicating in one of our cases in our Court of Appeals, and I thought this might be a better way than to have the testimony read here where it might have some—

1574 Mr. Thomas: That is the Jelke case, 255 Federal.

The Court: Yes.

Mr. Thomas: My objection was that it was made in the presence of the jury, your Honor. That is the point I am making.

The Court: I thought we might save some time, I thought we might save some time by having it refresh the witness' memory rather than by reading it in here as I have before.

Cross-Examination by Mr. Hanning.

I am 35 years old, and have been working for Platt's Oilgram for a little over 13 years. I started out as an assistant market checker and mostly office boy in the Chicago office. I was there as assistant checker and office boy about a year and a half. Then I went to the Tulsa office, where I helped check markets for a period of about 6 months. Then I went to the New York office as market checker and was there for about 2 years. Then I went to the Cleveland office. My first job there was mainly checking the Pennsylvania market and handling the main office detail on the Oilgram, also circulation. Ever since that time my job has been taking care of the circulation and office detail of the Oilgram and market checking at times.

1575 Prices on markets are gathered in each of these offices, Tulsa, Chicago, New York, and Cleveland. Prices on gasoline, kerosene, gas oil, fuel oil, lubricating oils, petroleum coke, and petrolatums are gathered at each of those offices. Gasoline is only one product, one of the main products, of the oil industry. When the boys out in the field offices call up for prices, they do not call up for prices only on gasoline, but all these other products, if the company that they are checking with handles those products. And each day as the Oilgram is issued, we have to carry prices on each of those many products that are sold and made in this oil business.

It is part of my duties in Cleveland to check the Pennsylvania markets at times; however, it hasn't been for over a year or a year and a half now. When I did do that, the procedure I followed, that is, the mechanical or detailed procedure, was not much different than that followed by the boys in other offices. It is practically the same in all our offices. In gathering the details that make up our price table, we call as many sellers as we can; from the Cleveland office it is all handled from the long-distance phone, because our sources of information are quite some distance from Cleveland. We call as many sources as we possibly can.

I get to work in the morning at 8:30; the first thing
I do when I get to the office is to look over cor-
1576 respondence that has come in. It takes me any-
where from half an hour to an hour and a half to
look over and clear my correspondence. Then a good bit of my time is spent on checking prospect lists for circulation on both the Oilgram and the Oil Price Handbook. I spend anywhere from an hour and a half to two hours on that daily. Then it is about lunch time.

By the time I get back to the office some of our market reports, preliminary reports, have started coming in. Some of the news has started coming in. And I try to get the news for the news section lined up for the day, that is, for the market leads we have been talking about, and the schedule of the news that we run in the news section. What we do is to take that stuff that comes into the office and arrange it.

The bulk of our material comes in to the Cleveland office via the teletype from any one of our 4 offices. We get wire reports also from our Los Angeles office, and sometimes men traveling out in the field send in wire stories, telegraphic, I mean. But most of it comes in over the teletypewriter.

When we get back after lunch, this teletype starts operating in the Cleveland, Tulsa, Chicago, New York and Washington offices, and probably in the Los Angeles office.

We have two of them in our Cleveland office, because
1577 of the volume of the material that is coming in. This
volume of material rolls in, and when it gets to the

Cleveland office, it is cleared for the other offices. The Cleveland office is a clearing house, or relay point, for this volume of material that is rolling in. It is midway from some of these points. The Chicago office is a relay point, it isn't a clearing house. We relay this material that comes in from Tulsa or the New York office, and the stuff that comes in from Chicago, and the same thing is true for each of the office points.

When that material comes in, we read it over for grammatical errors or poor sentence construction and polish it up like that, and send it on as quickly as we can to the other offices. In other words, we are working against time when our teletypes are running. I watch for grammatical errors as I quickly run this through; that is one of our main troubles. If some construction doesn't look proper, I might rearrange the construction of the sentence. As far as the price table is concerned, when that comes into Cleveland, I note the changes, if any, that have been made that day. On the things that come in, we do nothing except to quote the price, and relay them to the other offices. That comes in pretty continuously, I should say, between 1:30 and 4:15, or 4:30.
1578 I am not then through for the day. I then try to write circulation letters, and clean up any further correspondence that has come through in the day, and a dozen and one things.

My salary is $350 a month. After I take care of the circulation letters, I go home to dinner, and come back. I work evenings quite a bit, but not all the time. There are many little details that I have to take care of.

I haven't the right to hire and fire anybody working for the Oilgram, nor do I have any right or power to determine any policies of the Oilgram.

Redirect Examination by Mr. Lewin.

Mr. Platt has the right to hire and fire employees of the Oilgram and he determines the policies of the Oilgram; he is the only one.

There are quite a few jobbers scattered throughout the country who subscribe to our Oilgram; I don't know what percentage of the circulation, though. Our circulation is around 800.

The full, complete Oilgram service costs $100 a year. Subscription to The National Petroleum News is $2 a year, now. The number of subscribers to The National

Petroleum News has increased somewhat recently. I don't know the number, offhand. I think it is around 15,000.

(Witness excused.)

1579 HAROLD F. PARSONS, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I reside in East Orange, New Jersey, and am assistant vice-president and assistant to the executive vice-president, Edward L. Shea, of Tide Water Associated Oil Company. Mr. Shea is a defendant in this case. I have been associated with Tide Water Associated Oil Company since the merger on November 30, 1936. From 1933, when Edward L. Shea was elected president of Tide Water Oil Company of New Jersey, through the greater part of 1936, I was his assistant. For a short period, in connection with the merger, I was connected with Tide Water Oil Company of Delaware. Mr. Shea was for a short time president of Tide Water Oil Company of Delaware. My duties as assistant to the president were carrying out his instructions, assisting him in the operating policies of the company, secretary, and a member of the executive staff and the operating committee. I work very closely with Mr. Shea. Most of his incoming business correspondence comes over my desk, but not all of the outgoing.

The executive staff is composed of the executives of the various departments, and is an advisory body to the president. The members of the executive staff are the managers of manufacturing, transportation, retail 1580 sales, export, wholesale and industrial sales, comptroller,—who are also on the operating committee—the treasurer, director of personnel, the head of the law division, Mr. Noel Robinson, vice-president, who is a defendant in this case, and myself.

The executive staff holds weekly meetings. In addition, meetings may be called by the president on special occasions. During 1935 and 1936 Mr. Shea, the president, was usually in attendance at those meetings when he was in the city. He was usually in the city, except when he was on business trips to the fields, or on vacation.

The operating committee is composed of Mr. Noel Robinson, a defendant here, vice-president, as chairman; the manager of transportation, the manager of manufacturing, the manager in charge of retail sales, the sales manager in charge of wholesale export and industrial sales, the comptroller, a statistician, another man who takes part in general statistical information in connection with the oil industry, and myself. The operating committee meets once each week, and is subject to call for any special meetings that may be desired to take up any business. Occasionally the president has come in to operating committee meetings.

I was familiar with purchases of gasoline made on behalf of our company in the East Texas field in April, May, June, July, August, September, October and Novem-
1581 ber, 1935. The purchases were authorized by the op-
erating committee and approved by Mr. Shea, president of Tide Water Oil Company of New Jersey, and Noel Robinson, chairman of the operating committee. Some time in November, 1935 our company discontinued making purchases in the East Texas field. It did not resume purchases in that field until February, 1936. From February at least until April, 1936, they made purchases there at the rate of approximately 5 cars a week. Those purchases were likewise made with the knowledge and approval of Noel Robinson and Edward L. Shea.

The purchases of gasoline which were made in East Texas by Tide Water Oil Company of New Jersey were to supplement the production of the company as they were required for sale purposes. In 1933 and 1934 we made purchases both from the Gulf Coast and from East Texas, as these locations were economic sources of supply used to supplement the production of our Bayonne refinery. In 1935 and 1936 purchases from East Texas and the Gulf Coast were continued, not only for the reason that we needed gasoline, but also because by purchasing in East Texas there was an advantage to the company in using its tank cars and securing a mileage allowance from the railroads, equivalent to approximately ⅛¢ a gallon, and further because we found that it was a good thing to endeavor to take gasoline from East Texas and help to stabilize the market.

1582 *Cross-Examination by Mr. Webster.*

Tide Water Associated Oil Company, prior to November 30, 1936, was strictly a holding company. It was a Delaware corporation qualified to do business in New York and California. It held approximately 99% of the outstanding stock of Tide Water Oil Company of New Jersey, and later, of Delaware; and approximately 98% of Associated Oil Company of California.

Tide Water Oil Company of New Jersey was strictly an operating company. It operated principally along the Atlantic seaboard and the territory from Maine to Virginia; and in New York and Pennsylvania. In 1935 and 1936 it was not qualified to do business, nor did it do business, in the so-called Standard of Indiana Territory with the exception of Michigan, where we had an office in Detroit.

Tydol gasoline is one of our products. I couldn't say whether we have any distribution in Wisconsin right at the moment or not.

Tide Water Oil Company of Oklahoma was an operating company that operated in the so-called Mid-Continent area. I do not recall its exact date of incorporation, but the company was dissolved in November, 1936. It was a 100% subsidiary of Tide Water Oil Company of New Jersey.

I am generally familiar with the steps taken in connection with the merger in November, 1936, which I
1583 referred to in my direct examination. They were
taken shortly after the Revenue Act of 1936 was approved on June 22, 1936.

(Witness states several factors that led to the merger and describes the steps taken to effect the consolidation.)

During the indictment period, that is, February, 1935, to the end of 1936, Tide Water Oil Company of Oklahoma operated in the so-called Standard of Indiana territory from February 1, 1935, to August 4, 1936; Tide Water of Delaware, from August 4, 1936, to November 30, 1936; Tide Water Associated, from November 30, 1936, to December 22, 1936.

Mr. Shea was the president of Tide Water Oil Company of New Jersey, and of Tide Water Oil Company of Oklahoma. Since December, 1936, he has been the executive vice president of Tide Water Associated Oil Company, a defendant in this case.

Mr. Noel Robinson was a vice president of Tide Water Oil Company of New Jersey, but was not an officer or director of Tide Water Associated Oil Company during 1935 or 1936, up until the time of and after the merger. After December 17, 1936, Mr. Robinson was a vice president of Tide Water Associated Oil Company.

Until the consolidation, Mr. J. W. Warner was a vice

808

President of Tide Water Oil Company of Oklahoma, and
sales manager in charge of sales in the Mid-Conti-
1584 nent Division. When the Delaware Company took
over the Oklahoma Company, Mr. Warner still continued as general sales manager in the Mid-Continent area; and Mr. Warner, under Tide Water Associated, is still sales manager in the Mid-Continent area. Prior to December, 1936, Mr. Warner did not hold any position in Tide Water Associated Oil Company, nor did he hold any position in Tide Water Oil Compay of New Jersey.

During 1935 and 1936, Mr. R. O. Andrain, another defendant here, was connected with Tide Water Oil Company, Oklahoma, and was an employee who handled and worked on tank car purchases and sales of gasoline and other petroleum products manufactured by Tide Water Oklahoma at its Drumright refinery. His work was both buying and selling. I don't know whether Mr. Andrain had any particular title. Mr. Andrain was one of Mr. Warner's assistants in the Mid-Continent and in Tulsa.

Whatever purchases were made in East Texas in 1935 and 1936 by Tide Water Oil Company of Oklahoma were made by it for and on behalf of Tide Water Oil Company of New Jersey. However, in April and May, 1935, some purchases were made by Tide Water of New Jersey through Mr. O. D. Robinson of Republic Oil & Refining Company. Subsequent to that purchases were made by Tidewater of Oklahoma through the East Texas Refiners'
Association for Tide Water Oil Company of New
1585 Jersey.

Mr. Warner and Mr. Andrain with the Oklahoma Company made the purchases actually for the account of the New Jersey Company. They were instructed to purchase a certain volume in barrels at the going price or the best price that they could get. Whatever purchases they made, they made pursuant to instructions from New York.

I have seen this paper which you show me, dated November 3, 1937, attached to which are certain schedules showing the boards of directors and the officers of Tide Water Oil Company of Oklahoma, Tide Water Oil Company of New Jersey, Associated Oil Company of California, and the Tide Water Associated Oil Company of Delaware, for 1935 and 1936; also one for 1934 and 1935. I have seen this before, and it does contain a true statement of the facts as shown in the schedule.

(Document marked EXHIBIT 733, 733-A, 733-B, 733-C and 733-D, is received in evidence.)

Tide Water Associated Oil Company did not have an executive staff or an operating committee, because Tide Water Associated was purely a holding company. Tide Water Associated had nothing to do with the operating problems of the two main underlying companies. However, occasionally when a major expenditure was to be made for either of the underlying companies, say, an expenditure of $1,000,000 or $1,500,000, for some refinery
equipment, or something of that nature, it would be
1586 referred to the board of directors of Tide Water
Associated for approval.

Tide Water Oil Company of Oklahoma had an operating committee comparable to the operating committee of Tide Water Oil Company of New Jersey.

The boards of directors of Tide Water Associated Oil Company, Tide Water Oil Company of New Jersey and the Tide Water Oil Company of Oklahoma held separate board meetings. Prior to the merger, these companies had separate bank accounts. Separate financial reports were issued by the two underlying companies, Associated Oil Company and Tide Water Oil Company of New Jersey; and then the Tide Water Associated had its own. Each of these companies paid its own debts and obligations. Tide Water Associated had no purchasing and no legal department, any legal questions that they had being taken care of by outside counsel. Tide Water Oil Company of New Jersey, Associated Oil Company and Tide Water of Oklahoma each had a purchasing department and its own legal staff.

The accounting work for Tide Water Associated was handled by Tide Water Oil Company of New Jersey, and Delaware during that short transitional period, for which there was a certain fee paid to Tide Water Oil Company of New Jersey by Tide Water Associated. I don't recall what that exact figure was. Tide Water of Oklahoma
maintained its own accounting department. The
1587 same is true with reference to the credit department.

Tide Water Associated, being a holding company and not an operating company, had no departments whatsoever. The Oklahoma and New Jersey Companies had their own personnel, advertising and credit departments.

Redirect Examination by Mr. Chaffetz.

Prior to the merger Mr. Humphrey was president of Tide Water Associated Oil Company, chairman of the board of Tide Water Oil Company of New Jersey and president of

Associated Oil Company of California. He was in communication with Mr. Shea from time to time during 1935 and 1936, with whom he would discuss the policies of Tide Water of New Jersey. Mr. Humphrey was the controlling official of Associated Oil Company and Tide Water of New Jersey prior to the merger and superior to Mr. Shea. The policies of Tide Water of New Jersey and Associated Oil Company of California were received from the boards of directors.

Recross Examination by Mr. Webster.

The purchases in East Texas by Tide Water of New Jersey in 1935 and 1936 were not to my knowledge ever referred to or considered by the board of directors of Tide Water Associated Oil Company.

1588 *Redirect Examination by Mr. Chaffetz (continued).*

I would not say that the affairs and policies of the Oklahoma company were generally controlled by the New Jersey company prior to the merger. Tide Water of Oklahoma had its own officers and board of directors, and if I am not mistaken, all of them except Mr. Shea and possibly some assistant secretaries or assistant treasurers or the like, were located in Oklahoma, in Tulsa and in the Mid-Continent.

The Oklahoma company's operations were largely different from the activities of Tide Water Company in the East. One of the principal activities of the Tide Water Oil Company of Oklahoma was production. And the only person in New York who had anything at all to do with that was Mr. Shea. When questions came up, they would be taken up directly with him.

So far as I know, the question of the effect that such a merger might have upon the indictment then pending against Tide Water of New Jersey, returned at Madison, Wisconsin, some months prior to that merger, was never discussed among the officials of either Tide Water Associated or Tide Water of New Jersey. The question of the merger of these companies was one that had been under discussion for a period of years, and there were a number of successive steps taken to accomplish the merger.

1589 *Cross-Examination by Mr. Donovan.*

The operating committee of Tide Water of New Jersey had something to do with the purchase of gasoline. The principal factors considered in connection with the purchase of gasoline are the available supply that we have compared with our sales requirements or anticipated sales. When I say "available supply" I have in mind the gasoline that is produced by our own refinery. For the sales of Tide Water of New Jersey, we have only one plant, located at Bayonne, New Jersey.

If you take a solid block of New England states, New York, Pennsylvania, and down as far as Virginia, you have the market territory for Tide Water of New Jersey.

That is the only refinery we have to supply the needs of the market in that territory. Over the past 10 years it has been the practice to run the refinery to the full capacity, making as much gasoline as we could. If you are selling gasoline, you like to sell your own production rather than purchased gasoline. However, the production of the refinery has been insufficient to meet our sales requirements, and we have had to purchase gasoline on the outside. That would be true during the past 10 years.

Sales were greater than production at the Bayonne refinery. I haven't got the percentage by which sales exceeded production during the past 10 years, but I have
1590 it for the last 5.

Production of gasoline in the year 1932 was 5,582,394 barrels at the Bayonne refinery. Sales in the Eastern Division, which is the territory I mentioned, amounted to 8,136,474 barrels. That was 2,554,080 over our production. We bought 2,286,110 barrels of refined gasoline in 1932 to make up that deficit. Our purchases of refined gasoline were 28.1% of our total sales.

In 1933 our Bayonne production amounted to 6,771,725 barrels, an increase of 21.3% over the preceding year. Sales amounted to 8,489,177 barrels. We bought in that year 1,433,416 barrels or 16.9% of our total sales.

Our production in 1934 increased over our production in 1933 by 11.2%. Unfortunately, the 1934 increase in production was not sufficient to meet our sales requirements. It fell short 1,333,040 barrels. Then, as in prior years, our committee authorized the purchase of refined gasoline to meet sales requirements. In 1934 we purchased 1,152,669 barrels of motor gasoline. This was 13% of our sales requirements.

In 1935 our production was not sufficient to take care of our sales. It fell short 1,150,094 barrels in that year, and we purchased 599,746 barrels of refined motor gasoline. That was authorized by the Operating Committee. We bought part of it from sources other than the refineries in

East Texas. Part of it was bought on the Gulf
1591 Coast, and part was bought in New York Harbor. As
to the difference, we also purchased natural gasoline, and I haven't included the natural purchases here. I was only talking about the purchases of motor gasoline. In some cases the purchases of natural gasoline go up, in some cases they go down; but the two of them will pretty well balance out the total short requirements.

The motor gasoline that we bought in 1935 was less than we bought in 1932. In 1935 purchases were 1,787,000 barrels less of motor gasoline than they were in 1932. 2,286,000 in 1932 would be approximately 4 times as much as the 599,000 or the 1935 figure would be approximately 24%, on a quick calculation.

Our 1935 purchases were less than our 1933 purchases, 600,000 against 1,433,000; roughly, they were 800,000 barrels less. Our 1935 purchases were approximately 50% of our 1934 purchases, being 599,000 against 1,152,000.

6.6% of our sales requirements in 1935 were supplied by our purchase of motor gasoline. In 1932 the percentage of purchases to total sales was 28.1%; 1933, 16.9%; 1934, 13%; 1935, 6.6%; 1936, 12%. But bear in mind, again, the possibility of difference in these figures because of natural purchases which have not been included.

We did not curtail our production in 1935 as compared
to prior years. We increased it over 1934 by 361,000
1592 barrels. The 1936 production was 474,000,000 barrels
more than the production of gasoline in 1935. This increased production in 1936 over 1935 was not enough to take care of our sales, because we have still continued to purchase gasoline in 1937. In 1936 we purchased 12% of our motor gasoline, and then there was some natural gasoline included in there, in addition to that.

In 1936 we continued our policy of buying refined gasoline to make up for our deficiency in production, to meet our requirements. In 1936, we bought 1,161,885 barrels. That is approximately twice as much as we bought in 1935, and approximately the same as it was in 1934. Purchases in 1936 were 270,000 barrels less than in 1933; and, in comparison with 1932, they were 1,125,000 barrels less.

The amount of crude oil which we processed in our refinery increased during 1935 and 1936, as compared with prior years.

I am generally familiar with the prices which our company paid East Texas refiners for gasoline in 1935 and 1936. So far as I know, purchases were made below the low or at

the low of the East Texas refinery price. There was one period, I think, during April and May of 1935—approximately 25% of our purchases for the year were made during that period—when the market was rising, when some of our purchases were ⅛¢ and some were ¼¢ under the
1593 low East Texas quotation.

In one particular instance a purchase was authorized through Republic Oil Company, and it was told that it could purchase at the going market. It came back with an offer which we refused, and later it bought the gasoline under that order at ¼¢ less.

Then, when the price level flattened out, practically all of the purchases after the price level had become, you might say, in a straight line, were made at the low of the East Texas price, f. o. b. the refineries.

In the East 33.2% of our sales were made to jobbers in 1935, and 35.9% in 1936; and in the Mid-Continent or Standard of Indiana territory, 91.2% in 1935, and 90.7% in 1936.

Those jobbers are our most important outlet for gasoline. If we did not have jobbers to sell to, we would have to get other outlets to do business here, and I don't know where we would get them, without a tremendous expenditure of money for service stations or facilities.

In 1935 we bought 600,000 barrels, and of this we purchased in East Texas, I believe, 800 cars, which is roughly 160,000 barrels, figuring 200 barrels in a tank car. That is approximately 27% of our total purchases.

In 1936 the purchases were 1,161,000 barrels and there were 150 tank car purchases in East Texas. 150 cars purchased in 1936 is a considerably smaller percentage
1594 than we purchased in 1935.

I do not know whether the data I have is based on the data that was supplied before the grand jury. All through my testimony I was talking in terms of barrels, 42 gallons to each barrel, which is the regular refinery barrel.

By the Court

I haven't the details from whom we bought in East Texas in 1932. We bought in 1932 our gasoline on the Gulf Coast in cargo lots, and without having our records here, I think we might have bought some in California and some in New York harbor. In 1935 it was split up amongst 11 refineries. In 1936 the purchases were all from the Hurricane Petroleum Company. Not having the records here with me, I could not answer the question whether we bought as much in the East Texas field in 1932 as we did in 1935.

Redirect Examination by Mr. Chaffetz.

25% of our 1935 purchases were made in April and May, 1935. A part of these purchases were made a fraction below the low of Platt's Oilgram, East Texas market. When I said 25% of our purchases, I did not mean to signify by that 25% of all the gasoline that we bought in East Texas during 1935. That was 25% of the purchase orders that were filled. I haven't got the exact figure but prob-
1595 ably between 10% and 15% of the volume was purchased on that price level below the low.

The total volume we purchased in April and May was about 75 cars, in both months together. There is a total of 725 cars here for the succeeding months. All of those 725 cars were purchased at the low of Platt's Oilgram, East Texas market, except for 1 car at 4½¢. I don't know whether there was a temporary dip in the market just on that day.

By the Court

Our overhead in 1935 and 1936 was slightly less than it was in 1932 and 1933, because of the increased volume of sales. As you increase the throughput through the plant it reduces your operating expenses per gallon of product put through.

I haven't got the profits of the company for the period with me, but I think it is a safe assumption to say that in 1935 and 1936 the profits were higher than they were in 1932 and 1933. The fact, however, can be developed very quickly from the published financial statements of the company. They are higher because of the fact that in 1935 and 1936 the earnings of the company were higher than they were in 1932. The dividends paid were higher because of increased earnings of the company.

There are several factors that go in to make up the earnings of the company; there is profit on refining and
1596 marketing, profit on crude produced, and all of your ramifications; profit on the tank cars, profit on any number of items, direct service station operations, and all of your sales of lubricating oils.

I believe the price of our gasoline sold to jobbers in 1935 and 1936 was higher than it was in 1932. I haven't got the 1932 figures before me, but I would say somewhere between 1¢ to 1½¢ per gallon higher.

Recross Examination by Mr. Donovan.

Our company was improving the volume of its business and its position in the production field. It is much more economical to use your own crude than it is to use purchased crude.

I knew quite well that there was a depression in 1932 and 1933.

It would be practically impossible for me to say accurately without referring to the cost of manufactured gasoline and the cost of purchased gasoline for the two periods, whether we made more of a profit on the same quantity of gasoline we sold in 1932 and 1933, because 1932 was the period when the crude price was cut down very low, and you had a smaller manufacturing cost on gasoline. You could buy gasoline at a low price, and then when the price of crude rose to its new point, it was reflected in the cost of the finished product. And
1597 likewise when the value of crude oil was low you could buy gasoline at a lower cost than you could during 1935 and 1936 when the price had been stabilized on crude, somewhere around $1.25 or $1.30 a barrel in East Texas.

I am not sure whether it was 1932 or 1933, but I think at one time East Texas crude got down to 10¢ or 15¢ a barrel. I know it was practically given away. I do not recall which year it was, but it was somewhere along in that period. In 1935 and 1936 it was $1.25, and then went to $1.35. I cannot remember offhand the exact dates when those changes took place.

I couldn't state how low the price of gasoline was in the Standard of Indiana territory in April, 1932 without referring to the records.

I haven't got a statement here showing those companies we purchased from in 1932 and 1933, but I believe we can get it in New York certainly.

Mr. Webster: May it please the Court: I have here a schedule showing the names of each East Texas refiner, from whom purchases were made from 1931 down to 1936, and the amount purchased, and whether or not they were purchased from members of the East Texas Marketers Association or otherwise.

This is complete, except that it does not contain
1598 reference to the 75 cars that were purchased in April and May, 1935, through the Republic Oil

Company on the Gulf; I ask to have that received in evidence.

The Court: It may be received.

(Document is received in evidence as EXHIBIT 735.)

1599 HARRY JACOBS, a witness for the Government, testified as follows:

Direct Examination by Mr. Chaffetz.

I reside in a suburb of St. Louis, Missouri. I am assistant to the marketing vice president of Shell Petroleum Corporation, and have held that position since the end of January 1935. I have been connected with the Shell Company since 1923.

Mr. van Eeghen, was vice president in charge of marketing during 1935 and until, I believe, March, 1936. Mr. P. E. Lakin, who had been general sales manager since January 1934, succeeded Mr. van Eeghen, his superior, and combined the position of vice president in charge of marketing and general sales manager since March 1936. Technically I was assistant to Mr. van Eeghen during 1935 and the first part of 1936; practically, I was assistant to Mr. Lakin throughout 1935 and 1936.

The function of the vice president in charge of marketing was to sell the output of the refineries to the best advantage. It also involved the purchasing of gasoline, but that was delegated to me sometime towards the end of March or early April, 1935.

1600 I keep Mr. Lakin informed on any price changes and any price matters. I assist him in the formulation of the sales policies. I make any special studies he requests. Besides passing on capital expenditure in the building or improvement of service stations and bulk plants, I have the special assignment of purchasing gasoline. I assist Mr. Lakin generally in all the duties of the vice president in charge of marketing.

I don't think all of the correspondence, including letters, memoranda, and so forth, directed to Mr. Lakin goes over my desk. It depends very largely upon his secretary. If she thinks I should see it, she passes it to me. That does not apply both to incoming and outgoing. I never see any of the outgoing, unless Mr. Lakin should happen to mark a copy for my special attention. He does that from time to time.

Mr. Lakin's superior in the company in 1936, after he became vice president, was Mr. Alexander Fraser, the president of the company. I think he was elected president some time in the fall of 1933. He had been with the company prior to that time as vice president. Mr. Fraser and Mr. Lakin are defendants in this case.

I came in contact with the president of the com-
1601 pany an average of twice a month during 1935 and 1936. The president and vice president have their offices in St. Louis, Missouri, where the general offices of Shell Petroleum Corporation are located.

During 1935 and 1936 Mr. Lakin was actively on the job. He was out of town, of course, at periodic intervals. Insofar as I know, that holds true of Mr. Fraser, but, of course, I don't keep track of Mr. Fraser's movements. I would say very decidedly that Mr. Fraser was actively in charge of the affairs and policies of Shell Petroleum Corporation. He keeps in close touch with the operations of the company.

I don't know that all questions of policy are submitted to Mr. Fraser for approval. The marketing policies are pretty clearly defined in our own office. Whether they go to Mr. Fraser for clearance before they are actually put into effect, I can't say. I am sure Mr. Fraser would be interested in the prevailing prices for gasoline sold by our company and would keep in touch with what the trend of prices was at any particular time, and what the factors are that affect that trend. That was true during 1935 and 1936.

The document marked Exhibit 169 for identification appears to be a carbon copy of a letter from our crude oil department, dated January 11, 1935, addressed to Messrs. Fraser, Bascom, van Eeghen and Lakin.

1602 Q. And who would you say wrote that letter?

A. The initials are "A P R", which is Mr. A. P. Ruether, manager of our crude oil department.

Mr. Chaffetz: I ask that this letter be received in evidence as Exhibit 169 against the Shell Petroleum Corporation and the defendants Fraser and Lakin, and no other defendants. This is Exhibit 169.

Mr. Thomas: We object upon the grounds heretofore stated at R. pp. 504-05, 556-57, 721-23.

The Court: The objection is overruled. Exception allowed.

(Document received in evidence as EXHIBIT 169 against the defendants Shell Petroleum Corporation, Alexander Fraser and P. E. Lakin only.)

Exhibit 170 for identification is apparently a carbon copy of a memorandum from the crude oil department, dated January 15, 1935, addressed to Messrs. Fraser, Bascom, van Eeghen and Lakin. The Mr. Ruether who signed this was the same Mr. Ruether who was the general manager of the crude oil department of Shell,
1603 if he signed the original; but there is no signature on this carbon copy. The fact that it is marked "Crude Oil Department", would indicate that it came from his office, and presumably came from him. In the ordinary course, such a memorandum would go to Messrs. Fraser, Bascom, van Eeghen and Lakin. Mr. Bascom is vice president of Shell Petroleum Corporation.

Mr. Chaffetz: I ask that Exhibit 170 be received in evidence against Shell Petroleum Corporation and the defendants Fraser and Lakin.

Mr. Thomas: Same objection as appears at R. pp. 504-05, 556-57, 721-23.

The Court: Overruled. Exception allowed.

(Document referred to received in evidence as EXHIBIT 170 against the defendants Shell Petroleum Corporation, Alexander Fraser and P. E. Lakin only.)

Exhibit 173 for identification is apparently a copy of a wire addressed to Mr. P. E. Lakin, Shell Petroleum Company, St. Louis, from Mr. R. W. McDowell, dated February 2, 1935. That copy was made in the telegraphic department of our office. It is customary for the telegraphic department of our company to make copies of telegrams received. I know, from looking at that document, that several copies were made and distributed to several persons in the organization. It was marked for the attention of Mr. Lakin, with copy to Mr. Fraser, Mr. Anderson, Mr. Galloway, Mr. van Eeghen, Mr.
1604 Wagner and Mr. Jacobs. In the ordinary course of functioning of our organization, copies would go to the gentlemen whose names are mentioned. The handwriting on Exhibit 173 for identification appears to be Mr. Lakin's.

Mr. Chaffetz: I offer Exhibit 173 in evidence.

Mr. Thomas: Same objection as appears at R. pp. 504-05, 556-57, 721-23.

Mr. Chaffetz: (continuing)—against the defendants whom the record shows thus far have been connected up with the alleged conspiracy.

The Court: It will be received. Exception allowed.

> (Document referred to received in evidence as EXHIBIT 173. Later at R. p. 907 said Exhibit was admitted as evidence against all defendants generally.)

Exhibit 174 for identification is apparently the original telegram received from Kilgore, Texas, signed G. L. Shoemaker, addressed to A. P. Ruether, and dated February 13, 1935. The marks on the lower righthand corner on that document indicate that the telegram was marked for the attention of Mr. Ruether, with a copy to Mr. Bascom, and a copy to the production department. The practice of our office is to take an original telegram as it comes in, and somebody marks on the telegram the persons who should receive copies of it. The telegraphic department does that. It is left to their discretion.

1605 Mr. Chaffetz: I now offer Exhibit 174 as against the Shell Petroleum Corporation. Do I understand, your Honor, that that exhibit is received over the objections?

The Court: It will be received subject to the objections. Exception allowed.

> (Document referred to received in evidence as EXHIBIT 174 against Shell Petroleum Corporation only.)

Exhibit 175 for identification is an original of a wire dated March 6, 1935, addressed to A. P. Ruether, signed McNair, and originating at Tyler, Texas. I believe Mr. McNair is a scout in the crude oil department.

A scout works out of the district office into the field, scouting for information, gossip, anything he can, that he thinks will interest us. He keeps us advised in St. Louis of what is going on out in the field, in a general way. I don't know how true everything he sends in is, or whether it is gossip, rumor, exaggeration, his personal opinion. He may send in half a dozen telegrams merely to give the home office an idea that he is working very hard. But presumably he is a good man if he has held his job and his purpose is to send us reliable information. I presume that the information he sends to us is reliable, but how carefully it has been checked, I wouldn't say. We do rely on it as a source of information.

Mr. Chaffetz: I offer Exhibit 175 in evidence against Shell Petroleum Corporation.

1606 Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57, 721-23.

The Court: It will be received on that condition. Exception allowed.

(Document referred to received in evidence as EXHIBIT 175 against Shell Petroleum Corporation only.)

Exhibit 176 for identification is apparently a carbon copy of a memorandum from A. P. Ruether, dated March 8, 1935, addressed to P. E. Lakin and R. P. Bascom. I believe it is a bona fide copy of an original memorandum.

Mr. Chaffetz: I offer Exhibit 176 in evidence as against all of the defendants whom the record may show have this far been connected up with the alleged conspiracy.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57, 721-23.

The Court: It will be so received. Exception allowed.

(Document referred to received in evidence as EXHIBIT 176. Said Exhibit later at R. p. 907 was admitted as evidence against all defendants generally.)

Exhibit 177 for identification is apparently an unsigned memorandum from A. P. Ruether, dated February 6, 1935, addressed to Fraser, Bascom, van Eeghen and Lakin. It is on the stationery of Shell Corporation, but it is unsigned. I could not say that that was an original, as it is unsigned. I would say if it came from our files, it may be a copy of an original, although it isn't on carbon paper. It is original type, but it bears no signature.

1607 Exhibit 178 for identification is apparently a carbon copy of a memorandum from the crude oil department dated March 15, 1935, addressed to P. E. Lakin, with a copy to R. P. Bascom.

Mr. Chaffetz: I offer Exhibit 178 in evidence on the same basis as Exhibit 176 was offered.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57, 721-23.

The Court: It will be received. Exception allowed.

> (Document referred to received in evidence as EXHIBIT 178 against all defendants who the record shows have been connected with the alleged conspiracy. Later at R. p. 907 Exhibit 178 was admitted as evidence against all defendants.)

Exhibit 179 for identification is not on regular memorandum paper. It is apparently a typed note to Messrs. Lakin and Bascom, from A. P. Ruether, dated March 20, 1935. I am not quite sure, but I think that is Mr. Ruether's handwriting. On Exhibit 179 are the words, "Will you please discuss PEL"; they are Mr. Lakin's initials and it looks like his handwriting. I think the words "Spoke to Mr. Lakin, 3-22-35", were written by Mr. Ruether, although I do not recognize his writing.

Mr. Chaffetz: I offer Exhibit 179 in evidence on the same basis as I offered Exhibit 176.

1608 Mr. Donovan: Same objection as appears at R. pp. 504-05, 556-57, 721-23.

The Court: It will be so received. Exception allowed.

> (Document referred to received in evidence as EXHIBIT 179 on the same basis as Exhibit 176. Later at R. p. 907 Exhibit was admitted as evidence against all defendants generally.)

Exhibit 180 for identification is the original of a telegram from Tulsa, Oklahoma, dated March 20, 1935, addressed, St. Louis Office, A. P. Ruether, signed Crude Oil Department, E. A. Bacon. The telegraphic division of our company marked that telegram for the attention of Mr. Ruether and copies to Mr. Bascom. I think that is Shell Pipe Line Company file. Mr. Bacon is in charge of our crude oil department at Tulsa, Oklahoma. I prepared Exhibit 181 for identification.

Mr. Chaffetz: I offer Exhibits 180 and 181 on the same basis as Exhibit 176 was offered.

Mr. Donovan: The same objections as appear at R. pp. 504-05, 556-57, 721-23.

The Court: It may be received. Exception allowed.

> (Documents referred to received in evidence as EXHIBITS 180 and 181 on the basis stated. Later at R. p. 907 said Exhibits were admitted as evidence against all defendants generally.)

I prepared the original of Exhibit 182 for identi-
1609 fication, and this is a copy. The initials, "H. J.",
in the lower left-hand corner of the third page indicate that I prepared it. I think I prepared it for the signature of Mr. van Eeghen. This document was intended to be sent from Mr. van Eeghen to Mr. Fraser, the president of the company and a defendant in this case. In the ordinary course of business, if nothing interfered, it would go to Mr. Fraser.

By Mr. Donovan

Sometime in the end of February, 1935, or the beginning of March, 1935, Mr. Lakin asked me to prepare a concise digest of weekly market prices and trends based on information taken from trade publications, supplemented with material obtained from our scout reports, and any other gossip or rumors I heard in the trade, and to give my views, opinions, and conclusions on the market based on the information obtained from the sources I have just described. The source of material for this letter was the same sources as I have just described. I prepared a series of reviews in the same manner.

By Mr. Chaffetz

I did not have access to all of the information inside our company, as to our own company's operations. I wasn't permitted to go wandering around every department and looking through their files. I wasn't authorized to obtain
information for that report from any other source
1610 than those I have mentioned. If I got any infor-
mation from Mr. Lakin, I was not unauthorized to incorporate that in these reports, but I have a recollection of only putting in one item I got from Mr. Lakin. If I got any information from any of my other associates in the St. Louis office, I was not authorized to put such information in those reports.

My purpose in these reports was to incorporate in them the best information that was available to me from those particular sources on the subjects covered in those reports. As I say, I might have picked something up in conversation, and I would probably turn it over in my own mind and transpose it in my own words. I tried to give in those reports the most accurate picture of the situation as I was able to develop it at the time. It was intended to be a gossipy news letter.

Normally, I would say those reports were sent from the office of Mr. Lakin to the office of the president in the regular course of our company's business.

By Mr. Donovan

I was asked to prepare those reports so as to enable the executives of the company to get an idea of the market instead of wading through all the trade publications to obtain that information.

Q. Would it be right to say that principally it took the information obtained from the trade journals and put it in simpler and more digested form? 1611

Mr. Chaffetz: He said just the contrary.

Mr. Donovan: I asked him.

The Court: I think he has already covered it where he obtained that information.

Mr. Donovan: Then, your Honor, may I be permitted to make a further objection upon the statement of the witness that it appears that the information obtained was purely hearsay, embodied by him in such letters.

The Court: Objection overruled. Exception allowed.

By Mr. Chaffetz

Exhibit 183 for identification is similar to Exhibit 182 previously identified, except this one is dated March 20, 1935. It was prepared by me.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57, 721-23.

The Court: Same ruling. Exception allowed.

(Documents referred to received in evidence as EXHIBITS 182 and 183 against Shell Petroleum Corporation, Alexander Fraser and P. E. Lakin only. Later at R. p. 907 said Exhibits were admitted as evidence against all defendants generally.)

Mr. Francis: Is it clear in the record whether it is as to each of the several defendants?

1612 Mr. Donovan: Yes. In addition to the other objection, is it clear to his Honor that the objection we have entered applies to each and every document for each and every defendant?

The Court: Let the record show you have every objection known to the law.

Exhibits 184 and 185 for identification are price reviews dated April 3 and April 10 from P. E. Lakin to A. Fraser, but signed by me, at least, I put Mr. Lakin's name on them, but they are not signed personally by Mr. Lakin.

Exhibits 186 and 187 for identification are price reviews dated April 17 and April 24, 1935, signed by Mr. Lakin and addressed to Mr. Fraser.

Exhibit 188 for identification is a price review dated May 9, 1935, from Mr. Lakin to Mr. Fraser, which is signed by me.

Exhibit 189 for identification is apparently a carbon copy of a price review dated May 17, 1935, from Mr. Lakin to Mr. Fraser. I am uncertain as to whether I signed the original of that or whether Mr. Lakin signed it. I can't tell without seeing the original. If Mr. Lakin was in town, he would sign it.

Mr. Chaffetz: I now offer in evidence EXHIBITS 184, 185, 186, 187, 188, and 189.

The Court: They may be received subject to the
1613 same objections as appear at R. pp. 504-05, 556-57, 721-23. Exception allowed.

(Documents referred to received in evidence as EXHIBITS 184, 185, 186, 187, 188 and 189, respectively.)

(The following occurred out of the hearing of the jury.)

Mr. Morgan: This is in addition to all other objections made to the exhibits which we desire to apply to this exhibit. We object to Exhibit 185 and ask that that paragraph in which Texas is mentioned along with Sinclair and Phillips be stricken for the reason that it shows on its face it is based on reports and not on knowledge of the witness and applies to natural gasoline, which is a raw product, and which doesn't apply in this case.

Mr. Gray: I have this further objection to make in addition to the one already made to Exhibit 188 (passing paper to the Court). On that paragraph labelled "retail prices" there.

Mr. Chaffetz: On Louisiana territory?

Mr. Gray: Yes.

Mr. Chaffetz: On Exhibit 185 I ask that the motion to strike out the paragraph in question on page one be granted as against all defendants other than Shell and the Shell individuals. And then on
1614 that paragraph headed "retail prices, general," the rest of that last paragraph of Exhibit 188, I will

not object to a motion to strike out that paragraph as to all defendants other than Shell and the Shell individuals.

The Court: It may be stricken out.

Mr. Chaffetz: In accordance with the statement of Government counsel?

The Court: Yes.

(The following occurred in the hearing of the jury.)

By Mr. Chaffetz

I have had an opportunity to examine Exhibits 194, 197, 198, 199, 200, 201, 202, 203 and 204, all for identification. Exhibit 194 for identification is a price review, dated August 23, 1935, from P. E. Lakin to A. Fraser, signed by myself with Mr. Lakin's name and my initials.

It is my belief that the pencil mark on Exhibit 194 for identification is Mr. McGaw's initials. I could only say I believe that that mark, which appears on Exhibits 197, 198, 199 and 200, and Exhibits 202 and 204, is Mr. McGaw's initials, or Mr. McGaw's mark of some sort. I can't say that that might be Mr. McGaw's mark indicating that Mr. Fraser had seen this, putting Mr. Fraser's name or Mr. Fraser's initial on it. I think that handwriting on Exhibit 194 for identification is Mr. McGaw's
writing. I think it is M. C. or M. G. Mr. McGaw was
1615 in charge of the president's department during 1935
up to the end of 1936, or almost the end.

Exhibits 197, 199, 200, 201, 203 for identification are price reviews addressed to Alexander Fraser dated respectively September 25, October 9, 16, 23 and November 20, 1935, written by J. H. Wagner, signed by P. E. Lakin. J. H. Wagner is a clerk in the sales department. He was an assistant of mine at the time he wrote these reports. He acted in my stead in writing them.

Exhibit 198 for identification is a price review, dated October 2, 1935, prepared by J. H. Wagner, and signed by him, with Mr. Lakin's name.

Exhibit 202 for identification is a price review, dated October 30, 1935, prepared by Mr. Wagner and addressed to Mr. Fraser.

Exhibits 204, 214, 218 for identification are price reviews, dated respectively December 6, 1935, February 1, 1936, and December 14, 1935, prepared by myself, addressed to Mr. Fraser, signed by me with Mr. Lakin's signature, followed by my initials.

Mr. Chaffetz: I offer in evidence, on the same

conditions stated with respect to earlier exhibits of the same character, that is, as against all defendants whom the record now shows may have been connected up with the conspiracy, Exhibits
1616 194, 197, 198, 199, 200, 201, 202, 203, 204, 214 and 218.

The Court: They may be received subject to the same objections as appear at R. pp. 504-05, 556-57, 721-23, and elsewhere heretofore. Exception allowed.

(Documents referred to received in evidence as EXHIBITS 194, 197, 198, 199, 200, 201, 202, 203, 204, 214 and 218, respectively as stated. Later at R. p. 907 said Exhibits were received as evidence against all defendants generally.)

Mr. Chaffetz: Exhibit 177 was identified yesterday by the witness. I now offer this exhibit as against all the defendants whom the record may show have been connected with the conspiracy, with the exception that at this time this letter is not offered against Mr. Allan Jackson, defendant.

Mr. Donovan: Same objections as appear at R. pp. 504-05, 556-57, 721-23.

The Court: Yes, same objection and same ruling. Exception allowed.

(Document referred to received in evidence as EXHIBIT 177 against the defendants mentioned. Exhibit 177 later at R. p. 907 was admitted as evidence against all defendants.)
